

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THE BANKERS' MAGAZINE,

AND

Journal of the Money Market.

JANUARY, 1865.

THE TERMINATION OF THE YEAR 1864.

It might have been supposed that the year just now concluded would have been one of the most prosperous on record. Certainly, taking the course of speculation witnessed, and the full inflation in prices during the first six months, there has been ample reason to presume that there was little or no prospect of reaction. It was, indeed, this apparent confidence in the satisfactory progress of affairs that gave such a *couleur de rose* appearance to trade and adventure, and induced those who took part in the operations of the hour, to imagine that notwithstanding money might rule at high rates, the future would present no disagreeable results. The season for recreation, it was believed, would produce a lull in the organization of our enterprises, and leave promoters and others time to reflect upon the weight of responsibility incurred, without increasing further general engagements. But it was never imagined for one moment, at least such was the *dictum* of individuals confessedly interested, that we had arrived at a time when both financially and commercially we might be placed in straits of a most doubtful description.

We ourselves, who had from month to month sounded the note of warning, were regarded as carpers of the old alarmist school, who were not to be treated with anything like consideration, because (so our friends said), we were not thoroughly prepared for the change that had so steadily but silently made way, contradicting all previous theories of finance, and indicating the march of intellect, far in advance of ordinary notions of propriety. Satisfied as we were of the fallacy of the doctrine, we were nevertheless ready to allow our instructors to take advantage of the occasion to praise the strength of their position, reserving to ourselves the right of intimating, at a convenient season, the

opinion entertained of what they advanced. It was not long before the time arrived when we could state unhesitatingly our views ; and how far they have in reality been confirmed, the events of the last four months have abundantly testified. Indeed, it is a matter of surprise, looking back at what we have recently gone through, that we have escaped with so simple a scarification ; for at one instant it seemed, especially about the middle of October, that had it not been for the sound discrimination displayed by the bankers and brokers, there would have ensued a most frightful era of panic, the consequences of which no one could estimate. Fortunately that was averted ; the confidence exhibited by the public in the midst of the prevailing distress tending much to alleviate the peril that would have arisen had a helter-skelter run for accommodation followed, and found, as it has done on former occasions, little or no response.

As it is, we have passed through a period of peril with comparatively little damage ; for, notwithstanding prices at the Stock Exchange have largely fluctuated, and failures have occurred, the crisis has not been of a character to create undue apprehension, or to leave consequences which cannot easily be surmounted. The impression produced by the alteration is, however, sufficiently important to show that, had it not been for the greatest care and circumspection, there would have been extensive disasters. The operators in public securities are now so generally used to variations in prices that the true movements, such as were witnessed in May and June, and later again in August and September, would never have created alarm ; but the circumstance that occasioned anxiety was the excessive stringency in the money market, which promised to last for some period.

Seven per cent. was, perhaps, not considered out of the way ; but when the official *minimum* went to eight per cent., and was subsequently sustained at nine per cent., the effect was certainly anticipated ; and whatever may be alleged with regard to the profits of trade paying a full per centage for discount, if the exorbitant terms do not last beyond a few months, the rule may, perhaps, apply if placed in association with first-class transactions ; but if this is the case in this respect, it is not so certain that the rule holds good in connection with second and third class operations—for it is not so much the rate to be paid as it is the possibility of obtaining in reality the necessary accommodation.

The currency of the high rate of nine per cent. for a long time naturally entailed a strain in the produce departments ; and when the serious fall in cotton followed, through the tem-

porary expectation of peace in America, the struggle to maintain credit became more evident. Although the majority of houses that failed proved to have been more or less weak and embarrassed by speculation, it was necessary to extend assistance to some others likely to suffer from the numerous unfounded reports circulated towards the end of September and October. One thing that was in many cases apparent was the large credit several of the firms had obtained on slender means, showing that the old principle of "ship and draw," which has in other periods of commercial inflation been discovered, had again been resorted to on an extended scale. The fluctuations in cotton has, at the same time, done part of the mischief, but not to the same extent as the consignments made so freely abroad, and which it cannot be supposed will return much to the creditors. Large losses have likewise been made in sugar and rice, the depreciation in these especially having been very considerable.

But it is to be hoped that the worst effects of this epoch of depression and decline are over, and that we are now emerging into a more encouraging and healthy state of business. If banking facilities have been too generally afforded—more particularly by two or three of the new banking institutions—they have gained their lesson of experience, and in future they will have to operate with much greater caution. They will nevertheless hereafter be able to reinstate themselves in a favourable situation, if they have not gone too far by incurring disproportioned liabilities. The next half-yearly meetings will indicate the extent of loss which these establishments have made through such failures, and the probable realization of securities held and the prospect of dividends from the various estates.

It is not believed that the old banks have sustained any alarming debts. In the general course of business during the past six months they have had to take their chance with the other financial institutions; but although here and there through suspensions they cannot have wholly escaped, it seems to be imagined that their share of sacrifice has been much below the average. No doubt the proprietors will be very pleased at finding this is the fact, and they will accordingly appreciate the management which has carried them through so successfully. While they have avoided the shoals and quicksands upon which some of their less fortunate neighbours have been forced, they have also increased their business and made connexions of an important nature. More than one of the new establishments have ensured a position which, to say the least of it, promises to create

a solid reputation. Difficulties have had to be combatted, and shareholders will not be pleased with diminished dividends, but before attaining full prosperity a trying ordeal has frequently to be passed through which, in the long run, assists in securing that desirable object.

The principal of the discount, finance, and credit companies, it is stated, have transacted a favourable business ; in the majority of cases fair dividends are looked for, and in special instances they will, it is asserted, be very encouraging. The finance and credit companies will not, however, be able to show so large an amount of profit as previously ; because, during the last four months few enterprises have appeared, and the returns from promotion have been little better than *nil*. Still, the whole of the establishments are acquiring strength, and when we have a return to a full measure of activity, the prospects of improvement will be speedily discernible. Involved in these various establishments is a new kind of banking element which, entrusted to cautious hands, will gradually develop itself and become most remunerative ; but if vigilance, &c., be not displayed, it is very likely to lead to embarrassment. The greater number of the best working companies are confided to boards of directors and managers who have hitherto possessed considerable financial experience, and therefore the expectation is entertained that they will be conducted prudently.

Looking impartially at the close of the year, and at its antecedent progress, it must be confessed that although the last three or four months have exhibited discouraging symptoms, the twelve months, taken on the whole, cannot be said to have terminated unsatisfactorily. As is customary in every speculative era, there has been a breakdown, but not such a severe one as to sweep away all profits. Business has latterly been much curtailed, through the high rates for money, and the despondency occasioned by the late failures. The healthiness of this reaction has been exhibited in the return of ease in the money market, and in the descent of the rate from nine to the more rational price of six per cent. The same sympathy has been shown by the terms for discount in the Continental markets, every foreign national bank having lowered its quotations—the Bank of France taking the lead, the last reduction being to $4\frac{1}{2}$ per cent. It may therefore now be fairly said that there is ease in the money markets of London and Paris ; and if no untoward events take place in the spring, we anticipate that finance and trade will hereafter move in a smooth and quiet channel.

HISTORIC OUTLINES OF AMERICAN FINANCE.

No. XI.

MR. MONROE was inaugurated President on the 4th of March, 1817. In the first session of his rule the internal duties imposed during the war were abolished. He strengthened the fortifications on the coast, and altered the law for compensating the congressional services both of the representatives and of the senators. The Act of March, 1816, had awarded to each member of both Houses a salary of fifteen hundred dollars a year; it was repealed, and in substitution each was allowed eight dollars a day when in session, and eight dollars for every twenty miles travelled.

In 1818, East and West Florida, and all the adjacent islands, were ceded by Spain to the United States, though the formal surrender was not completed before 1821, but the archives and other state documents were not given up on that occasion; of the sales of land in Florida, the United States agreed to pay five millions of dollars to American citizens who had been spoliated by the Spaniards. In this year the Missouri Compromise Bill, the first overt act threatening disunion between the North and South, was discussed, but the controversy was not settled till the 2nd of March, 1821.

Mr. Monroe was twice elected President. In his first inaugural address of the 5th of March, 1817, after pointing out that the United States enjoyed every variety of climate, extending through many degrees of latitude, which rendered them commercially independent of nearly all other nations, if their industry were judiciously applied to production and distribution, the President made the following remarks on the principle of protection:—

“Our manufacturers,” said Mr. Monroe, “find a generous encouragement by the policy which patronises domestic industry, and the surplus of our produce a steady and profitable market by local wants in less favoured parts at home. Our manufactures will require the systematic and fostering care of the government. Possessing, as we do, all the raw materials, the fruit of our own soil and industry, we ought not to depend, in the degree we have done, on supplies from other countries. While we are thus dependent, the sudden wants of war, unsought and unexpected, cannot fail to plunge us in the most serious difficulties. It is important too that the capital that nourishes our manufactures should be domestic, as its influence in that case, instead of exhausting, as it may do in foreign hands, would be

felt advantageously in agriculture, and in every other branch of industry. Equally important is it to provide a home market for our raw materials, as, by extending the competition, it will enhance the price, and protect the cultivator against the casualties incident to foreign markets."

In enunciating these protectionist principles, Mr. Monroe supported the policy of all his presidential predecessors, and echoed the voice of public opinion. Those principles are now repudiated in England, where they were formerly as warmly encouraged as in America; but it should be remembered that the relative positions of old and new countries are essentially different. All commence their industrial career as agriculturists, and gradually become manufacturers, while they who dwell on the sea coast devote themselves to navigation. While America was a colony we have seen what constant and unjust efforts were made by England to crush its rising manufactures. Its progress in naval architecture was resisted with equal jealousy. In 1670, the celebrated Sir Josiah Child declared that "of all the American plantations His Majesty has none so apt for the building of shipping as New England, nor so qualified for the breeding of seamen, not only by the natural industry of the people, but principally by reason of their cod and mackarel fisheries; and, in my opinion, there is nothing more prejudicial, and no prospect more dangerous to any mother kingdom than the increase of shipping in its colonies, plantations, and provinces." The selfishness and cupidity of Great Britain desired to retain America in a purely agricultural condition, confining her to the plough, and prohibiting the sail, the loom, and the forge. Food she might grow for herself; whatever else she required was to be obtained from the mother country, as the supply would be attended with profit to the mother country. This was the principle of a tribute-exacting government, insisting that its colony should never be self-sustaining but always dependent. It was, therefore, decreed by British legislation that America was not to work its minerals or metals, build ships with its timber drawn from its own forests, navigate its own rivers, or convert its own raw materials into objects of utility. It was to continue a farm for ever, and England was to be the sole workshop of that farm. Of course these restrictions, imposed by the strong hand of power, ceased when political independence was established; but the older country, by virtue of its superior machinery, and its larger accumulated capital, could easily undersell the younger country on equal terms of competition. By these advantages it was as effectively enabled to hold the United States

in agricultural bondage by a manufacturing invasion, as it had held the colony by imperial legislation. The means, indeed, were less offensively odious, because the interference of the mother country was less directly felt, but the result was equally destructive of American labour. Apparently a benefit was offered, for England could supply goods at a cheaper rate than the Americans could supply themselves; but this tempting bait of moneyed cheapness concealed a snare. It was presented solely on the condition that America should continue a consumer of foreign commodities, leaving her own raw materials unworked, and thus condemning to idleness the labour which would otherwise have been employed. Had the United States accepted this policy it never could have passed from the gristle into the bone. How was a neighbourly intercourse, founded on a mutuality of interests, between agricultural states, plantation states, manufacturing states, and shipping states, to have been cemented and perpetuated, except by those commercial links which can only be welded together by relative production, consumption, and interchange? In a vast country having a variety of climates and pursuits, and a diversity of raw materials, it would have been an insane policy aiming at mere moneyed cheapness to array portions of the Federation against each other in an industrially belligerent attitude. The true object of American statesmanship was to concentrate, consolidate, and blend together all those various interests, so directing the measures of government as to combine the whole nation, as it were, in a family concern, that the citizens of each and every state might feel that they were citizens of the United States. It was desirable that producers and consumers, however scattered over the territory of the Union, should be brought together into the closest juxtaposition possible, by creating a home demand both for the products of agriculture and the fabrics of manufactures, thus uniting state to state, city to city, village to village, house to house, the sea-board with the interior, and all with the lakes, industrially as well as politically. Such, at the period, were the views of federal statesmanship, for as yet the popular mind was faithful to the perpetuity of the Union.

During Mr. Monroe's first term of office the national debt was largely reduced. In his message to congress of the 14th November, 1820, he made the following statement on the public finances. On the 30th September, 1815, the funded and floating debt of the United States was estimated at 119,635,558 dollars. If to this sum be added the amount of five per cent. stock subscribed to the Bank of the United States, the amount

of Mississippi stock, and of the stock issued subsequently to that date, the balances ascertained to be due to certain states for military services, and to individuals for supplies furnished to that date, as afterwards liquidated, the whole figured on the 30th of September, 1815, for 158,713,049 dollars. On the 30th September, 1820, it was reduced to 91,193,883, by payment of the difference between those two sums, or 67,713,069. Owing to causes presently to be explained, and which require a separate exposition and treatment, the foreign commerce of the country declined during the closing years of Mr. Madison's administration, and so continued under that of Mr. Monroe, and with it the revenue derived from customs dues. It became necessary to borrow, by which fresh loans were contracted though old loans were discharged, and, on the whole financial operations, public indebtedness was diminished. At the close of Mr. Monroe's administration in 1824, the national debt was estimated at 86,000,000 dollars, inclusive of 2,500,000 dollars borrowed in 1823. In that estimate was also included a stock of 7,000,000 of dollars issued for the purchase of that amount of the capital stock of the Bank of the United States; but as that amount was still held by the government it was fully equal to the reimbursement of the purchase, and in that sense could not be considered as constituting a part of the national debt, which, therefore, only figured in fact for an uncovered sum of 79,000,000 dollars.

There is one other important subject connected with finance to notice in the administration of Mr. Monroe. It had been held as a constitutional principle that the funds of the federal government should only be appropriated to federal improvements, never to state improvements. The advocates of states rights protested against this construction of the law, but the President adhered to it; however, he ultimately ceded the point and gave his assent to the application of public moneys to roads and canals which belonged to states, not to federal jurisdiction; and this became a precedent for future legislators. Mr. Monroe also authorised the sale of public lands in sections of eighty acres each, to suit the poorer class of purchasers, but abolished the credit system. After the 1st July, 1820, it was ordered that cash should be received on land sales, great abuses having arisen from many persons having bought who had not wherewithal to pay, speculating on a rise of prices. This retarded occupancy and actual cultivation which was the real policy of the Government in utilizing the national domain. However, an act was passed exonerating these penniless pur-

chasers from their contracts and the debt due on them, on their relinquishing the lands and restoring them to the land office. To actual settlers in Florida, then an almost unpeopled desert, land was given without any payment. The naturalisation laws were altered so as to allow aliens, being minors, to become citizens on arriving at the age of twenty-one years, provided they had resided five years in the United States.

At the very close of Mr. Monroe's administration of eight years, that is in February, 1825, Mr. King, of New York, proposed in the senate that, after the extinction of the public debt for which the national domain was pledged, the proceeds of all sales arising from it should be applied to the emancipation of slaves. The proposal did not receive the sanction of the senate, but the fact proves that the difficulties which subsequently arose on the subject of the "domestic institution" were foreseen by keener-sighted statesmen.

Mr. John Quincy Adams was inaugurated into the presidential office on the 4th March, 1825. The strictly political events of his administration, though few, were important, but their full significance was not appreciated by his contemporaries. In some of these we may trace indications of that growing conflict between the North and the South which ultimately led to secession. Mr. Monroe had recognised the independence of Mexico, and the first act of Mr. Adams was an attempt to bring South and North America into alliance. He proposed a meeting of delegates from both countries, to be convened at Panama. The plan was submitted to the committee of foreign relations, and by them rejected on the 26th January, 1826. It was generally believed that the committee had been packed by Mr. Calhoun, who, as vice-president, had the appointment. He was the leading statesman of the South, suspected of a desire to annex Mexican territory to the Union for the specific purpose of enlarging the area of slavery (restricted and defined by the Missouri compromise), by forming new states in which the domestic institution might be legally established. Mr. Calhoun, therefore, did not favour an independent kingdom in Mexico, where slavery had been abolished; and the subsequent war in that country, wholly undertaken in the interests of the South, confirms this view of Mr. Calhoun's policy. But the adverse report of the committee of foreign relations was negatived in the senate by 24 to 19 votes. The house of representatives warmly sanctioned the proposition of Mr. Adams, voting an appropriation of funds to defray the cost of the mission to Panama. Mr. Anderson, minister to Columbia,

was directed to attend this international congress, but died of malignant fever on his journey. Thus the meeting was prevented. However, congress concluded a treaty of friendship and perpetual confederation with Mexico, to which all American powers were invited to accede within the year. That treaty was dated the 15th July, 1825. Its object was to carry out what is known as the Monroe doctrine, which denied the right of any of the European monarchies to interfere in the affairs of the New World.

The concession made by Monroe, to appropriate public moneys to state improvements, led to an attempt to allot the national revenue itself among the different states so that each might collect, retain, and apply its own portion as it pleased. This scheme was defeated. It was promoted by those who favoured the doctrine of "states rights," and desired to diminish the patronage of the executive. During the four years of Mr. Adams's administration no less a sum than fourteen millions of dollars was expended on national objects in which the whole Union had a common interest. None affirmed that this expenditure was useless, injudicious, or extravagant, but it excited a sectional animosity among those who agitated the doctrine of "states rights;" and it is here mentioned as among the real antecedents to the subsequent revolt of South Carolina during the administration of General Jackson.

In 1826, trade with the West Indies was prohibited, as the Government of England would not abolish the discriminating duties.

In 1827, the annual report of Mr. Rush, secretary to the treasury, recommended a protective tariff in favour of American manufactures; and in 1828 a new tariff bill was passed. It was very unpopular in the southern states, which were still plantation and agricultural in industry, and desired the cheaper fabrics of Europe. The South, accordingly, denounced the new tariff as unconstitutional and oppressive, for their interests were very different from those of the North.

During the rule of Mr. Adams, chiefly devoted to domestic policy, the interest on the public debt had been punctually paid, while the debt itself had been constantly in a process of reduction. On the 1st of January, 1829, it stood at 58,362,136 dols., so that the principal sum had been reduced by 21,627,638 dols. during the four years' rule of Mr. Adams, who also left in the treasury on his retirement from office a surplus of 5,125,638 dols. The financial operations both of Mr. Monroe and of Mr. Adams are the more creditable to those

Presidents considering the commercial crisis through which the United States passed while they were at the head of affairs.

Mr. Adams was an eminently conscientious statesman. The purity of his moral sense was without taint. He never made any mean, dishonouring compromises with expediency. Equivocation was his abhorrence, and he scorned to catch at a fleeting popularity by tiding over difficulties. The following extract from his inaugural address reveals the character of his mind.

"No government," said the President, "in whatever form constituted, can accomplish the laws of its institution but in proportion as it improves the condition of those over whom it is established. Moral, political, and intellectual improvement are duties assigned by the author of our existence, to social, no less than to individual man. For the fulfilment of these duties governments are invested with power; and, to the attainment of the end, the progressive improvement of the condition of the governed through the exercise of delegated powers, is a duty as sacred and as indispensable, as the usurpation of powers not granted, is criminal and odious."

In connection with the finances of the United States, Mr. Adams stated that a sum little short of thirty millions of dollars had been paid from the common treasury for that portion of the national domain which had been purchased from France and Spain, and for the extinction of aboriginal titles. The area of lands acquired by these arrangements he computed at nearly two hundred and sixty millions of acres, of which, on the 1st January, 1826, about one hundred and thirty nine millions of acres had been surveyed, while little more than nineteen millions had been sold. Of those sold a considerable part had been conveyed under extended credits. In March, 1821, a debt of twenty-two millions of dollars, due by purchasers of the public lands, which they were unable to pay, had accumulated. To their relief, congress had passed several acts between the years 1821 and 1826, but, according to law, the last of these indulgent provisions expired on the 4th July, 1827. Many buyers were wholly excused from their bargains on re-conveying the lands to the government; to others Mr. Adams proposed to extend the period of payment. Three-fifths of the balances then due were for lands in Alabama. The chief causes of this derangement were the monetary crises through which the nation had passed on the termination of the war, and which had been aggravated by the reckless system of banking, through which the directors greedily aimed at large dividends by granting loans or discounts to desperate speculators who did

not buy lands with any view to their cultivation, but to sell them at an advanced price at some postponed date. This facility of loans encouraged the mania of gambling, which seized on thousands of penniless adventurers who had nothing to lose, but by imposture and hypocritical pretensions sustained the appearance of being men of substance. When the exhausted banks could no longer make advances or renew bills that had arrived at maturity, the bubble burst, and the land defaulters could no longer discharge their obligations to the federal treasury.

The attention of Mr. Adams was anxiously directed to the protection and encouragement of native industry, in reference to which he delivered the following sentiments on the policy of a prohibitive tariff and the just incidence of taxation.

“So far as the object of taxation is to raise a revenue for discharging the debts and defraying the expenses of the community, it should, as much as possible, suit the burden with equal hand upon all in proportion with their ability of bearing it without oppression. But the legislation of one nation is sometimes intentionally made to bear heavily on the interests of another. That legislation adapted, as it is meant to be, to the several interests of its own people, will often press most unequally upon the several component interests of its neighbours. Thus the legislation of Great Britain, when, as has been recently avowed, adapted to the depression of a rival nation, will naturally abound with regulations of interdict upon the productions of the soil or industry of the other which come into competition with its own ; and will present encouragement and even bounty to the raw material of the other state which it cannot produce itself, but which is essential for the use of its manufacturers, competitors in the markets of the world with those of its commercial rival. Such is the commercial legislation of Great Britain as it bears on our interests. It excludes with interdictory duties all importation (except in time of approaching famine) of the great staples of our middle and western states ; it proscribes with equal rigour bulkier lumber and live stock of the same portion (of the country), and also of the northern and eastern parts of our Union. It refuses even the rice of the south, unless aggravated with a charge of duty upon the northern carrier who brings it to them. But the cotton, indispensable to their looms, they will receive almost duty free, and weave it into a fabric for our own wear, to the destruction of our own manufactures, which they are able thus to undersell.”

He enforced the principles of protection in these terms:—
“Is the self-protecting energy of this nation so helpless that there exists in the political institutions of our country no power to counteract the bias of this foreign legislation? That the growers of grain must submit to this exclusion from the foreign markets of their produce—that the shippers must dismantle their ships—the trade of the north stagnate at their wharves, and the manufacturers starve at their looms—while the people pay tribute to foreign industry to be clad in a foreign garb? That the congress of the Union are impotent to restore the balance in favour of native industry, destroyed by the statutes of another realm?”

Mr. Adams then referred to the hostility evinced by various parties in America against that measure of protective policy which had been enforced. “The tariff,” he said, “of the last session was, in its details, not acceptable to the great interests of any portion of the Union, not even to the interest it was specially intended to subserve. Its object was to balance the burdens on industry imposed by the operation of foreign laws, but not to aggravate the burden upon one section of the Union by the relief afforded to another.”

That such was the intention there can be no doubt, but to carry it into practice was the difficulty. Mr. Adams expressed a hope that the principle of the late Tariff Act would be maintained, remarking at the same time that if it could be shown that the import duties imposed by it only relieved the manufacturers by aggravating the burdens of the planters, its provisions might be carefully revised so as to hold the balance even between all classes. To reconcile the conflicting interests which had grown up with time and changed circumstances, under the strictly limited views of buying in the cheapest and selling in the dearest market, was not within the power of statesmanship. The manufacturers desired protection to the extreme point of absolute prohibition, and to them free-trade was a mere hypocritical phrase really masking an industrial invasion. On the other hand the plantation states, not being producers of manufactures but simply consumers of them, championed the principle of unrestricted commerce, being the sellers of a raw material not exposed to competition; they wished to carry their cotton to England at the lowest freight, instead of paying the higher freight demanded by the shipowners of the eastern states; and for the same reason they preferred the cheap fabrics of Lancashire and Yorkshire to the costlier ones of Massachusetts and Pennsylvania. Both parties were influenced by the

selfishness of sectional interests, ignoring the claims of nationality, and both were arraying states rights against the rights of the federation to which they all belonged. Each separate section that adopted these views acted on the narrow maxim inspired by egotism, "I care not who sinks, provided I swim." Secession, or a dissolution of the Union, was an intelligible principle, and where antagonism was utterly irreconcilable, it was a rational policy, for a federation in which the constituent numbers are in constant discord, is a contradiction in terms and in sense.

The legislative session had been so disgraced by party bickerings, arising almost to personal violence in some cases, that Mr. Adams deemed it advisable, in a message addressed to both Houses, to call special attention to the paramount rights of congress in relation to the rights of the separate states. It contained the following remarks:—

"The United States of America, and the people of every state of which they are composed, are each of them sovereign powers. The legislative authority of the whole is exercised by congress under authority granted by them in the common constitution. The legislative power in each state is exercised by assemblies deriving their authority from the constitution of that state. Each is sovereign within its own province. The distribution of power between them presupposes that these authorities will move in harmony with each other. The members of the state and general government are all under oath to support both, and allegiance is due to the one and to the other. The case of a conflict between these two has not been supposed, nor has any provision been made for it in our constitution, as a virtuous nation of ancient times existed more than five centuries without a law for the punishment of parricide. More than once, however, in the progress of our history, have the people and the legislature of one or more states, in moments of excitement, been instigated to this conflict; and the means of effecting this impulse have been allegations that the acts of congress to be resisted were unconstitutional. The people of no one state have ever delegated to the legislature the power of pronouncing an act of congress unconstitutional, but they have delegated to them powers by the exercise of which the execution of the laws of congress within the state may be resisted. If we suppose the case of such conflicting legislation sustained by the corresponding executive and judicial authorities, patriotism and philanthropy turn their eyes from the condition in which the parties would be placed and from that of the people of both who must be its victims."

This conflict which Mr. Adams foresaw and lamented arose during the administration of his immediate successor, President General Jackson, when South Carolina arrayed its militia against the laws of congress and menaced war on the federation, which General Jackson averted by the vigour of his policy. The rule of Jackson forms a very distinctive epoch in American history ; in one sense it was revolutionary, in all senses it was most calamitous : but to understand its character and spirit, its antecedents must be studied under the various forms of industry, tariffs, manufactures, and banking.

(To be continued.)

BY THE BANK.

I VERY much doubt if the *multum in parvo* system be carried in any other city in the world to such an extent as it is in London. Great and straggling as our modern Babylon is, there are certain spots in which a man might pitch his tent and find within something like a stone's throw of him nearly everything he needed in life. By merely crossing over the street on his right, or the one on his left, he could absolutely satisfy all, or almost all, his mental and physical wants, barring, perhaps, his craving for fresh air. Of all places in London, by the Bank is the one where the powers of squeezing much into little has been most successfully accomplished. Some might think it a hardship, but I most solemnly aver that nothing could be more satisfactory to my feelings than a moderate competency, and a waterproof hut, at the foot of the Wellington statue in front of the Royal Exchange, the said statue to come between my majesty and the east wind. To your imaginative poet this doubtless seems the wish of a madman, but your good, sharp, practical man will applaud me for it, and think that, next to himself, I am about the most clever person in existence. What would a country mansion in the midst of a large park be to my compact hutment in the very centre of the most civilized city on the face of the earth ? Simply a lodging in a howling waste, whilst mine—but let me explain the advantages of my retreat, and in order to do so in the most convincing manner, imagine me located there.

Imprimis, I have just risen, after a refreshing night's sleep, into which I was lulled by the rumbling of vehicles and the monotonous tread of City policeman 1001. I enjoy my bath, dress in a leisurely manner, throw open my door, and stepping out, am at once in the very midst of business life. There have been no vexatious delays, no waiting for breakfast, no delay about boots, no loitering omnibus wasting precious minutes, nothing to disturb my equanimity. The moment I am out of doors my favourite member of the shoe brigade

pounces upon my feet, and beginning at my upper leathers, in a few minutes has given them a polish which would throw Day into ecstasies and drive Martin wild with joy. Whilst the operation is proceeding, half a dozen urchins offer me a choice of penny papers, and I have the news, so to speak, fresh and hot as new rolls. Before I breakfast I am "up" in all matters, have the closing price of Consols, and notice with delight that my pet company the Otranto Grand Junction Interfinancial Association (Limited) has moved from $\frac{1}{4}$ discount to par! And while I am calmly reading this satisfactory intelligence, City people are hurrying past me in hot, uncomfortable haste, to get to their offices in good time. How they must envy me my retreat! Now my boots are done, and I may think of breakfast; but first let me look around and reflect. What a superb situation; before me is the Poultry, alive with loaded vehicles and foot passengers. On my left I have the Mansion House, reminding me of the municipal privileges of the City and the even-handed justice with which our criminal laws are administered. On the right is the Bank of England, suggestive of wealth, and of that vast national debt which England bears on the whole in a remarkably cheerful manner. At my back is the Royal Exchange, recalling those richly freighted argosies that are ever sailing from and to our ports. In the Quadrangle is the statue of the Queen, calling to mind our constitutional monarchy; and throwing its shadow over me is the effigy of Wellington, speaking very forcibly of our military greatness. Then if I look up Prince's Street, is there not in the shape of the Union Bank a reminder of our commercial enterprise and greatness; and further still, have I not my little bit of country, my trees, which in the spring at least delicately hint at the beauties of English landscape. Why, where could a more suggestive spot be found than that on which I am standing?—justice, civic greatness, national greatness, war, commerce, navigation, and constitutional government. It is true that Parliament is not represented, but then have I not in the session a newspaper filled with reports of debates, and when the house is up have I not "extra parliamentary utterances" by the yard?

Breakfast! Nothing easier; four doors up Lombard Street I can, without the trouble of making it, procure strong Bohea, or a fragrant cup of Mocha, with roll and butter and a couple of slices of delicate ham, in which there is just the admirable balance of marrow-like fat with succulent lean; and have I not also more newspapers, with a choice of comic periodicals by way of salt to the solid meat? With just the trouble of crossing the road my morning repast has been procured, and now I am ready for the work of the day. I have imagined that I have a small competency: I will further imagine that, like the rest of the world, I do not agree with Dr. Watts, that "Man wants but little here below," but rather that he wants that little more, hence I wend my way to the Stock Exchange. Wend my way, do I say, why, is not that very centre of the world's lottery at the

very threshold of my door? Certainly it is; and here I am in the Babel, and "Otrantos" have risen, and I have made my little more. Shall I not let my brother in the country have a chance in the "good thing?" Certainly I will. Another step or two and I am in the telegraph office, and able to flash a message north, south, east, or west.

My message sent, I recollect that land in the neighbourhood of London is rising rapidly in value, and I have a few hundreds to spare; shall I try the speculation? Certainly; and I have only to cross Cornhill, and there is Garraway's;—every facility, you see, gentle reader, is at hand; and as I cross to and fro I see my respectable charwoman "tidying" up my mansion. Back again to the Stock Exchange; another bit of luck, and the cheque in my pocket. What shall I do with it? Have I not every kind of bank at hand to lodge it in? There is the Bank of England, *apropos* of which, you see, I have only to step over the way on dividend days; then there are the joint-stock banks, then there are the private banks, and, finally, the limited liability banks. There they all are—but what is that tug at my pocket; a young gentleman is attempting to seize my handkerchief, but I seize him instead; a crowd collects; a brass-lettered policeman comes up, and, of course, the Mansion House is only over the way: in half an hour justice is appeased, the juvenile offender, as the reporters call a young thief, has been sentenced to fourteen days, and I am at home, quietly writing a letter. That done, two minutes takes me to the post office, and then I confess I am again hungry. Have I any difficulty in finding a luncheon-house? None: is there not Birch's, where mock turtle and cold punch can be procured, the best in the world? Thither I will go, and as I sit at a window on the first floor I see my charwoman carefully lock my front door and then disappear into the vortex of life that is whirling madly along on every side that I gaze.

Refreshed, I once more sally forth, and it recurs to me that a vessel in which I had a little venture may have come to grief during the late frightful cyclone at Calcutta. I would then satisfy my mind on that point, and before I can say "presto" I am at Lloyd's, and in three minutes I have been assured that my fears were groundless. Another hour or two amongst operators and I am in 'Change, and can see the back of my hut, cut in two by the Wellington statue. The hum of voices increases, the people who always sit on the benches in the quadrangle try to look as if they, too, were taking part in the din. As I move about I am brought face to face with men who are the Derbies, Palmerstons, Disraelies, Stanleys, and Gladstones of the commercial world. The excitement increases, the bell rings, the great gates close, there is a movement amongst the loungers, followed by one amongst the busy crowd, and at length there is an outpouring of the multitude and I am at home, with half a dozen letters to write to conclude my day's work. You see, without moving away from my hut an eighth of a mile my business wants have been satisfied.

By half-past four or five I am a free man. *Le Roi s'amuse*, and there is no dearth of amusement, especially as when work is over one looks at the same things with very different spectacles. In the morning I regard the Bank and the Royal Exchange from a commercial point of view; in the afternoon I am somewhat of an art connoisseur, and I cannot help wishing that Palladio's design for the Mansion House had been adopted rather than Dance's; that some other sculptor than Lough had been employed to produce a statue of the Queen for the Royal Exchange; that Sir John Soane had not put so much ornamentation on the Bank; and that the Duke of Wellington at the back of my hut had a pair of stirrups to his saddle! Cornhill is my Bond Street, and as I leisurely walk up it I have enough and more than enough to satisfy my curiosity. But stop—I had intended to insure my hut, and there is the Globe Office staring me in the face, and reminding me of my forgetfulness, to-morrow I will remedy my neglect. Now what do I want? Clothes? Yes; well Cornhill has a tailor's shop. Books? Effingham Wilson, and Smith Elder and Co., will supply them, and I doubt not publish my forthcoming pamphlet on the currency question. Pictures? At Leggatt's I can procure them, and at the same time does he not furnish me with an art exhibition for nothing? Watches or jewellery? Legion is the name of jewellers on Cornhill. Do my friends desire to present me with a service of plate? I will select it for myself at Savory's. Cigars, tobacco, and pipes; wines, beer and spirits? Cornhill and Birchin Lane will supply them. An outfit for any part of the world, or a uniform for the City Rifles? Silver and Co. are the men. Dressing cases, writing desks, and knick-knacks in general? They are all to be procured in my Bond Street, to say nothing of hats, boots, umbrellas, whips, sticks, wedding breakfasts and ball suppers. I can get them all, and if in all the shop windows I cannot find amusement to while away the time to my dinner hour I must be *blasé* indeed.

When I come to dinner I have a choice indeed of "Where to dine?" Within a few hundred yards of my hut I can get the best cooked chops and steaks in the eating world, and there are houses where joints are served fit for the table of Lucullus; and we can, too, in Cornhill procure a dinner of French "kickshaws" that shall not be unworthy of the *chef* of the *Maison Dorée*. But before I dine let me not forget my military spectacle. I have every evening a "hint" of the pomp and majesty of glorious war in the shape of the night guard for the Bank of England. True, the procession is not very imposing, but what there is of it is satisfactory, and it is pleasant to be allowed to get a peep of a luxury that we have to pay for. So back again to the hut. "Here they come—they march splendidly"—"here they are"—"the officer is a good-looking fellow"—"there they go"—"that sergeant is over six feet." "Now they have gone." "Very, gratifying, isn't it?"—and so to dinner.

But, exclaims my Lord Dundreary, you haven't any clubs? I beg

your pardon, but I was just thinking about dining at my club—the Gresham, only a few paces from my front door. A cosy, snug club, with a good cook, and a cellar of wine that the Reform would be glad of. So you see you are wrong. I dine at my club quietly and serenely, thankful for a good, well-dressed meal, and retire to the smoking-room with those benevolent feelings in my breast which attend on good digestion! I smoke awhile and then stroll out to look at my favourite spot sinking to slumber after its hard day's work; but my reverie is broken in upon by Smith, who proposes billiards, and in a couple of minutes we are at Stebbing's, and over our game partake of some most excellent coffee and an equally excellent anchovy toast. Billiards finished, I am instantly at home, and as I turn my back upon the world I am thankful there is a fire escape close to me. I should not need it certainly, but I feel sure that if, through my bad habit of smoking in bed, my hut caught fire, the man in charge of the machine would chop my abode to pieces before I was quite suffocated, and so—Good night!

"Stop, stop!" exclaims my reader, "where's your lawyer? You can't do without that necessary evil." "If you will do me the favour to step outside and look up Princes Street you will see, just at the corner where the moonlight is streaming, a large stone house, *that* is the office of one of the most eminent solicitors in London." "Oh, indeed; well, then, suppose your affairs get into a mess, where's your accountant?" "You can't see the house, but at the opposite corner, in Moorgate Street, there happens to be an accountant." "Ah! well then, where's your church?" "There are three close at hand!" "Oh! well, now I have you—where's your linendraper?" My dear Sir, I am a single man, but if I were married, do you suppose I should allow my wife to live in the midst of so many tempting shops? Certainly not. When I turn Benedict, I shall live in the country at some distance from a town, and not within four miles of a railway station! Now are you satisfied?" "Pretty well." "Then, again I wish you good night, and I think I may fairly conclude I have established my claim to have 'By the Bank' regarded as one of the most comfortable spots for a bachelor to reside in—mind, I said a *bachelor*. Good night!"

INDIAN CURRENCY.*

At the commencement of the present year, the Bombay Chamber of Commerce presented a memorial to the Governor-General of India in Council, requesting him to introduce a well regulated gold currency into our eastern empire. This they urged on the ground that silver

* On the Gold Currency for India. By Lieutenant-General Sir W. R. Mansfield, K.C.B. London: John Murray, Albemarle Street, 1864.

was no longer adequate for the circulation of commodities which, of recent years, had prodigiously increased among the swarming population of Hindostan. It was stated, that within the last ten years, the trade of Bombay had been trebled, while the exports and imports of Calcutta, Madras, and Bombay amounted, in 1863, to 1,060 millions of rupees. The annual produce of silver throughout the world is computed at ten millions sterling; and the proof of its insufficiency is clear from the fact that during the last six years the average annual imports and absorption of that metal in India alone have amounted to eleven and a half millions sterling, while in 1863 the import was no less than fourteen and a half millions sterling. Unless this tendency to increase be checked, all other nations are threatened with a drain of their silver currency till absolute exhaustion takes place. It must also be considered that of late years general production has been prodigiously stimulated in India, and with it an enormously enlarged circulation of commodities; therefore, silver must rise in price relatively to commodities till production itself is arrested, unless the currency be supplemented by gold as legal tender. Throughout India, silver is now the dearer of the two precious metals because it has a privilege denied to gold—the privilege of passing from hand to hand as money of account. Silver now reaches India under the disadvantage of having to travel half the circumference of the globe from Europe, while, comparatively speaking, Australia, abounding in gold, is proximate to her shores; and though it is true that gold is imported, yet it is simply as commodity, not being legally recognized as money of account. It is, however, important to observe that in the absence of gold coin, the Bombay banks have stamped gold bars with their mark, and they are thus circulated by voluntary convention in several parts of the country. This shows, so far as it goes, that gold coin would be welcome with the government stamp, since gold ingots are current as a rude substitute.

This state of things induced Sir W. R. Mansfield, a meritorious military officer now serving in India, and holding the high rank of lieutenant-general, to investigate the subject, which he has done with acuteness, impartiality, and judgment, and what invests his pamphlet with peculiar interest, is the large and accurate local knowledge of the trade of the country and of the inner life of the people. He directs his argument with great power against the views of the late Mr. Wilson when that gentleman was financial member of council at Calcutta, in 1859, in which year Mr. Wilson published a minute condemning a gold currency for India. That minute contended that a change from a silver to a gold currency would involve a breach of faith with the creditors who had contracted their obligations in the form of silver. Some other objections were raised, but they were rather verbal than substantial, derived from imagination rather than founded in logic, and they need not here be noticed. It is the "breach-of-faith" objection, so frequently reproduced at different periods of

legislation, and as frequently set aside as worthless, that demands attention.

Sir W. R. Mansfield remarks that Mr. Wilson anticipated a heavy fall in the value of gold from the discovery of additional new mines, to which fear could not assign any limit ; but, as our author remarks, "he overlooked the corresponding circumstance that silver, if stationary in the amount produced, would proportionally rise. He thus neglected to consider that, as a means of appreciating value, silver was, in truth, as uncertain as gold ; this being true, both with regard to new contracts hereafter to be made, and to those of ancient date."

This alone ought to be decisive in the present stage of the argument ; but our author places the subject in another form, and insists with force irresistible, that "the State does not, and cannot bind itself never to change the character of its legal tender, or expression of measure, which it looks on as liable to change like other institutions." It has been shown in the pages of this Magazine that what is conventionally called the "Standard of Value" has been changed not less than fourteen times in the monetary history of England, or about once in every fifty years ; and, with one exception, the change has always been one of depreciation. Money, whether composed of metal or of paper, is but the machinery of exchange, and when governments or individuals contract debts, they do not borrow a commodity of trade of a definite weight and fineness, though that may be the outward sign or form of the obligation, but they borrow a representative of value ; and if, when they pay the debt they discharge that value, the equity of the contract is redeemed, for it is the purchasing power of money over markets that constitutes its value, and, of course, a fall in commodities is a rise of money. To this Dr. Arnold refers in his History of Rome, when commenting on the monetary reform effected by Julius Cæsar.

"When the Dictator Cæsar," observes Dr. Arnold, "remedied the evils arising from a scarcity of money, during the civil wars, he was accused of making the creditor sustain a loss of nearly twenty-five per cent. ; and men are so apt to regard money as the only standard of value, that this feeling is still very general ; and he who should pay his creditor a less sum in actual money than he had borrowed, would be thought to have defrauded him of his due, although from an increase in the value of money what he paid might be fully equal in its command over other commodities to the sum which he had originally received."

It was the neglect of these distinctions that led to the gigantic fraud of restoring cash payments in 1819, when £600,000,000 lent in depreciated paper were deemed the equivalent of an equal sum in appreciated gold pounds, the legislature most erroneously concluding that Government had borrowed a special commodity of trade, instead of a conventional representative of value. The fact was, that the paper borrowed during the war, and funded in a 3 per cent. stock at 60, was

only worth ten ounces of gold, for which the lender was credited twenty-five ounces when cash payments were resumed. Here, then, "the breach-of-faith argument" led to the very injustice it was intended to avoid ; its implied profession of regard for the interests of the creditor most severely and permanently damnified the debtor, and the error arose from the notion that when Government borrowed a pound of account, it borrowed a weight of metal. The simple question that ought to have been asked at the close of the war was this : when the loans were being contracted, was it ever understood by borrower or lender that they should be redeemed in money of double value ? The answer would have been contained in the very absurdity of the question ; and the more so when men reflected that the cost of naval and military defence against invasion was really more conservative of funded than of any other property ; it was therefore preposterous to give fundholders who had received high interest for their money an enormous bonus for protecting their property against the spoliation that would have followed conquest. However, "the breach-of-faith argument" was triumphant in 1819 ; cunning men put it forward for their own selfish benefit, and simple men adopted it, and it grew into a precedent, and has influenced legislation till our times ; among others, Mr. Wilson accepted it, as one of the financial dogmas of the political party that had raised him to office, and applied it to India.

Regarding currency as a "machinery of circulation," Sir W. R. Mansfield contends "that there is no good reason why we should be irrevocably bound hereafter by an accidental form of legal tender which happens to be in existence now." It should also be considered, though it rarely enters into the mind, that when society fixes on a commodity as the standard measure of value, it unconsciously reverts to a system of barter, which it professes to have abandoned after it has adopted a system of money. The essence of a standard is immutability, but every commodity is liable from a variety of causes to constant oscillations, which, of course, negative the idea of immutability, and thus show that neither of the precious metals is fit for a standard ; and though they have been hitherto so chosen, they have proved but clumsy contrivances. When men become wiser and see a monetary error, are they never to correct it ? On this silly adherence to precedent, our author remarks in condemnation of Mr. Wilson's exclusive attachment to silver, "the community would be absolutely precluded from effecting any improvement or economy in the working of that particular machinery, organised and maintained by the community at its own charges, for the performance of particular functions, which affect alike the State and the individual." It is certain that of recent years silver has become more and more costly ; and with a tendency to increase in costliness, the supply being unequal to the increased demand for that metal in India and China, the inevitable consequence is that all debts contracted in silver must increase in pressure, that is, be more difficult to be discharged, although

the denominations of money be unchanged ; it is not the rupee but the silver, the metal contained in the rupee, which becomes more costly. To persist in Mr. Wilson's scheme, this mutation in values secretly operating, is to offer a premium to the creditor class, and thus to create the very breach of faith which Mr. Wilson's argument sought to avoid. His adherence to the letter of the contract was his mistake, betraying him into the error of not perceiving that all monetary obligations are made for value, not for the commodity which happens at the time to be the conventional legal tender. Be it remembered that a metallic standard must ever be as shifting and variable as the metal of which the standard is composed ; for which reason the coin and the commodity are always liable to come into conflict, of which we have almost daily instances before our eyes in London, though disguised under the mystic nomenclature of the "variation in the foreign exchanges," a phraseology invented to delude the public ; the simple and real fact being that the mint price of the coin no longer accords with the market price of the ingot.

There are interesting chapters in this pamphlet on the policy of France and of the United States substituting a gold for a silver currency, on the discovery of the new mines, which checked the rise in silver, and prevented the fall in gold ; and also on the opposite policy of Holland, Belgium, and India, all of which demoralized gold through a fear of its large and rapid decline in value ; this our author considers was a policy of "inconceivable rashness," since it caused the very evil it professed to dread, for silver, being the sole legal tender, or money, immediately rose in price. Before the gold discoveries, that metal was as low as 4s. 11d. per ounce ; afterwards, it rose to and even exceeded 5s. 2d. per ounce. As gold coin ceased to be legal tender in India, where the balance of trade was heavily against Europe, England was constantly parting with its gold, and draining France of silver, to pay its debts to India, and this scramble was constantly deranging the home-trade of the two countries. The evil still continues, nor will it cease till a gold legal tender in India lowers the price of silver by checking the demand.

One of Mr. Wilson's plans was to introduce a paper currency into Hindostan. This expedient, Sir W. R. Mansfield pronounces injudicious, the native population being too ignorant and suspicious to accept anything as money but solid substance, thus resembling very many in England who demand something that "rings on the table." In the Presidency towns and large cities on the sea, bond notes would be taken, but would be worthless for circulation in the interior. In fact, only a civilized people, trained in moral courage, will have confidence in a representative value ; and Oriental people insist on the intrinsic ; hence their love of bangles, and other gold or silver ornaments carried about their persons, which they can constantly see and touch, giving them the assurance of security. But though it is true

that the natives would distrust bank-notes, such as are current in England, that is, professedly convertible into gold, it does not follow that they would refuse notes of a different character—of a character that does not appear to have presented itself to the mind of either Mr. Wilson or of Sir W. R. Mansfield. Suppose that Government, as proprietor of the soil of India, issued its own notes in payment of the troops, and promised to take them back for the rent of land, which constitutes the chief revenue, would the natives distrust a currency so accredited, so firmly guaranteed? We think not; at any rate, we think it would be wise to give publicity to such a financial instrument, for if it disarmed suspicion and became current it would greatly diminish the dependence of the public on gold and silver.

On introducing a gold coinage into India, Sir W. R. Mansfield would retain the rupee as the nominal unit of account in which men reckon, whether its value were expressed in gold or in silver, as the franc has been preserved in France and the dollar in the United States; and he thinks that "gold coins, struck for the purpose of domestic exchange, should be multiples of the rupee as laid down in the Act of 1835."

The main principle contended for in this able pamphlet, which may be perused with profit by all financial students, is the necessity of apportioning money to the goods which money circulates; and since silver is inadequate to the task in the present industrial states of India, gold is recommended to remove the present deficiency of circulating medium. A truth of the gravest importance is also inculcated, namely, that debt is not a contract for a commodity but for value; and had that truth been perceived and acted upon since 1797, England would have escaped a mass of evil which is incalculable. The practical pressure of the national debt and of all private mortgages would not have been doubled by the Act of 1819. Since silver is rising in India, and must continue to rise more and more if it remain the sole legal tender in discharge of debt, every debtor must henceforth give more and more labour to buy the silver at which alone his debt can be discharged. This is the result of regarding the contract of debt as a contract to replace a commodity, without considering whether in the course of time that commodity become more difficult of acquisition; this is an unjust advantage to the creditor for which he never bargained, and a cruel plunder of the debtor—an evil that would be avoided if debt were treated as a contract for value. This is a principle long contended for in the pages of this Magazine, and it is gratifying to know that it has received the support of a writer so acute and logical as Lieut.-General Sir W. R. Mansfield.

Banking and Commercial Law.

SECURITIES; PERSONAL ESTATE OF MARRIED WOMAN IN COURT; SALE OR DEPOSIT OF CHATTELS; IMPLIED WARRANTY ON.

It is of course well known that in *law* money given by will or deed to, or otherwise belonging to a married woman, passes to the husband *juri mariti*, that is, whenever it is reduced into possession by the husband. But if it is a fund standing in the Court of Chancery, that Court exercises a right not to permit the husband to take the fund, or any part of it, until he has made what is in the opinion of the Court an adequate settlement on his wife and children; and it is in the absolute discretion of the Court to make such settlement of the whole or of any part of the fund. In exercising that discretion, the Court is guided by the circumstances, such as, whether there is already any reasonable provision for the wife and children, the conduct of the husband, or other circumstances affecting the welfare of the wife and children, regardless of any rights or claims of assignees of the husband. An assignment, therefore, by the husband of any portion of a fund in Court belonging to his wife is, in general, a very unsafe security. This appears in a strong light by a case of *Heath v. Lewis* (5 New Rep., p. 32). There a fund in Court was carried over to the account of Mr. and Mrs. Johnson, then residing at the Cape of Good Hope. In 1856 Mr. Johnson came to England, and by virtue of a power of attorney executed by his wife, borrowed £100 on the security of the fund, of course assigning it.

What the wife's power of attorney had to do with the alienation we do not understand, as a married woman cannot make any deed effectual to alienate any right she may have to personal property. However, that was one of the facts of the case.

After the assignment the husband petitioned for payment to the assignee, and for a settlement of a moiety of the residue of the fund on his wife and children, and payment of the residue to himself. The wife counter-petitioned for a settlement of the whole before any settlement was directed. Mr. Johnson became insolvent, returned to the Cape, and there obtained a divorce from his wife. Here was a question as to domicile, which is immaterial for the present purpose.

Mrs. Johnson after the divorce, which the Court held valid,

petitioned for settlement of the whole fund, and the Court held that she was so entitled; that as she was entitled to the whole fund subject to the marital right, that right being gone by the divorce, and the assignment being in the opinion of the Court no reduction into possession, the whole fund was to be settled on the wife and children, to the exclusion of the assignee.

A delivery of goods coming under the legal designation of chattels upon sale, and a delivery of goods by way of deposit upon an advance of money, fall under the same principle; and, therefore, the case we are about to cite is important to holders of chattels as securities, as well as to purchasers.

Upon this subject we may, by way of preliminary observation, say that in general where a shopkeeper sells or offers to sell goods, it has been held in some cases that that is evidence of his selling as owner, and he therefore enters into an implied warranty for title, *Ryall v. Rowles* (1 Ves. sen., 348); and again, if a shopkeeper sells goods in his shop, he sells as his own, and warrants title, *Morley v. Attenborough* (3 Exch., 500. But *Springwell v. Allen* (2 Earl, 448 n.), and see "Broom's Maxims," 768 (4th edit.), *nem. contra*.

In *Eichholz v. Bannister* (5 New Rep. 87) the case was this: The plaintiff bought of Bannister the defendant a lot of prints, and paid for them at Bannister's shop. The defendant sent the goods to the plaintiff, with the usual tradesman's invoice. A few days afterwards, the plaintiff found that the goods had been stolen, and he returned them to the rightful owner, and brought his action for the price against the defendant. Verdict for the plaintiff. A rule was then obtained to set aside the verdict, and enter a verdict for the defendant, on the ground that there was no warranty of title. On the plaintiff's side, it was argued that there was an implied warranty of title, and a failure of consideration; that is, that as the goods were not the defendant's, he sold nothing. On the other side, it was argued that mere sale did not raise an implied warranty; that there must be something more on the nature of contract or implied covenant.

But the Court discharged the rule, holding that there was implied warranty, the vendor having, by his conduct, led the purchaser to believe him the vendor to be the owner.

We give the judgment of Chief Justice Erle *in extenso*, as it is a valuable exposition of the law.

He said, "After hearing the case remarkably well argued, I am of opinion that the rule should be discharged. I decide

the case in accordance with the current of authorities which have not been disputed, viz. : that if the vendor by word says that he is the owner of a chattel, or by his conduct leads the vendee to suppose that he is, that is part of the contract. The rule is so laid down by Baron Parke, in the elaborate judgment in *Morley v. Attenborough*; and he adds, that if articles are sold in a shop professedly carried on for the sale of goods, the title to them is warranted. Here the shopkeeper, by his conduct, affirms that persons buying in his shop, buy from the owners, and the plaintiff buys there; and if the defendant was not the owner, a condition of the contract is broken, for which the plaintiff may recover." So much for the particular case. Mr. Molkes says there is no warranty of title on the sale of chattels, and there is authority on authority for that position. I adverted to May one of the authors constantly cited on this point, and he says. (page 209.) "If I take the horse of another man and sell him, and the owner takes him again, I may have an action of debt for the money; for the bargain was perfect by the delivery of the horse, and *caveat emptor*, that statement at first shocks the understanding; but I take its meaning to be, where I am in possession of a horse, and, without holding myself out as owner, neither affirm nor deny my title to it, and if you choose to give me money for it and take it such as it is, you cannot, if it be reclaimed by a third person, recover the money you have so paid. So in *Morley v. Attenborough*, a pawnbroker selling forfeited pledges gives notice to vendee of what it is he sells, and that he knows nothing absolutely about the title, and consequently if the real owner comes forward and recovers the article, the pawnbroker has a right to keep his money. So in *Chapman v. Speller* the seller merely assigned the right he had purchased of the sheriff, and in *Hall v. Conder* the defendant did not profess to sell a good and indefeasible patent right. But in almost all the transactions of sale in ordinary life the vendor exercising the highest right of dominion, holds himself out as owner and leads the purchaser to believe that he is so, and that is the case of a seller selling as his own; put by Blackstone, Nay's maxim is merely a dictum and has always been so treated. This is another case which shows the wisdom of Lord Campbell's remark in *Sims v. Marryat*, that if by the law of England the maxims of *caveat emptor* applies on the sale of personal property, the exceptions have well nigh eaten up the rule. The result is, that mere sale, unaccompanied by any circumstances, implying assertion of ownership, does not give warranty of title; but any material

cases implying an assertion of ownership, *a fortiori* an actual assertion of ownership will give implied warranty of title, so that if the ownership does not exist, and the purchaser is deprived of the property by the real owner, he may recover against the vendor. Upon the authority of the case, there can be little doubt, that if a tradesman—say a silversmith trading in selling plate, and not merely receiving it in pledge—were to deposit plate with his banker for an advance, and it turned out that the goods were not his, the banker could not recover against him, apart from any other security or contract for repayment; but if the tradesman was known to be a pledgee or deposité of plate, it would, we apprehend, be otherwise, because then there would not be clearly implied evidence of ownership, and whatever the lender's other remedies might be, he could not recover on implied warranty for title."

TRADE OF THE UNITED KINGDOM.

THE Board of Trade returns for the month and ten months ended the 31st October were issued on the 29th November, but, unlike those of several previous months, present some rather unfavourable aspects. There is a considerable decline in the value of our exports, as compared with the same month of last year, which is chiefly to be ascribed to the falling off in the exportation of cotton yarn and cotton manufactures, though there are many other articles of minor importance which assist to swell up the general total. The total declared value of exports for the month last past is £12,871,491, against £15,082,332 in the month of 1863, and £9,846,835 in 1862, which is a decrease on the former period of £2,210,841, but an increase on the latter of £3,024,656. For the ten months of the present year the total is £136,275,652 against £119,377,045 in 1863, and £103,519,269 in 1862, which is an increase of £16,898,607 as compared with 1863, and of £32,756,383 as contrasted with 1862. As regards exports, there has been an increase in linen manufactures, seed oil, and silk manufactures, but a decrease in alkali, arms and ammunition, beer and ale, coals and culm, cotton yarn, cotton manufactures, haberdashery and millinery, hardware and cutlery, linen yarn, metals, spirits, wool, woollen and worsted yarn, and woollen and worsted manufactures. With respect to imports, an increase is exhibited in clocks and watches, raw cotton, petroleum, flaxseed and linseed, wool, spirits, unrefined sugar, and wine. On the other hand, there has been a falling off in flax, hemp, leather manufactures, saltpetre, raw silk, cocoa, coffee, tea, and tobacco. With regard to provisions, there has been an increase in every description. In the case of cereals there has been an increase in oats and peas, but a falling off in wheat, barley, and beans and wheat meal and flour. The annexed tables indicate the most important changes that have taken place:—

EXPORTS.

	1863.	1864.
Coals and culm tons	844,685	752,078

Legal Miscellany.

IMPORTANT QUESTION WITH REGARD TO JOINT-STOCK COMPANIES.—JAMES V. THE ORIENTAL FINANCIAL CORPORATION.

THIS case was tried before Mr. Baron Martin, in the Court of Exchequer, on the 8th of December.

It was an action to recover money had and received by the defendants to the use of the plaintiff. The defendants pleaded never indebted.

Mr. Edward James, Q.C., and Mr. T. J. Clarke, were counsel for the plaintiff; and Mr. M. Smith, Q.C., and Mr. Robbins, for the defendants.

Mr. E. James said this was a case which he apprehended would resolve itself ultimately into a point of law for the determination of the judge rather than the jury. The action was brought to recover £100 under the following circumstances:—The Oriental Financial Corporation, Limited, was a company established last spring under the Companies Act of 1862. According to the first prospectus the capital was £1,000,000, in 20,000 shares of £50 each; the first issue of shares was to be 10,000, the deposit on application £1 per share, and £4 on allotment; the calls not to exceed £5, at intervals not less than three months. The object was to promote financial, commercial, and industrial enterprise in the East by the application of English capital. The prospectus also stated that the memorandum of the articles of association might be seen at the offices of the company, and that in the event of no allotment being made the deposits would be returned without deduction. The plaintiff, who was a solicitor, made an application to the directors for shares in the following form:—"Gentlemen, Having paid into the bankers the sum of £100 I request you will allot me 100 shares in the Oriental Financial Corporation, Limited, and I hereby agree to accept the same, or any less number that may be allotted to me, and pay the calls in respect of the shares so allotted when due; and I authorise you to place my name on the register of members for the number of shares allotted to me." The £100 was paid into the bank, and on the 14th of April last he received a letter from the secretary of the company in the following words:—"In reply to your application the directors have allotted to you sixty-five shares. The amount required upon this allotment is £325, and you have already paid £100, leaving £225 to be paid to the Mercantile and Exchange Bank, the bankers of the company, making £5 per share to be paid on or before the 23rd of April instant, or this allotment will be liable to be cancelled and the deposit forfeited." This was a condition which the plaintiff never contemplated. He never supposed that the money was to be forfeited on any given event, and therefore the defendants sought to impose upon him a term of which he knew nothing when he made the application for the shares. There could be no contract between two parties unless both agreed to its terms. The plaintiff, therefore, paid no attention to this communication. On the 4th of May he received a letter stating that the £225 still remained unpaid, and requesting the payment of it, with interest at the rate of 10 per cent. per annum from the 23rd of April. Of this communication the plaintiff also took no notice. On the 27th May the secretary again wrote, to the effect that if the money with interest was not paid by the 6th June the shares would be liable to be forfeited. The

plaintiff did not reply, and he received another letter, stating that if the money was not paid by the 30th June the shares would be forfeited, and that he would remain liable to all calls and accruing interest on the shares from the day of forfeiture. On the 5th July he was informed that, in pursuance of the resolution of the directors, the shares had been forfeited. On the 26th July the plaintiff wrote to the secretary stating that, as the allotment was cancelled, he had to request the directors to forward him a cheque for £100. On the 29th the secretary wrote that his proposition could not be entertained. The plaintiff replied on the 4th of August that he had made no proposal, but merely made a request for the £100 as the natural sequence of the act of the directors. The learned counsel submitted that under these circumstances there was no contract by which plaintiff agreed to the deposit being forfeited on any certain event, and that if the directors chose to cancel the allotment of shares there was no consideration, and the deposit became money received by the company to the use of the plaintiff. He added that he thought the best course would be to put in all the documents and leave the question, which he conceived to be one of law, to the court above.

Mr. Baron Martin said it struck him that the question was one for the jury, but if the parties agreed to refer the point to the court above he would have no objection to that course.

Mr. M. Smith said he preferred the case being left to the jury.

Mr. Baron Martin thought it was for the jury to say whether the plaintiff assented to the terms of the allotment letter, in which it was stated that if the money was not paid the shares might be cancelled and the deposit forfeited.

Mr. M. Smith then addressed the jury for the defence. He said that the Oriental Financial Corporation was a very respectable company, with a very respectable body of directors, and when started the plaintiff, like many other persons, applied for shares, in the hope, no doubt, that they would go to a premium. He received an allotment letter, in which he was informed that if the money due upon the shares was not paid the allotment was liable to be cancelled and the deposit forfeited. If he objected to those terms he ought to have done so at the time, but not having repudiated them they were binding upon him. Unless some agreement of that kind was made companies could not be formed, and shares could not go into the market. There could be no doubt that the plaintiff was waiting for the chances of the market, and that if the shares had gone up to a premium he would have paid the whole £325, sold the shares, and pocketed the premium. The shares, however, went to a discount, and then the plaintiff repudiated the allotment letter, and wanted to get back his money.

The secretary of the company, who was called, deposed that on the 14th April the shares were stationary in the market, and that on the 23rd they were at a trifling discount. They had never reached a premium since, but the discount had become greater.

Mr. Baron Martin, in summing up, said the verdict of the jury depended upon the letter of allotment, which told the plaintiff in very plain language that in the event of his not paying the £4 per share in addition to the £1 the allotment would be liable to be cancelled and the deposit forfeited. If he had written back immediately and said, "I know nothing of that term, and I won't agree to it; give me back my £100," he would have been perfectly right in doing so, because it was not a term contained

in his application. He, however, did not do so, and allowed all the time from the 14th of April to the 5th of July to elapse without making any objection. If the jury thought the truth of the matter was that the plaintiff meant to play fast and loose—to take the shares if they went to a premium, and to refuse them if they were at a discount, and that in reality he agreed to the terms of the allotment letter, they would find a verdict for the defendants; but if they thought he did not agree to those terms he had received no consideration for his £100, he was entitled to their verdict.

The jury, after a brief deliberation in the box, found a verdict for the defendants.

BANKERS AND CUSTOMERS—HOFFMAN V. THE AGRA AND MASTERMAN'S BANK.

THIS case came before Vice-Chancellor Stuart, in the Court of Chancery, on the 14th December.

Mr. Bacon, with whom was Mr. Malins and Mr. Dickinson, moved for an injunction to restrain the defendant, George Frederick Hoffmann, a merchant, at Liverpool, from further prosecuting an action at law to recover a sum of £4,105. 2s. 9d., and to recover damages for the injury claimed by the defendant for dishonouring his cheques. The case was this—The plaintiffs had a branch bank at Calcutta. The defendant was originally a partner in the house of Hoffmann and Co., of Calcutta. The plaintiffs having had a good many dealings with a Liverpool firm named Speltz, on being requested by Speltz, agreed to open a credit in favour of Hoffmann and Co., on certain terms, viz., that the credit should be divided into four letters of £25,000, each to be issued by Speltz, and enfaced by the plaintiffs. That there was to be a margin of 15 per cent. on actual cost price of produce, and that nothing should have occurred to affect materially the position of Messrs. Hoffmann and Co., or the said Speltz, during the currency of the credits, which should continue in force for six months, and be issued on such dates as the said Speltz might wish. These terms were agreed to, and the plaintiffs took and paid bills to a large amount drawn by Hoffmann and Co. on Speltz, and endorsed by him to the plaintiffs, who, however, held the same, and amounted in the whole to £71,224. 5s. The bill alleged that Speltz had stopped payment, and that the bills of lading held by the plaintiffs were insufficient to cover the liabilities. In May, 1864, the plaintiffs allowed the defendant to open an account with them, and discounted bills for him to the amount of £8,648. 15s. 6d., running on the 30th September, 1864. The bill alleged certain transactions between the plaintiffs and the defendant. The defendant, as he alleged, ceased to be a partner in the Calcutta firm, and set up business at Liverpool. The Calcutta firm of Hoffmann failed, and the plaintiffs, on September 30, 1864, resolved not to honour the defendant's cheques, having regard to the outstanding liabilities at the time. When the bank came to this resolution, the defendant's balance was £4,105. 2s. 9d., and it appeared from the evidence that the day previously the defendant had paid in to his account upwards of £1,000. It was stated in the plaintiffs' affidavit that some of the bills had been since dishonoured, and that there was due to the plaintiffs at the present time about £1,100. The ground on which the plaintiffs' equity was rested was that at law, the

bills being pending at the date of the action, the plaintiffs could not set off their claim.

Mr. Greene and Mr. Bristowe, for the defendant, contended that it was unprecedented for a banker, having money of a customer in his hands, to refuse to honour the customer's cheques simply because there were bills running. The plaintiffs had ruined the defendant, and he was entitled to have the damage he had sustained ascertained by a jury. They cited "*Rawson v. Samuel*."

Sir John Stuart—I do not think I can, as asked, dismiss this motion. This bill in equity states that an action was brought against the plaintiffs by a customer of their bank, in which he insists that he is entitled to recover a balance of money standing at their bank upon a banking account, and the plaintiffs also state that notwithstanding such balance, there is on the part of the defendant a much larger liability to the bank; and they insist that they (the present plaintiffs) ought to be allowed to hold this balance until the defendant has discharged his liability to the bank. That is a fair question to be tried in this court. What the defendant in equity insists upon is his right to go on with his action, and have the question tried at law. The plaintiffs in equity have filed their bill, impeaching altogether the legal right of the defendant at law, and stating the peculiar nature of the liabilities, and alleging that they have not been discharged, and according to that state of things the court is, I think, bound to grant the injunction which has been asked for. His Honour then considered that the case of "*Rawson v. Samuel*," which had been cited, had nothing to do with the case made for the defendant, and he also stated that the plaintiffs, in not filing their bill sooner, left no room for complaint on the part of the defendant, because in October the heavy liabilities of the defendant to the bank might be liquidated before the action could be tried. Some or one of the bills having been dishonoured, the plaintiffs had come to this court, and were entitled to an injunction. He could not avoid observing that he thought it was rather a sharp thing on the part of these bankers to take the money of their customer on the very day upon which they had made up their minds to stop the payment of his cheques. If it should hereafter be considered that the bankers were not justified in withholding payment of those cheques, then the amount of damages would have to be considered, but at this time it was quite impossible to say what those damages were.

Reports of Joint-Stock Banks.

SCINDE, PUNJAUB, AND DELHI BANK.

THE third half-yearly meeting of the proprietors in this bank was held on the 29th November, at the London Tavern; Mr. W. P. Andrew in the chair.

Mr. Craig, the manager, having read the advertisement convening the meeting, read the following report:—

"The bank has now branches in operation at Bombay, Kurrachee,

Lahore, Umritsur, and Calcutta, and is represented by agencies at Madras, Hong Kong, Ceylon, Sydney, and Alexandria. The Lahore and Umritsur branches were opened on the 6th April and 2nd May respectively; the Calcutta branch on the 18th July. The result of the operations of these branches cannot be brought into account before the 31st December next. The shares last issued at £2 per share premium were taken up and paid upon to the extent of 7,382 out of the 12,500 offered to the shareholders, and, according to advices by last mail from the Bombay branch, the 1,000 shares placed at the disposal of that branch had all been allotted to the public at £5 per share premium, which premium, together with a deposit of £2 per share, had been paid. The total amount realised by premiums, viz., £24,674. 1s. 6d., has been carried to the reserve fund. No returns have yet been received from the other branches as to the disposal of the shares appropriated to them. The accounts for the half-year ending 30th June last, as per annexed statement, which have been duly audited, show a gross profit of £26,613. 12s. including balance brought forward 1st January, 1864, after deducting interest on current and fixed deposits.

"From this sum £9,270. 9s. 4d. has been deducted for current expenses, and £12,433. 8s. 1d. for rebate on bills and commission on acceptances running, including a due provision for bad and doubtful debts, leaving a balance of £4,909. 14s. 7d. at the credit of profit and loss, which the directors propose to carry over to next half-year."

Balance-sheet made up to 30th June, 1864.

<i>Dr.</i>		<i>LIABILITIES.</i>	
Capital authorised 50,000 shares £20 each £1,000,000

The Chairman, in moving the adoption of the report, said there was no necessity under their charter for calling the shareholders together, but the directors had thought it better to do so, and lay the state of their affairs before them, particularly as it was not their intention to propose a dividend. The progress of the bank had been in most respects satisfactory. The subscribed capital had increased to upwards of £900,000, the paid-up capital to nearly £400,000, and the reserve fund to nearly £25,000. At the last meeting the shareholders amounted to 450, and they were now nearly double that number. Looking at the peculiar position of the bank, that was very encouraging. (Hear, hear.) But they might say, "Looking at your resources, why do you show us such very small profits, and pay us no dividend at all?" (Hear, hear.) He would very soon answer those questions. The capital at their disposal had been very small, and the greater portion of it had been *in transitu*, in going out of this country. It was never intended that the capital should be worked in this country, but that it should be used in stimulating commerce in India. The expenses there had been very great, and there had been at present no returns from a large portion of their outlay. They had established five branches in India, and only two of them were remunerative, and they were at Kurrachee and Bombay. It had been their policy to withhold their hands from business unless it was of a safe character. (Hear, hear.) It had been the aim of himself and his colleagues to encourage a safe and stable business, rather than do a speculative and dashing business (hear, hear), and as long as he was a director of that company he would set his face against any alteration of that policy. (Hear, hear.) They were aware that the financial position of Bombay was at present very much inflated with speculation, in consequence of which the board had sent instructions to their managers to hold their hands, and engage in no business except what was of a safe and profitable character. They might easily have declared a dividend if they had chosen to engage in rash speculations, but they had preferred pursuing a safe and cautious policy, which, he was convinced, would in the end result in the establishment of an institution which would prove not only of the

most stable but of the most profitable character. He considered that if they had anything to pride themselves on, it was their courage in withholding a dividend when it was inexpedient to declare one. If they had only patience to let the bank go on for a few years, they would reap the profits of the course they were now pursuing. He regretted that they had declared a dividend so early in their career as they had done, but still he did not see that they had any cause to regret it, for the money had been fairly earned. Since then circumstances had been very adverse, the rate of interest had been high, and business had consequently been curtailed. He felt, however, sure that from the connection of the bank with the railways in India, there would be a very large ultimate profit. They had been at great expense in establishing the branches in Upper India, but he was satisfied that they would prove very remunerative. They would have already seen by the public press an account of the magnificent durbar which was held by the Governor-General of India at Lahore, and they would observe that the next important duty that Sir John Lawrence discharged was the opening up of another section of the Punjaub Railway from Lahore to Moultan. In reference to the railways, he was happy to state that very large payments on their account would pass through the bank. In the first place, he might state that they were the bankers of the Punjaub Railway, which was now paying in to its credit £30,000 a month; and when the line was further opened that amount would be much greater. Then there was the Delhi Railway, the contract for which amounted to the gigantic sum of five millions; and he was happy to inform them that the financing of that great operation would be speedily confided to the bank. (Hear, hear.) Looking at the severe manner in which their accounts had been made out, and that the expenses of the establishment of the branches had been paid out of revenue and not charged to preliminary expenses, as, in his opinion, they ought to have been, he thought there was every prospect that their future operations would be very successful. If it had not been for the manner in which their accounts had been placed before them, and for a bad debt (the only one they had to complain of), they would have been in a position not only to have declared a dividend, but to have carried a considerable balance forward. Looking at the rebate account, he felt confident that the dividend was only suspended. Their abstinence on the present occasion would be highly favourable to the future prosperity of the company, for it would not only enable them to carry forward the rebate and commission, amounting to £10,000, but inasmuch as that all the branches would speedily become productive, he looked forward to their being able in May next to declare a dividend similar to what they did before. He had a large stake in the bank himself, and had the most complete confidence in its success. Other banks had received credit for declaring a dividend, but he thought that the directors deserved more credit for their abstinence in not declaring a dividend. In doing so they had consulted the interests of the shareholders, and at the same time increased the stability and prestige of the bank. (Hear, hear.) He moved the adoption of the report.

Mr. W. F. Russell, M.P., seconded the motion, and said he agreed with what the chairman had said, not only with regard to the report, but also with regard to the declaration of the dividend in May last. He thought they ought not to have declared it then; but having done so they could not do better than follow the policy that had been laid down by the chairman, and he believed that if that were done the bank would become a most flourishing institution.

A Shareholder asked whether they did not declare a dividend of 5 per cent in May last?

The Chairman said they did.

The same shareholder observed that they declared a dividend of 5 per cent in May, and immediately afterwards issued new shares at £2 premium. He thought they were not worth £2 premium. (Hear, hear.) He would like to know how many shares the directors took up. (Hear, hear.)

The Chairman said he took up the full complement of his shares, and his colleagues did the same, and they had kept them. (Hear, hear.) When those shares were issued at £2 premium they were quoted at £4 in the market. (Hear, hear.) With regard to the dividend, it was only recently that they had decided on not declaring one. Had he been asked a month ago he should have said that there would have been a dividend.

Mr. Hedgcock said he took a very different view from the hon. proprietor. He thought their prospects were very encouraging. Out of 12,500 shares 7,889 had been taken up by the shareholders. Was not that satisfactory? (Cries of "No, no.") The fact was, the report did not go far enough, for it might have stated that the capital paid up was £392,000, that the gross profits had been £26,600, less rebate and commission.

A Shareholder (indignantly)—Do not talk such stuff. If you take the balance brought forward from the previous half-year, it will reduce the profits to £21,000, and then take the current expenses and the rebate, and you will find that they amount to more than that; so that the business of the bank has been conducted at a loss.

Mr. Hedgcock continued—They could not blame the directors for having made no more profit out of a capital of only £190,000.

The indignant Shareholder—We do not blame the directors; we could not expect more. Look at the expenses of establishing the local branches.

Another Shareholder asked whether the last dividend was paid out of capital or profits.

The Chairman—Profits, of course. What a question to ask!

Mr. Conybeare said nobody could charge him with having come to a foregone conclusion. The report was unsatisfactory to them all; but still he had great faith in the concern. (Hear, hear.) No one could charge the directors with unfair dealing. (Loud cries of "No one is charging them with unfair dealing.") But this country had gone through a great crisis in the money market. (The speaker was here interrupted by loud cries of "Question, question.") He was next heard to say that he had the greatest confidence in the directors, and their conduct had confirmed his confidence in them and their sterling, steadfast honesty. (Hear, hear.) The chairman mentioned that they had had a loss by a bad debt: he should like to know the amount of it.

The Chairman said it was £1,900.

Mr. Conybeare said he was glad to see it was so small, and he should like to know which bank could show so small a loss. He had, therefore, great confidence in the directors, who had the honesty not to declare a dividend. It had been stated that the Bank of Hindustan had made a boast that they had the Oriental Bank Corporation at their back, which could do all their proper business in India for them, and that, therefore, this bank could not stand against them. He should like to have some information as to whether

there was any truth in such a statement. He then deprecated the shareholders acting unfairly to the directors, and expressed a hope that the next time he met them he should have the pleasure of congratulating them on the way they were making through the troubled waters.

The Chairman, in reply to a shareholder, said they expected great profit from the financing of the five millions from the Delhi Railway, and also from the business of the Punjaub Railway, which would be opened in January next. They had built a house at Kurrachee, and purchased a house at Lahore. The house in King William Street was not freehold, but they occupied the whole of it.

Mr. Henry said that the general expenses were very heavy. In December, 1863, they were 40 per cent. on the profits, and in June last they were 42 per cent., or equal to the working of a railway. It was very large, and he thought ought to be explained.

The Chairman said they included the expenses of the establishment of the branches, and those of the manager's, which ought properly to have been put to preliminary charges. The managing director had been out there to establish the branches, which at present were unproductive. They had had to pay the salaries and other expenses of officers sent from England from the day they sailed, and they ought to be put down to preliminary expenses; but the auditor thought they might be charged to revenue, and in deference to his opinion it was done so. He should like the shareholders to ask any questions they chose, for they would show that the position of the bank was in a better condition than it looked, although they were not required to give them a detailed statement of their affairs then, as that more properly belonged to the annual meeting.

Some confusion arose in consequence of two shareholders rising to speak at the same time, and the one the chairman decided against refusing to sit down.

Mr. Edward King at last obtained a hearing, and reminded the meeting that that conduct was not banking. (Hear, hear.) He was not an old man, but he was old enough to have been in a bank which did not declare a dividend at first, but was now worth £300 per cent. premium. (Hear, hear.) He approved of the conduct of the directors, and was convinced that no good ever came of patching up a bad concern with dividends. (Hear, hear.)

Mr. Henry wanted an answer to his question. How was it that so large a sum as £7,000 could come into general expenses, in addition to £8,000 preliminary expenses. He also wanted to know if there were £20,000 of calls in arrear.

The Chairman said that with regard to the first question he had answered it, and as to the last, there were no arrears of calls—they had all been paid up.

Mr. Innes said that the chairman had taken credit for charges being put down to current revenue instead of to preliminary expenses. It appeared to him that the accounts should be presented in a correct manner, and that which belongs to preliminary expenses ought to be placed to its proper charge, and prospectively he should like to see all items charged under their proper heads, and then mercantile men would be able to judge of the condition of the bank, otherwise they never would be able to do so.

The Chairman said—With regard to keeping their accounts, they had placed them in the hands of the very efficient firm of Coleman, Turquand,

Youngs and Co. It was an advantage to have men independent of the bank, and of the known public character that they were, keeping their accounts. If they had been made out severely it was very much in deference to their views. They would have been made out more favourably if it had not been for the intervention of those gentlemen. Nevertheless he approved of their intervention.

Mr. Minton objected to preliminary expenses being increased after they had commenced business.

The Chairman said—If they were to go on putting down the expense of establishing branches to revenue they would not have a dividend for years to come. By the last mail they heard that the 1,000 shares sent to Bombay had been disposed of. They had no information with regard to the shares sent to the other branches.

A shareholder asked whether it was contemplated to make any call on the shares upon which they had paid £2 premium.

The Chairman said it was not intended at present.

Colonel Wood asked whether, at the next meeting, the dividend would be declared for the whole year?

The Chairman hoped it would be for the year.

Colonel Wood said that was satisfactory.

A cordial vote of thanks to the chairman closed the proceedings.

MAURITIUS LAND CREDIT COMPANY, LIMITED.

The first ordinary general meeting of the shareholders was held on the 30th November, Major-General Burn in the chair, at the company's offices, 25, Fenchurch Street, for the usual business of an ordinary general meeting, and for the purpose of altering the month prescribed by the articles of association for the holding of the annual ordinary general meeting, and for the purpose of passing a special resolution to add to the 6th paragraph of section 79 of the articles of association the words, "but they shall not invest any money of the company in the purchase of shares of the company."

The Chairman, in moving the adoption of the report, which we have already published, observed that the reasons why the business in the Mauritius did not commence before July was that the new mortgage ordinance was not in force till the 1st of that month, and that other companies having started on the same principle as that one, the planters waited to see what terms would be offered by each company. Matters were, however, proceeding satisfactorily. A great many applications for loans were now under consideration, and as soon as the company was in a position to place a further amount of debentures the profits would be greatly increased. Each £100,000 of additional debentures placed would yield a profit of 12 per cent. in addition to the profits already made; and thus the directors would be enabled to declare a satisfactory dividend, and to add to the reserve fund.

The report having been adopted, and some routine business having been disposed of, the meeting was made special, when the following resolution, moved by the Chairman, and seconded by Mr. James Du Buisson, was passed:—"That the ordinary general meeting of the company be henceforth held in the month of August or September at the option of the directors, and that the following words be added to the 6th paragraph of section 79 of the articles of association, 'but they shall not invest any money of the company in the purchase of shares of the company.'"

NATIONAL FINANCIAL COMPANY.

THE ordinary meeting of the shareholders of this company was held on the 30th November, at the London Tavern; Mr. M. C. Seton in the chair.

The following report was read :—

“The directors have much pleasure in meeting the shareholders at this, the first ordinary meeting, and submitting a statement of accounts for the half-year ending the 15th of the present month. By the constitution of the company the directors are called upon to convene a meeting within twelve months after commencement of the business; but having regard to the satisfactory progress of the company, and the present position of mercantile and monetary affairs, the directors have considered it advisable, in the interests of the shareholders, to hold the meeting fifteen days after the date up to which the accounts are made up, this being the earliest period practicable. From the accompanying balance-sheet, which has been duly audited and certified by the public accountants and auditor appointed under the articles of association, it will be seen that the profits amount to £57,578. 0s. 5d. The directors recommend a dividend at the rate of 20 per cent. per annum, together with a bonus of £1 per share, the bonus to be added to the paid-up capital, making in all £6 per share paid up; this will be equivalent to a payment of 60 per cent. per annum upon the paid-up capital, the dividend being in future payable upon £6 per share. After setting aside £21,000 to a suspense account for profits not yet realised, writing off the whole of the preliminary expenses, and providing for the commission payable to the management, there will remain a balance of £12,746. 0s. 4d. to be carried forward to next profit and loss account. These profits might have been considerably augmented, but the directors have declined numerous important transactions, for while these offered large profits they required the company's acceptances to be given for amounts for which the present paid-up capital was wholly inadequate, and which might have necessitated making calls; and, although ample security might have been taken in each case, the directors preferred confining the operations of the company within the limits of the amount at present paid up. Having in view the extension of the company's operations, and the advantage of a large subscribed capital, the directors have resolved to issue 5,000 new shares, with the same amount paid, viz., £6 per share. These shares, in the first instance, will be offered to the shareholders on the register on the 21st December next, in the proportion of one share for every two then held. Financial companies, until recently, were unknown in this country, and, like joint-stock banks, will require time before the public will fully appreciate their capabilities and the great facilities they render to industrial and other enterprises. But it may not be without interest to the proprietors for the directors to remind them of the many millions of capital which have, through the agencies of such companies, been lately diverted into profitable channels, and the large dividends which have consequently accrued. Whilst the directors see no reason to doubt the future profitable working of this company they desire to impress upon their shareholders the advantages and security of having an ample reserve fund, and at the same time that the profits of a company like the National

Financial must be materially influenced by the general welfare and prosperity of the country."

The Chairman—It gives us much pleasure to meet you at the earliest opportunity since the organisation of the company. You have the report of the result of the six months' operations, and I trust that it is satisfactory to you. (Hear, hear.) I have heard only one objection to it, viz., that we have made too large profits; but it is probable this will not appear a very serious objection to you, when you consider that we have made them without incurring any risk, without making ourselves liable for anything, or giving a single acceptance—(hear, hear)—and without having lost one farthing. (Cheers.) We have made these large profits legitimately, by fostering commercial enterprises which, if properly managed, will be, we believe, profitable to the shareholders who have entered into them, and advantageous to society at large, for they are all of them sound commercial enterprises. I beg to move the adoption of the report.

Admiral Burney (director) seconded the motion, and congratulated the meeting on the splendid balance-sheet the directors had been enabled to lay before them. The result was most gratifying, because if they had not succeeded they would doubtless have had lots of blame, and now that they had he doubted whether they would receive very much praise. The business by which they had obtained these large profits was legitimate in all respects, involving no risks whatever, despite the slur of the leading journal, as it was called, but which from the manner in which it prostituted its influence to serve its own purposes, was a disgrace to the country, and would receive, he was sure, at the hands of that meeting the condemnation which it deserved. (Cheers.)

Captain Gossett felt that the thanks of the shareholders were due to the directors for what they had accomplished, but objected to the proposal of issuing new shares while only £6 each was called up on the existing £50 shares. He considered that one-fifth of the nominal capital should be paid up, that was £10 on each share, before they increased their capital by a new issue. He held 100 shares, but would not add to the number by taking up his quota of the proposed new shares, if issued.

Mr. Swann expressed his concurrence in the views of the last speaker, which, he said, were shared in by a very large proportion of the proprietors. Shareholders objected to increase their liability to future calls by taking up new shares, besides which the multiplication of shares depreciated their value in the market. He observed there was no charge in the accounts for directors' remuneration. The articles, he believed, provided that the shareholders should fix that remuneration in general meeting; and considering that it should be proportionate to the profits made, he thought it should be fixed from time to time, and given in the way of a bonus. He proposed, in consideration of the handsome dividend, that £1,000 should be voted to the directors on the present occasion for their past services. In regard to the profits, he of course did not object to receive 60 per cent. on his capital, but he was most anxious that the directors should avoid all risks in their endeavours to obtain such results. For himself he would rather have a safe 10, 15, or 20 per cent. than 60 per cent. if it were earned by risking their capital. (Cheers.)

Mr. J. T. King urged that the directors should explain the reasons why they proposed to issue new shares in preference to making a call. He could understand that it might be important to increase the proprietary.

A Shareholder thought it might be wise to increase the number of the shares, so as to place the company on an equality with competing financial institutions.

A Shareholder could not see that the shares would be at all depreciated by increasing their number—of course within reasonable limits, and he believed that many shareholders would prefer taking up new shares to paying a call. He could not understand on what grounds the writer in the "*Times*" said that they could not have made such large profits without accepting bills, and he was glad to see the letter of the secretary, published in the papers, declaring authoritatively that the company had never accepted a bill. [The Chairman—it is quite true, sir.] As a merchant he thought that 200 per cent. per annum profit was something so gigantic as to be almost beyond belief; but they had heard that it had been earned in bringing out new commercial companies, and that was a very different thing from the ordinary trade of a merchant.

The Chairman, in reply, remarked that if the board had made a call without the knowledge or consent of the proprietors, it would have been necessarily compulsory on them all, although it might not have been convenient or agreeable to all; but when a fresh issue of shares was made, it was voluntary on the part of the proprietors whether they took them up or not. (Hear.) The board, however, considered this entirely a shareholders' question, and would be bound by the opinion of the meeting. With regard to the necessity for increasing the capital, the directors saw prospects before them, if they had more capital, of using it advantageously. He did not mean to say that the profit would be as great as that reported to-day; for 200 per cent. perennially was something like Aladdin's lamp, and could not be expected. But there were other projects on the tapis which this company might be called upon to assist in bringing out, and if commercial enterprise went on at the same rate that it had done of late, the directors saw their way to the possibility of employing further capital at great profit and without risk, as they had employed the capital which had already been entrusted to their management. (Hear, hear.) He thought there was some force in the objection that there was more risk in having £50 shares with only £6 called up than in having a larger sum called up and less liability remaining; but that might be met by reducing the nominal amount of the shares and doubling their number. The board would, however, take the question into consideration as to the advisability of making a call instead of issuing new shares. As he had already stated, they had made the profit realised during the past six months without any risk of capital.

A Shareholder, who said he had every confidence in the directors, thought it better to take their recommendation as to the mode of raising the additional capital. (Cheers.)

The motion adopting the report was then put and carried unanimously.

Mr. Swann moved that £1,000 be voted for the directors' remuneration.

Mr. King suggested that the remuneration should not be less than was authorised by the deed, viz., at the rate of £3,000; that was £1,500 for the half-year, and he would even go so far as to propose a bonus in addition. He moved that the remuneration be, for the past six months, at the rate of £3,000 a year.

Mr. Barker seconded this.

Captain Gossett asked how many directors there were. He observed that the deed of settlement provided that there should be an executive committee, who might be paid 25 per cent. upon the profits after the shareholders had divided 5 per cent.

Another Shareholder believed that the remuneration of the executive committee was a matter apart from that of the remuneration of the directors as a body.

The Chairman replied that there were ten directors. The question of the remuneration of the directors was one entirely for the shareholders, and he would rather not say a word upon it.

Captain Gosset moved as an amendment that the remuneration be at the rate of £2,100 a year.

Admiral Burney would, if there was the least division of opinion, prefer the lower sum.

In accordance with what appeared to be the general wish of the meeting, Captain Gosset ultimately withdrew his amendment, and the original motion was put and carried *nem. con.*

The Chairman expressed his thanks, and stated that by the deed of association two of the directors retired at that meeting, but were eligible for re-election. The board, however, thought it better, as they had not been elected by the shareholders in the first instance, to place their resignation in the hands of the present meeting, to deal with it as they might think fit. If they were re-elected they would do their best to serve them as they had done.

Mr. Swann thought 200 per cent. was too good a thing to allow them to think of changing their directors (cheers and laughter) and he proposed that the present directors be re-elected, viz., Mr. M. C. Seton, Admiral Burney, Major Gowley, and Messrs. Pappa, Spicer, Kisby, M'Marster, and E. Clench. This was agreed to unanimously; the auditors were likewise re-elected, and 50 guineas awarded to them for their services.

A vote of thanks to the chairman and directors, and a similar compliment to the managing director, the secretary, and other officers, concluded the business.

LONDON AND SOUTH AFRICAN BANK.

A GENERAL meeting of the shareholders in this bank was held at the London Tavern, on the 30th November, to receive a statement of accounts, and for other business; Colonel Jas. Holland, deputy-chairman of the bank, in the chair.

The advertisement convening the meeting and the minutes of the last meeting having been read by the manager,

The Chairman said that before beginning the business of the day, he must mention that their esteemed chairman was unable to occupy his post on the present occasion, in consequence of domestic bereavement, and he was sure that he would meet with the sympathy of all present. (Hear, hear.) There was not much to present to the shareholders in the way of accounts; in fact nothing but what had already been laid before the meeting. As the shareholders were aware, it had not been their custom hitherto to hold half-yearly meetings, but some months ago there was considerable agitation in regard to this bank, induced by certain rumours, which he was happy to say were quite unfounded—(hear, hear)—and a desire was expressed that their meetings should be held half-yearly. Unfortunately, however, they were so hampered by their deed, that they were obliged to give four months' notice for holding a general meeting, and that was the

reason why there had been such a delay before holding the present one. The circular which had been sent out alluded to a notice which had been given that it was the desire of several of the shareholders to bring forward a resolution, and to discuss the propriety of removing Mr. Symons from his office of auditor of this company. He (the chairman) had now to inform the shareholders that Mr. Symons had already sent in an unconditional resignation. The first business they had to do was to confirm the minutes of the last meeting. (This having been done, the chairman continued.) Before making any remarks upon the business of the meeting, he wished to mention two incidents to the shareholders, namely, the resignation of one of the board, Mr. Macmaster, and also that of Mr. Etheridge, their manager. That gentleman had served them zealously and faithfully for three years; his talents were well known, and his high sense of honour was manifested in the fact, that when he was offered the position of manager at another bank, with a salary double that he received from the board, before thinking of accepting it, he went to the directors and placed himself entirely in their hands, saying, "Gentlemen, if you think I ought not to accept this offer, I will not do so." (Cheers.) The board thought that they could not stand in his light, and accordingly they offered no obstacle in the way of his advancement—(hear, hear)—and appointed in his place Mr. James, who had been their accountant at Cape Town for some time, a gentleman who bore a high character, and who, he was happy to say, was doing his best to maintain the high character which he had previously enjoyed. With regard to the accounts generally, he had really little to add beyond what was said by his predecessor at the last meeting. The actual sum they divided was a trifle below what they had done previously, and he had some hopes—although he did not like to commit himself to any specific promise where so much depended upon the state of mercantile affairs at the Cape—that they would be able to make it good at the end of the year. (Cheers.) One of the most significant signs by which they might judge of the prosperity of a new bank was the condition of the item "deposit accounts;" and he would read the figures of the deposit account as it stood for the last two years, and as it now stood. In June, 1863, the amount of the deposit account was £228,000; in December of the same year, £250,000; in June, 1864, it was £305,000; and it now stood at £360,000. (Cheers.) He thought that that must be considered a very satisfactory result—(hear)—because South Africa was not a country like India, where any very rapid development of such institutions took place. It was a steady and rather slow-going country, and the bank itself was a steady hard-working institution, making no attempt at dash, but endeavouring to avoid bad business and bad bills, and he believed that by so doing they would ultimately become a very prosperous concern. There was one item in their accounts which he might call their attention to, because it indicated that amendment was wanted in one portion of their charter. He alluded to their note circulation, which was not what it ought to be. Here again their charter hampered them, because having eight or ten branches at the Cape every note issued at any of the branches was made payable on demand at each of the other nine or ten branches, in consequence of which they were compelled to keep at each branch sufficient money to meet the liability of the whole of the branches, and that was a position in which their rival bank, which was started under limited liability, was not placed. The attention of the board had been directed to that point, and they

proposed to apply for an alteration in the charter, with the intention of making notes payable only at the branches at which they were issued, the grounds on which they were about to make the application being so just and reasonable that there was no reason to suppose that any objection could be offered to it. He could only add that he should be happy to answer any questions or give any information that the shareholders might desire.

A Shareholder inquired whether it was the intention of the directors to follow the valuable precedent they had set, and to call the shareholders together half-yearly instead of annually.

The Chairman said that they were in a difficulty in having to give four months' notice. It was a very expensive process to get the charter altered, and they were anxious to avoid incurring more legal charges than were absolutely necessary. He should be glad to know whether it was the general wish of the shareholders to hold a meeting half-yearly. (Such a wish having been generally expressed by the meeting, he continued.) In that case he thought there was a way of getting over the difficulty without going to the government for an alteration of the deed, and he gave notice that they would hold another meeting next November, thus giving twelve months' instead of four months' notice. That notice could be repeated, so that in effect their meetings in future would be half-yearly. He had nothing more to do except to thank them in the name of the board for their attendance that day.

A Shareholder stated that on the last occasion of their meeting he found fault with the slow progress of the directors; he designated them the slow coach, and thought that it was necessary to throw a little more energy into the business. Although he had great faith in the directorship, he had come there to propose certain resolutions in reference to a reformation in the mode of conducting their business; but from a consultation with several gentlemen it was apparent to him that his resolutions would not meet with the accord of the meeting, and he should not therefore propose them. (Cheers.) He complained, however, that the scale of remuneration for the directors was too high.

The Chairman explained that the board had never hitherto taken the full rate of remuneration of £3,000 unless there was an £8 per cent. dividend, and should not do so if the dividend did not reach that amount in the present year. (Cheers.)

Mr. Nunn stated that he had received information that one of the directors had overdue bills at the bank, and inquired whether any loss had been sustained from bills of that character?

The Chairman pointed out that the report of the auditors stated that they had examined the balance-sheet and annexed profit and loss account, with the books, vouchers, and securities at the head office in London, and with the detailed returns and balance-sheet, and that they certified as to their correctness and satisfactory character. With respect to overdue bills, it was true they had bills of that character to the amount of £800 held by one of the directors, but whether that was an exaggerated or extraordinary amount they were able to judge—("No, no," and cheers)—particularly when they had ample security for the full amount. He might also say that the director in question had resigned.

A Shareholder inquired if an *ad interim* dividend which might be declared, could be declared by the shareholders; or if not, whether it ought not be delayed till the annual meeting?

The Chairman replied he was afraid that they could not do that; and, moreover, the board were of opinion that as soon as they had the accounts quite clear, and they found that they could declare a dividend, it was more satisfactory to the bulk of the shareholders that the dividend should be declared and paid as soon as possible. (Cheers.)

In reply to a further question,

The Chairman explained that the directors only declared the *ad interim* dividend; the shareholders themselves declared the dividend at the annual meeting.

A Shareholder inquired whether there was any probability of a further call being made.

The Chairman—None whatever. In fact, as the whole of the capital had been paid up, the only mode of increasing the capital would be by a new issue of shares, which would only be done after very considerable deliberation and with ample notice. There was no intention of doing anything of the kind at present. He also stated, in reply to a question from a shareholder, that it was not the intention of the directors to fill up the vacancy occasioned in the board by the resignation of Mr. McMaster; that they considered the board quite large enough, and that they proposed not to fill up vacancies that might arise until it was reduced to its legal minimum of eight or ten. (Cheers.)

On the proposition of the Rev. R. C. Gazeley, seconded by Mr. H. Leatherdale, a cordial vote of thanks was given to the chairman and the board of directors for their able management of the bank, and the proceedings terminated.

HIBERNIAN BANK.

THE annual general meeting of the shareholders in this bank was held on the 5th December, at the bank, Castle street, Dublin; John Rafferty, Esq., governor, in the chair.

The following statement of accounts and report were submitted to the meeting:—

Abstract of the Affairs of the Company, to 31st October.

<i>Dr.</i>									
Paid-up capital	£250,000	0 0
Amount due on current and other accounts and deposit receipts	593,268	9 4
Balance	98,126	17 7
								£941,395	6 11
<i>Cr.</i>									
Bills discounted	£548,820	10 1
Loans on government stock and other securities	201,228	4 6
Branches and agencies	52,733	13 7
Bank premises	8,654	14 6
Cash and government stock and debentures	129,958	4 1
								£941,395	6 11

							<u>£108,876</u>	<u>17 7</u>

Balance 31st Oct., 1863, £88,033. 1s. 11d.; less dividend paid	£79,283	1	11
Dec., 1863, £8,750	27,593	15	8
Net profit for year ending 31st Oct., 1864		<u>£106,876</u>	<u>17 7</u>

RESERVE FUND.

Present amount	£79,283	1	11
----------------	-----	-----	-----	-----	-----	---------	---	----

"Your board submit the foregoing statement of the accounts for the past year, and feel satisfaction in referring to the result, which, although in some degree attributable to the enhanced value of money, is an evidence that your bank has maintained its high position, notwithstanding the very active and increasing competition in banking in this country. The accounts now presented show a net profit on the year's transactions of £27,593. 15s. 8d., out of which a dividend of 3½ per cent. for the half-year ended 1st May last has been paid, leaving a sum of £18,843. 15s. 8d. which the directors recommend to be disposed of in the following manner, viz., £12,400 in the payment of a dividend at the rate of 10 per cent. per annum (free of income tax) for the half-year ended 1st November last, £5,000 to be set aside as a provision for bad and doubtful debts, and the balance, £1,343. 15s. 8d., to be carried forward. Your board, anxious to avail themselves of every favourable opportunity of forwarding your interests, and extending your sphere of usefulness, have, since the last meeting, at the instance of gentlemen of position and local influence, established branches in Kilkenny and Tullamore, and in a few days another will be opened in the flourishing assize town of Naas, which up to this has not had the advantage of any banking establishment, from all of which your directors are justified in expecting very profitable results. In making this announcement, the directors take occasion to observe that, in order to maintain the efficiency, to promote the prosperity, and to preserve the confidence so long enjoyed by this useful company, no effort on their part has been wanting, and they rely with confidence on your co-operation to assist, as well in increasing the income as in promoting the general prosperity of this purely Irish establishment, an establishment founded on capital realised by Irish industry, and affording banking accommodation in Ireland to its traders and merchants. To the vacancies on the directory, caused by the resignation of Mr. William O'Brien Butler and Alderman Moylan, your board recommend for election, on Thursday, the 15th instant, Mr. P. Byrne Darcey and Mr. James F. Lombard, gentlemen well calculated, from their high mercantile position and commercial habits, to advance the business and promote the interests of your company."

The report having been read, the following resolutions were proposed:—

Moved by the chairman, seconded by Alderman Campbell, and resolved: that the report now read be received, adopted, and entered on the minutes.

Moved by the chairman, seconded by Alderman Campbell, and resolved: that a dividend for the half-year ended 1st November last, be paid, at the rate of 10 per cent. per annum (free of income tax) on the paid-up capital of the company.

Moved by the chairman, seconded by Thomas Dillon, Esq., and resolved: that the books for transfer be closed from this day until the 12th inst., and that the dividend be payable on and after said day to all holders of the company's stock on this day.

Moved by Alexander Comyns, Esq., seconded by Edward Nolan, Esq., and resolved: that the marked thanks of the meeting are due and hereby given to the board of management, the secretary, and assistant secretary of the bank, for their exertions in promoting the interests of the establishment.

Moved by Alexander Comyns, Esq., seconded by Alderman Tarpey, and resolved: that the thanks of the meeting be given to John Rafferty, Esq., for his proper and dignified conduct in the chair.

NEW ZEALAND BANKING CORPORATION.

THE second half-yearly meeting was held, on the 6th December, at the offices of the company, in New Broad Street; Mr. S. J. Russell presided, in the unavoidable absence of Mr. Hankey, the chairman, and the Lord Mayor, the deputy-chairman.

The following report was taken as read:—

“The directors have much pleasure in submitting to the shareholders the audited accounts of the bank up to the 15th November last. The net sum available for division, inclusive of amount received on premiums, as appears by the profit and loss account, amounts to £7,287. 9s. 6d.; this the directors propose to appropriate as follows:—To payment of a dividend at the rate of 10 per cent. per annum for the preceding six months ending 15th October last, £2,042. 17s. 10d.; to write off preliminary expenses, £529. 17s. (£500 being the amount required to be annually written off, pursuant to the articles of association); to reserve fund, £4,000; carried forward to next account, including rebate of bills, £714. 14s. 8d. In their last report the directors referred to negotiations then pending with a land mortgage company, who proposed to invest a considerable sum on mortgage through the agency of the bank. They have now the pleasure to announce that the arrangement has been carried into effect upon satisfactory terms. The directors also referred to a proposal to form a local board in Dunedin, which was still under consideration at the time of the despatch of the last mail. During the past six months some heavy colonial failures have occurred, but the bank has not been affected in any way, the directors having been anxious rather to confine than extend their operations. In pursuance of the articles of association, the following directors retire in rotation, and being eligible, offer themselves for re-election accordingly—viz., the Right Honourable the Lord Mayor; Henry Alers Hankey, Esq.; and Benjamin Hardwick, Esq.”

Balance-sheet, 15th November, 1864.

<i>Dr.</i>		
Capital—60,000 shares at £10, £600,000. Paid up, £1 on 40,000 shares, first issue, £40,000; paid up, £1 on 20,000 shares, second issue, £15,490; calls paid in advance, £11,650—£57,140; less calls not due till the 15th December, 1864, £3,191. 5s....		£52,948 15 0

The Chairman trusted that the meeting would consider the present report as satisfactory as the last. The balance-sheet told its own story. In the amount of profit shown there were six weeks of the Dunedin branch not included, but which would be carried to the profits of the current half-year. They had from the proceeds of the past half-year been enabled to set aside £4,000 to the formation of a reserve fund. They proposed also to pay a dividend at the rate of 10 per cent. per annum, amounting to £2,042, leaving a balance of £714 in hand. This was a result which he

thought should be gratifying to the shareholders. He was happy to say that during the recent commercial crisis they had made no bad debts, having been very careful to place their money out only in such a way as was safe as well as beneficial to the company. Under these circumstances, he thought the meeting would give credit to the directors for having done their duty. Since the last meeting was held Mr. Hardwick had resigned his office of solicitor to the company, and Mr. Kimber had been appointed in his place. Considering the large stake that Mr. Hardwick had in the bank, the deep interest he took in it—for it might almost be said to be a child of his own—the directors felt that it would be for the general benefit if they could secure that gentleman's services and influence as a member of the board. They had consequently added his name to the direction. He would retire at the present meeting by rotation, and he had no doubt that the shareholders, confirming the view of the directors, would re-elect him. (Hear, hear.) He moved in conclusion the adoption of the report.

In reply to a question from a shareholder, and in seconding the report, Mr. Hardwick said that the directors were fully impressed with the necessity of having an efficient local board and an efficient local audit in New Zealand, and arrangements were in progress for that purpose. The formation of an efficient local board was a matter of some difficulty, as those who represented the bank as directors in the colony must be men of position, who would bring influence and business to the concern, and at the same time men who would not make use of their power as directors for their own private ends. (Hear, hear.) The board had sent out to Mr. M'Kenzie, their manager, letters of introduction to an eminent firm in Dunedin with a view of inducing them to join the bank. He was not at liberty at present to mention the name of the firm, but when the negotiations were so far advanced that it could be stated it would of itself be a sufficient guarantee for the respectability and influence of the parties. In regard to the question of a local audit, although the board had every confidence in their manager, Mr. M'Kenzie, they were quite prepared to admit that all were better for looking after—even directors—(hear, hear)—and they had accordingly sent out instructions requiring that the next balance-sheet should, besides being confirmed by himself and his accountant, be submitted to and regularly audited by a professional accountant in the colony. (Cheers.) He was sorry he could not at present report that they had elected directors for the colony, but they must bear in mind that the course of posts between New Zealand and London took a considerable time.

In reply to a further question Mr. Hardwick added that the qualification was the same for the New Zealand as for the London directors.

The motion adopting the report was then put and carried unanimously.

The dividend at the rate of ten per cent. per annum free of income tax was then declared, payable on the 8th inst.

On the motion for re-electing the retiring directors, viz., Mr. Hankey, the Lord Mayor, and Mr. Hardwick, some question arose as to the power of the meeting to increase the number of the board by confirming the election of Mr. Hardwick; but on its being explained by the solicitor on reference to the deed of settlement that the maximum number was ten, whereas Mr. Hardwick would make only the sixth, the resolution was carried *nem. con.*

Twenty guineas each were awarded to the auditors for their services.

A Shareholder considered the remuneration provided by the deed of

attainment, viz., £1,000 a year and 10 per cent. upon all profits divided over six per cent. per annum, too large.

Mr. Hardwick said that the directors had not acted up to the clause referred to in the articles of association. They had not even taken the £1,000, but for the whole eighteen months during which the bank had been in existence they had only taken £800.

A vote of thanks to the chairman and directors concluded the proceedings.

BANK OF BRITISH NORTH AMERICA.

A GENERAL meeting of the proprietors of this bank was held on the 6th of December, at their banking-house, 7, St. Helen's-place, Bishopsgate-street; R. Carter, Esq., in the chair.

The following report was taken as read :—

“ Since the last half-yearly report was issued the severe and prolonged stringency in the money market of Europe has exercised a paramount influence in the banking and commercial world, the direct effect of which upon that portion of the bank's capital which has been employed in London has been favourable; but it has at the same time injuriously affected the commercial and trading classes in the colonies. The aim of your directors in managing the affairs of the bank at its branches has been to extend to their regular customers all the accommodation that could be afforded with a due regard to the interests of the corporation. The difficulty of successfully combining these objects is much increased by the legal restrictions imposed upon banking by the local legislatures. The shareholders are aware that the banks are not allowed to charge more than 7 per cent. interest in Canada, nor more than 6 per cent. in Nova Scotia and New Brunswick, while the minimum rate of the Bank of England has fluctuated between 6 and 9 per cent. during the last six months, and in British Columbia and California rates of 12 per cent. and upwards are generally current. It is to be hoped that a system so artificial, which must necessarily divert capital from the Eastern colonies, will engage the attention of colonial statesmen, and lead ultimately to such amendments in the laws as will leave the price of money, like that of other commodities, to the unrestrained action of supply and demand. The business of the bank at Victoria, Vancouver Island, has steadily increased; an office for melting and assaying gold has been established in the bank premises, to which a duly qualified assayer has been appointed, and no effort has been wanting on the part of your directors to meet the requirements of this prosperous colony. As contemplated in the last report, an agency has been established at San Francisco, in California, and your directors feel warranted in now stating that its prospects are very encouraging. The management of this agency has been entrusted to two experienced officers long in the service of the bank, and their endeavours, combined with the established character of this bank, have already obtained a fair measure of support from the mercantile community in that city. The returns from all the branches during the current year exhibit a satisfactory increase of profit; and your directors are amply justified in declaring the customary dividend of 3 per cent. for the half-year, free of income tax, which will be payable on the 5th January next. As already notified by circular, the present and future dividends will be

sent by post to the address of each proprietor, or be paid to his banker or agent, as he may prefer, thus dispensing with the necessity for personal attendance at the bank for receipt of dividends. A vacancy having occurred in the direction by the retirement of Oliver Farrer, Esq., a new director will be elected at an extraordinary general meeting, to be held at the conclusion of the general meeting."

The Chairman, in moving the adoption of the report, said, "I have to address a very few observations to the meeting on the present occasion; and in the first place I must express to you the very deep pain with which the directors have to announce to you the very sudden death of one of their number (Mr. Jaffray), the gentleman who so ably and so satisfactorily presided over the meeting in June last, who had not been very long at the board, and who had all the strength and energy of youth—a man of the highest character, of first-rate abilities, and of the highest qualities as a man of business, and who unfortunately for the board and for the shareholders has been taken from us after only a few days' illness, he having expired only on Sunday last. The feeling of the directors would have been to have postponed this meeting if time had allowed, feeling so deeply as they do that both they and the bank have sustained so deep a loss. Under the circumstances I will not refer to any questions which may lead to any difference of opinion, and I hope that no such questions will arise. The shareholders will see in the report that the progress of the bank during the last six months has been of a favourable character, and that the profits, as far as they have come before us, have been in advance of those of former years. You are aware that on this occasion it is not possible to lay the accounts before you, because the business in progress at the branches at the very busy period of their short year, they being locked up by ice for nearly six months, renders it difficult, if not impossible, to bring the accounts before you half-yearly. The directors, however, have made the usual inspection of the accounts, and the result is of a very favourable nature. I may add that the investigation which has been made of the accounts on the present occasion is similar to that which has been made during every year of the bank's existence, and on every occasion when they had been able to make up the final accounts they had found some addition, little or great, to make to the profits beyond those which were estimated at this time of the year. There is every reason to believe, not merely that we shall have such an increase to report next June, but that the increase will be found larger than usual when the accounts are finally made up. (Hear, hear.) With these observations I beg to move that the report be received and adopted."

Mr. Brooking, director, seconded the motion.

Mr. Wheeler, referring to the statement made by the chairman as to the satisfactory increase likely to take place, and the beneficial results of the last half-year's working, inquired whether it was contemplated by the directors to give anything in the way of bonus in June. (Hear, hear.)

The Chairman stated that the course of proceedings of this bank had always been to declare a dividend in the summer upon the actual accounts of the previous year. At the end of the year they merely made an estimate, they having first ascertained by examination that they could prudently and properly pay a dividend to the same amount as that paid in the summer. They did not anticipate what would be the state of things next summer. He assured the proprietors that if they could do as they had sometimes done before, add a little to the dividend, nothing

would delight them more than to do so; but such a question was never entertained at this meeting.

Mr. Petrie said that he quite concurred in the sympathy which the directors had expressed for the loss of the late Mr. A. W. Jaffray; but referring to the dividend mentioned in the report he wished to know whether, in the opinion of the board, the time had not arrived when they should not wholly reconstruct the bank, and with that view he would put a series of questions which he had drawn up after various conversations which he had had with gentlemen in reference to the Canadian portion of their business. He would ask—1. Has it not been the experience of the bank that when money is cheap in Canada the customers of this bank go elsewhere for their discounts, and when money gets dear they return? 2. Has money not been as regularly returned from Canada when cheap, and drawn from this market when dear—the reason being, as stated in the report, 6 to 7 per cent. is the legal rate in Canada? 3. Have the agents in Canada not invariably received those customers who thus go and come—in fact, cannot do otherwise? 4. Have the profits for the past two years not been chiefly from money lent in London; and if the agents in Canada had not drawn away funds from this side, would not our profits have been larger? If this be so, why continue the Canada business? 5. Could we not, in addition to our other business, make considerable profits by receiving money on deposit as other banks do, and lend it out to the discount houses, on the Stock Exchange and unquestionable securities? Would not the position and credit of this bank (with a million paid up) command deposits to the extent of some millions? and if only three millions were received, and 1 per cent. per annum made by the turn, we should have £30,000 additional annual profit, adding in this alone 50 per cent. to our dividend, and with very little additional expense. Is the charter worth this?

The Chairman, with respect to the first question, said that although some cases might have arisen where customers had gone away and returned, the managers would be very deficient if they allowed the customers to treat them in that way as a rule, and he believed there was no reasonable ground for any such imputation. In regard to the next question, he admitted that as far as the public were concerned the natural course of things would be for money to be returned from Canada when cheap, and drawn from this country when dear; but it was the object of the bank to prevent such a proceeding, and he assured the hon. proprietor that the bank managers were quite alive to the effect on its interest of such a course of proceeding. It was not the fact that at any time the profits of the bank had been derived chiefly from money lent in London. Some two years ago, when money was low, they had a good deal of their capital here, but it only yielded a small portion of the profits of the bank. Just now, when, according to the theory of this question, they would have no money in London, it did happen that they had got rather a large portion of their capital here which they were employing at a high rate of interest, and it was probably yielding a larger proportion of the full profits than money employed here had done at any previous period. In reply to the fifth question, he might observe that the bank was established for the express purpose of carrying on business in British North America. The deed of settlement contemplated that, and nothing else. They could not change that state of things, and the directors had no power to employ money received on deposit here. They must conduct the business accord-

ing to the deed of settlement, and he did not believe that the shareholders could alter that state of things. No doubt they could receive deposits and lend them out if they were an English bank, but in point of fact they were not. The charter and deed of settlement authorised them to bank and do banking business in British North America and parts adjacent thereto, and to take up money in London would involve a heavy responsibility. Whether they could legally do it or not he was not prepared to say, but, at all events, it was not a directors' but a proprietors' question. He had been connected with this bank during the twenty-eight years of its existence, and he did not believe that the entering into the business of taking deposits and lending them to discount houses at their own risk would be a very popular measure with the shareholders. The feeling of the proprietors of this bank had always been a strong desire to carry on the business prudently and safely. (Hear, hear.) He was quite aware that if they could get a large amount of deposits, and make only 1 per cent., they would add materially to their profits, because if a bank with £1,000,000 capital got deposits to the extent of £20,000,000, they of course got 20 per cent.; but they must remember that those large profits were never made without large accompanying risks. They could not extend the area of profit without extending the area of risk. (Hear, hear.) The charter itself scarcely contained any regulations for the management of the bank, but it recognised the deed of settlement, in accordance with which the business was carried on. Not being a lawyer he could not undertake to say how far they could get the deed altered, but he believed that as it at present stood any single shareholder who objected could prevent the directors from altering the character of the establishment. At all events it was not a question which the directors ought to initiate, whatever might be done by the shareholders.

A Shareholder—Is it worth while to do business in a country where you can only get 6 or 7 per cent. when money is so high.

The Chairman said that the proprietors must bear in mind that the rate of interest in London for some time past had been very exceptional, and that the average rate of interest in this country was less than 6 per cent. They could not withdraw their business from Canada when money was high here and take it back when it was low. If they gave up the Canadian business they must give it up altogether. He was reminded that the reason why there was so much capital in London at the time the rates were so low was in consequence of an act of prudence on the part of the directors. The whole of the capital which they used to employ profitably in New York before the war, was entirely withdrawn, because they did not think (knowing what the fluctuations in the currency must be) that it was prudent to leave a large amount of their capital there. (Cheers.)

Mr. Macdougall said that he should, under the painful circumstances of the case, and the gloom thrown over the meeting by the death of Mr. Jaffray, have been content to have allowed the report to be adopted *sub silentio*, and to have reserved any remarks he had to make to the meeting in June. The discussion, however, having arisen, he would earnestly impress on the directors to restrict their Canadian business. He considered that the directors in their report admitted that the profits in Canada were less than they were here, and he did hope that means would be taken at least to employ their money more profitably in Vancouver's Island and San Francisco than they could in Canada. He complained that with a paid-up capital of one million they had only £900,000 of circulation

and deposits, which was out of all proportion to the deposits in other banks with the same capital. He hoped that at the June meeting the chairman would be able to state that the deposits had at least doubled, and that when the time came for the renewal of the charter, when the deed of settlement would also expire, steps would be taken to give to the directors powers to extend their business, which they did not at present possess.

The Chairman explained that the proportion of the profits made by the bank was not so large in London as in the colonies; and with respect to the charter, he reminded the hon. proprietor that it would expire in 1870, but not the deed of settlement, which was for all time, at least until the shareholders chose to wind up the concern. With respect to the deposits, he could not endorse the anticipations of Mr. Macdougall, because business was too active in North America in proportion to capital to expect large deposits to be made in banks.

The motion having been put, the report was unanimously adopted.

The meeting was then made special for the election of a director in the room of Mr. Oliver Farrer, who had retired.

The Chairman having submitted the names of three candidates, Mr. H. R. Farrer was declared elected on a show of hands.

Mr. Farrer returned thanks for the mark of confidence reposed in him.

On the motion of Mr. Macdougall a cordial vote of thanks was given to the chairman and directors, and the proceedings terminated.

LONDON CHARTERED BANK OF AUSTRALIA.

THE half-yearly meeting of this company was held, on the 9th of December, at the London Tavern; Mr. W. Fane De Salis in the chair.

The Assistant-Secretary (Mr. W. M. Young) having read the advertisement convening the meeting, submitted the following:—

Abstract of profit and loss account at 30th June, 1864.

Dividend proposed to be paid viz.; 4 per cent. on paid-up capital, for half-year ending 30th June 1864, (free of income tax)	£40,000	0	0
Amount proposed to be carried to the reserve fund this half-year	5,000	0	0
Balance to next half-year... ..	8,757	6	9
	£53,757	6	9
Balance carried over, as per last report... ..	£7,849	3	11
Balance of Profit and Loss in London and in the Colonies for half-year ending 30th June 1864, after deducting current expenses, income tax, and making provision for bad and doubtful debts... ..	45,908	2	10
	£53,757	6	9
By balance brought down... ..	£8,757	6	9

The Chairman observed that the meeting was convened for the sole purpose of declaring a dividend. They did not upon these occasions submit a report or annual statement of accounts, but following the provisions of the deed of settlement, they circulated amongst the shareholders a statement showing the results of the bank's operations for the half-year. That statement had been in their hands some days, and it showed a disposable surplus of £53,757. 6s. 9d., out of which they proposed paying the shareholders a dividend after the usual rate of eight per cent. per annum, which would absorb £40,000. They proposed also to place £5,000 to the reserve fund, which would then amount to £85,000, and to carry forward a balance of £8,757. 6s. 9d., which was about £700 more than was carried forward on the last occasion. These figures spoke for themselves, and required no comment at his hands. (Hear, hear.) As regarded their affairs in the colonies, no matters of particular importance had occurred since they last met which would require any lengthened observations on his part. The panic which had convulsed the markets of Europe, and which had also disturbed the markets of the east, introducing great fluctuations in the value of produce, and involving many individuals in large losses, had in no way affected the Australian colonies. Hence the course of trade there had run smoothly, and those colonies had been permitted to proceed uninfluenced by extraneous events in their wonderful onward progress towards wealth and prosperity. (Hear, hear.) Such a state of things could not be otherwise than favourable to banking, consequently, as might have been expected, the letters they received from their managers described the position and prospects of the bank as highly satisfactory. He might also mention another matter, which must be as satisfactory to the shareholders as it was to the directors, namely, that their letters stated that during the past half-year they had sustained no losses. (Hear, hear.) As regarded their affairs at home he knew of no new feature which he ought to bring under their notice, unless it were the determination which had been arrived at by the directors since the last meeting to accept deposits for fixed periods at interest. Until recently none of the Australian banks established in this country were willing to accept deposits; and it was perfectly clear that while communication betwixt the colonies and England was so uncertain and so protracted as it was formerly it would have been impossible to accept them with any advantage. Now, however, that a postal intercourse was established which occupied only 45 days, and that the service was performed with almost railway regularity, the case was altered. The directors had also watched with interest the course of the Indian banks in taking deposits; they found that those banks did so with great success, and they thought the time had now arrived when they might imitate their example. (Hear, hear.) Their impression was that deposits would become a source of considerable revenue to the bank. This would be obvious to the shareholders when they reflected what a vast field there was in Australia for the extension of their business and the profitable employment of capital. Any amount they could raise here at English rates of interest they would have no difficulty in employing upon undoubted security at colonial rates, and the difference in the interest, which was considerable, would of course be profit. The shareholders would be able to assist the directors in this matter, either by making deposits themselves or influencing their friends to do so; and he felt sure that they would gladly co-operate with the board to promote the interests of the bank in this respect. The directors on their part had put their shoulders to the wheel, and not-

withstanding the high rates of interest that had lately ruled, they had among their own friends and connections—for the deposits as yet received from the general public did not amount to much—obtained at moderate rates a sum exceeding £50,000 on deposit (hear, hear), and he felt assured that by their assistance they would, before long, have offered to them a larger sum than the bank would probably find it convenient to accept. The rate of interest to be allowed by the Bank to their depositors would, of course, fluctuate with the market, but inasmuch as the profits of Australian banking were larger than those of English banking, they would probably be able to allow from a half to one per cent. more than given by the great English banks, such as the London and Westminster, and the Union Bank, which would be an additional inducement to persons to deposit with them. (Hear, hear.) There was another matter connected with their home affairs to which he wished to refer. They were aware that only a few weeks ago the question of transportation to Australia threatened to assume a shape which might have terminated in a serious difference betwixt the mother country and her colonies. The wise and prompt concession made by her Majesty's government had settled that question at once and for ever, and if he now referred to it it was, in the first place, to report to them the course which the directors thought proper to take upon an important question deeply affecting their interest; and in the next place, to congratulate them upon a result which, in lieu of separating Australia in feeling from England, would cement more closely than ever that union which ought, and he hoped would, always exist between the mother country and that colony in which their capital was invested. They would readily understand that, if a serious difference had unfortunately arisen out of the Convict question, its effects would have acted most prejudicially, not as regarded their property alone, but also upon the vast capital employed by England in her Australian commerce. Under these circumstances the directors thought it was due to the interests of the bank to make a representation to her Majesty's government, expressing a hope that they would terminate as speedily as possible a question which those of their directors who like himself had lived in the colonies many years, knew well the colonial public felt most keenly upon, and would go every length to see carried. He was able to state that the course they took in the matter had been received with the highest satisfaction in the colonies, and it would no doubt also have the approbation of the shareholders. (Cheers.) As regarded her Majesty's government, it was only fair to conclude that the representations of the directors, added to the firm front assumed by the friends of Australia in this country, were not wholly without effect in influencing a decision so fortunate for the peace, happiness and prosperity of our colonies. (Hear, hear.) He concluded by moving a dividend at the rate of 8 per cent. per annum.

Mr. E. Gellatly seconded the resolution.

Mr. Minton inquired what progress was being made in respect to the branches it was proposed to open at Brisbane. He also stated that, having had occasion to go to the Bank, he was happy to say that he received from its officers the fullest information in reply to every inquiry he had made, and his conviction was that the Bank was managed not only with great ability and energy, but above all with great integrity. (Cheers.)

The Chairman, in reply, stated that the establishment of a branch at Brisbane had received the careful attention of the board. Some time ago

they determined to establish it, but finding that other banks had been before them, and there being some reason to doubt whether the business they transacted was profitable, and finding, above all, that they had already sufficient employment of their capital, they declined for the present to go to the serious expense of establishing a branch. He could, however, assure the hon. proprietor that the question of the extension of their business, not only to Queensland, but to New Zealand, was at present engaging the serious attention of the board, and the shareholders might depend upon it that on the first favourable opportunity they should do so. (Cheers.)

On the motion of Mr. H. Wood, seconded by Mr. G. C. Eagle, a cordial vote of thanks was given to the chairman and directors for their able and judicious management of the Bank.

The Chairman, having acknowledged the compliment, proposed a vote of thanks to the inspector, Mr. J. Bramwell, and other officers, for their attention to the interests of the company.

The motion was seconded by the Deputy Chairman, and Mr. Bramwell having returned thanks on behalf of himself and his brother officers, the proceedings terminated.

MADRID BANK, LIMITED.

A MEETING of the shareholders in the above bank was held on the 15th December at the London Tavern; Mr. Daniell, chairman of the board of directors, in the chair.

A report from the directors was read, which went at length into the difficulties which had stood in the way of the formation of the company—one of the principal of which was the rule of the Stock Exchange, which prevented the recognition of any Spanish company by that body. The directors under the circumstances recommended the dissolution of the company, and the chairman moved a resolution to that effect.

A long and rather warm discussion took place, in the course of which the directors were charged with having neglected the true interests of the shareholders in not sooner bringing the affair to a close, before their money was frittered away in the manner in which it was probable it now had been.

On the resolution being put the number for and against was so equally balanced that a division was called for, and it resulted in the motion being negatived.

It was finally resolved to call an extraordinary general meeting of the company on Thursday, the 19th of January, and a vote of thanks to the chairman concluded the business of the meeting.

LONDON AND NORTHERN BANK, LIMITED.

THE AMALGAMATION WITH THE MIDLAND BANK.

An extraordinary general meeting of the shareholders in this bank was held on the 16th December, at the London Tavern, Bishopsgate-street, for the purpose of considering a series of resolutions for voluntarily winding up the company. Mr. Basil T. Woodd, M.P., occupied the chair.

Mr. J. P. Turner, the secretary, read the notice convening the meeting. The Chairman then said that it was proposed to submit the following resolutions to the meeting:—

“1. That the company be wound up voluntarily.

“2. That the resolution passed by the board of directors on the 25th day of November, 1864, is hereby approved, and, so far as its respective contents are to be performed or observed by this company, or are in their nature and under the circumstances of a voluntary winding up, capable of being or becoming regulations of this company, are hereby made regulations of this company; and all previous regulations of this company in any way inconsistent therewith are hereby repealed.

“3. That William Dallison Starling, Esq., Charles Poppleton, Esq., Ralph Walters, Esq., Basil Thomas Woodd, Esq., M.P., and Thomas Collis, Esq., directors of the company, and the survivors and survivor of them, be liquidators for the purpose of winding up the affairs thereof, and of disposing of its property pursuant to the regulations made by the last preceding special resolution; and that, whatever shall be done in such liquidation by any two or more of the persons hereinbefore named be valid and binding as if it had been done by all the said liquidators for the time being.”

As those resolutions had relation to that passed by the directors in November last, he would ask the secretary to read that resolution.

Mr. J. P. Turner then read the following resolution:—

“Resolved,—That the following heads of agreement between the London and Northern Bank (Limited), and the Midland Banking Company (Limited) be, and the same are hereby approved of by the board:—1. That the Midland take over the business of the following branches now carried on by the London and Northern at Leeds, Huddersfield, and Sheffield. 2. The London and Northern to let the Midland at once, or as soon as practicable, into possession of the premises at those branches, including the fittings, furniture, &c., at a valuation, and to assign their interests in such premises. 3. The Midland to take all the liabilities at those branches upon current or deposit accounts upon London and Northern handing to it the cash at those branches (estimated at about £10,000), and assigning all such of the overdrawn accounts and securities at such branches as the Midland may call upon it to do. 4. The Midland to have the option of electing to take over in a similar way the premises and business at Newcastle, Hexam, Alnwick and Morpeth branch and agencies if so disposed, upon having the cash there; also all overdrawn accounts and bills of exchange now in bank portfolio (the latter not to exceed £5,000) transferred to it. This option to be exercised within 14 days from this date. 5. That 500 shares in the Midland Banking Company (Limited) shall be forthwith applied for and taken by shareholders in the London and Northern Bank, upon which a deposit of £5 per share shall be paid. No call to be made within six months from this date, and then not exceeding £5 per share. This clause, however, is not to bind any London and Northern shareholder individually. 6. That three London and Northern directors go on the board of the Midland—Mr. Basil T. Woodd, M.P., Mr. Poppleton, and Mr. Briggs—but in the event of the last-named gentleman declining, some other director to be substituted from the London and Northern board. Mr. Ralph Walters will also join if the Newcastle branch is taken over. 7. The London and Northern directors to advance out of their own funds forthwith £10,000 for a period not less than six months upon the

deposit note of the Midland Bank, bearing interest at 1 per cent. under the Bank of England minimum. 8. The goodwill to be paid by the Midland to the London and Northern to be at the rate of one and a half year's purchase, less £500 upon the first year's net profit at the branch or branches and agencies taken over by the Midland after fairly providing for bad and doubtful debts. 9. It is understood that the directors will use their best endeavours in the event of a voluntary winding-up of the London and Northern to secure for the Midland the account of the liquidators."

The Chairman then said that the shareholders could easily imagine that in taking the chair at that meeting he did so with some feeling of mortification, very different to the feelings which he thought would have possessed him when he presided over the ordinary meeting in January next. At the last meeting in July he felt that they were in a flourishing condition, and it was only in consequence of unforeseen circumstances which had arisen that the directors had passed the resolution which they now asked the shareholders to adopt. They were no doubt aware of the circumstances to which he referred, and he need not, therefore, allude to them. He would, however, draw their attention to what had taken place since the meeting which had been held at Leeds in connection with the Leeds Banking Company. It was stated there on behalf of the directors that they would advance £25,000 for the purpose of carrying on the affairs of the bank as an independent company, and it was suggested that the shareholders should subscribe an equal sum as a loan or deposit fund. Some of the directors remained at Leeds, and others at Huddersfield, to see if that proposition would be carried out. But so far from that being done a sum of £34,000 was paid away out of the deposits. That had drawn very heavily on the resources of the bank, and the London discount market being closed against them it was with the greatest difficulty that the business of the bank could be carried on. The Bank of London refused to pay their drafts, and the only alternative was that suggested by the resolution or bankruptcy, which would have entailed very heavy loss. The meeting at Leeds rejected the amalgamation, and arrangements were made with the Midland to take the branches at Leeds, Huddersfield, and Sheffield, with an option of taking that at Newcastle. The three first places the Midland Bank had taken and commenced business, since which a considerable balance had accrued to the Northern Bank shareholders. All he had to do now was to ask them to confirm the resolution, which had been adopted by the directors after a deal of harassing and trouble. The directors offered to provide £10,000 in cash out of their own pockets, and also to take up 500 shares in the Midland Bank. They very readily came forward to allow the business to be carried on for the welfare of the shareholders in the Northern Bank. They had all heard the resolutions read, and to show that the directors were justified in the course they adopted they had engaged Mr. Price, the professional accountant, to go over the accounts, and he would ask that gentleman to state the condition of affairs, and the shareholders could then judge for themselves whether the directors had not, under the unfortunate circumstances, adopted the best course in the interests of the shareholders. He did not know whether it was intended to propose any amendment, but to meet such a case he might say that the directors had taken counsel's opinion, and had been advised that the meeting could only adopt or reject the resolutions. He then moved the adoption of the resolutions he had read, and called upon Mr. Price to present a statement of the accounts.

Mr. Price said he had made up the accounts to the 28th November, and the figures had been prepared entirely independent of the directors. Those gentlemen had given him free access to the books, and not made a single alteration or erasure in any of the figures. He had endeavoured to under-rate the assets, and some thought to too great a degree. The amount of loss was considerably in excess of that mentioned at the Leeds meeting. At the 28th of November the capital called up was £161,890, of which the calls in arrear were £12,570; the bank owed on current and deposits £103,657, at the Bank of London £100,642, of which £87,571. 11s. 4d. were good bills; dividend unpaid £6. 2s. 6d., outstanding drafts of the bank, £20,797. 14s. 5d., rents and taxes accruing, £276. 17s. 4d., making a total of liabilities and capital, £387,270. 2s. 8d. With regard to the assets, there were bills discounted (after deducting for re-discounting and loss on bad bills), £146,159. 18s. 5d.; past-due bills (after deducting estimated loss), £26,341. 2s. 4d.; loans and over drafts (after deducting estimated loss), £129,017. 11s. 11d.; stamps, £469. 8s. 7d.; premises and furniture, £2,505. 13s. 10d.; calls in arrears, £12,570; and cash in hand, £16,461. 8s., that would show a loss including the preliminary expenses (£11,016), which would have extended over a number of years, but for the present state of things of £53,745. 2s. 7d. They must consider that the Midland Bank would pay one and a half years purchase for the goodwill of the three branches, which might be estimated at £15,000, therefore the loss might be put down at below £40,000. He then proceeded to mention the statement of losses made by Mr. Turner, the manager, at the Leeds meeting. Mr. Turner then said that the loss was £26,379, and there appeared to be a very great difference. But the amount did not include the £11,016 preliminary expenses, and properly so, as Mr. Turner then imagined that the bank was in a very flourishing state, and that it would continue its business. That amount being deducted from the £53,745 would leave the sum of £31,138 to be accounted for. He gave Mr. Turner credit for having based his statement on figures, but there were several items which Mr. Turner had reckoned on as assets, which he (Mr. Price) had struck off in order to be on the right side, and which might in part be realised eventually. There were certain securities which were thought to be good by Mr. Turner when he made his statement, but which he (Mr. Price) had struck off, and after allowing a sum of £5,000 to meet any emergency or deficiency which might arise, the difference between his statement of the losses and that of Mr. Turner was accounted for. Although the difference might appear to be very large, yet it was accounted for by the items he had referred to.

Mr. Cooper then rose to second the proposition of the chairman for the voluntary winding up of the company, and the confirmation of the resolution of the board of directors. As chairman of the Huddersfield meeting he must say that on that occasion a large number of shareholders were present representing Huddersfield, Sheffield, Leeds, and the West Riding of Yorkshire generally. Mr. Tomson the manager of the Midland Bank, was present and answered the questions put to him in a very open and satisfactory manner. They tried to induce Mr Tomson to recommend to his directors a complete amalgamation on the terms of share per share a £20 Midland for a £25 London and Northern share. They made that offer on the understanding and in the belief and expectation that the shareholders would not suffer upon the payment of the money for the goodwill of the branches, which was to be at one and a half year's purchase. That proposition was received unanimously at the meeting, there not being

a dissentient voice, although all parts of Yorkshire were represented. Upon coming up to London however, they found that there were legal difficulties in the way of the proposal, and he therefore thought that the best course they could now pursue would be to adopt the resolutions of the board. It should be the object of the shareholders to throw themselves heartily into the Midland Bank—make that concern as flourishing as possible and that would tend to the benefit of the London and Northern Bank shareholders. If they followed his advice they would find that the bank would become a complete success, and by the success of the Midland, the shareholders of the London and Northern would ultimately recover every penny of their money. In conclusion, he seconded the resolution.

Mr. Olive wished to know whether the Midland Bank would take the Newcastle branch?

The Chairman said the matter was formerly at the option of the Midland Bank, but the 14 days had expired, and the directors of the London and Northern Bank could now if they liked refuse to pass the Newcastle branch over to the Midland Bank. That Company had not at present made any communication to the board of the London and Northern Bank upon the subject. He had had great experience in banks in that part (Yorkshire), and found they paid good dividends. He believed that the three branches which the Midland had taken at Leeds, Huddersfield, and Sheffield, were amongst the best in the country, and he believed the branch at Newcastle stood on equal terms.

The Chairman remarked that there had been no discussion about the Midland taking the Newcastle branch, but there was no doubt that the reason why they had not taken it was that it was not in the County of York but just over the border. Nothing had ever been said about the value of that branch, but the fact was that it had done a very good business, and had paid very well.

Mr. Olive believed that the present arrangement would be most beneficial to the Midland Bank. He wished to ask if this resolution were rejected what course would be pursued?

The Chairman said that under those circumstances the company must be wound up officially, and that would entail great loss. Perhaps Mr. Morris, the solicitor to the Midland Bank, was in possession of some information which might be important to the question before the meeting.

Mr. Morris had great pleasure in answering the Chairman's call to explain the position of the Midland Bank, and thought he might do away with all legal views of the matter. In the first place, he must say that there always had been great misinterpretations of the meaning of "amalgamation." There was a desire on the part of the Midland Bank to effect an amalgamation with the London and Northern Company, and he thought that the price at which the shares should be exchanged was the only point that remained to be decided upon. The directors of the Midland Company were ready to-morrow to put the amalgamation into operation on the principle of share for share. There was no argument in the matter; the Northern Company had settled it themselves, and the only open question was the amount that the Midland should give them credit for. The Midland were desirous of giving them every farthing of their value, in addition to the price of the goodwill. If they went into the Midland Bank they would make it strong and successful, and there was no desire on the part of the Midland Company to split straws on the question of a pound. The safest course he could suggest to them would be that made to the meeting at Huddersfield, viz., that Mr. Price, the accountant, whom they all knew,

and Mr. Tomson on the part of the Midland Company, of which he was the manager, should be selected to consider the matter, and decide what the minimum sum should be that the Midland Bank should give the Northern shareholders credit for, but that course could not be adopted until the shareholders came to some resolution similar to that proposed. Such a resolution could not now be avoided, for without a formal winding up there would be a large amount of expense and inconvenience in Chancery proceedings. The directors of the Midland Bank, pending the result of the present meeting, had agreed to the draft of a circular which they were ready to act upon that very night if necessary. He would read that circular to them. It was as follows:—

"Sir,—At an influential meeting of the shareholders of the London and Northern Bank, Limited, held at Huddersfield, on Friday, the 9th December, 1864, resolutions were unanimously passed in favour of an exchange of shares in the London and Northern Bank, for an equal number of shares in the Midland Banking Company, Limited, the latter being credited at once with such a sum on account of the value of the assets of the London and Northern Bank, as Mr. Price, on behalf the London and Northern Bank shareholders, and Mr. Tomson, on behalf of the Midland Banking Company, may agree upon; and the London and Northern Bank shares being further credited with the balance which the assets (after providing for liabilities) may realise, as well as the amount of goodwill when ascertained, on the footing of one and a half year's purchase. It was understood that the foregoing arrangement should apply to the new as well as the old shares of the London and Northern Bank, all the shares, both old and new, being entitled to participate in proportion to the amount paid up thereon.

"The directors of the Midland Banking Company, Limited, have duly considered these resolutions, and are prepared to give effect thereto conditionally on proper arrangements being concluded with the liquidators as to the control of the assets.

"In order to facilitate the exchange of shares being carried out with as little delay as possible, after the passing and confirmation of the necessary resolution for the winding-up of the London and Northern Bank, I shall be glad if you will at once sign, and return to me the form on the other side."

Mr. Morris proceeded to say that he thought the two gentlemen he had named could better fix the amount to be paid by the Midland Company than a meeting of shareholders. But he could assure the meeting of this fact, that the directors of the Midland were prepared to carry out the amalgamation with spirit and promptitude, and to welcome them all as Midland Bank shareholders. There was no uncertainty about the matter, and he did not think that they could improve upon the present proposal. However, the matter was in the hands of the shareholders, but he could assure them of the desire of the Midland to act towards them in the most cordial spirit. (*Hear, hear.*)

The Chairman wished the meeting to understand that, as the resolution stood at present, the two companies were quite separate, and if they were passed it was then for any shareholder who did not wish to come in with the arrangement to refuse the Midland shares in exchange for his own, and in lieu thereof to take the amount agreed upon between the parties to take in cash.

After some conversation as to the manner in which the amalgamation of the Imperial and Mercantile and Credit Companies and other undertakings had been effected,

A Shareholder said the shareholders were not bound to go in with the amalgamation unless they chose. But his opinion was, that if the shareholders supported the Midland Bank it would become a greatly improved concern, and they would get every penny of the value of their shares. He would ask, with all respect, whether it had been ascertained that the Midland Bank was in a safe and sound condition before they had entered into any arrangement with them.

Mr. Morris said the position and affairs of the Midland Bank were before the public. That bank had been particularly fortunate in securing the services of a good man of experience as its manager, who by his conduct had shown that he was a most cautious and careful man. He happened to dine with one of the directors, and in course of conversation that gentleman told him that he did not believe the Midland Bank had made £200 bad debts in all its branches, such had been the extreme caution which the manager had exercised. The Midland was not one of the go-ahead banks, but transacted a very quiet, steady business.

Mr. Price (in answer to questions) said that the Newcastle branch and agencies connected with it had been very profitable indeed in their working. He confirmed the statement already made, that the Midland would have taken the Newcastle branch had it been within the radius of their operations. With regard to the bad debts and the profits of the Newcastle branch, he found that while the profits from the 1st of July had been £1,585, the bad debts since the starting of the branch had only been £860.

A Shareholder asked, if he wished to keep himself clear of both companies, how much would he get?

The Chairman said that that depended upon the realisation of the assets.

Mr. Chatteris regretted to find that the arrears of calls unpaid amounted to upwards of £12,000. He thought that the first duty of the liquidators should be to get that money in, or else to declare the shares forfeited. (Applause.) They would not be acting with justice to the other shareholders who had so readily responded to the directors' call if they did otherwise.

Mr. H. A. King said that it had been found by experience and admitted on all hands that the four or five branches in Yorkshire had been conducted in such a manner as to produce a good profitable business. That being the case, he asked what could have been the policy of the directors in entering into a large discount business in London where they had no business connections? He was quite at a loss to understand such a proceeding. He thought that the shareholders were entitled to some explanation from the directors upon that point, and also, that some explanation should be given as to the loss that had arisen from the very extraordinary heap of bad debts—showing as they did that the business had been conducted in a careless and reckless manner.

After some remarks from Mr. Clench and another shareholder,

The Chairman, replying generally to the observations which had fallen from the proprietors during the discussion, said he had no difficulty in doing so. With regard to the bad debts, he must say that until September last they had no idea that any existed. They all arose from the transactions of the Bank with Messrs. Manual and Brillman. The directors

were not aware that any transactions had been carried on in that shape. The directors ought to know of everything, and as soon as it was ascertained that such had been the case, they spoke to the manager on the subject, and from what he said he (the chairman) believed he had acted with the best intentions, but the transactions had turned out unfortunate. From that time Mr. Price, the accountant, and Mr. Turner, the solicitor, had been engaged, and every action had been sanctioned by those two gentlemen and one of the directors. The liquidation would be in the hands of the directors named, and that course was suggested to save expense. The directors had never received a sixpence for their labours, neither did they expect one. The moment that they found the Bank was in difficulties they advanced money from their personal funds to help it out of them. They advanced £10,000, and undertook to take up 500 shares in the Midland Bank. With regard to the bad debts, he had been informed by Mr. J. P. Turner, the manager, that he made the strictest inquiries, before he sanctioned the advances, of one of the principal banks in London, and the names were reported to him as being very good. But it was for Mr. Turner to justify himself for imprudently making such large advances. He did not say that the directors were not to blame for not knowing what was going on, but the statements from the branches in the country were always placed before them, and they showed a profitable working; but those relating to the London transactions, which had turned out so disastrous, had not been placed before the directors.

A Shareholder asked the condition of the Bank when the new shares were issued.

Mr. Price said that when the new shares were issued in July last, they had no doubt as to the solvency of Manual and Brillman. In justice to the manager, he must say that before that firm had any transactions with the Bank, he went to one of the first City banks, where they had had an account for twenty years, and the manager was told that that account had been kept in a most respectable and satisfactory manner. That would not perhaps justify him in going as far as he had. At the time of the issue of the new shares the creditors and directors believed that the account of the firm was perfectly good, and there was not then a single bill dishonoured.

The motion for the voluntary winding-up of the company, and confirming the resolution of the 25th of November, was then passed unanimously.

A vote of thanks to the chairman closed the proceedings.

LONDON, BUENOS AYRES & RIVER PLATE BANK, LIMITED.

The second annual meeting of shareholders was held at the London Tavern on the 16th December; Mr. Hatchblock in the chair.

The report, as follows having been taken as read,

"The directors in presenting their second annual report, have to deplore the very great loss the bank has sustained by the death of their late chairman, Mr. Bruce, and to express their deep regret that he was not permitted to witness the success realised by this bank, to which his sound judgment and zealous labours so essentially contributed. The directors in submitting the annexed statement of accounts congratulate the proprietors upon the result of the second year's operations. The directors felt themselves justified in paying an *ad interim* dividend of 5 per cent. for the first half-year, they are now enabled, after the most ample provision for all bad and doubtful debts,—appropriating £1,000 towards the

reduction of preliminary expenses, and adding £10,000 to the reserve fund—to declare for the second half-year a dividend of 5 per cent. and a bonus of 10s. per share on the original shares, and a proportionate bonus on the new shares, and to carry forward to the profit and loss account of the current year the sum of £755 2s. Buenos Ayres: the reports received from their very able manager, Mr. Green (confirmed by their respected colleague, Senor Don N. de la Riesta) are most encouraging, expressing his conviction of the continued success of the bank, and also satisfaction with the zeal and good conduct of his very efficient staff. These services are duly appreciated by the board. Montevideo: the continued political and domestic troubles of this republic have contributed to retard in great measure the progress of this branch. The directors, however, hope that the steps they have taken will, on the cessation of the civil war, prove of advantage and profit to the bank. Increase of capital: the directors have given their serious attention to this subject, and in asking the proprietors to vote the necessary powers (which they do not intend immediately to exercise) are fully confirmed in their opinion by the advices from Mr. Green, that from the great increase of their general business and the rapid development of the resources of the country, they will have ample opportunities for the profitable employment of the proposed additional capital. The dividend warrants will be issued payable on 27th December, 1864.

Balance-sheet made up to 30th September, 1864.

CAPITAL AND LIABILITIES.			
Capital called up to date, viz.—£40 per share on 5,000 shares, £200,000; £5 per share on 20,000 shares, £100,000—£300,000; less arrears on 2nd call on £25 shares £410, and 456 £25 shares unallotted £2,280—£2,690		£297,310	0 0

The Chairman, in moving the adoption of the report, commenced by an eulogy of the late chairman, Mr. Bruce, whose exertions and self-devotion to the interests of the bank could not be too highly appreciated. (Hear, hear.) The directors felt gratified in being able to congratulate the shareholders on the results of the second year's operations. They gave an *ad interim* dividend of 5 per cent. for the first six months, and now they proposed a second dividend of 5 per cent., with a bonus of 10s. per share on the original shares of £100, and a proportionate bonus on the new shares of £25, making together a dividend of 11½ per cent. for the year as compared with 7½ per cent. in the last year. He hoped that would be satisfactory. (Hear, hear.) In addition to this they were enabled to add £10,000 to the reserve fund, and appropriate £1,000 towards the reduction of the preliminary expenses. All these sums united together, with the amount carried forward, were equal to a profit of 16 per cent. for the year. This was not all. They not only made ample provision for bad and doubtful debts, but in consequence of the troubles in Rio and the high rate of interest, they made a larger reserve fund than they otherwise would have done, in order to be able to meet any contingencies that might arise. They had now a month's later advices from Rio, and as none of the evils which they wished to provide against had occurred, the shareholders would have the benefit of what had been laid aside to meet contingencies in the next profit and loss account. (Hear, hear.) The Buenos Ayres branch was also progressing very favourably, and the reports they received from their manager, Mr. Green, and their colleague, Señor Riestra, argued well for the success of that bank. He regretted he could not speak so favourably of the Monte Video Bank, but this was owing to the political and domestic troubles which existed in that republic. With regard to the expenses, they at the first sight seemed large, viz., £17,662. (Hear, hear.) But these it should be recollected were the expenses for the year and not for the half-year. He analysed those expenses, and he found that the items were moderate and economical. With regard to the increase of capital, he should wait till the extraordinary general meeting before he spoke on that matter. (Hear, hear.)

Mr. Holt, the deputy chairman, seconded the motion.

Mr. Boyman and other shareholders put questions, the nature of which will be understood from the chairman's reply.

The Chairman said there could be no objection to making the report more explicit in future. The capital of the company was plainly set forth in the accounts—viz., £300,000. With regard to the 456 unallotted shares, as they were too few to be allotted *pro rata* amongst the shareholders, they would be disposed of in the open market, probably less eighty for a gentleman in the Plate, and the proceeds would be added to the company's fund. With regard to the £89,400—contingent liabilities on bills discounted which had since been duly paid (excepting £5,000 not yet due)—that was inserted in the accounts because that was the state of things on the 30th September, but since then all had run off except about £5,000 which was not yet due. (Hear.) With regard to the directors' remuneration, the directors by the articles of association were entitled last year to £2,500. They took that for more than twelve months. There were twelve directors (eleven at present), and the business in London was conducted without a manager by the chairman, the deputy-chairman, and the secretary. The expense of a manager was, therefore, saved, but he did not wish to disguise from them that from the increase of business they would be

compelled to have a manager. This year the directors were entitled by the articles of association to take £5,500, but they took £2,000 less. (Hear.) He hoped the amount they took would not be considered unreasonable. The expenses in London were £6,483; in Buenos Ayres £7,538; in Monte Video, £3,671. But it should be recollected that they were subject to increased expenditure on account of the distance of the banks. There was an item, for example, of £300 for the expense of sending out clerks. There was also a heavy charge for foreign stamps, and, on account of the cost of living, salaries were higher abroad than they were in London. The expenses last year were £14,000, as against £17,000 this year; but the expenses of the Monte Video branch were for twelve months this year as against nine months for last year. The Monte Video branch was not a loss. It afforded a moderate profit. With regard to the sum set aside for contingencies, that was a question he must decline to answer. (Hear, hear.) It was a large sum, and was three times as much as they considered necessary last year. If the contingencies did not arise, the shareholders would have the benefit of the money next year. The qualification for a director was £2,000 stock, and he believed the board held between them something like one-fifth or one-sixth of the entire capital. (Hear, hear.) With the £10,000 now added, the reserve fund would amount to £43,000. With respect to the division of the £100 shares into two £50 shares, the opinion of counsel had been taken, and it was to the effect that it could be done, but that it was not advisable to do so till £10 had been paid on the 20,000 shares. (Hear, hear.) The dividend was not free of income tax, but the next would be.

The motion was then agreed to, and a dividend of 5 per cent. and a bonus of 10s. per share on the original shares, and a proportionate bonus on the new shares, were declared.

In reply to a question,

The Chairman said that 4s. 8d. was the amount of dividend and bonus on the £25 shares.

Votes of thanks were passed to Mr. Green, the manager, and Senor Riestra for their valuable services to the bank, and a similar compliment was paid to Mr. Smithers, the secretary, whose uniform courtesy and kindness, the chairman remarked, in conducting the affairs of the bank must be known to all, and whose great knowledge in dealing with the difficult operations of exchange in five different currencies was appreciated by the directors.

The retiring directors and the auditors were re-elected, and a remuneration of £50 a year was voted to each of the auditors.

The business of the ordinary meeting having concluded,

The Chairman proposed to the extraordinary general meeting, which was then held, a resolution for the purpose of ratifying and confirming a resolution passed by the board of directors on the 19th of November, for empowering the board to increase the existing capital of the company by an amount not exceeding £1,000,000 sterling, at such times, in such manner, and upon such conditions, as the board may from time to time deem expedient.

Mr. Holt seconded the motion.

A Shareholder said that only £40 had been paid up on the original £100 shares. He wished to know whether the directors intended to call up £10 on these shares so as to make the amount paid on them £50.

The Chairman said that the late chairman, in obedience to what he considered to be the desire of the shareholders at the last general meeting, gave an implied pledge that the board would not call up that £10, and the board at present had no intention of doing so. There was now paid on the £25 shares £7. 10s. per share, and a call of £2. 10s. would be made in January. The £10 on the £100 shares, and the £2. 10s. on the £25 shares, would only produce an additional capital of £100,000. As soon as Monte Video was free from civil war they had reason to believe that the branch there would become an important and a prosperous one; but to enable it to become so they must have a larger capital in their possession. There were other circumstances also which made this desirable. They ought to be in such a position in London that they need not be obliged to pay excessive rates of discount when their remittances arrived. (Hear, hear.) There were some negotiations with respect to the right of emission in Monte Video, and if they acquired that valuable privilege they would want a larger capital. It might also be good policy to open other branches. He could only say that if this bank did not supply the capital, it would be supplied from other sources, and he should be sorry to see any opposition arise. If they did not see their way to dividend they would not ask for the money. The board would fix the rate of premium at which the shares would be issued, and they would be issued at such a price as in the opinion of the board would be equally for the benefit of the shareholders and the reserve fund. (Hear.)

A few shareholders expressed an opinion that in the first instance the board should call up the £10 on the £100 shares, but on the proposition of the directors being made it was carried, only three hands being raised in opposition to it.

A vote of thanks to the chairman and directors concluded the business.

EAST INDIA FINANCIAL ASSOCIATION, LIMITED.

A SPECIAL general meeting of the shareholders in this company was held on the 20th December, at the offices in East India Avenue, Leadenhall Street, City; Mr. H. D. Cartwright in the chair.

The Secretary having read the advertisement convening the meeting,

The Chairman said that it had been called in order to enable the directors to render some account to the shareholders of the way in which they had dealt with their money. They were aware that the time had been very much against associations of this kind. Instead of finding money easy here, as was anticipated, it had been unusually tight, the consequence of which was that their operations had been much more restricted than they would otherwise have been. He should class the observations he had to make under three heads; first, the progress they were making; secondly, he should explain the present position of the associations; and thirdly, he would state the reasons which induced the directors to make calls. With regard to the progress of the association, he might state that they had placed all the available funds in India. The capital sent out to Calcutta was £65,000, of which half was invested in land and home mortgages and other securities of unquestionable character, at an average rate of 11 per cent., and the other half arrived out just after the hurricane, and when money was in great demand. The last advices they had re-

ceived from Calcutta brought intelligence to Nov. 5. The sum of £60,000 had been sent to Bombay, of which £40,000 was invested in land and house mortgages and other excellent securities, and £20,000 was yet to be invested. The investments which had been proposed for a great portion of the capital were now under consideration, their latest advices from Bombay bearing date the 12th of November. The capital already invested had been placed in India at less than a loss of half per cent. on the rate of exchange, but that which was to be invested would probably not be invested at so small a loss, because, as a general rule, the loss on sending money from England to India was 3, and frequently 4, per cent. They would observe that the money placed at the disposal of the Indian agency was £25,000 in excess of the paid-up capital. That included the whole of its liabilities on acceptances, including March and April next, which liabilities would be provided for out of the first call to be made. Those acceptances were for the purpose of investment, and it was hoped that the profit accruing from the employment of the funds pending the maturing of the bills would be considerable. While on this subject, he might say with respect to Calcutta, that the moneys now called up would enable the agents, should they require to draw for investment, to make such terms as would save the association from the loss on the rate of exchange with respect to those drafts, which was a point that had been brought prominently to the attention both of the Calcutta and Bombay agencies. Those agencies were in very trustworthy hands, and the receipts and correspondence reached this country with the greatest regularity every mail. The drafts all passed through the Bank of Agra and Masterman, the company's cash depository, and the agents in India were assisted by the co-operation of influential local committees. Two of the directors, Messrs. Moran and Robinson, had lately returned to Calcutta for a short period, and would act on the local committee, and from the intimate knowledge they had of the principal persons in Calcutta, and their influence, it was expected that a large business would accrue to this company in course of time. With respect to the position of the company, all he could say was that their money was most securely invested, ample margin having been left for depreciation; the greatest caution had been used, and the severest tests applied to all the securities on which the company had lent money. They must, however, recollect that their funds were very limited, and the expenses of working a small paid-up capital were as heavy as if they were working one ten times as large. For the greater portion of the year the English money market had been in such a state that it was out of the question to hope for any assistance from debentures except at a rate of interest which would have left no margin of profit, and the directors had felt that severely, because the opportunities for investing on safe securities in India were very large; and looking to the present state of things in India, the board had thought it better to avoid business of a general financial character, because, although the prospective profits might be large, they might be absorbed or swept away on the failure of any security which entailed a great risk. (Hear, hear.) In the investments they had made, landed securities chiefly had been sought and obtained; and he had pleasure in stating that to the shareholders because it was material to their interests. (Hear, hear.) Their position was this: a small paid-up capital safely invested or in course of investment at paying rates, with power and opportunity to do a very large and profitable business on the production of more capital without materially increasing their

working expenses. With reference to the reasons which induced the board to make a call, they were explained by the observations he had made with regard to the position of the company. The simple fact was that they wanted money and came to the shareholders for it, bringing in their hands proofs that they had invested the money already entrusted to them securely, and that in the face of the most difficult and exceptional period of money value relatively in England and India. Their prospects at the time of their organization were a moderate supply of money on this side and great scarcity in India, but the reverse had been the case, and had taken even the most far-seeing by surprise. In the western presidency of India twelve months ago money was from 20 to 30 per cent., and in considerable demand, whereas now it was only 8 to 10 per cent. As to their future prospects he could say with confidence that with a good supply of money there existed both in the Calcutta and Bombay presidencies an ample field for the profitable working of the association. In the presidency of Bengal, extensive railway works were proceeding, and advances might be made on very profitable terms on railway and other public works, the interest of whose capital was to a great extent guaranteed by the government. Besides this, in one district of Madras alone, that of Malabar, they could employ immediately fully one-third of the subscribed capital, while in respect to another, he meant the district of Wyenaud, where coffee planting had been engaged in to a great extent with very successful results (which district he knew intimately, having a large interest in it), he could speak most positively to the fact that the whole of the subscribed capital of this company might be invested in excellent security. Thus, the field of India, on the one side where he had resided, and on the other side where some of his co-directors had resided, there was no doubt that a large capital could be most profitably employed, and had it not been for the exceptional state of the money market here for so long a period, they would have no doubt been able to show a much better account, proportionally though perhaps not actually. They were also making cautious inquiries in the direction of China and Japan; but until the capital was increased they would be obliged to confine themselves to that part of the east with which they were best acquainted.

In reply to questions from Mr. Harris,

The Chairman said that the £25,000 acceptances in excess of the capital was money drawn on six months bills, the difference in the rate of exchange representing the whole of the interest paid, and that, as he had explained, did not on the average exceed half per cent. Of course, some of the bills had been drawn at a higher rate, and even at $4\frac{1}{2}$ per cent. the average was only one-half per cent. The fact was that they made a profit on the larger sum, and suffered a loss on the smaller. The money derived from those acceptances had been invested at the rate of 11 per cent. (Hear.)

Mr. Porter inquired what progress had been made by the board in the issue of debentures, or whether they intended to abandon that system? He reminded the board that the calling-up of capital tended rather to depreciate debentures in the market.

The Chairman replied that the board were well aware that the prosperous working of a large concern like this depended to a great extent on the assistance it could derive from other quarters at a moderate rate of interest. They were still advertising for debentures, but considering the state of the money market hitherto they could not expect to meet with much success. They had had applications for debentures, but up to the present they were comparatively small, and he trusted they would soon be larger.

It was important to the holders of debentures to know that from the mode in which the money of the company was invested nothing could be securer than their debentures. If this association could get £100,000 on debentures with £150,000 paid-up capital, they could easily declare a £10 per cent. dividend.

Mr. Stoven inquired whether the directors had contemplated an amalgamation with any other company of the same description, for the purpose of widening their basis. He remarked upon the fact of the large number of financial companies which had sprung up both in India and in this country, which had introduced an extraordinary competition, and had led to considerable depreciation in the value of money in India. He hoped the directors would, if they had not done so already, take this matter into consideration, and he pointed out that the position of the Land Mortgage Bank of India was such as to well merit their consideration.

The Chairman said that the subject had not escaped the consideration of the directors, and if there was an opportunity for a profitable amalgamation with another company of a suitable character, no regard to the position occupied at the board by the directors of this company would prevent them from carrying such an amalgamation into effect. (Cheers.) He, however, remarked that some of the associations which had been recently formed in India transacted a class of business which this company would not touch (hear, hear), and he trusted that the shareholders would give the board credit for acting prudently in dealing with their money. (Cheers.)

A Shareholder asked if they had any losses?

The Chairman: None.

A Shareholder complained that there was a report abroad that 800 shares had been purchased by the directors with the funds, and sent out to India. They were bought at a premium.

The Chairman denied that those shares had been bought with the funds of the company. But directors who had shares on hand sent them out with a view of obtaining influential support in India.

In reply to questions,

The Chairman said he was not at liberty to say whether they had had overtures made to them for amalgamation, or whether they had made overtures themselves.

Mr. Stoven hoped the directors, in the present state of the company, would not vote themselves the amount to which they were entitled. He asked also what would be the extent of the calls?

The Chairman said their present intention was to call £5. They would take no remuneration which the shareholders would not cheerfully vote. He believed the directors had power to draw acceptances to the extent of the capital, and to issue debentures to the extent of the subscribed capital, but they were limited to £250,000.

Mr. Hill asked what the preliminary expenses stood at.

The Chairman stated they were brought out by the International, and the expenses were settled at £2,000. They were ready to earn commissions when proper opportunity presented itself.

The proceedings were then brought to a close, and a vote of thanks passed to the chairman.

THE LEEDS BANKING COMPANY.

On the 1st December the case of the shareholders of the Leeds Banking Company came again before Mr. Buckley, chief clerk of Vice-Chancellor Kindersley, at the Vice-Chancellor's Chambers, Lincoln's Inn. Three cases were selected for consideration belonging to Class B, and those cases were looked upon as representative cases, with a view to decide all similar ones connected with the contributories. There was a very large attendance of solicitors representing shareholders.

The first case for consideration was that of Thomas Bromfit, Thomas Dixon Cradock, and Thomas Craven, the executors of a deceased gentleman named James Cradock.

Mr. Denton (of Messrs. Freshfields and Newmans) appeared for the official liquidator. He said he believed there was no objection to placing those gentlemen on the list of contributories in their representative character as executors, and he should be quite satisfied if they were placed on the list of contributories in that capacity. They thought the estate was sufficient to pay all, and they did not desire to do more than place them on the list of contributories. The persons who had taken the residue of the property were persons in a good position.

Mr. Nelson said he only got notice in this case the previous evening, and he had not had an opportunity of looking into the matter, but he believed those shares were specially bequeathed by a will, although with another property; and a bill had been actually prepared to say which fund should bear the call. It was a question whether it was payable by the tenant for life or by the residuary legatee.

Mr. Denton asked the amount for which the will had been proved.

Mr. Nelson—£7,000.

Mr. Buckley suggested that they should be placed on the list of contributories, without prejudice to the right of the official manager to place any one on the list whom the bill should find.

Mr. Nelson—Then how do you propose to put us on?

Mr. Denton—As executors, without prejudice to the rights of the official manager.

Mr. Bunting said it was very important that this case should be settled in some way, if it were to decide other cases.

Mr. Denton said if they got £70 per share from the executors of Mr. Cradock they thought they had done all they could.

Mr. Torr—May not the trustees get off if there is a special bequest? That would not determine the other question.

Mr. Buckley could not help that. They had not all the facts before them.

Mr. Bunting did not know the executors were liable. There was some division of the property, and he generally objected to the course that was being taken with very great respect.

Mr. Buckley could not see that he was prejudiced. He settled them as executors, and left all the other points open. They could not take evidence to settle the legatees.

Mr. Torr said this was not a good model case.

Mr. Nelson said the executors did not resist in their representative capacity.

Mr. Denton—Mr. Cradock signed the original deed, and his will was

produced in 1857 at the Leeds Banking Company, and the executors named in the will placed on the list. He was prepared to prove by the drafts of the Leeds Banking Company that those gentlemen had drawn various amounts from the bank, describing themselves as the executors of James Cradock, and that was continued up to the 4th of February, 1864. They had received the dividend, drawing on the Leeds Banking Company in their representative capacity.

The names were placed on the list of contributories in their representative capacity as executors.

Mr. Denton said the next cause was that of Crossland. There was the deed of settlement executed by Mr. Crossland for 16 shares. He obtained on the 7th of April, 1841, five further shares. In 1862 probate of the will was produced at the bank, and there was an entry on the 6th of February and the third of July, 1864, that the executors of Crossland received the dividend.

A short discussion followed, and this case was ordered to stand over to ascertain the amount of the property left under the will.

Mr. Williamson, solicitor, appeared for the executors in this case.

The next case considered was that of John Chalk Bennett, of Liverpool.

Mr. Denton said in this case he produced the deed of settlement executed by Mr. J. C. Bennett for ten original shares. The deed of settlement was signed for 7,340 shares, and 2,660 shares were reserved to the directors; and on the 20th November, 1857, there was a transfer of 30 shares, and on the same date a transfer of 15 shares—in all 55 shares—to Mr. Bennett. Of the 2,660 shares in the hands of the directors he had subsequently had 22 additional allotted him, and on the 2nd of August he paid £660 on account of those shares, and asked for the certificates at the earliest convenience of Mr. Greenland. The register had been identified in this case, and there was no question as to the number of shares.

Mr. Bunting asked, was there any evidence that the share register was entered up at the time? It might have been entered after the stoppage of the bank.

Mr. Buckley would not go into those questions unless they were raised in each particular case.

Mr. Paterson objected to his client being made responsible on the latter shares, for which he had paid £660 and had received no return. He was induced to take the shares by statements contained in the report of the Leeds Banking Company for February, 1862, which were false and fraudulent. They wanted to know the truth of those statements on the 2nd of February, and they wanted to know how many bills were in the hands of the bank as new bills, and how many years and months they had them.

Mr. Buckley thought the shareholder was entitled to enquire into those matters, and would postpone the further consideration of the case for the present.

The inquiry was then further adjourned.

On the 9th December a meeting was held at the chambers of Vice-Chancellor Kindersley, before Mr. Buckley, the chief clerk, for the purpose of declaring a call.

Mr. Denton, from the office of Messrs. Freshfields and Co., stated that up the present time 189 shareholders, representing 6,660 shares, had been

settled on the list of contributories. There were certain cases which related to the liability of executors and trustees that stood over for inquiry, and others also postponed for the Vice-Chancellor to fix the parties. Since the last meeting all who had been settled had been served with the usual notices, and also a copy in print of the remarks of Mr. Turquand, the official liquidator, at a previous meeting. That gentleman had filed an affidavit, dated Dec. 6, 1864, in which he stated his reasons for stating that a call of £70 per share would be necessary; and he also presented an approximate statement of the affairs of the company at the date of its stoppage, viz., Sept. 17, 1864. The amount of bills of exchange not yet due and still current was £830,000, or thereabouts; but it was impossible, from those returned unpaid at present, to ascertain accurately the amount of deficiency from this source, but it would probably be £503,000. It further appeared that on the 17th September the company were indebted to certain creditors unsecured to the extent of £639,337. 0s. 6d.; likewise to creditors holding security, £90,000 odd; and also to liabilities on bills bearing the endorsement of the bank estimated to rank at about £1,000,000; making in round numbers £1,700,000 as the total of the debts of the Leeds Banking Company. For this it was necessary that a call should be made. It was supposed that there would be available in course of time assets to the extent of £826,000, and that in that way the total amount to be ultimately fixed as the loss of the company will be about £503,000. This presumption was grounded on the fact that it was estimated there would be recovered from the drawers, the acceptors, and the endorsers of the dishonoured bills something approximating to £400,000. The list of contributories comprised 7,340 shares in Class A and 2,374 in Class B, and with a few exceptions the persons returned as contributories in Class B were also found in Class A. He therefore did not consider, having regard to all the contingencies of the case, and seeing that some persons would fail to pay, that a call of £70 per share would be too much.

Mr. Torr, solicitor, complained that the statement of Mr. Turquand did not come up to the present date.

Mr. Denton said that if Mr. Torr's client would pay the expenses of such a process, it would be furnished at once.

Mr. Turquand said there was no probability of the assets exceeding the estimate. The liabilities had "run off" £660,000.

Mr. Torr said of course they must, to a large extent, rely on the official liquidator; but it was generally usual, he thought, before making a call, to give precise information as to the finances up to the period of convening the meeting for such purpose.

Mr. Buckley.—It would be a very great expense.

Mr. Torr thought that after all there would not, perhaps, be much variation.

Mr. Buckley.—Then let there be a call of £70 per share.

Mr. Fearnley wished to know when it was to be paid.

Mr. Turquand suggested in a month.

This was agreed to, and the meeting adjourned.

BANKING AND FINANCIAL ANECDOTES.

No. I.

THE FOUNDER OF THE BANK OF ENGLAND.

"The world knows nothing of its greatest men," says a philosophic poet ; and it is astonishing how little is known of the founders of great cities, or cities which once were great ; of great institutions, or of the originators of great theories, religious or political. Certainly the founder of the Bank of England, if a man be measured by the effects he has produced, should be reckoned amongst our great men, and we know but little of him. Mr. Francis, in his "History of the Bank of England," tells us that William Paterson—who, by the way, was not only the founder of the Bank of England, but the projector of the present Bank of Scotland—was born in Traillfalt, in the county of Dumfries, in 1658. "Having been educated for the church, he indulged a naturally adventurous disposition, by visiting the West India Islands, under pretext of converting the Indians. His real occupation is stated, however, to have been very different, as he mingled with, and perhaps formed part of those daring buccaneers, the exploits of whom form so romantic a chapter in the byeways of history. While roving about the beautiful islands of the western Indies, Paterson loved to listen to the buccaneers, who, after a stormy and eventful career, delighted in relating the glories of their early achievements ; and, with memories which still lingered on their past lives, recounted with transport the ease with which they had passed from one sea to another, driving before them the plunder they had acquired. From them he heard of precious metals in the bowels of the earth, of fine tracts of land little known to Europeans, and of rivers sparkling over sands of gold. The romance which fired the imagination of the youth, was productive in the maturity of his manhood of the unfortunate Darien expedition." The disastrous failure of this enterprise is matter of history, and it is here referred to in consequence only of the name with which it is identified ; for "William Paterson, the first to leave his native soil at Leith, and the last to quit Darien, saw with an anguish almost inexpressible, the failure of his cherished scheme." A writer of the time affords us a passing glance at the man :—"The colonists," he says, "give Paterson due praise, for he hath been diligent and true to the end. He looks more like a skeleton than a man."

Paterson himself touchingly corroborates this. "When the rest were preparing to go away," he says, "I was left alone on shore in a weak condition. None visited me except Captain Drummond, who, with me, still lamented the thoughts of our leaving the place, and prayed God that we might hear from our country before we left the coast." The remnant of an expedition which had left their native shores, their hearts beating with high hopes, and their imaginations picturing "full many a sanguine scheme and fraught with loveliness," were brought so low on their determining to abandon their project, that the few returning adventurers were physically too weak to weigh the anchor of the leaky vessel destined to convey them home. Among this little forlorn company was the projector of the scheme which was now coming to so disastrous a conclusion; and the failure of which weighed so heavily upon him that for a time, during this miserable return voyage, he lost his reason.

If Paterson's name, is, however, connected with this gigantic failure, it is identified with one grand success—the Bank of England, to say nothing of that of Scotland. The Bank of England was established in 1694, and the name of William Paterson, the founder, was on the list of directors for the first year, but only for that year. His resignation of the office of director, could the facts connected with it be fully ascertained, would but be another illustration of an oft-told tale. "The persons to whom he applied," said Sir John Dalrymple, "made use of his ideas, took the honour to themselves, were civil to him awhile, and neglected him afterwards." The institution which he founded remains, grand in its influence and mighty in its power, but the memory of its founder is preserved only by a few faint touches of the historian's pen; and no more touching epitaph could be written on the enterprising Scotchman than this brief mention of him by one of the writers of Queen Anne's reign: "Paterson survived many years in Scotland, pitied, respected, but neglected."

THE GREAT FINANCIER AND THE BATTLE OF NAVARINO.

THAT Navarino was one of the decisive battles of the world cannot be doubted. Alison thus writes relative to its effects on the current of events in Europe and Asia. "No words can convey an idea of the transports of joy which pervaded entire Greece when the intelligence of the battle of Navarino was received. Fast as the flaming

beacon which conveyed the news of the fall of Troy to Argos, the joyous tidings were transmitted from mountain to mountain, from crag to crag, from isle to isle, and one throb of exultation and thankfulness was felt in every bosom. Equally great was the sensation produced by this memorable event over entire Christendom. Never, save by the taking of Jerusalem, in 1199, by the crusading warriors under Godfrey of Bouillon, had so unanimous a feeling of exultation pervaded the Christian world. It exceeded that felt at the battle of Lepanto, gained by Don John of Austria. . . Slow, but certain, had been the march of divine justice. The final blow was not struck till many opportunities of repentance had been neglected ; but when it was delivered, the balance was at once righted ; an entire people rose from their grave ; the blood of Chios was avenged by the flames of Navarino.

The way in which the news of this momentous battle was first made known in England was very curious. One Saturday evening in November, 1827, Rothschild, the millionaire financier, made his appearance at the office of the *Atlas*, then the leading weekly paper of the day, and holding a high position in the estimation of the commercial world. This journal was printed and published at Beaufort House in the Strand, and some of its proprietors were said to be identical with the proprietors of the lottery which was then in vogue. The eminent financier had evidently something important on his mind, and his mere appearance in the office of a well-known journal, gave rise to excitement. He brought the first news that had been received in England of the battle of Navarino. He held in his hand a copy of the *Moniteur* with an outline of the facts. But it was in French, and the great financier either felt himself unequal to the task of translation, or would not perform it. The paper was just going to press ; the editor had gone ; and none of the heads of the establishment could translate the despatch. What was to be done ? In the emergency the master of the printing establishment remembered that one of the apprentice boys had some knowledge of French. "Tom" (for that was his name, as the story-books say), was thereupon called down from his composing-frame, and requested to translate the despatch. This he readily did, and went to his work again, grumbling at receiving not the slightest acknowledgment for his services. The news was rapidly inserted in the *Atlas*, and the intelligence flew over the town like wildfire, none caring to

know who had been the humble instrument in conveying the news to the public in their own language.

THE BANKER AND HIS CUSTOMER.

OLD Mr. Lefevre, the father of the late Speaker of the House of Commons, and the principal founder of Curries and Co.'s house in Cornhill, illustrated the theory of banking one day to a customer in a significant manner. The customer in question was one of those men who find it very convenient to have bad memories. His account was almost always overdrawn, and whenever spoken to on the subject, his answer was the same—he really had forgotten how it stood. At last Mr. Lefevre, who had watched his opportunity, caught him one day at the counter, and said to him, “Mr. —, you and I must understand one another something better than we seem to do. I am afraid you don't know what banking is; give me leave to tell you—It's *my* business to take care of *your* money, but I find *you* are always taking care of mine. Now, that is not banking, Mr. —; it must be the other way; I'm the banker, not you; you understand me now, Mr. — ?”*

Reviews.

EQUATION INTEREST TABLES, at 5½, 6, 6½, 7, 7½, 8, 8½, 9, 9½, and 10 per cent. calculated for the use of bankers and others. To which are added commission tables at one-eighth and one-fourth per cent. By JOHN ROSS COULTHART. Longman & Co., London; A. and C. Black, Edinburgh; and W. Mc Gee, Dublin.

In our June number we briefly reviewed a volume of Interests Tables then published by Mr. John Ross Coulthart, banker, Ashton-under-Lyne, and we now recur to the book, the author having in the meantime extended the rates from 8 to 10 per cent., by the addition of four sets of tables advancing consecutively one-half per cent. beyond each other. He has also added Commission Tables at one-eighth and one-fourth per cent. which will be found very convenient by accountants in country banks, where one-eighth per cent. is now usually charged on all business done by customers who keep a creditor account, and one-fourth per cent. on all transactions in an account where the customer is from time to time accommodated with advances. The extension of the rates beyond 8 per cent. has doubtlessly been rendered necessary by the Bank of England having maintained its *minimum* rate of discount at 9 per cent, for such a lengthy period in the months of September, October, and November, and

* D. Hardcastle, Jun., “Banks and Bankers.”

the prospect that there still is of money remaining at tolerably high rates in consequence of the heavy calls which have to be paid on several important foreign loans, and the pressing requirements of many of the financial and commercial companies that have recently been formed in this country. These tables, however, it is to be hoped may now be considered sufficiently comprehensive for the calculation of any rate of interest likely to be charged by bankers for some years to come, and at the present time they must prove of great practical utility to all who keep their accounts on the Scottish or progressive system, as without such tables the time and labour of accountants must be nearly doubled, and the liability to error increased probably tenfold. But besides the advantages referred to in the calculation of interest exceeding five per cent., these tables will be found extremely useful in the making up of accounts at minute fractional rates of interest beneath five per cent., which has often to be done in the ordinary state of the money market. For instance, the half of $9\frac{1}{2}$ per cent is $4\frac{3}{4}$ per cent.; the half of $8\frac{1}{2}$ is $4\frac{1}{4}$; the half of $7\frac{1}{2}$ is $3\frac{3}{4}$; and so on down through the various rates in the volume. Though these tables have been published principally for bankers, yet they will also be found more convenient than any other by all persons engaged in interest calculations, as, from our own experience, we can unhesitatingly affirm that no one who has used such tables for a short time, and thoroughly understands their principles and application, will ever voluntarily relinquish them for any other description yet printed. Their chief excellence consists, as we stated in our former article, in being easier of reference, freer from losing the fractions of a penny, less liable to error, and requiring fewer extractions in collecting the interest than other tables, and when we add that they have been continuously used and appreciated by the banks in Scotland for the last eighty years, we have given perhaps the best evidence that could be adduced of their practical superiority. Indeed, the saving of time in the making up of accounts at the periods of general balancing is held by all bankers to be of vital importance, for as no transactions of a subsequent date can be posted to an account until after it has been balanced, the exact amount of a customer's debt or credit is a matter of uncertainty whilst that operation is in abeyance, but so rapidly is the balancing of accounts effected with tables of the nature of those under review, that we have frequently known accountants in banks balance thirty accounts per hour, or after the rate of one account in every two minutes. In very many of the banks whose accounts are kept on the progressive principle, the whole of the current accounts are balanced on the evening of the same day on which the general balance occurs; but we believe that it would be utterly impossible to do so in the great majority of existing cases if it were not for the facilities afforded by interest and commission tables like those published by Mr. Coulthart. We have been led to make these remarks, not so much for the purpose of praising Mr. Coulthart's tables, though they are deserving of high commendation, as with the view of inducing those bankers who still adhere to the old-fashioned laborious, dilatory plan of reducing the charges and allowances on every separate bill and draft they receive into pounds, shillings and pence at the time of the transaction, to discontinue that practice without delay, and instead thereof to simply multiply the number of days by the sum of money, be it bill or balance of account, and carry that product into the debtor and creditor interest column, leaving it there till all such products are added together at the end of the half year, and reduced to pounds, shillings, and pence by one operation with equation interest tables. This plan will save

much time and labour; and to ascertain the average value of money for the half year it is only necessary to take £100 and multiply it by the number of days during which each separate rate of interest existed in the course of the six months, and having applied the appropriate interest tables to these different products respectively, and added the interest items together as collected from the tables, the amount will be the average interest on £100 for the half year, or if doubled, the average rate per centum per annum. No doubt there are exceptional accounts in all banks which would have to be treated differently; but we are at present speaking of banking accounts generally, and of the most approved method of keeping and balancing them. In adopting the plan recommended, Equation Interest Tables are almost indispensable, and as those published by Mr. Coulthart are by far the most comprehensive of the kind ever printed, we have no hesitation in bringing them under the special notice of our readers, and in recommending them as being in every way thoroughly serviceable and trustworthy. We may add that the work in its enlarged form is characterised by the same distinct style of printing, and careful manipulation of stereotyping, which distinguished the issue from the plates in June; and Messrs. Harrison and Sons, of St. Martin's Lane, have in their department shown how safely they may be trusted with similar work, which is, perhaps, the most difficult to manage accurately of any connected with letter press printing.

UNITED DANUBIAN PRINCIPALITIES LOAN.

THE prospectus of the United Danubian Principalities loan of £916,000 has been issued. It is brought out under the auspices of the Imperial Ottoman Bank and Messrs. Stern Brothers, who, acting on behalf of themselves, the International Financial Society, the Société Générale of the Ottoman Empire, and others, notify that they are prepared to receive subscriptions at the price of 86 for each £100 stock. The interest is 7 per cent. per annum, with a sinking fund of 2 per cent. per annum, the bonds to be redeemed by annual drawings, and paid off at par in London in sterling. The interest and sinking fund of this loan are specially guaranteed by a first charge upon the Customs revenues of the united Principalities. It appears that the Customs revenues amounted in 1861 to £258,700; the total estimated by the Ministry for 1865 is £332,100; the annual amount required for the interest and sinking fund is £82,440. Since August last, the date when the contract was concluded, the payments have been regularly made in conformity with the agreement. Discount at the rate of 7 per cent. will be allowed on payments in full in anticipation. The interest will date from the 1st of September, and this, with the discount allowed in prepayments, will render the price of issue equivalent to about 83 per cent. Looking at the reimbursement of the bonds at par by means of the sinking fund, the calculated return is about 10 per cent. per annum. This is the first foreign loan which the Princi-

politics have contracted, and there is no internal stock existing. Eighty per cent. of the entire loan is to be applied for the indemnity to be paid for the secularisation of the convent property, by which means the revenue of the Government will be increased to a much larger extent than their expenditure will be by this loan. Messrs. Glyn, Milla, Currie, and Co., are the bankers ; and the brokers are Messrs. P. Cazenove and Co.

DANISH FIVE PER CENT. DEBENTURES.

Messrs. R. Raphael and Sons have announced an issue of Danish Five per Cent. Government Debentures to the extent of £728,000. The Sound dues receivable from Russia, of which a large proportion remain to be paid, are pledged as security in the first instance, and in addition "all the means and revenue of the Danish state and finances." The circular intimates that the subscription price is to be 94½ per cent., payable, 25 per cent. on allotment, 25 per cent. on the 15th Dec., 1864, 25 per cent. on the 16th January, 1865, and 19½ per cent. on the 15th February, 1865. Discount is to be allowed at the rate of 5 per cent. per annum, and no application will be received after the 1st December. The debentures, it is arranged, shall become due in sums varying from £21,000 to £38,000, at specified dates down to May 1877, and of course will be redeemed at par.

MONTE VIDEO EUROPEAN LOAN.

THE proposals have been issued of the Monte Videan European loan of £1,000,000. The amount is to be placed in bonds to bearer of £100 each at the price of 60 per cent. The operation is introduced under the sanction of Messrs. Maua and Co., of Monte Video, and Messrs. Maua, M'Gregor and Co., of London, and Messrs. P. Cazenove and Co. are the brokers. The bonds are to bear 6 per cent. per annum from the 1st of January, 1865, payable in sterling half-yearly in London, and a sinking fund of 1 per cent. will be applied annually in the purchase or redemption of the bonds in sterling. It is, in fact, a conversion of the debentures of the internal debt into a national debt stock. The interest and sinking fund are secured as a charge on the general revenue of the republic, and also by a special hypothecation made by the law of the 14th of November, 1863, of certain customs and anchorage dues. The revenue derived from these sources is stipulated to be paid weekly to Messrs. Maua and Co., who will remit monthly to Messrs. Maua, M'Gregor, and Co., of London, for payment to the bondholders the proportion necessary for the payment of the interest and sinking fund on the external national loan. The

payments since the 1st of January, 1864, have been regularly received by Messrs. Maua and Co., and they were, therefore, able to estimate with accuracy the annual amount which may be looked for from the hypothecated revenues. This estimated annual amount exceeds £100,000. The average annual amount required for the sinking fund and the interest of the unconverted portion of the internal debt and for the £1,000,000 external national loan, is £90,000. The instalments are spread from 15 per cent. (5 per cent. on application, and 10 per cent. on allotment) to 15 per cent. on the 31st of March, there being four monthly payments, making the total 60 per cent., the price of issue. Discount at the rate of 6 per cent. per annum will be allowed on payments in full in anticipation.

TENDERS FOR BILLS ON INDIA.

THE biddings for 35,00,000 rupees, in bills on India, took place on the 7th December, at the Bank of England. The proportions allotted were :— To Calcutta, 22,62,000 rupees; to Bombay, 12,00,000 rupees; and to Madras, 38,000 rupees. The minimum price was, as before, 1s. 11½d. on Calcutta and Madras, and 1s. 11½d. on Bombay. The applications within the limits amounted to 223 lacs. Tenders on Calcutta and Madras, at 1s. 11½d., will receive about 9 per cent., and on Bombay, at 2s. 0½d., about 80 per cent. All above these prices in full. Further biddings for 35,00,000 rupees took place on the 21st December. The proportions allotted were —to Calcutta, 17,82,000 rupees; to Bombay, 12,00,000; and to Madras, 5,18,000 rupees. The minimum price was fixed at 1s. 11½d. on Calcutta and Madras, at 1s. 11½d. on Bombay. The applications within the limits amounted to 65 lacs. Tenders on Calcutta and Madras at 1s. 11½d. will receive about 58 per cent., and on Bombay at 2s. 0½d., about 84 per cent., all above these prices in full.

Communications.

BANK CLERKS' SALARIES.

19th December, 1864.

SIR,—The February number of the "*Bankers' Magazine*" contained a valuable suggestion to bank directors from a correspondent, which meets with the unqualified approval of a bank official of eighteen years' standing, in your October number, namely, the payment of bank clerks' salaries *monthly*. I feel sure that bank directors would not hesitate to adopt the suggestion, did they know how many of their employes would be kept from all worry of a pecuniary character (which must be always prejudicial to their employers' interests): for the interests of bank shareholders, directors, and officers in their employ are identical; and if the latter are noted for their strict integrity, high morality, and right-mindedness, the bank shareholder must be a great gainer. As a new year will soon dawn upon us, I trust it will be seen that the subject

has had the consideration of bank directors, both in town and country, for I am perfectly convinced that it is a reform from which every one connected with banks will reap the fruits.

Yours,
AN OLD BANK CLERK.

THE NEW BANKS.

SIR,—Can any of your readers furnish me with an explanation of an item frequently to be seen in the balance-sheets of new banks, viz., “Stamps in hand,” in amounts varying from £400 to £500.

I have been connected for many years with an old-fashioned joint-stock bank in a manufacturing district, doing a large business, and I can only say that neither stamps nor stationery ever appear in a balance-sheet as an asset, but have been always charged to profit and loss as soon as paid for; and also that the amount of such payments is never at any time half such a sum as generally quoted.

I can only suppose the stamps consist of unused cheques and drafts. Is it so?

Your obedient Servant,
AN UNLIMITED BANKER.

Leicester, 20 December, 1864.

CHEQUE PAYABLE TO ORDER.

SIR,—May I beg the favour of a reply to the following question in your next number:—

Would a banker be justified in refusing to honour a cheque payable to “order” having a memorandum of horse-warranty written on the back by the drawer, who intended that the endorsement of the payee should be a completion of it, but the latter had cancelled the memorandum and endorsed the cheque in the usual manner only; the reason given by the banker for the dishonour being, that the cheque was issued on a condition which the payee had not fulfilled, and the drawer’s consent was necessary to such non-fulfilment. It is assumed that the payee himself presents the cheque, and not a third party.

I am, yours faithfully,
C.

[We think the banker was not justified in refusing to pay, if the cheque were regularly endorsed, unless he had notice from the drawer that the warranty must also be signed.]

BANK OF ENGLAND NOTES.

Sir,—While thanking you for your reply to my note published in the last number of the Banker’s Magazine, I may, perhaps, be allowed to express my surprise at its tenour, for in the “Law of Banking” by J. W. Smith, LL.D., (one of Wilson’s legal handy-books), published in 1859, it is stated, page 18:—

“Where a note or half note is lost or destroyed, payment of it, if refused, may nevertheless be compelled by bringing an action at law upon
VOL. XXV.

it (as it may in the case of any other lost negociable instrument), and a judge may order that the loss is not to be set up as a defence to the action, upon an indemnity being given to his satisfaction against the claims of any other person upon the bill."

If you consider that this was the law in 1859 will you be so obliging as to say whether it has been altered by a subsequent decision?

The great importance of the question at issue must be my apology for thus troubling you.

I am, Sir,

Your obedient servant,

A. B.

Dec. 16, 1864.

[The Editor of the "Handy Book" referred to, appears to have gone beyond the decision of Lord Ellenborough and the Act 17th and 18th Vict., c. 125, sec. 87, for, while that learned judge, in the case of *Mayor v. Johnson*, decided that the holder of a lost half note could not recover, the Act in question refers only to lost bills or other negotiable instruments, and not to parts of such instruments. The subjoined extract is from the large work on Mercantile Law by John William Smith, continued by Dowdeswell, the same doctrine is laid down by Mr. Justice Byles, in his leading work on Bills, &c. (8th Edition, 1862), and, however much the commentators on Lord Ellenborough's decision may doubt whether it would be upheld if the issue were now raised, it appears to be the law until reversed.

"So, if a bill or note transferable by delivery be cut in halves, and half be lost, it has been held that the holder cannot sue at law upon the other half. In Bayley on Bills of Exchange, it is remarked that Lord Ellenborough assigned as a reason for the decision in this case, that the other half might have immediately got into the hands of a bona fide holder for value, and he would have as good a right of suit on that as the plaintiffs on the other half, which afterwards reached them, but the maker of a promissory note cannot be liable in respect of it to two parties at the same time," and the learned author adds, "But quære whether a man who takes half a note does not take it at his peril." There seems good reason for the doubt implied in this quære; and the case of *Mayor v. Johnson* may be considered open to review."—Smith's Mercantile Law, 6th edition, page 284.]

DECEASED ACCOUNT.

SIR,—Is a banker legally bound to honour a deceased customer's cheque, the banker having sufficient funds at the drawer's credit to meet it, the drawer having died in the interim of the date of the cheque and its being presented at his banker's for payment? I shall esteem your reply to the foregoing question a great favour.—I am, Sir your most obedient servant,

December 8th.

ALPHA.

[No; he is not justified in paying the cheque of a deceased person after knowledge of the death.]

CIRCULATION OF A PRIVATE COUNTRY BANK.

SIR,—Can a joint-stock bank having no cash note circulation of its own, legally issue the cash notes of its neighbour—a private country bank—whose circulation is below its limit? Z.

[We are not aware of any legal impediment.]

AD VALOREM STAMPS.

SIR,—Would you in your next issue kindly supply the following information, viz.:—Whether an inland bill drawn after date upon an ad valorem stamp, but negotiated abroad, also requires the ad valorem foreign stamp! Also, whether bankers' drafts (not in sets) upon which the composition duty is paid, are liable to advalorem foreign stamps if negotiated abroad!—I remain, Sir, yours most obediently,

Newcastle, Dec. 13th, 1864.

B.

[Inland bills duly stamped do not require foreign stamps when negotiated abroad, nor do bankers' drafts upon which composition is paid.

Cheques or drafts on demand bearing only 1d. stamp do, however, require a foreign stamp].

CROSSED CHEQUES.

SIR,—Would you oblige by informing me whether I do right in refusing to cash a cheque presented at the counter crossed with two transverse lines without the words and company or any abbreviation thereof?—I am, Sir, your obedient servant, TELLER.

[We think you do; the words "and Co." are essential to the crossing].

ENDORSED CHEQUE.

SIR,—In your number for September last, you say, at page 904, that "in an action upon a cheque endorsed 'per pro.' it was held that the banker was justified in paying."

Would you oblige me by stating, in your next number, when and in what court the action was tried; who were the parties to it; and in what publication the case will be found reported.

I am, Sir, yours respectfully,

December 22nd, 1864.

H. H.

[The action referred to was *Cuthbert v. Bank of England*, tried before Mr. Baron Martin, about four or five years ago, but we cannot find it reported.]

CHRISTMAS GRATUITIES TO CLERKS.

THE directors of the National Provincial Bank of England have issued the following circular to the whole of their branches, announcing a bonus and an extra gratuity on the salaries of their officers and clerks for the year 1864. This is a most satisfactory proceeding, and is worthy of imitation by the majority of the other banking institutions throughout the country.

"National Provincial Bank of England,
112, Bishopsgate Street, Dec. 24.

"Sir,—We have much pleasure in informing you, that the board of directors have to-day again ordered a bonus of 10 per cent. to be presented

to the officers and clerks of the company upon their salaries for the year 1864. And we have further to state to you that the directors having taken into consideration the many circumstances which mark the closing year as a very exceptional one in the matter of banking profits, have been pleased on this occasion to make a special grant of money for distribution amongst them, which will allow of a further gratuity of 5 per cent. being paid upon their salaries.

We are, your obedient servants,
 "ALEXANDER ROBINSON, } Joint General
 "EDWARD ATKINSON, } Managers."

On the eve of Christmas the directors of the London and County Bank distributed to the several officers engaged in the service of the bank £10 per cent. on the amount of their respective salaries, with the addition of 5s. per cent. in respect of every clear year of service, to mark their appreciation of continued attachment to the bank.

[We hope to have many more such announcements to make in the course of the next month.—*Ed. Bankers' Magazine.*]

LONDON AND BRAZILIAN BANK.

THE directors of the London and Brazilian Bank have issued their report preparatory to the approaching meeting. The net profits for the half-year ending the 30th June amount to £24,704, and considering the rate of interest on this side the directors trust the result of the six months' operations will be satisfactory to their co-proprietors. Out of the above sum it is proposed to pay a dividend, free of income tax, of £1. 4s. per share, amounting to £15,600 (equal to interest on paid-up capital after the rate of 6 per cent. per annum), and to carry forward the balance of £9,104 to the next account. The intention of the directors was to have recommended an increased dividend, but in consequence of the late important failures at Rio de Janeiro it is deemed more prudent to carry over a large balance, and to make the distribution proposed. The opportune arrival in England of Mr. Saunders from the Rio branch, simultaneously with the announcement of the severe crisis in that city, not only, it is stated, afforded the directors the gratifying intelligence of the satisfactory position of that branch, but also that the losses were likely to be much less than at first anticipated. And there is every reason to hope that these will be more than compensated by diminished competition and the general improvement of business. By the last advices from the branches it appears the operations are progressing most satisfactorily. There is also a steady increase of business in Portugal.

Estates of Failed Firms.

THE ESTATE OF MESSRS. EARLY AND SMITH.

MESSRS. COLEMAN, TURQUAND, YOUNGS AND CO. have issued a circular with an approximate statement of the affairs of Messrs. Early and Smith. The amount of debts and liabilities is £81,369, and the assets £28,079. The firm have been engaged in transactions with the Confederate States

and also with the Leeds Banking Company. Respecting the liquidation the following is the statement in the circular :—

“We are requested by the inspectors to forward you the annexed statement of the affairs of this firm, and to inform you that part of the stock has been sold from the premises in the usual course, and the remainder at discounts ranging from 20 to 25 per cent., payable one-fourth part in cash, one-fourth within one month from this date, and the remainder at six months. We may add that in consequence of the imperfect state of the books, more particularly the cash account, we have been engaged in an examination thereof on behalf of the Leeds Banking Company, who have the largest interest in the estate. Prior to the payment of a dividend, which we have no doubt may be declared in the course of next month, we shall be glad to receive a statement of your claim.”

THE ESTATE OF WILLIAM VILCHES.

At a meeting, on the 27th November, of creditors of Mr. William Vilches, of 75, Mark Lane, merchant, a statement was submitted for consideration. It appeared that the liabilities amount to £27,027, with assets expected to realise £2,869. The failure, it was said, was mainly attributable to Mr. Vilches having made himself responsible to the extent of £13,607 on behalf of E. P. Gonzalez, and Younger and Co. Gonzalez had a contract with the Spanish Government, and Mr. Vilches, having previously had business relations with him, was induced to assist him in completing it. Younger and Co. were bankers at Cadiz, and have recently suspended payment, and Gonzalez also has failed. In January last Mr. Vilches possessed a surplus of £1,648, and the deficiency of £24,158 appearing on the statement has consequently arisen between that time and the 26th of October, the date of the suspension. A proposition to wind up the estate under inspection, and pay a composition of 2s. 6d. in the pound by instalments, was made, but it was ultimately resolved that the meeting should be adjourned for seven days, in order that further investigation might take place to ascertain whether a better offer could not be presented.

THE ESTATE OF MESSRS. BROWN, BUCKLEY & Co.

At a meeting of the creditors of Messrs. Brown, Buckley and Co. held on the 28th November, at the offices of Messrs. Quilter, Ball and Co., the following resolution was passed :—“That as the accounts presented to this meeting leave no doubt that Messrs. Brown, Buckley and Co. will, at an early period, be in a situation to pay their creditors 20s. in the pound, they be requested to wind up their estate, and to pay as soon as possible the debts due from them to their creditors, it being understood that 10s. in the pound be paid forthwith.”

THE ESTATE OF MESSRS. JOHN M'CALL & CO.

A MEETING of the creditors of Messrs. John M'Call and Co., engaged in the provision trade, was held on the 1st December, when the statement of accounts, presented by Mr. J. E. Coleman, of the firm of Messrs. Turquand, Younger and Co., showed debts and liabilities of £31,764, and assets of £15,486. An offer of 10s. in the pound was proposed, and carried unanimously, most of the creditors present at once signing. The arrangement is to be made by instalments of 2s. 6d. each, at one, four, eight, and twelve months.

THE ESTATE OF MR. C. WILSON.

THE creditors of Mr. C. Wilson, importer of silk, met on the 1st December, when the statement of accounts, prepared by Messrs. Lovering and Kinton, showed debts and liabilities £25,249, and assets £21,660. After some discussion it was arranged to accept a composition in cash of 11s. 6d. in the pound.

THE ESTATE OF MESSRS. EYLES, EVANS & CO.

A MEETING of the creditors of Messrs. Eyles, Evans, Hands, and Wells, who suspended on the 3rd, was held on the 22nd December, showing liabilities £81,353, and assets £59,205. Mr. White, the accountant, explained at considerable length the present position of the estate and the cause which had led to the failure. Sympathy was expressed for the firm, and an adjournment was agreed upon to enable the creditors to consider the offer that was made of 10s. in the pound by three equal instalments, at four, eight, and twelve months. Eventually an offer of 11s. in the pound was accepted.

THE ESTATE OF MR. HENRY GURNEY.

At a meeting of the creditors of Mr. Henry Gurney, held at Birmingham on the 23rd December, it was resolved to wind up the estate under a deed of assignment. A statement of affairs, prepared by Messrs. Cooper Brothers and Co., showing liabilities £60,000, against assets estimated at £24,000, was submitted.

THE ESTATE OF MESSRS. W. J. MORGAN & Co.

A MEETING of the creditors of Mr. W. J. Morgan, trading under the title of W. J. Morgan and Co., of Leadenhall Street, was held on the 25th December, when the balance-sheet, presented by Mr. J. J. Saffery, accountant, showed debts and liabilities of £14,781, and assets £10,188. The difficulties of the debtor, who returned a year ago from India with a fair capital, have been occasioned by the late fluctuations in cotton. It was arranged to take an assignment.

THE CITY BROKERS.

THE committee of Brokers who are acting for the members of the Stock Exchange not sworn brokers, who have received a notice from the solicitor to the corporation of the City of London calling attention to the penalties they incur by acting as brokers without a licence from the corporation, met again to-day in the rooms of the official assignees in the Stock Exchange, when it was arranged that they should take measures to protect the members. Whilst many object on principle to the payment of any sum to the corporation of London there are others who would willingly discharge the annual £5 provided the oath were modified and some of the objectionable clauses swept away. The Committee of Brokers will bring the matter prominently before the committee for general purposes, in the hope that they may be induced to take such steps as may appear expedient under the anomalous circumstances of the case.

Note of the Month.

DEATH OF SIR WILLIAM BERKELEY CALL, BART.—The death of this gentleman, a partner in the banking-house of Call, Marten, and Co., Old Bond street, took place on the 23rd December, at his residence, Bond street. The deceased Sir William was born in 1815, and succeeded to the baronetcy in 1851; in 1841 he married the daughter of the late C. W. Gardiner, Esq., of Coombe Lodge, Oxon, by whom he has left a son and two daughters.

BANKING OBITUARY.

On the 27th Nov., in Paris, Robert Williamson, Esq., of Scarborough, chairman of the York City and County Bank, aged 57.

On the 6th December, at Athol Place, Glasgow, Mr. William Johnston, of Glenorchard, Stirlingshire, agent for the Commercial Bank Glasgow, aged 58.

On the 23rd December.—At his residence Bond Street, Sir William Berkeley Call, Bart., partner in the bank of Messrs. Call, Marten, & Co., aged 49.

MERCANTILE SUSPENSIONS.

The following mercantile suspensions were announced during the month of December :—

Messrs. Wilson, Bowles & Co., London, East India merchants.

Messrs. Eyles, Evans & Co., London, silk trade.

Messrs. Hutter, Droughet & Co., London, merchants.

Messrs. Sterling, Gordon & Co., Glasgow, merchants.

Messrs. Berger Brothers, London, metal brokers.

Mr. Henry Gurney, Birmingham, timber dealer.

Mr. E. Lloyd, Birmingham, foreign timber trade.

Messrs. Hill & Weguelin, London, Russian merchants.

Messrs. Edward De Coster & Co., London, Brazilian trade.

Messrs. Grundler, Ormond & Co., London, Italian, and Spanish trades.

Messrs. Perry & Waagen, London, commission agents.

MONTHLY CHRONOLOGY.

Dec. 2.—Suspension announced of Messrs. Wilson, Bowles and Co., of Mincing Lane, East India merchants, with liabilities reaching to about £250,000.

3.—Failure of Messrs. Eyles, Evans and Co., of Cannon Street West, in the silk trade, with debts to the amount of £100,000.

5.—Stoppage of Messrs. Hutter, Droughet and Co., of Gracechurch Street, merchants, with £30,000 liabilities.

8.—The Directors of the Bank of France reduced their rate of discount from 6 to 5 per cent.

10.—The Directors of the Bank of Frankfort reduced their rate of discount to 5 per cent.

12.—Suspension of Messrs. Sterling, Gordon and Co., of Glasgow, merchants, with £180,000 liabilities.

15.—The Directors of the Bank of England reduced their rate of discount from 7 to 6 per cent.

15.—Failure of Messrs. Berger Brothers, London, metal brokers. Liabilities not stated.

22.—The Directors of the Bank of France further reduced their rate of discount from 5 to 4½ per cent.

22.—The Bank of Holland reduced its rate of discount from 6½ to 6 per cent.

22.—Suspension announced of Mr. Henry Gurney, of Birmingham, timber dealer.

23.—Failure of Mr. E. Lloyd, of Birmingham, in the foreign timber trade.

27.—Suspension of Messrs. Hill and Weguelin, of Alderman's Walk, Russian merchants, with debts extending to £130,000.

27.—Suspension of Messrs. Edward De Coster and Co., London, in the Brazilian trade, with £60,000 liabilities.

27.—Failure of Messrs. Grundler, Ormond and Co., of London, in the Italian and Spanish trades. Debts, £20,000.

27.—Stoppage of Messrs. Perry and Waagen, commission agents. Liabilities about £12,000.

BANK MOVEMENTS.

Mr. Henry Worms has joined the direction of the Land Mortgage Bank of India.

At the meeting of the London and Northern Bank, resolutions were passed for an amalgamation with the Midland Banking Company.

Mr. Coleman, one of the official liquidators of the Northumberland and Durham District Bank, having obtained the sanction of the Vice Chancellor Kindersley to pay a further dividend of 1s. in the pound, it was paid on the 20th and 21st December at Newcastle, thus making the aggregate amount of dividends 19s. 6d. in the pound.

A further dividend of 5s. in the pound, making with former dividend 15s. in the pound, has been paid by Mr. William Turquand, the official liquidator of the Herefordshire Banking Company.

Monetary Intelligence.

MONETARY REVIEW FOR THE MONTH OF DECEMBER.

There has been a great change for the better in the appearance of financial affairs within the last three weeks or a month. The reduction by the Bank of England of the rate of discount from 7 to 6 per cent., and by the Bank of France from 6 to 5, and then to $4\frac{1}{2}$ per cent., are circumstances which have done much to give confidence to the public. The influx of specie from America and the East Indies, the contraction of engagements, and the disposition to repress speculative adventure could not fail at length to exercise their effects, and now the results are seen in full working force. The only cause for a demand for money at the present moment is the necessity for providing for the holidays, and the engagements falling due at the end of the year. In this respect the inquiry will no doubt continue until the 4th of January, and from that date forward we may reasonably calculate upon a better state of things. The talk of a prospect of large remittances being made to Egypt has proved incorrect; some quantities of sovereigns have gone, but not in the proportion expected, and it is believed that no further large totals will be required before February or March at the earliest.

The market for English securities has not varied in any important degree. There was at one moment a decline through pressure of sales, but when money became more abundant, greater activity was manifested. Latterly a decided recovery has taken place and prices have rallied, leaving off at the end of the month at their best. Some good purchases of Consols have recently been effected on behalf of insurance and other companies having balances to employ.

Foreign stocks have not largely fluctuated. After being dull with a partial depression a recovery has taken place, leaving prices in a better position than they were before. The market it was thought would be heavy at the middle of the month, but the tendency is now evidently in the right direction. At the commencement of the year it is highly probable we shall see fresh indications of active speculation. Spanish, Mexican, and Greek will again come into vogue.

The railway market was better, but there was no great rise in prices. It is expected that this description of property will come into greater repute after the half-yearly reports shall have been published. The increase of traffic, the economical working of the lines, and the great competition exhibited by directors will, it is believed, assist largely to sustain dividends. Indian and foreign railway shares have been amazingly well sustained.

Bank, credit, and finance shares have been quiet. They have shown a fair amount of business with very steady prices, but there has been no general advance. The operators are waiting for some intimations with respect to dividends, and if these shall be encouraging, then a general advance will ensue.

The produce markets have been better, but there is yet great absence of activity. At the opening of business subsequently to the holidays, we may look for partial animation.

THE GRAIN TRADE.

There has not been any material alteration in the Grain Trade during the past month, as regards the extent of business, but prices have throughout had a slightly declining tendency. Good dry samples of wheat have been rather more in request, but the supply has been ample. There has been a fair market for barley, at rather steadier quotations. Oats, beans, and peas, have not been quite so much inquired after, and prices have become weakened. The latest official average quotations were:—Wheat, 38s. 1d. per qr.; barley, 28s. 4d.; oats, 19s. 9d.; rye, 29s. 1d.; beans, 37s. 2d.; and peas, 35s. 3d. per qr.

The Gazette returns for England and Wales have been:—

Week ending, 1884,	Wheat. Qrs. sold.	Weekly Average.	Six Weeks' Average.	Duty.	Corresponding Six Weeks Last Year.
		s. d.	s. d.	s. d.	s. d.
Nov. 26	170,836	38 8	38 9	1 0	40 0
Dec. 3	101,757	38 5	38 9	1 0	40 1
„ 10	96,245	38 4	38 8	1 0	40 4
„ 17	96,985	38 1	38 6	1 0	40 6

The importations since the harvest of 1864 have been:—

	Wheat. Cwts.	Other Grain. Cwts.	Total. Cwts.
Eighteen weeks ended 19th Nov. ...	7,967,603	9,300,076	17,267,679
Four weeks ended 17th Dec. ...	1,176,526	1,791,248	2,967,774
	9,144,129	11,091,324	20,235,453

And the weekly averages have been:—

	Wheat.	Other Grain.	Total.
Eighteen weeks ended 19th Nov. ...	442,000	517,000	959,000
Four weeks ended 17th Dec. ..	294,000	447,000	741,000
	Less 148,000	70,000	218,000

STATE OF TRADE.

The state of trade has rather improved during the last month, but still there is no general activity. Everyone is awaiting the commencement of the new year for a full resumption of business.

NOTICES TO CORRESPONDENTS.

We have arranged in future to issue a double number in February and August, instead as formerly in May and November. This has been rendered necessary by the great increase of the meetings of the Banks and Discount Companies, which will be always carefully collected in the pages of the *Bankers' Magazine*. We shall also give the proceedings of the various Credit and Finance Companies as they are more or less associated with banking, so that our subscribers and readers can refer to them without difficulty. Correspondents will please forward communications addressed to the Editor, No. 8, Birchling Lane; subscriptions and orders as usual to Messrs. Groombridge and Sons, Paternoster Row, or Messrs. Waterlow and Sons, Carpenters' Hall, London Wall.

BANCO. (Liverpool.)—The legal tender in silver is to the extent of 40s.

SUBSCRIBER.—We know of no work on progressive Banking Book Keeping. The Joint Stock Companies Directory for 1885, just issued by Messrs. Charles Barker and Sons, will give the whole of the information required.

BANKING AND FINANCIAL ANECDOTES.—It will be perceived from notice elsewhere, that the Editor of the *Bankers' Magazine* is collecting and arranging a series of Banking and Financial Anecdotes. Any contributions from subscribers and readers of the *Magazine* will be thankfully received, particularly if the subject matter shall not have previously appeared in print. Nothing very personal or offensive will receive publicity.

SUMMARY OF WEEKLY RETURNS OF BANKS OF ISSUE.

	Fixed Issues.	Nov. 19.	Nov. 26.	Dec. 3.	Dec. 10.
115 Private Banks	£4,212,786	£3,116,144	£3,085,612	£3,039,983	£2,992,426
59 Joint-Stock Banks ...	3,226,357	2,779,673	2,769,088	2,750,268	2,717,542
197 Totals.....	7,439,143	5,895,817	5,854,700	5,790,251	5,709,968

Average Weekly Circulation of these Banks for the month ending December 10th:—

Private Banks ..	£3,058,541
Joint-Stock Banks ..	2,754,143

Average Weekly Circulation of Private

and Joint-Stock Banks ending as above	£5,812,684
---	------------

On comparison of the above with the Returns for the month ending Nov. 12th last, it shows:—

A decrease in the notes of Private Banks, of	£152,807
A decrease in the notes of Joint-Stock Banks, of	101,280
Total decrease on the month ...	£254,087

And as compared with the month ending December 12th, 1863, it shows:—

A decrease in the notes of Private Banks, of	£161,494
A decrease in the notes of Joint-Stock Banks, of	145,175

Total decrease, as compared with the same period of last year

The following is the comparative state of the circulation as regards the fixed issues:—

The Private Banks are below their fixed issues	£1,154,345
The Joint-Stock Banks are below their fixed issues	472,214
Total below their fixed issues	£1,526,459

SUMMARY OF IRISH & SCOTCH RETURNS TO DECEMBER 10, 1864.

The Returns of Circulation of the Irish and Scotch Banks for the four weeks ending Dec. 10th, when added together, give the following as average weekly circulation of these Banks during the past month, viz.:

Average Circulation of the Irish Banks	£5,872,705
Average Circulation of the Scotch Banks	4,626,796

Total Average Circulation of these banks for the past month	£10,499,501
---	-------------

On comparing these amounts with the Returns for the month ending 12th Nov. last, they show:—
Decrease in the Circulation of Irish Banks £83,605
Increase in the Circulation of Scotch Banks 132,463

Total increase on the month.....	£48,857
----------------------------------	---------

And as compared with the month ending December 12th, 1863, they show:—

Decrease in the Circulation of Irish Banks	£67,548
Decrease in the Circulation of Scotch Banks	12,868

Total decrease on the year	£80,416
----------------------------------	---------

The fixed issues of the Irish and Scotch Banks at the present time are given in the *Banking Almanac*, as follows:—

6 Banks in Ireland, allowed to issue ..	£6,354,404
12 Banks in Scotland, allowed to issue ..	2,740,271
18 Banks in all, allowed to issue	£9,103,775

The following appears, therefore, to be the comparative state of the circulation:—

Irish Banks are below their fixed issue	£481,789
Scotch Banks are above their fixed issue	1,977,525

Total above the fixed issue	£1,495,736
-----------------------------------	------------

The amounts of Gold and Silver held at the head offices of the several banks, during the past month, have been as follows:—

Gold and Silver held by the Irish Banks	£2,180,778
Gold and Silver held by the Scotch Banks	2,513,205

Total of Gold and Silver Coin	£4,693,983
-------------------------------------	------------

Being an increase of £43,961 on the part of the Irish Banks, and an increase of £71,461 on the part of the Scotch Banks, on the several amounts held by them during the preceding month.

CIRCULATION OF THE UNITED KINGDOM TO DECEMBER 10, 1864.

The following is the state of the Note Circulation of the United Kingdom for the month ending the 10th December, 1864:—

Circulation of Notes for the Month ending 10th December, as compared with the previous month:—

	Nov. 12.	Dec. 10.	Increase.	Decrease.
Bank of England (month ending Dec. 7)	£20,908,439	£19,806,137	—	1,100,302
Private Banks	3,211,348	3,058,541	—	152,807
Joint-Stock Banks	2,855,423	2,754,143	—	101,280
Total in England	26,975,210	25,618,821	—	1,356,389
Scotland	4,444,334	4,626,796	182,462	—
Ireland	5,966,310	5,872,705	—	93,605
United Kingdom	£37,373,854	£36,118,322	£182,462	£1,450,094

The comparison of the month ending Dec. 12th, 1863, with the month ending Dec. 10th, 1864, shows a decrease in the Bank of England circulation of £398,440, a decrease in Private Banks of £161,494, and a decrease in Joint-Stock Banks of £145,175; being a total decrease in England of £1,205,109; while in Scotland there is a decrease of £12,868; and in Ireland a decrease of £83,605. Thus showing that the month ending 10th Dec., as compared with the same period last year, presents a decrease of £1,205,109 in England, and a decrease of £1,288,524 in the United Kingdom.

The return of Bullion in the Bank of England, for the month ending Dec. 7th, gives an average amount in both departments of £13,963,617. On a comparison of this with the Return for the month ending Nov. 9th, there appears to be an increase of £673,715; and an increase of £742,361 as compared with the same period last year.

The stock of specie held by the Banks in Scotland and Ireland during the month ending 10th Dec., was £4,693,983; being an increase of £115,462 as compared with the Return of the previous month, and an increase of £44,375 as compared with the corresponding period last year.

THE BANKERS' MAGAZINE,

AND

Journal of the Money Market.

FEBRUARY, 1865.

THE PHILOSOPHY OF BUSINESS FAILURES.

THE conditions of business failures are, on the whole, more alike and less dissimilar than is generally believed. They may be said to differ as the atmospheric changes which precede rain or storms; those changes having but one issue or result. They may be said to differ as the Scotch and English Bankrupt Laws; those laws equally wresting property from the hands of debtors. Why the contrary has been accepted as sound doctrine is only to be explained on the supposition that business failures have more frequently been investigated, scrutinised, and analysed by the accountant, assignee, trustee, and commissioner, than by the less prosaic, more disinterested and philosophical observer, whose occupation and mission are to search out uniformities, in the hope of at length arriving at a knowledge of the hidden laws of commerce. The one inquiry may be said to resemble the occupation of the cattle-market salesman, and the other that of the comparative anatomist of King's College or the London Hospital; for at the cattle market money is desired above all things, and at the college money neither exercises a soothing nor a disturbing influence.

Without attempting to deal exhaustively with a question of so much breadth and intricacy as the conditions of business failures, it will be attaining something if the mere foreground is faintly traced. The faint tracings may in time lead us to a better appreciation of the relations between debtors and creditors, and to the framing of a more satisfactory bankrupt code than yet holds sway on either side of the Tweed.

With rare exceptions men of business begin the world with good intentions. They are to make their way honestly if they

can. It is only of the exceptions of whom it may be added, that failing to make their way honestly, they are still to make their way. The evidences of the good intentions of all but the exceptional few greet us in every walk of commerce. Who cannot bear witness to the attractions of a newly-opened place of business? Painter and paperhanger, gas fitter and glazier, joiner and carpenter, have been hired and brought together that the new comer may stand well among his neighbours. The new comer, by a good appearance, seeks to conciliate all classes, and command their patronage. And if the newly-opened place of business is entered and a purchase made, there is unusual promptness, with civility enough to make one think that instead of showing favour, it is a pleasure and a duty to spend his money in the new place. Of course the new shopkeeper will not always display skill in the high art of pleasing. If vulgar, he will offend refinement; and if refined, he is sure to offend the poorer classes. But be the qualification what it will, the attention and industry of the new comer are beyond all praise. He is bent on the realisation of what appears to be a long-cherished hope; and to adopt the cant of the circular and the handbill, no effort shall be wanting on his part to gain and maintain the good opinion of those who buy from him. So it is in Eastcheap, in Mimcing Lane, and Mark Lane, and elsewhere. The new broom sweeps clean. New merchants elbow old ones until in turn they are old, or until their tether's length is reached. In a word, from the lowest to the highest business level the beginnings of all are, as a rule, calculated to convey to thoughtful men a new and better opinion of human nature.

Passing by the exceptional class—the case of whom need not now be considered—the fact of business men beginning the world with good intentions is suggestive of various points which separately are well known. These are, the cold approval of the public; the error, not of putting faith in princes, but of trusting humbler people; the misfortune of buying freely; the evil of mismanagement in the common sense; and several others which will readily occur to all. The characteristic of such a set of considerations is, that they are errors of judgment, not moral offences or crimes. In fact, some of the best men living are the worst administrators; they are easy and well-intended, and that is all. Their youthful ardour soon cooled down; they were always sanguine, and had not the remotest apprehension of the mess in which they may have found themselves. And before buying freely is condemned, the temptation to buy—or rather, the pressure to buy under which a numerous class of business

men are placed by an elaborate system of town and country travelling—must be thought of in its many bearings. Then, giving credit is a still more blameless failing, because, unless some confidence is to be reposed in those to whom we sell, they are not unlikely to seek a more pliant merchant. Last of all, what shall be said of him who settled down where he is not wanted? Thus the conditions of one set of business failures—and that a very numerous one—are not dissimilar, but alike. They may almost be referred to the same cause—that, namely, of the necessity which exists for taking things as we find them.

The higher walks of commerce will not be found to differ greatly in their main features. They agree in the extraordinary combinations necessary to insure success; in the magnitude of the interests at stake; and in other points to which it is superfluous to allude. To speak first of the combinations, none but those familiar with commerce can conceive of the complexity of the problem before the merchant. His operations may be confined to the United Kingdom, or they may extend to one and all of the great markets of the world. In either case finance will engross a large measure of attention. How are bills falling due to be retired, business expenses to be met, and funds for private expenses to be provided? Unreasonable realisations will be unprofitable, and hitch or embarrassment in money matters is another name for ruin. Next in importance to finance is the entering into new transactions. That is at all times a most anxious case, for without it there is no getting on, and in proportion as it is profitable or unprofitable is gain or loss computed. After new transactions and finance comes administration, or the orderly and judicious regulation of the whole—an effort, to which sometimes the term *genius* might fitly be applied.

Then, as if to perplex the judgment, especially at a time of pressure, the contemplation of the magnitude of the interests involved is constantly forcing itself on the attention. The constituents of a bank, for example, or of an army agency, may number some thousands; the constituents of a great merchant are frequently few in number, although the liabilities are heavy. Thus, again, the conditions of another set of business failures are alike, and not dissimilar. There may be several great failures, not one of which may be distinguished by a single novelty.

Such is the faint foreground tracing of the intricate and broad question of business failures, with the omission of the cases which are exceptional. The popular view, and the view that seems to be generally current among successful business men, is

very different. The popular view is, that if a business man have failed he is guilty of some unpardonable sin, and is not to be again reinstated in credit or favour. And as if to confirm the popular view, it is usual for those who have broken down to hang the head, relinquish old privileges, and abandon old pretensions. Without saying that bankrupts are to be heroes, it must be obvious that the popular view is unsupported by reason and fallacious. It is a low estimate of business—a forgetfulness of its hazards. The mariner with a ship at sea, the general with an army in the field, is not called on to display half the powers of mind, not half the self-denial, of the busy merchant. All the year round the merchant is at his post, always venturing; and therefore when he falls it ought to be assumed that he falls honourably—until at least dishonour has been proved against him. Falling honourably cannot logically consign him to contumely and isolation. As well might the hand which drew an insufficient Bankrupt Bill be forbidden to draw another; as well might one miscarriage of justice preclude the administration of all justice. On abstract grounds failure in business—honourable failure—like failure in invention, or in any mental effort, should be esteemed a guarantee against rashness in the same direction at another time. It should be esteemed an addition to the stock of an individual man's experience, instead of forming a stumbling-block to him.

Of dishonourable failure sufficiently strong terms of reprobation can scarcely be employed. It is an injury to the collective body of business men, and an offence against society. But unfortunately the scope of the term is ill defined, and its application vague and arbitrary. An attempt to fix its meaning, and the meaning of some other business terms and phrases, is much needed, and if successful would be sustained with great benefit to all classes.

THE HALF-YEARLY MEETINGS.

THE present number of the *Bankers' Magazine* contains the bulk of the half-yearly meetings of the banks, the discount and the finance companies. A more important issue of this periodical was never before made. In the reports of these assemblies will be found the history of the financial progress of the last six months: the prosperity which preceded the high rates of

money, the adversity and loss which accompanied the crash produced by the pressure in October and November. The bank meetings, like the credit and finance meetings, exhibit varied results; all the old-established institutions have made large profits and declared enormous dividends; several of the new banks present doubtful balance-sheets, with large losses, and have been compelled to suspend the payment of dividends.

Some of the new establishments, the shares of which were very high in the days of the general inflation, will hereafter have to be carefully managed, or they will collapse; but the majority, it is but fair to say, show such elements of success, that, now they have got into smooth water, there is the expectation of ultimate prosperity. The accounts and reports issued (taking them in the order in which they have appeared) by the Union Bank of London, the London and Westminster Bank, and the London Joint Stock Bank, have surprised most people. The shareholders and the public were prepared in all these cases for flattering and substantial expositions, but they scarcely imagined that such profits, such dividends, and such reserves would have been presented.

The Bank of London and the City Bank have both done well—the latter, however, not having escaped some sacrifice in the panic—and the Metropolitan and Provincial and the Alliance even showing less unfavourable accounts than were imagined. The directors of these latter establishments have nevertheless made a clean breast of it, and as they promise to go to work with heart and a will hereafter to retrieve lost ground and improve their position, they may in the course of time do so.

The meeting of the London and County Bank has yet to be held, but it is understood that the profits of that establishment have proved extremely satisfactory, and that the rate of distribution will be very encouraging. The other bank meetings have not exhibited important features, but they indicate most unmistakeably that there is now quite sufficient bank accommodation, and that there is not the slightest necessity for any increase of it. This will therefore, perhaps, be a warning to

promoters and others not to attempt to introduce any new projects, without they are for localities where English banking does not exist, and unless they are assured that they can complete their subscriptions and capital without drawing from the resource of the general market.

The best of the credit and finance companies show that they are negotiating a sound and satisfactory business. The London Financial, the International, and the Imperial Mercantile Credit have each published reports that prove they have been well and carefully managed. The dividends have been good, and the reserves carried forward enough to place them in a stable situation. They are evidently transacting what may be considered a large proportion of banking business, and the effect is that their operations produce a marked influence upon the course of general financial relations.

Some of the weaker establishments—those which it is not necessary to enumerate—will, when they have made a few losses, have to put their affairs into liquidation, and the issue will be inconvenience to the shareholders and no advantage to the public. The accounts of the National Discount Company present a most cheering appearance, and the Joint Stock Discount report would have been better but for its having suffered from the Leeds Bank paper which was so extensively circulated through London just previous to the suspension of the Leeds Bank in September last.

The Consolidated Discount Company have made losses consequent upon the panic, and in one instance it is believed they were defrauded through some warrant transactions. Hereafter they will, no doubt, be in a stronger position, and when trade revives they may come in for their fair share of business. Looking, nevertheless, at the general results of the meetings, they have proved eminently favourable, and though there have been exceptions, the anticipatory rumours of the collapse and winding up of certain establishments have been in most cases altogether unfounded.

HISTORIC OUTLINES OF AMERICAN FINANCE.

No. XII.

ANDREW JACKSON was inaugurated President of the United States on the 4th of March, 1829, as successor to John Quincy Adams. He had distinguished himself as a soldier by brilliant successes against the Creek and Seminole Indians, by his defence of New Orleans against the rash and unfortunate English General Pakenham, and by the invasion and conquest of the Spanish possessions in Florida. After all the founders of American independence had disappeared from the political scene, his military prowess had rendered him highly popular, especially with the extreme democracy, on whose votes he had counted to raise him to the presidential chair. To promote his canvass, he promised to act upon the principles of Washington and Jefferson, and of the other patriarchs of American liberty, confining his rule scrupulously within the defined margin of the presidential prerogative. That he was conscientious, patriotic, and disinterested, his bitterest enemies allow, but he exhibited none of the conciliatory temper of his illustrious predecessors. On the contrary, he was self-willed, arbitrary, dictatorial. Shortly after the battle of New Orleans, he arrested a member of the legislature of Louisiana, who had written an article in one of the newspapers of which he disapproved. For this violation of the liberty of the subject, he was tried, condemned, and sentenced to a fine of 1,000 dollars. In the second war against the Seminole Indians, he seized two Englishmen, named Ambrister and Arbuthnot, who were in the country at the time, suspecting them to be secret allies of the Indians. He ordered them both to be tried by court martial. One of the two was condemned to death by that tribunal, but General Jackson executed both. On the pretext of the Indians retreating for shelter under the guns of the Spanish fortress of St. Mark, he seized it, on which the Governor of Pensacola demanded its restoration. General Jackson marched against it and took possession of the whole country. These acts sufficiently prove the impetuosity of his character.

On being appointed President, his first measure was to fill up all public offices with his own partizans. During the first sessional recess, he made 176 appointments, principally removing those who differed from him in opinion. In comparing his conduct in this respect with that of his predecessors, his partiality appears most flagrant. During the administration of Washing-

ton, there were only nine removals in eight years, and one of these was a defaulter. In that of John Adams, there were ten; under Jefferson, thirty-nine; under Madison, five, of whom three were defaulters; under Monroe, nine, of whom six were for causes assigned; under John Quincy Adams, only two, and both for causes assigned. Thus, under the administration of six succeeding Presidents, extending over a period of forty years, there were seventy-four removals; under Jackson, immediately on his accession to power, there were one hundred and seventy-six, all, with rare exceptions, without any proof of official delinquency. His government commenced with the principle of proscription. What made this sweeping exercise of the prerogative the more remarkable, was that, before his election, he had openly professed himself a determined enemy to party spirit and party favouritism, more particularly in the distribution of executive patronage. The violation of this pledge strongly manifested itself in the post office department. Between the 4th of March, 1829, and the 22nd March, 1830, he displaced four hundred and ninety-one postmasters.

It may also here be observed that down to the presidency of General Jackson, the construction given to the spirit and intent of the Federal constitution by the majority of Congress, gave it power to protect domestic manufactures, to appropriate public moneys for works of internal improvement, to create a Bank of the United States, and generally to regulate and control all affairs strictly national. Such was the settled policy of the country to the year 1829, in which nearly all parties concurred, excepting a large majority of the representatives of the Southern States. General Jackson had been a member of the Senate, in which capacity he had voted in the affirmative on eight different Bills providing for internal improvement out of the funds of the general government, and his vote in favour of the tariff of 1824, founded on the principle of protection, showed that he did not concur in the principles of free trade of which Mr. Crawford was the leading politician. Mr. Calhoun, elected Vice-President with General Jackson, had advocated the re-charter of the first United States Bank in 1810; he also concurred in the charter of the new bank in 1816, and had supported in Congress the general features of a protective tariff. Finally, the friends of Crawford and Calhoun had united to ensure the election of Jackson in 1828. Politicians soon began to speculate how they would act together, now that power was placed in their hands.

In his first annual message, 8th December, 1829, the President thus alluded to the tariff of 1828, which had excited a

lively and growing opposition in the Southern States :—"Looking to the period not far distant when a sinking fund will not be required, the duties on those articles of importation which cannot come into competition with our own productions, are the first which should engage the attention of Congress in the modification of the tariff. Of these, tea and coffee are the most prominent." These sentiments did honour to a wise and generous statesmanship. So long as the nation was in debt, it became the duty of the President to make provision for its redemption, and a sinking fund was one of the provisions of which Congress had approved ; when that was no longer needed, justice demanded the repeal of the duties on such commodities as American industry could not produce, such as tea and coffee, for the growth of which the soil and climate were not adapted ; but the case was the very reverse with those commodities to the production of which America was competent. In regard to these, protection, or, in other words, the exclusion of rival fabrics from more advanced countries, was essential to the gradual development of native industry, as it had been to England in the earlier periods of its history, for without a beginning there could not have been any progress. Manufacturing excellence requires time and assisted culture before it can arrive at self-sustaining maturity. That was the policy of Congress, not exceptionally, as Jackson had put the case, but absolutely, and fears were roused by the modification he had introduced, alarming the protectionists lest the small end of the wedge might be inserted with ulterior views. On the other hand, the free-traders were dissatisfied with the limited concession that had been recommended.

Symptoms of disunion soon appeared. The standing committees both of the Senate and of the House of Representatives made reports diametrically opposed to the recommendation of the President, for the tone of his first message both on the tariff and on the bank of the United States was deemed hostile. A debate in Congress on the public lands arose. It was proposed to limit sales to such sections as had already been offered for sale, and were subject to entry at the minimum price, and to abolish the office of surveyor-general. This was construed by the Southern members as a design to prevent the settlement of the West, and it raised formally the question of "States Rights." It was replied to these oppositionists that public lands not particularly and expressly ceded to a State were solely at the disposal of the United States Government, and while they remained in that condition, as unreserved national

domain, no single State or aggregation of States had a right to interfere in any manner. Such was the argument of the celebrated Mr. Webster, who wished to sell small tracts to actual settlers and fill up the vacant territory with resident cultivators; and he contended that to yield the pretensions involved in "States Rights" was in effect to nullify the Union. The eastern States applauded these views; the Southern opposed them; and then a new subject of discord arose. Indeed, the South had always resisted what it called the encroaching exercise of power by the Federal Government, with the exception of South Carolina, which had voted for internal improvements, the United States Bank, and the tariff; but a great change had taken place, and South Carolina had become the most vehement advocate of States' Rights. It had opposed the tariff in 1824, and its subsequent modification in 1828. On its passage its members threatened to resign their seats in Congress. In 1827 the state legislature of South Carolina asserted that each state was a distinct and independent sovereignty. Georgia acquiesced in the doctrine. Virginia adopted it, and in 1829 the right of a state to nullify an act of Congress was affirmed. North Carolina, though equally opposed to the tariff with other southern states, declared against all violent measures; and while Alabama remonstrated against commercial restrictions, it conceded the right of Congress to pass revenue laws.

These conflicts prognosticated a stormy administration, but there were other causes of collision. We have seen that Mr. Monroe, though at first disinclined to appropriate the public money to internal improvements except for strictly federal purposes, ultimately yielded, and the precedent he had established was accepted as irreversible. A bill was now passed for internal improvements through Congress, called the "Maysville Road" bill, which Jackson vetoed. He had, however, sanctioned a bill for continuing the Cumberland Road, and another for the improvement of roads and harbours; but what gave great offence was the fact of his approval of the Cumberland Bill with a qualification that limited its extension. This was a novel and unconstitutional proceeding, for the legitimate action of the President on the legislation of Congress was a mere naked right of approval or disapproval. He could neither enlarge or abridge the instrument submitted to him by Congress. His conduct, therefore, was an act of usurpation. Jackson, in truth, objected to the principle which Monroe had sanctioned, not that he was unfavourable to internal improvements, but to the payment of the cost directly out of the public treasury.

His notion was that the national funds should be distributed among the several States in proportion to their number of representatives, to be applied by them to objects of internal improvement. However Congress persisted, passed other bills having similar objects, and the President yielded. The principle was then considered settled.

These various causes of difference had greatly weakened the moral union of the cabinet. Mr. Calhoun had long been suspected of having proposed a vote of censure on General Jackson for his conduct in the Seminole war. That conduct related to the year 1818. The suspicion rankled; at length, on the 20th April, 1831, it became known that the cabinet ministers had resigned. Of the new Cabinet Mr. Calhoun was not a member. General Jackson then appointed his personal friend, Mr. Van Buren, minister to England, but the senate refused the appointment. The votes were twenty-three against twenty-three. Mr. Calhoun, as Vice-President, gave the casting vote against the President's friend. This was the first occasion on which a minister had been compelled to retire from his post by the Senate. It was the sign of open war.

We have now sufficiently sketched the broader outlines of parties when General Jackson took the reins of government, and to give as clear a view as we are able of his turbulent administration we propose to treat its leading events separately, commencing with the Tariff and the South Carolina Rebellion.

The commercial interests of the north had become essentially bound up with manufactures and shipping; those of the south continued agricultural. The north demanded protection against the superior wealth and highly improved machinery of England, and sought it in an excluding Tariff which shut out the competing fabrics of Great Britain from the American market. To compass that end Congress had passed the several restrictive laws of 1816, 1818, 1824, 1828, and 1832. Of these enactments the South complained, for the South was a buyer not a seller of manufactures, desiring to supply its own particular wants at the cheaper rate which England would have willingly accepted, but which would have crushed the industry of the North. Hence arose a deadly feud between the two sections of the Union, originating in the diversity of their mercantile interests, and it became so violent as to threaten the dissolution of the Federation.

When General Jackson became President, the national debt, estimated at 120,000,000 dollars at the close of the second war with England, had been reduced to less than 59,000,000 dol-

lars. The great source of revenue had been customs duties, though these had been supplemented by moneys derived from the national domain, but all internal taxes were abolished at the restoration of peace. It was under this fiscal system, carried on with paper money, that the national debt was in rapid course of liquidation. The whole country prospered, all the people were contented. In his message to Congress of the 4th March, 1832, the President said, "Within the four years for which the people have confided the executive powers to my charge, forty eight millions of dollars will have been applied to the purchase of the public debt." As this had been derived from the surplus of income over expenditure, it is certain that the material wealth of America had been largely augmented. In the same message the President referred to the tariff in these terms. "A tariff of high duties for perpetual protection was never contemplated by any statesman. However, large interests have grown up under the implied pledge of legislation which would seem a violation of public faith suddenly to abandon. Nothing could justify it but public safety, which is the supreme law. People submit to high duties so long as the money arising from them is applied to the common benefit in the extinguishment of the public debt. Those who take an enlarged view of the condition of our country, must feel satisfied that the principle of protection must be ultimately limited to those articles of domestic manufacture which are indispensable to our safety in time of war." Beyond that object the President did not consider protection justifiable, but the doctrine, even with this limitation, was denounced by South Carolina, while the limitation offended the Protectionists.

In October, 1832, the legislature of South Carolina summoned a convention of the people to meet on the next ensuing 3rd of November, and declare its opinion, not only on the tariff, but generally on the principles which ought to influence congress when enacting commercial laws. The convention met, and by a majority of 136 votes against 26 passed an ordinance affirming that the various protective tariffs passed by Congress, especially those of the 19th May, 1828, and the 14th July, 1832, violated the spirit of the federal constitution, and therefore were null and void. It further ordered that the state ordinance should be obligatory on the citizens of South Carolina. That their extreme measures should not remain an idle threat, South Carolina armed and embodied its militia on a war footing. Other states of the south, especially Virginia and Georgia, without committing themselves to any overt act of rebellion,

showed that they fully sympathized with the insurrectionary state; and there were general rumours that the entire south would revolt and form a separate and independent confederation. In fact the Union hung together by a thread. The South Carolina ordinance contained the following threatening passage:—

“That the several acts and parts of acts of the Congress of the United States, purporting to be laws for the imposing of duties on the importation of foreign commodities, and now having actual operation and effect within the United States;” and, more especially, “two acts for the same purpose passed on the 29th May, 1828, and on the 14th July, 1832, are unauthorised by the constitution of the States, and violate the true meaning and intent thereof, and are null and void and no law, and not binding on the citizens of that state nor its officers.” The document then proceeds to state that by the said ordinance it is further declared to be unlawful for any of the constituted authorities of the state, or of the United States, to enforce the payment of the duties imposed by the said acts within the same state; and that it is the duty of the legislature (of South Carolina) to pass such laws as may be necessary to give full effect to the said ordinance.” It was then ordered that no court of law or equity in South Carolina should question the validity of the ordinance, and that no appeal should be allowed to the Supreme Court of the United States under pain of punishment. Finally it was resolved that the citizens of South Carolina should maintain the ordinance at all hazards, and consider any act of Congress closing or obstructing the ports of the said state “as inconsistent with the longer continuance of South Carolina in the Union;” and further that the people of South Carolina will “forthwith proceed to organize a separate government, and do all acts and things which sovereign and independent states may of right do.” This was to draw the sword and throw away the scabbard.

A defiance so insolent roused the fiery spirit of General Jackson, but for a man of his impetuous temperament his answer to the South Carolina ordinance was moderate in its tone, though masterly in argument. He began by remarking that the ordinance was not founded on the indefeasible right of resisting acts which are plainly unconstitutional and too oppressive to be endured, but on the absolutely untenable ground, that one state may not only declare an act of Congress void, but also prevent its execution. He admitted there were two appeals from an unconstitutional act of Congress—one to the

judiciary, the other to the people and the states; but, as he observed, the ordinance refused any appeal to either, and therefore South Carolina made itself sole judge of its own act. It was indeed obvious that a state veto on the sessional laws of the Union was an impracticable absurdity, for instead of all the parts of the federation obeying the whole, each separate part would be supreme in itself. Secession is an intelligible principle (whether justifiable by circumstances or not is another question), for it dissolves the federal tie; but for any single member of a federation to obey or defy the general laws at its mere will and pleasure, is an outrage on common sense. During the colonial government the different provinces formed leagues for special and temporary purposes, but all being then subjects of England they had no pretensions to sovereignty. Before the declaration of independence the provinces, in their aggregate character, were known as the united colonies of America. That declaration made them a nation by a joint act, not by several separate acts, and thus they became one and indivisible. The instrument of confederate union contained this clause:—

“Every State shall abide by the determination of Congress on all questions which by that confederation shall be submitted to them.”

Experience having proved that the confederate constitution was so full of defects as to render government impracticable, it was agreed to change its provisions after the contest with England was decided; and to facilitate that arrangement it was enacted that the whole thirteen states should be bound by a vote of nine States in defining and settling the new federative constitution. The next important object aimed at in the political system was “to form a more perfect union” than that of the confederation which was to be superseded. It was therefore childishness to suppose that the founders of a more perfect union ever contemplated the framing of an instrument by virtue of which any state or combination of states, (unless by unanimous vote,) should disrupt the union when it or they pleased by refusing to obey the laws of Congress.

The South Carolina argument amounted to this: The right to secede is deduced from the nature of the constitution, which is a compact between sovereign states who have preserved their whole sovereignty, and, therefore, are subjects of no superior. Having made the compact they can break it when, in their opinion, it has been departed from by the other states. The flaw in this reasoning is the very false assumption that in

forming the compact each state retained its sovereignty wholly undiminished.

General Jackson answered it substantially in the following terms. We are one people in the choice of President and Vice-President. There the states have no other agency than to direct the mode in which the votes shall be given; the candidates having the majority of all the votes are chosen. The electors of a majority of the states may have given their votes for one candidate, and yet another may be chosen. The people, then, not the states, are represented in the executive branch. As to the House of Representatives, When chosen they are all representatives of the United States, not of the particular state by which they are deputed. They are all paid by the United States, not by the state which elected them. No doubt they do and may consult the local interests of their constituents, but they are none the less representatives of the United States, and bound in duty to promote the general good. The states severally have not retained their sovereignty. They are component parts of a nation, not members of a league. Each has surrendered many of the essential attributes of sovereignty. The right to make treaties, to declare war, to levy taxes, to exercise judicial and legislative powers, are all of them, functions of sovereign power. For all these sovereign powers, the states are no longer sovereign, as they formally surrendered them when the constitution was formed. The allegiance of the citizens of each state was transferred to the United States. They all became American citizens, promising obedience to the laws enacted by Congress; treason is an offence against sovereignty and sovereignty must reside in and be inherent in the punishing power. The states have no such power, and this alone is decisive of the principle of unity. Moreover, in time of war the President is commander-in-chief of all the militia of all the states, which is a clear admission of the surrender of individual sovereignty. For these various reasons General Jackson contended that the federation was a nation, not a mere league, for a constitution is a compact which all are bound to obey, not an agreement from which any party may capriciously secede. Such in substance was the proclamation of the President, dated the 11th December, 1832, and every unprejudiced judge must admit that his reasoning was unanswerable. He enforced his proclamation by dispatching a sloop of war to Charleston to collect the Customs Duties in the harbour.

(To be continued.)

AMALGAMATION OF MESSRS. ATTWOODS, SPOONER & CO. WITH THE BIRMINGHAM JOINT-STOCK BANK.

THE Birmingham papers announce one of the most important amalgamations of banking interests that have taken place in that locality, if not in the provinces, viz., the fusion of the old-established bank of Messrs. Attwoods, Spooner, Marshalls and Co. with the Birmingham Joint-stock Bank, Limited. The negotiation which has resulted in this amalgamation commenced in April last, immediately after the transfer of Messrs. Jones Lloyd's business to the London and Westminster. The death of Mr. T. A. Attwood, and subsequently of Mr. Spooner, necessarily delayed a settlement; but a few days ago, the preliminary agreement was executed, and the transfer will take place as soon as the resolutions to be submitted to the shareholders of the joint-stock bank have been confirmed. It will be seen by the subjoined circulars that the title of the united bank will remain as it is; that the business will be carried on in New Street, as well as at Temple Row, and the management and conduct of the New Street house will remain as at present, Mr. George Edwards being the chief executive officer of that branch. We are also informed that Messrs. Barclay, Bevan, Tritton, and Twells will continue to be the London agents. In order that the interests of the two banks may be closely united, Mr. Henry Marshall, the surviving partner of his firm, will co-operate in the direction of the bank, and three other gentlemen of large commercial experience and eminent position will also take seats at the board. The terms upon which this amalgamation has taken place are not made public, but we have reason to know that while they are fair and equitable to Messrs. Attwood and Co. they will yield substantial advantage, not only in *prestige* and position, but in profit to the shareholders of the joint-stock bank.

The bank, which has now adopted the course which all private firms sooner or later will take, was opened on the 4th of April, 1791, and has consequently been in existence for seventy-four years. The original partners were Messrs. Isaac Spooner, James, Matthias and Aaron Attwood, and Thomas Aynsworth. The business subsequently passed into the hands of the descendants of some of the founders, and later the Messrs. Marshall became partners. Time has removed all the members of the firm except Mr. Henry Marshall, and he and the business he has managed so long, take, it is to be hoped, a new lease of life in the union with one of the youngest and most vigorous of contemporary banks. The founders of the joint-stock bank have certainly much cause for congratulation in the fact that experienced and sagacious men like those who represent the interests of Messrs. Attwood and Co. should have selected their bank as that with which the fortunes of the old firm should be linked; a preference due, we suspect, not

less to the prosperous condition of the joint-stock bank than to the fact of its being based on the principle of limited liability.

The following are the circulars which have been issued to the friends of the two banks :—

“ Birmingham Joint Stock Bank, Limited.

“ Birmingham, January 20, 1865.

“ Sir,—I have the pleasure of informing you that the directors of this company have entered into an agreement with the representatives of the old-established bank of Messrs. Attwoods, Spooner, Marshalls, and Co., for the amalgamation of the business of the two companies.

“ The terms upon which this amalgamation has been effected have been the subject of careful consideration, and the directors have pleasure in congratulating the shareholders on an arrangement which cannot fail to conduce most materially to their interests.

“ The amalgamated business will be carried on under the title of ‘ The Birmingham Joint-Stock Bank, Limited,’ in Temple Row, West; and the Banking House of Messrs. Attwoods, Spooner, Marshalls, and Co., will be continued as a branch under the superintendence of Mr. George Edwards, for many years cashier with Messrs. Attwoods, Spooner, Marshalls, and Co. The amalgamated company will also have the benefit of the co-operation of Mr. Henry Marshall, who, with three other gentlemen, representing Messrs. Attwoods, Spooner, Marshalls, and Co., will join the board of direction.

“ In making this announcement the directors need scarcely say that the interests of the friends of the Joint-Stock Bank shall always have their utmost attention; and on behalf of the amalgamated bank they solicit from the friends of Messrs. Attwoods, Spooner, Marshall, and Co., a continuance of the confidence that has so long been accorded to that firm.

“ The transfer will take place on the day the shareholders confirm the resolutions to be submitted to them.

“ I have the honour to be,

“ Sir, your obedient servant,

“ JOSEPH BEATTIE, Manager.”

“ Bank, 191, New Street, Birmingham,

“ 20th January, 1865.

“ Dear Sir,—We have the pleasure of acquainting you that, after a very careful negotiation, we have come to an arrangement with the directors of the Birmingham Joint-Stock Bank, Limited, for the amalgamation of our bank with theirs.

“ A preliminary agreement has been signed, and the directors will apply for powers at their annual meeting, on the 6th February next, to carry it into effect.

“ We are of opinion that the terms are very beneficial to both parties, and our customers will have the opportunity of taking shares in the amalgamated bank upon the same terms as the customers of the joint-stock bank.

“ It has been arranged that Mr. Henry Marshall, and three other gentlemen to be proposed by us, shall be nominated directors; and that Mr. George Edwards who has been so many years our cashier,

shall be the manager at the branch of the amalgamated bank in New Street.

"It would be very gratifying to us that you should extend to the united bank the same confidence with which you have honoured us for so many years.

"We remain, dear sir,

"Your faithful and obliged servants,

"ATTWOODS, SPOONER, MARSHALLS & Co."

It will be seen by the subjoined notice that a special general meeting is called for the 6th of February, to confirm the agreement, and to raise the nominal capital to £3,000,000. Some of the shares so created will, we presume, be applied to the purchase of the business of Messrs. Attwood and Co. However that may be, the shareholders are to participate in the new issue to the extent of one share in ten, the premium being the very moderate one of £16, the payment of premium and capital being spread over a period of twelve months. We append the official notices :—

"BIRMINGHAM JOINT-STOCK BANK, LIMITED.—Notice is hereby given, that the next ordinary general meeting of the company will be held at the Exchange Assembly Room, in New Street, Birmingham, on Monday, the 6th day of February next, at one o'clock in the afternoon precisely, to receive the directors' report, to declare a dividend, and to transact the general business of the company.

"Notice is also given, that an extraordinary meeting of the shareholders will be held at the same place at half-past one o'clock in the afternoon of the same day, when resolutions to the following effect will be proposed, viz. :—

"1.—To confirm an agreement entered into by the directors for the amalgamation of the banking business of Messrs. Attwoods, Spooner, Marshalls, and Co. with this bank.

"2.—To increase the capital of the company, by the creation of 10,000 additional shares of £100 each (so that the whole capital will be three millions), and to authorise the appropriation of such new shares.

"3.—To annul the 54th and 77th articles of association, and in lieu thereof to take power to increase the number of directors and to supply vacancies.

"By order of the Board,

"JOSEPH BEATTIE, Manager.

"Bank, No. 4, Temple Row West, Birmingham,
January 20, 1865.

"The transfer books of the company will be closed from the 20th day of January to the 6th day of February."

"Birmingham Joint-Stock Bank, Limited.

"Birmingham, 20th January, 1865.

"Dear Sir,—In transmitting the accompanying notice, convening the annual and a special general meeting of the company, I have the pleasure

to inform you that out of the new capital then to be created, the directors propose to allot to the shareholders upon the register this day, one share for every ten shares held by them, at a premium of £16 per share. The payments in respect of capital and premium will be extended over a period of twelve months.

"I am, dear sirs, yours faithfully,

"JOSEPH BEATTIE, Manager."

BANKING AND FINANCIAL ANECDOTES.

No. II.

EARLY STRUGGLES OF THE BANK OF ENGLAND.

BRANDED those difficulties which may be said to be the lot, more or less, of all financial experiments and commercial ventures, the Bank of England in its early days—as indeed in its later days also—had to contend against the shafts of ridicule and the attacks of interested opponents. The following curious example of the difficulties that beset the bank at its outset will explain itself. In a sham report, "The Trial and Condemnation of the Land Bank at Exeter Change for Murdering the Bank of England at Grocers' Hall," is to be found an equally spurious will, which is supposed to be produced at the trial. It is as follows:—

"Know all our creditors by these presents, that we, the Governor and Company of the Bank of England, being weak in body through the wounds received from the Land Bank at Exeter Change, to whom we lay our death, but of as good sense as ever we were, finding ourselves impaired in our credit and reputation, and despairing of recovery, do make our last will and testament.

"1st We bequeath our soul to the devil in order to serve the public out of our creditors' money; and as to the qualities of our mind, we dispose of them as follows; namely, all our skill in foreign exchanges, and our probity and candour in making up the accounts of the loss thereof, we give to all and every of our directors, except four or five, jointly and severally to hold to them and to their successors as heir-looms and indelible monuments of their skill and probity for ever. All our obstinacy and blunders we give unto our present Governor, upon trust that he shall employ one equal third part thereof as one of the Lords of the Admiralty, and the other part thereof as Governor of the Bank of England. All our oaths,

impudence, &c., we give unto our present Deputy Governors and our dear Sir Henry Furness, to hold in joint partnership during their lives, and the survivor to have the whole. All our shuffling tricks we give to our dear Sir William Gore. All our cynicalness and self-conceit we give to our directors Sir John Ward and Sir Gilbert Heathcote, equally to be divided betwixt them, share and share alike, as tenants in common. All our blindness and fear we give unto our dear Obadiah Sedgwick, and we also give him £5 in money to buy him a new cloth coat, a new half-beaver hat, a second-hand periwig, and an old black sword to solicit with in the lobby, and also to buy him a pair of spectacles to write letters to lords with. As to the residue of our temporal estate (besides the said £5), we dispose thereof as followeth:—Imprimis—we devise to our own members (when they shall have paid in their whole £100 per cent.) our fund of £100,000 per annum, charged and chargeable, nevertheless, with the sum of £1,200,000 for which it stands mortgaged, by bank bills, in full satisfaction of all their great expectations from the probity and skill of our directors, advising them to accept a redemption thereof by Parliament whenever they can have it. Item—all our ready moneys before any of our debts are paid we give to our executors hereinafter named, in trust that they shall, from time to time, until 1st of August, 1696, lend the same into the exchequer, upon condition to defeat the establishment of the Land Bank; and from and after the said 1st of August then to lend out the same into the said exchequer, upon security of premises to establish our executors the next session, instead of the Land Bank, and for such other premiums as our said executors can give to themselves for doing thereof. And we do direct our said executors to continue the stock and pensions already allowed to our past friends—they know where. And after all our ready money so disposed, we leave the residue of our effects for payment of bills and notes, at such days and hours, and in such manner and proportion, and with such preferences as our said executors shall think fit. And we do hereby constitute our directors executors of this our will, giving each of them power out of our cash to discount their own tallies, bills and notes at par, and the bills and notes of other of our creditors at the highest discount they can get for the same. And our body we commit to be buried with all privacy, lest our creditors arrest our

corpsa. In witness whereof we have hereunto set our common seal, 4th May, 1696."

Emanating from the same source we have the following spiteful suggestion for an epitaph on the Bank of England:—"Here lies the body of the Bank of England, who was born in the year 1694; died May 5th, 1696, in the third year of its age. They had issue legitimately their common seal, 1,200,000 called Bank Bills, and by their cashier two million tons of ———, called Speed's notes."

WILLIAM THE THIRD AND THE FIRST DEPUTY GOVERNOR OF THE
BANK OF ENGLAND.

The establishment of the Bank of England had a decided effect on the war which William the Third was carrying on against the French, in 1695. The sinews of war were required, and Mr. Michael Godfrey, who was then Deputy Governor of the Bank, charged himself with the mission of conveying funds to the King, who was vigorously besieging Namur. Mr. Godfrey having ventured into the trenches to have an interview with the sovereign, who was to be found there, was cordially received, as was natural enough, seeing what was the purport of his visit. But the King seemed to have a presentiment that the trenches of Namur were not the place for the man of finance. "As you are no adventurer in the trade of war, Mr. Godfrey," said William of Orange, "I think you should not expose yourself to the hazard of it." The banker immediately replied, with the true spirit of a courtier, "Not being more exposed than your Majesty, should I be excusable if I showed more concern?" "Yes," replied the monarch; "I am in my duty, and therefore have a more reasonable claim to preservation."* It is difficult to see how the King was more in his duty, or more self-denying than the banker, or what "claim to preservation" either had a right to set up. But be this as it may, the dialogue between the King and his loyal subject was in a moment cut short. The messenger of death—a cannon ball from the fortress—in an instant laid Mr. Godfrey low, and he thus paid a fatal penalty for too reckless a devotion to the interests of his country.

* Martineau's History of England.

COUNT VAN HORN AND THE MURDERED STOCKBROKER.

In 1718-19, when the Mississippi scheme of the notorious John Law was exciting much sensation, society in France was completely disorganised. The historian De Tocqueville, alluding to this period, says, "At this epoch of scandal and opprobrium there was no folly or vice in which the upper classes did not take the lead. The degradation of men's minds was equal to the corruption of their manners." A striking illustration of the depravity of the time may be found in the life and ignominious death of the Count Antoine Van Horn, who was related to many noble families, as well as the brother of a prince. He is thus described :* "His face was as pale and as beautifully chiselled as that of an antique statue, and a pair of singularly wild and brilliant eyes shed over the whole what might have seemed preternatural light. The ladies, with whom Van Horn was a greater favourite than with their husbands or brothers, declared that it was almost impossible to withstand his ardent gaze." The external characteristics of the Count were evidently no index to his mental qualities, for he obtained "a bad pre-eminence" in crime even at a period when extravagance, debauchery, and crime were rife. Paris was one morning startled by the rumour that a wealthy Jewish stockbroker had been robbed and murdered in open day, and in the very heart of this luxurious city. All the town was on the *qui vive*, and the excitement was increased by the name of Count Antoine Van Horn being whispered as the murderer. It seems that the unfortunate Hebrew broker had been lured to a *cabaret*, and—whether in the heat of passion in quarrelling about money matters, or in cool blood, is not known—the Count stabbed the unhappy Jew. He was immediately apprehended, and though immense efforts were made by the noble and the wealthy to save him, he was condemned to be broken on the wheel, and afterwards suffered this miserable and disgraceful death.

PAYING BANK NOTES BY INSTALMENTS.

AMONG the "things not generally known" in connection with the Bank of England, is the fact that during the earlier period of its history, the holder of a note could obtain payment of part of its value,

* Chambers.

leaving the Bank to pay the remainder at a future time. Indeed, the note might be paid in several instalments. There are still to be seen in the mammoth establishment in Threadneedle Street, some of those notes. The last note that was thus treated is a curiosity; there is but sixpence to receive upon it.

A DINNER PARTY PUT OFF FOR WANT OF CHANGE.

DURING the panic in Ireland, in 1820, when eleven banks had failed within one month, there were some ludicrous annoyances amidst severe distress. A gentleman in Cork wanted a leg of lamb, and offered a £5 note for it, which was refused. In Limerick, a country gentleman, with £1,500 a year, had sent out invitations for a dinner party the week before the banks broke, and considered himself most fortunate in finding amongst his notes one Bank of Ireland note for £10. No one doubted the goodness of the note, but no one could give change for it. Ten pounds in gold or silver, were not in the county; and as for credit, there was none to be had. In this extremity, with money—which was not money—and without credit, having tried butcher, baker, and confectioner, in vain, the gentleman gave up the idea of his dinner party in despair, and wrote to his friends to keep the engagement standing until he could procure cash or credit for a £10 note.*

ALDERMAN SIR R. C. GLYN.

ALDERMAN Sir R. C. Glyn, Bart., was remarkable for the liberality and generosity he displayed in assisting his customers when in temporary difficulty. An old client of the bank applied to the firm for a large advance. Sir Richard's partners were opposed to the proposal, but the alderman had greater faith, and, strenuously urging his views, carried them against his partners. A large sum was advanced to the customer, and this enabled him to triumph over his difficulties. The customer thus saved from pecuniary ruin, subsequently became very rich, and at his death left to the alderman an annuity of £5,000 a year, as a testimony of gratitude.

* Hardcastle's Banks and Bankers.

SPECULATION IN THE EIGHTEENTH CENTURY.

THE South Sea scheme, which was in itself the cause of so much excitement and ruin, turned men's minds from the ordinary pursuits of business and produced a fever for speculation, during which many ridiculous projects were started. There was one scheme for the discovery of perpetual motion; and two companies were actually concocted to secure the money of subscribers without any statement of the objects sought to be attained. One of them was stated to be a "promising design hereafter to be promulgated;" the other a "company for carrying on an undertaking of great advantage, but nobody to know what it is; every subscriber who deposits £2 per share to be entitled to £100 per annum." The projector of this latter scheme obtained £2,000 in five hours from his dupes, and immediately decamped. Another bubble was the issue of "Globe permits"—little bits of card on which there was a seal representing the Globe tavern and the words "Sail cloth permits." These cards merely gave the holder the right of subscribing to a sail-cloth company in contemplation; and yet these little "permits" sold at sixty guineas each, and even more, while there was quite a fever to procure them. The *London Journal*, of June 11, 1720, says: "The hurry of our stock-jobbing bubblers has been so great this week that it has exceeded all that was ever known. There has been nothing but running about from one coffee-house to another, and from one tavern to another, to subscribe without examining what the proposals were. The general cry has been, 'For God's sake let us subscribe to something; we don't care what it is.'"

FEEDING ON GOLD.

DR. Mackay, in his "History of Popular Delusions," says: "The overbearing insolence of ignorant men who had arisen to sudden wealth by successful gambling made men of true gentility of mind and manners blush that gold should have power to raise the unworthy in the scale of society. The haughtiness of some of these 'cyphering cits,' as they were termed by Sir Richard Steel, was remembered against them in the days of their adversity." During a parliamentary inquiry, one of the members made the following curious motion, in reference to a man named Grigsby, who, though he had once boasted

that he could feed his horse upon gold, was reduced to bread and water for himself: "That since that up-start had been so prodigally vain as to bid his coachman to feed his horses with gold, no doubt he could feed on it himself; and therefore he moved that he might be allowed as much gold as he could eat, and the rest of his estate go towards the relief of the sufferers."

Legal Miscellany.

INJUNCTION.—WATSON V. THE INTERNATIONAL BANK.

THIS case came before Vice-Chancellor Kindersley in the Court of Chancery on the 12th January.

It was a motion for an injunction to restrain the defendants from suing upon certain promissory notes and railway debentures, and from parting with or dealing with the same under these circumstances. The plaintiffs' case was that they were contractors in London and also at Bahia, in South America, and, wanting money, applied to Messrs. Wooley, Coates, and Hankey, brokers in London, to get them a credit for £15,000, which Messrs. Wooley obtained from Messrs. Gladstone and Co., merchants in London, for three months, with power to extend it to six months if the plaintiffs desired it. The plaintiffs, therefore, drew on Messrs. Gladstone three bills of exchange for £5,000 each, and the plaintiffs, as security to Messrs. Gladstone, gave three promissory notes for the same amount, at six months, which were deposited in the hands of Messrs. Wooley, not to be handed over unless, and until, the liability of Messrs. Gladstone accrued, and the plaintiffs also deposited in Messrs. Wooley's hands nineteen bonds or debentures of the Newry and Armagh Railway Company, for £18,000, on the same terms as the notes. It was then alleged that Messrs. Wooley, instead of holding these securities, handed them over to Messrs. Gladstone—one of whose firm, Thomas Hall Gladstone, was director and chairman of the London and Colonial Bank, Limited, which had dealings with Messrs. Field and Co., who were their debtors to a considerable amount, Messrs. Gladstone being also liable to the bank on other transactions. It appeared that there was another banking company called the British and American Exchange Banking Corporation, Limited, and that the two companies became associated, that is, the business of one was entirely transferred to the other, but such other remained still a corporation, but the name was changed, and was now represented by the defendants. The defendants then became aware that Messrs. Gladstone were liable to the Colonial Bank, and being called upon to give security, the bill suggested that the defendants alleged that a list of securities was given, including the three promissory notes and the nineteen bonds in question, representing them as together being of the value of £15,000 only, and not for £15,000 and £18,000, it being alleged in the same manner that the £15,000 was security for Field's debt, the £18,000 for that of Messrs. Gladstone. It was also alleged that Mr. Rixon, the plaintiffs' solicitor, had conversations with Thomas Hall Gladstone, on the foundation of which they assumed that his directors had information that the notes and bonds belonged to the plaintiffs and not to

the Messrs. Gladstone. Thomas Hall Gladstone had absconded, and the bank were proceeding to sue upon the notes and bonds, and this bill was filed to restrain them, for a declaration that they were trustees for the plaintiffs, for an account, &c. About a week previous an *interim* injunction was obtained at his Honour's private residence, with leave to amend the bill, and the motion was now brought on, on the ground that the fact of the list of securities furnished by Messrs. Gladstone was sufficient to put the defendants on inquiry, and that if they had not direct, they had, at least, constructive notice of the plaintiffs' rights, which were unquestionably clear as to these bonds. The defendants relied upon their legal title to sue, and contended that there was not sufficient allegation as to the list to prove any notice whatever; the plaintiffs, therefore, had neither legal nor equitable defence.

Mr. Baily, Mr. Glasse, and Mr. C. Locock Webb appeared in support of the motion; Mr. Rolt and Mr. Eddis opposed it; Mr. Anderson appeared for the Union Bank; Mr. W. Morris for the Colonial Bank; Mr. Methold for the Newry and Armagh Railway Company.

The Vice-Chancellor, after stating the facts, was of opinion that the questions of equity raised by the plaintiffs in opposition to the defendants' clear legal right to sue, independent of such equitable grounds, were questions to be decided at the hearing, and not on an interlocutory application; and the Court would abstain from deciding any question which it was not now absolutely necessary for it to decide. The plaintiff insisted, although his Honour thought the bill appeared to proceed on a different footing, that whatever the right was to the notes, that as to the bonds was unquestionably in the plaintiffs. With regard to the allegation of the list of securities, it was certainly not distinct, and both parties with equal justice insisted—the one that if not distinct, there were statements amounting to such allegation; the other that, not being distinctly alleged, it could not be assumed. His Honour's opinion was that the plaintiffs ought to have distinctly stated the fact, and the defendants distinctly to have denied it. No doubt the conversations between Mr. Rixon and Mr. Gladstone did pass, but the allegations in that respect were very unsatisfactory, and perhaps at the hearing something more definite might be elicited. Under these circumstances, there must be an order for the injunction, on the terms of bringing the £15,000 into court within a reasonable time, the *interim* order meanwhile to continue, and if the money was not brought in within the time, the motion to be refused with costs.

Mr. Baily then, after some discussion, said that the £15,000 should be brought in within a week.

THE LEEDS BANKING COMPANY.—VICE-CHANCELLOR KINDERSLEY'S COURT
(IN CHAMBERS).

On the 9th January, before Mr. Buckley, the chief clerk to Vice-Chancellor Kindersley, several solicitors attended upon the hearing of summonses on behalf of certain persons who had been "settled" on the list of contributories to the Leeds Banking Company, and now sought leave to have their names taken off the list.

There were only five summonses down for hearing, and out of that number there were further postponements in four cases ordered upon application by the chief clerk.

In the case of the Rev. Benjamin Firth, of Great Horton, near Bradford, Yorkshire, a Wesleyan minister, Mr. Braun appeared in support of the application for leave to be struck off the list, and Mr. Denton on the other side.

Mr. Denton, in stating the case, said that Mr. Firth had been settled on the list in his own right as a contributor for five shares in the Leeds Banking Company. He was so "settled" on the ground of his non-appearance. He had been settled on the list as a transferee of shares, having had shares transferred to him by the executors of Mr. George Hammond on the 16th of March last.

The Chief Clerk asked if that transfer had been approved?

Mr. Denton replied that the directors of the bank had approved the transfer to Mr. Firth, and upon his right as such transferee Mr. Firth applied for new shares, which were allotted to him, and it was in respect of those shares that the present application was made.

The Chief Clerk observed that that was equal to a confession on the part of the applicant.

Mr. Denton—Yes. He found that upon the 14th of December, 1864, an affidavit was filed by Mr. Braun on behalf of his client, in which it was contended that he should not have been put upon the list for those shares.

The Chief Clerk then read over some portions of the affidavit, from which it appeared that the applicant was not connected with the Leeds Banking Company up to February or March last, when at the house of Mr. Richard Wilson, who was one of the directors of the bank, he held a conversation, and Mr. Wilson spoke in high terms of the state of the bank, and produced a report of that year's date. He regretted that that report had been lost or mislaid, and therefore could not now be produced. He had also seen a prior report of 1863, and it appeared that there was a balance of £3,382. It was stated that they had always paid large dividends for some years past, and he consequently instructed a broker to purchase five shares for him, which was done; that he did not know there was any material difference in the state of the bank, and if he had any notion of the slightest deficiency in the assets he would not have had any shares transferred to him.

Mr. Denton.—Of course not.

The Chief Clerk.—No; I should think not. (Laughter.) The applicant further stated in his affidavit that he paid a deposit into the bank in the month of August. He had never received any dividend, he had not attended any meetings, neither had he been returned to the Stamp Office.

Mr. Denton said that the return in this case had been made to the Stamp Office.

The Chief Clerk having concluded reading the applicant's affidavit,

Mr. Braun submitted that his client was induced to take the shares upon the representations of the directors, or certain of them. He knew his friend Mr. Denton would rely upon Froud's case against him, but still he ventured to make the suggestion.

The Chief Clerk thought that the conversation between the applicant and Mr. Wilson was private.

Mr. Denton.—This was a conversation between two gentlemen in a private house, and the applicant was one of the two gentlemen. He did not take the shares from the bank, but went into the market, and his broker bought the shares for him.

The Chief Clerk said he had no doubt upon the matter. It was doubtless very hard upon the applicant, but he saw no reason why the name should be struck off the list of contributories. The summons would be dismissed.

Mr. Braun supposed it rested with his client whether the case was referred to the court.

The Chief Clerk.—Yes. I only record my own opinion.

Upon the question of costs, the Chief Clerk said that they must be paid by the applicant.

Mr. Denton said he had another matter to mention. He had to apply for an order to authorise the official liquidator to invest the sum of £75,000, which was in hand in Exchequer bonds. The question was whether that amount, which was a realisation of portion of the assets of the bank, should be so invested, or that they should wait until some more money had come in from calls. If the order were made it was proposed that the money should be sent to the Bank of England, and that they should employ a broker to invest it in bonds, which would bear interest.

The Chief Clerk said he wished that there should be no loss of interest on moneys in hand to any of the parties. But the question was as to the security for the money.

Mr. Denton said that the chief clerk could make his order to the Bank of England authorities.

Mr. Lordin (from Messrs. Freshfields and Newman) said it was laid down that all moneys could be so employed by order of the official liquidator and the chief clerk of the judge.

Mr. Denton said a further matter he had to ask leave to mention was, that all the small shareholders, say up to £50, should be allowed to pay in full at once. The sum from this class would amount to some £30,000.

The Chief Clerk thought he had no power to make any difference between the various classes of holders, and he believed that it would be impolitic, as the cost of making each small shareholder show by affidavit the exact amount of his holding would be equal to the expenses under the present course of proceeding.

Mr. Denton said that he would shortly be in a condition to show that a large amount of the calls (which were that day due) had been paid. The sum of £75,000 of which he had spoken was from assets alone, and quite irrespective of the calls which had been made.

It was ultimately arranged that the question of investing the £75,000 assets in Exchequer bonds should stand over for the present.

The proceedings were then adjourned.

Reports of Joint-Stock Banks.

BANK OF NEW SOUTH WALES.

THE half-yearly general meeting of the shareholders of the Bank of New South Wales was held in Sydney, on Wednesday, 26th October last; the Hon. G. Allen, M.L.C., in the chair.

The Secretary read the following report and balance-sheet:—

“The directors have the pleasure to present to the proprietors the follow-

ing abstracts of the bank's liabilities and assets, and of the profit and loss account for the half-year ended on the 30th ult :—

The net profits for that period, after deducting rebate on current bills, interest on deposits, providing for bad and doubtful debts, and reducing valuation of bank premises and office furniture, amount to	£74,176 16 8
To which are to be added—	
Recoveries from debts previously written off as bad or doubtful	2,106 8 11
Undivided balance from last half-year	3,896 15 8
Giving for distribution	<u>£80,179 16 8</u>

Which the directors appropriate as follows :—

To payment of dividend at the rate of 15 per cent. per annum—	
On old stock for six months... ..	£56,250 0 0
On new ditto, paid in the colonies, five months	8,172 10 0
On new ditto, paid in London, three months	1,894 10 0
	<u>£66,317 0 0</u>
On bonus at the rate of 2½ per cent. per annum on capital paid up... ..	11,052 16 8
On balance carried to "profit and loss" new account	2,809 19 7
	<u>£80,179 16 8</u>

"The proprietors will observe that a larger amount of new capital has been paid than was called for on the 27th April last, and upon which dividend is now being paid; the next payment will be due to-morrow, of which intimation has already been given.

"The directors have the pleasure to report the advantageous purchase of a site in London, upon which suitable banking premises are about to be erected.

"Branches of the bank have been opened in this colony at Richmond, and in Queensland at Bowen, Port Denison.

"It is the duty of the meeting to elect a director in the room of Thomas Buckland, Esq., who retires by rotation. Messrs. Thomas Walker, George Thorne, and R. A. Hunt are candidates for the office, and have given the required notice.

"It also devolves upon the meeting to elect two auditors in the room of Mr. James Milson, jun., and Mr. John Richardson, the latter gentleman being eligible for re-election.

"The dividend will be payable at the head office to-morrow, and at the branches on receipt of advice.

"For and on behalf of the Board of Directors,

"GEORGE ALLEN, President."

*Aggregate Balance-sheet of the Bank of New South Wales, September 30, 1864,
(including London Branch to 30th June, 1864, and New Zealand Branches
to 5th September, 1864).*

<i>Dr.</i>			
To bank stock—Old stock £750,000; new stock, paid up			
£181,280	£931,280 0 0
Reserve fund	310,426 13 4
Notes in circulation	591,687 0 0

PROFIT AND LOSS SEPTEMBER 30TH., 1864.

<i>Dr.</i>			
1864			
Sept. 30—To rebate (at current rates) on bills discounted not due at this date	£33,158 10 11
Dividend at the rate of 15 per cent. per annum	66,317 0 0
Bonus at the rate of 2½ per cent. per annum on capital paid up	11,052 16 8
Balance carried to "profit and loss" new account	2,809 19 7
			<u>£113,338 7 2</u>

<i>Cr.</i>			
1864.			
March 31—By amount from last account	£3,896 15 8
Sept. 30—By recoveries from bad debts	2,106 3 11
Balance of half-year's profits after writing off bad debts	107,335 7 7
			<u>£113,338 7 2</u>

The report was adopted.

Mr. Thomas Walker was elected a director in the room of Mr. Thomas Buckland, who retired by rotation.

Mr. J. Richardson was re-elected an auditor, and Mr. Francis Mitchell was elected an auditor in the room of Mr. J. Milson, jun., who retired by rotation.

The resolution to increase the stock on the London register to one-third

of the capital, agreed to at the special meeting held on the 28th September, was not confirmed, there being a large majority against it.

A vote of thanks was awarded to the directors, and the proceedings terminated.

BANK OF NEW ZEALAND.

THE half-yearly general meeting of the shareholders of this bank was held at the bank on the 28th of October; Mr. James Williamson, the president, occupied the chair.

The minutes of the last half-yearly meeting having been duly read by the Secretary, and confirmed, the Secretary read the sixth report of the directors, as follows:—

"Sixth report of the Bank of New Zealand, to the half-yearly general meeting of the proprietors held at the Banking House, Auckland, on Friday, the 28th day of October, 1864. The directors have to lay before the proprietors the following statement of the affairs of the bank as at 30th of September last, and while congratulating them on the increase of business, and generally successful manner in which it has been conducted, they have to express their regret that the monetary and commercial crisis which Southland has experienced during the past six months, and an indiscreet advance at Dunedin, have entailed losses much greater than may again be reasonably looked for, and but for which the profits would have been greater than during any previous half-year. Ample provision has been made for all bad and doubtful dependencies, some portions of which may yet be recovered. The net profit for the half-year, after providing for all bad and doubtful debts, and making considerable reductions in bank premises and furniture accounts, amounts to £32,295. 14s. 10d. To which is to be added—undivided balance from last half-year, £2,259. 17s. 11d.; making a total available for division of £34,555. 12s. 9d. With the addition now to be made to the reserve fund, it will amount to £100,000, being an excess of 25 per cent. of the paid-up capital of the bank. The directors, therefore, recommend the following appropriation of the above profits:—To payment of dividend at the rate of 10 per cent. per annum, £18,231. 16s.; to bonus equal to 5 per cent. per annum, £9,115. 18s.; to addition to reserved fund, £5,000; balance carried to profit and loss new account, £2,207. 18s. 9d.; total, £34,555. 12s. 9d. The dividend and bonus will be payable at the head office on Tuesday, the 1st proximo, and at the branches on receipt of advice.—For the Board of Directors, James Williamson, President."

"Balance-sheet of the Bank of New Zealand, for the half-year ending 30th September, 1864, including London Office Balance at 30th June, 1864.—Dr.: To paid-up capital, £392,614; to reserve fund, £95,000; to notes in circulation, £333,467; to bills in circulation, £240,964. 12s. 6d.; to deposits, £1,323,039. 8s. 7d.; to balances due to other banks, £99,343. 1s. 8d.; to balance of profit and loss account at 31st March, 1864, £2,259. 17s. 11d.; to net profits for half-year, £32,295. 14s. 10d.; total, £2,518,983. 15s. 6d. Cr.: By coin and bullion, £372,094. 3s. 9d.; by government securities, £350,000; by landed property, £17,442. 7s. 10d.; by bank premises, furniture, and stationery, £29,649. 10s. 3d.; by balances due by other banks, £142,676. 16s. 6d.; by notes of other banks, £1,150. 13s. 7d.; by balances due by colonial governments, £261,431. 2s. 1d.;

by bills receivable and all other advances, £1,344,539. 1s. 6d.; total, £2,518,983. 15s. 6d.

Profit and Loss Account.—Dr.: To increase of reserve fund, £5,000; to dividend at the rate of 10 per cent. per annum, £18,231. 16s.; to bonus at 2½ per cent. for the half-year, £9,115. 18s.; to amount carried to profit and loss, "new account," £2,207. 18s. 9d.; total, £34,555. 12s. 9d. Cr.: By balance of profit at 31st March, 1864, £2,259. 17s. 11d.; by net profit for half-year, £32,295. 14s. 10d.; total, £34,255. 12s. 9d.

Reserve Fund.—Dr.: To balance, £100,000. Cr.: By balance from last statement, £95,000; by amount transferred from profits of past half-year, £5,000; total, £100,000.—Audited (Signed) HENRY WALTON, W. C. WILSON."

The Chairman said that in rising to propose the adoption of the report he had to congratulate the shareholders on the great success that had attended the transactions of the bank, the large increase of discount business as well as of deposits. This was the first time that they were called upon to write off any large amount for bad debts, which, it must be remembered, was principally occasioned by the great financial depression that had occurred in the Southern provinces, and more especially in Invercargill. Taking everything, however, into consideration, the business was steadily prospering, while a glance at the totals of the balance-sheet showed that the business of the last half-year was fully as great as could reasonably be expected. He felt satisfied that their position was in every way a firm one, and would be productive of results still better than ever, the only thing required being the same expression of confidence in the directorship as had hitherto been the case. He would beg to propose the adoption of the report.

Mr. Owen seconded the motion, which was unanimously agreed to.

Messrs. J. O'Neill and Stark were appointed scrutineers to examine the voting for the office of directors in the room of Mr. Owen, who retired, and of Messrs. J. O'Neill and D. Nathan who had resigned; the gentlemen who had signified their intention of becoming candidates being Messrs. W. Williams, W. T. Buckland, Samuel Browning, and Thomas Henderson.

The ballot having been taken, the last-named gentlemen were declared to have been duly elected directors for the ensuing half-year.

Mr. Henderson begged to return thanks on behalf of himself and his brother directors for the honour that had been conferred upon them.

The Chairman remarked that this would conclude the business of the meeting, without there were any gentlemen present who had any questions to ask.

Colonel Mould said that in consequence of certain rumours that had got abroad—rumours in which he begged to state he in no way participated, nor did he feel sure any of the present meeting—he was induced to ask for public satisfaction some explanation regarding the large advances that had been made by the Bank of New Zealand to the colonial government, and relative to the repayment of the same.

The Chairman said that he had much pleasure in answering the question, and at the same time he had to thank Colonel Mould on behalf of his brother directors and himself for the expression of confidence that he had given utterance to. By last advices he was happy to inform the meeting that the colonial agents had informed them that they were prepared to pay off the whole of the advances, which communication had been subsequently certified to by the government itself.

Mr. Henderson rose to move a vote of thanks to the directors and officers of the bank for the valuable assistance rendered during the last six months. He was in no way surprised at the losses that had occurred down South; it was only to be wondered at that so few losses had been occasioned, considering the large amount of business that had been transacted, the amount of capital involved, and the numerous branches of the bank.

Colonel Mould seconded the motion, which was unanimously carried.

The Chairman, on behalf of himself and brother directors, thanked the meeting for their unanimous expression of satisfaction.

According to usage, the minutes of the foregoing meeting were then read and approved of, and the meeting broke up.

COLONIAL BANK.

The fifty-fourth half-yearly general meeting of the proprietors of this bank was held on the 4th January, at the London Tavern, Mr. C. Marriott in the chair.

The Secretary, having read the notice convening the meeting; proceeded to read the following report:—

"The directors submit to the proprietors, in accordance with the provisions of the charter, the following statement of the debts and assets of the corporation on the 30th June, 1864, which comprises the net profit of the half-year which ended at that period:—

DEBTS.

Circulation...	£257,691	8	4
Deposits, bills payable, and other liabilities	1,567,964	9	2
Paid-up capital	500,000	0	0
Reserved fund	123,000	0	0
Balance of profit from last half-year	537	0	1
Net profit for the half-year	36,868	19	10
							£2,486,061	17	5

ASSETS.

Specie	£321,912	9	8
Due to the bank in the colonies, on bills discounted and purchased, including those past due, &c.	974,846	19	9
Due to the bank in the colonies, on current accounts	16,205	12	2
Due to the bank in London, on bills remitted, cash at bankers', &c.	1,162,875	17	7
Bank premises and furniture in London and the colonies	10,220	18	3
							£2,486,061	17	5

"The business of the half-year now reported upon having had the benefit of the rise in the prices of colonial produce alluded to in the last report, as well as the high rates of interest prevailing here during that period, the directors found themselves in a position to recommend the payment of an extra dividend. They were happy to state that, according to the latest accounts, the business of the branches was going on very satisfactorily;

but the proprietors would have to bear in mind that the prices of colonial produce had considerably receded. The directors now proposed that out of the net profits, which, after providing for all bad and doubtful debts and income-tax, amounted to £36,868. 19s. 10d., an ordinary dividend of 6 per cent. should be made for the half-year ending June, 1864, being at the rate of 12 per cent. upon the paid-up capital of the corporation, which would require £30,000; and an extraordinary dividend of 1 per cent., which would require £5,000, leaving £1,868. 19s. 10d.; which, after adding the balance brought forward last half-year, £537. 0s. 1d., would make a total of £2,405. 19s. 11d. From this amount the directors proposed to carry to the reserve fund £2,000, increasing it to £125,000, and the balance of £405. 19s. 11d. to the next half-year."

The Chairman, in moving the adoption of the report, said that he hoped the shareholders would agree with him that it was sufficiently satisfactory to require neither any explanation nor a long speech from him. (Hear, hear.) He congratulated them on the fact that the board was able to repeat the additional dividend on this occasion, but he trusted that they would bear in mind what was stated in the report—namely, that although the branches had done very well, the proprietors were mainly indebted to the high rate of interest in this country. As regarded the branches, they had since the end of June been going on satisfactorily, but the business had not sprung so much as was expected owing to the high rate of sugar. A reaction, however, had now set in, and they already began to feel its effects. He had to inform them that since their last meeting the board had received proposals from the Bank of Jamaica to transfer their business to this bank on certain conditions, and it was an opportunity which offered of increasing their business which they gladly availed themselves of. Negotiations were accordingly entered into with that bank, the result of which was that the Colonial Bank had taken over their business, paying them £10,000 for retiring altogether. (Cheers.) By the last accounts they had received, it appeared that the Bank of Jamaica ceased business on the 31st of October, and he was happy to say that since then almost all the accounts had been transferred to this bank. (Hear, hear.) The Bank of Jamaica was, as they were aware, as old as this bank, being established at the same time, and sharing with it the business of the colony. For his part, he believed they would derive great advantage from this amalgamation, because being a local bank, the Bank of Jamaica possessed certain advantages, inasmuch as its supporters were more disposed to hang together than a general proprietary could be expected to do. He would mention also, that it had been thought convenient both to the proprietary and to the bank, that the divided warrants should be sent by post in future, instead of troubling gentlemen to come to the bank—(hear, hear)—which would not only save the time of the shareholders, but prevent the crowding and bustle at the bank, especially on packet days, occasioned by the proprietors being kept waiting for their dividends. With these observations he begged to move that the report be adopted, printed, and circulated. (Hear, hear, and cheers.)

The Deputy Chairman having seconded the motion it was carried unanimously, and a dividend in accordance with the statement in the report was declared.

The retiring directors were then re-elected, and Mr. Eden Colville was elected to fill the vacancy occasioned by the death of Mr. Henry Bruce, whose decease the directors deeply deplored. Mr. James Scott, for many

years one of the largest proprietors of the bank, was elected auditor, in the room of Mr. Colville; and a cordial vote of thanks to the chairman and directors for their able management concluded the proceedings.

UNION BANK OF AUSTRALIA.

A SPECIAL general meeting of the proprietors of this bank was held at the bank buildings on the 9th January, Mr. Robert Campbell in the chair, for the purpose of receiving the half-yearly report of the directors, and other business.

The Secretary (Mr. Saunders), having read the advertisement convening the meeting, proceeded to read the following report:

"The accounts which it is the duty of the directors to present at this supplementary meeting are so satisfactory as not to require any lengthened remarks from them; as usual their preparation has been preceded by a close investigation of the business of the bank at its various branches, and careful provision for everything that could be estimated as doubtful to latest dates. The results are considered by the directors to be very favourable, and they are gratified to report accordingly. The proprietors will notice the profit obtained by the disposal of unallotted shares, and the completion of the funds that were formed when the new capital was created; also that the remaining £50,000 of Imperial Four per Cent. Debentures has been obtained and applied to the reserve fund in terms of the proprietors' resolution of the 12th of July, 1858. The directors have been deprived during the half-year of the co-operation of two of their most esteemed colleagues by the resignation of Charles Edward Mangles, Esq., and the death of Thomas Young, Esq.; these vacancies have been provisionally filled by the nomination of Charles Henry Mills, Esq., and Sir Henry Watson Parker; the former a member of the firm of Messrs. Glyn, Mills, Currie, and Co., and the latter long and influentially connected with the colony of New South Wales, and with banking in Sydney. Both gentlemen, in accordance with the terms of the deed of settlement, now retire and offer themselves for election. The profits for the half-year, as shown by the subjoined statement of accounts, have enabled the directors to declare a dividend of £2. 5s. per share, after which there remains a balance of £1,320. 9s. 7d. to carry forward. The dividend will be payable in London on the 17th January, free of income-tax, and in the colonies as soon as the inspector shall fix after receipt of advices."

The Chairman said—I have very few observations to trouble you with in explanation of the report which you have just heard read. To vindicate a want of success generally requires a considerable amount of eloquence, whereas the features which our balance-sheet presents to you speak for themselves, and render but little comment on my part necessary. It is with much pleasure that I am able fully to endorse the statement made by the directors with regard to the soundness of the assets of the bank. (Hear, hear.) During the twelve years that I have had the honour of holding a seat in this direction, I have never known the various points of danger so carefully and thoroughly guarded by ample reserves as they are on the present occasion. (Hear, hear.) As this is the first half-year in which the working of the additional capital is shown, it is satisfactory to your directors to have it in their power to exhibit so good a balance-sheet, not only as justifying their policy in applying to you for an increase of capital, but as refuting the arguments of many of our shareholders who looked forward to diminished dividends as a consequence of that increase of capital. (Hear, hear.) This success is mainly attributable to the able and judicious manner in which the managers of the different branches, under the auspices of our chief inspector, Mr. McMullen, whom

I can most correctly describe as being actuated by the single desire of promoting the prosperity of the institution over which he presides, have carried out the policy of the board. (Cheers.) Now, the policy which the board in London has always pressed upon its officers abroad has been that of caution and safety in preference to large profits—keeping the assets of the bank in a lively and convertible shape, as much as possible free from all “locks up,” and to this course of policy Mr. Macmullen has steadily adhered. (Hear, hear.) We have now before us the history of the working of this large bank for nearly twenty-seven years; and I may safely say that, during all that period, the working has been characterised by almost unvarying prosperity; and I need hardly tell you that, during my twelve years’ experience we have distributed among the proprietors very large dividends indeed. (Hear, hear.) As to the future of the bank, I have no fear whatever. I can speak from personal knowledge of the vast and fertile area of the colonies with which we trade, and of their almost unlimited resources, tenanted as they are by an energetic population, yearly increasing, and producing as they do the greatest amount of exportable wealth in the smallest compass, in the form of wool and precious metals, with which they supply the world. Such being my sanguine views with regard to the future of the group of colonies with which we trade, I cannot but feel hopeful as to the prospects of a bank which aids by its capital and credit in the creation and distribution of this wealth; always assuming that the same caution and prudence which have hitherto marked the counsels of the institution be steadily persevered in. (Cheers.) I have to notice with sincere personal regret the retirement from our board of my esteemed friend Mr. Charles Mangles, who had been with us from the commencement of the operation of the bank. You will also have heard with regret, as we ourselves did, of the death, full of years, of our esteemed colleague Mr. Thomas Young. The regrets which the loss of these gentlemen has occasioned, however, are mitigated by the selections which the board has made to fill up the vacancies, and the accession to our body of two gentlemen of character, position, and banking experience, with whom we shall always feel pleasure in co-operating, and from whose counsels we expect to derive very great advantage to the bank. (Hear, hear.) In moving, “That the report and balance-sheet be printed and circulated among the proprietors,” I have only to add that I shall be happy to answer any questions that may be put to me, relative to the affairs of the institution, to the best of my ability.

Mr. Wilkinson agreed in what the chairman had said as to the working of the bank, because with more of their own and less of other people’s capital they had made an increased sum of money. It was always desirable to have their capital well up in proportion to their liabilities. He looked upon the state of the accounts as satisfactory.

Mr. Jephson remarked that although they were met as a society of friends they ought not to separate like a meeting of Quakers. They had to congratulate not only the board of directors but themselves upon the present position of the bank. (Cheers.) It was certainly emphatically a great bank, and he had reason to believe that it was conducted upon moral principles of the highest character. (Hear, hear.) Some twelve months ago they met under rather different circumstances, and were not quite so unanimous as they were that day. At that time they looked upon the board as hard task-masters in levying a £20 premium on the new shares; though he did not mean to say that he himself regarded them exactly in that

light; still such was the feeling then expressed. But he was happy to say, and he thought the most captious objectors were now satisfied, that they were reaping the reward of that tax, if he might be allowed to call it so. (Cheers.) When they reflected on the ordeal which this and similar institutions had gone through during the last six months, he considered that they had reason to be highly satisfied with an 18 per cent. dividend, and he congratulated the shareholders upon it. (Loud cheers.) He would not venture to caution the board; but he would take the liberty of reminding them that there was one evil which he feared all boards of directors were liable or prone to—he meant extravagance, or rather want of economy. (A laugh.) He was sure there was no one in the room who grudged the directors whatever remuneration they might take. They were worthy of it; and he hoped the meeting would not disperse without passing a vote of thanks to them and to the staff in the colonies. But he respectfully submitted that the expenses of the institution had always seemed to him to be large. He did not mean to say that they were unnecessary, and it was of course impossible for him to say in what particular department economy might be introduced; but he hoped that if £1,000 could be saved in one department, or even £100 in another, the directors would not miss the opportunity of doing so. At present the expenses approximated to those of a railway, being upwards of 45 per cent.

Mr. Wilkinson—They are only 32. (Hear, hear.)

Mr. Jephson was obliged for the correction, and proceeded to observe that one or two of the Australian banks had resorted to the practice of receiving money upon deposit. He wished to know whether the directors had considered this subject, or had any intention of following the example. He also drew attention to the recent loss of an Australian gold ship, and inquired whether the interests of the Union Bank were at all affected by the unfortunate event.

The Chairman replied that Mr. Jephson, in referring to the expenses, had put his finger upon the very item that most engaged the attention of the directors, and that to such an extent that amongst their rivals and neighbours they were called stingy. (Hear, hear, and a laugh.) His own opinion was, that there was no true economy in underpaying efficient officers, for upon them essentially depended the welfare of the bank. (Hear, hear.) At present they had 23 branches and 240 officers; and unless those gentlemen were paid well there would not be such results as were shown in the balance-sheet that day. (Hear, hear.) With regard to deposits, he was not then in a position to give an answer to the inquiry either affirmatively or negatively. The question had its difficulties, but was engaging the close attention of the directors. As to the gold ship he was happy to say that the interests of the bank were not in any way affected by her loss.

A proprietor noticed a large increase in the item "Bank premises."

The Chairman explained that four houses had been built and three partly built, at a cost of £24,000, and remarked that with a continuous growth of the bank it was impossible to limit the growth of the bank buildings. (Hear.)

Mr. Wilkinson—Then the revenue had had to bear about half of it.

The Chairman—The revenue had borne no part of it, and the increase was upon the whole year, not the half-year.

The motion for adopting, printing, and circulating the report was agreed to.

The Chairman moved the election of Mr. Charles Henry Mills as director.

Mr. Chapman, without questioning the qualifications of the two gentlemen whom the directors proposed to fill up the vacancies at the board, thought there was one gentleman among the shareholders to whom they must all feel exceedingly indebted for the services he had rendered them on several previous occasions; the person he alluded to was Mr. Wilkinson. (Hear, hear.) He had held no personal communication with Mr. Wilkinson upon the subject, but he felt grateful to him for his valuable advice on those occasions, and he had hoped that considering his great financial acumen the directors themselves would have come forward and recommended him to a seat at the board. (Hear, hear.) He hoped when next an opening presented itself that the shareholders would bring such pressure to bear upon the directors that they would themselves request Mr. Wilkinson to accept the offer.

Mr. Botley concurred with Mr. Chapman as to the eligibility of Mr. Wilkinson for a seat in the direction; but said it would be an unpleasant thing to propose a candidate in opposition to a gentleman who came recommended by the board. He trusted, however, that eventually the shareholders at large would consider whether it was not for their interest to infuse a little fresh blood into the direction.

The Chairman was sure that it was impossible to fulfil the hon. proprietor's desire to infuse fresh blood into the direction better than by the selection the board had made of Mr. Charles Mills; and the hon. proprietor who first spoke must have a very limited City knowledge indeed (Mr. Chapman: Very true) if he did not know the name of Mills in connection with the firm of Glyn, Mills, and Co. He wished to speak frankly. It was the duty of the directors under the deed to select the men they considered best for the interests of the bank, and that duty they would continue to discharge fearlessly and faithfully, as they had hitherto done it. (Hear, hear.) They felt that the destinies of the bank entirely depended upon it, and that unless the board were perfectly harmonious it would be useless to endeavour to bring their efforts to bear upon the management of the bank. He repeated that they would perform the duty committed to them by the deed fearlessly and faithfully. They would select the men they considered best for the interest of the institution; and it was for the proprietors assembled in general meeting either to confirm or reject that selection. (Cheers.)

Mr. Wilkinson having seconded the motion, the nomination of Mr. Mills was agreed to *nem. con.*

The Chairman proposed the election of Sir Henry Watson Parker as a director. The hon. candidate, he remarked, was a gentleman of large colonial experience, and had been chairman of a sister banking institution in the colonies.

Mr. Hamilton, in presenting a requisition, signed by twenty shareholders, for convening a special general meeting to consider the propriety of increasing the remuneration of the directors, as an act of justice to those gentlemen for having conducted the affairs of the bank so efficiently, said that the present capital of the company amounted to a sum considerably in excess of the paid-up capital of any one of the large joint-stock banking companies that were now carrying on business in this

country. This capital, moreover, had to be employed in distant countries, where competition was great, where deposits were comparatively limited, where the results of trade, industry, and enterprise were somewhat precarious, and where banking business was attended with special difficulties. Altogether, the duties that devolved upon the board in various ways were of a very onerous character. Now, from 1845 to 1852 the remuneration voted to the board was £2,000 a year; but in 1852 it was increased to £3,000, and the arrangement made with reference to that amount by the directors themselves was that the managing director should receive £1,000 a year, and that £2,000 a year should be divided among the eleven ordinary directors. In 1859 there was a further increase voted of £500 a year, but the effect of that addition was not to alter the position of the ordinary directors, but to augment the salary of that most valuable officer, Mr. Cumings, the chairman of committees. The arrangement so made existed at the present day. Mr. Cumings received £1,500 a year and his eleven colleagues divided £2,000 a year amongst them. That was a little more than £180 each, the sum voted to them in 1852, when the colonial business of the bank was confined to eleven branches, and the paid-up capital to £820,000, whereas there were now 23 branches scattered over the various Australian colonies and New Zealand, and the dividend had to be paid upon a capital amounting to £1,250,000. Under these circumstances, he submitted that the time had arrived for increasing this inadequate remuneration. (Hear, hear, and No.) He termed it inadequate, and it was so in every point of view. It was inadequate in comparison with the present scale of salaries allotted to the directors of other companies of no higher standing and with no more marked success than this. It was inadequate in reference to the duties that had to be discharged; and it was inadequate as an inducement to gentlemen of experience and judgment to come forward and work with the energy and diligence necessary to secure success. (Hear.) If the requisition to call a special general meeting were complied with, he should then take the liberty of submitting, for the approval of the shareholders, that the vote for the directors be increased by the sum of £1,300, thus making a total of £4,800, which he would ask them to recommend for distribution into two portions, viz., £3,600 to the twelve directors, including Mr. Cumings, thereby giving them £300 a year each, and £1,200 a year to Mr. Cumings exclusively as the managing director. The result of adopting this step would, he believed, be greatly conducive to the benefit of the bank.

Mr. Brookes, M.P. (a director), said that the duties of the directors were much more onerous than many gentlemen present would be aware of. They required the attendance of some members of the board every working day of the week; and the accounts from every one of their numerous branches had to be examined thoroughly before holding the general meetings. In short, no one outside the establishment could form a conception of the amount of business that was done there. At his time of life it was not very probable that he should continue many years to be associated with the board; but he thought it was only fair that the gentlemen who might come after him should be well paid. In his opinion there was not, for the amount of work performed, a single board of directors so badly paid as that of the Union Bank of Australia. (Hear, hear, and a laugh).

Mr. Cumings said that as his name had been mentioned, as he happened to be the only director who was adequately paid, and as he looked for no

increased payment, but would be contented with less if the shareholders thought proper—(cries of "No")—he begged to state that it was his thorough conviction that were it not for the strength of the interest the directors felt in the concern, it would be unreasonable to expect them to devote the business powers they possessed to the affairs of the bank, and not to feel that they were inadequately paid. For his own part, he would much rather surrender his remuneration, and let it be divided amongst the directors at large, than that his colleagues should continue to work as they had done without adequate pay. (Loud cheers.) Economy did not always consist in low salaries. Boards who rendered voluntary services were seldom useful boards, and clerks who were underpaid were seldom valuable clerks. (Hear, hear.) As a matter of prudence and economy, it was desirable that proprietors should feel that those who worked for them were rewarded for their labour, otherwise, by-and-by, the board might sink in the public estimation to a degree that would prove highly injurious to the interests of the bank. (Hear, hear.) The word "pressure" had been used in reference to the appointment of directors, and he thought that nothing would be more calculated to injure that interest than to press upon the board any person whom they, having the power of selection, had not themselves recommended. (Hear.) In making a selection the board always chose the best man, be he whom he might, and at such meetings as this they came before the proprietors on their trial. If they had not selected good men, the shareholders had the power of rejecting them, and making them go back and select others. And when that power was exercised the shareholders would show what real substantial ground they had for objecting to the men. Speaking on his own behalf, he would say for one of the new directors, Mr. Mills, for Sir Henry Parker had only just joined them, that a more active and attentive director, one that exhibited more astute intelligence in the work he had to perform, or that rendered more valuable services to the bank, had never sat at the board. (Cheers.)

Mr. Botley believed that there was no fear of the shareholders ever withholding their support from anything that was proposed by the directors here; and in seconding the nomination of Sir Henry Parker he begged to say that he had been assured by a friend who had a large stake in the Australian colonies, and was a member of parliament, that Sir Henry Parker had great colonial knowledge, and was otherwise a very fit man to occupy a seat at the board. (Hear, hear.)

The motion was agreed to, and

The Secretary having read a notice that the dividend of £2. 5s. a share, free of income tax, would be payable on and after the 17th inst.

A vote of thanks was carried by acclamation to the chairman, directors, and officers in London and the colonies for the able manner in which they had conducted the affairs of the bank.

LONDON AND BRAZILIAN BANK, LIMITED.

The second annual general meeting was held on the 9th January, at the London Tavern; Mr. J. White Oster in the chair.

The directors' report was taken as read. It said:—

"The net profit for the half-year ending June 30, 1864, amounts to £24,704. 12s. 11d. Out of this the directors propose to pay a dividend,

free of income-tax, of £1. 4s. per share, amounting to £15,600 (equal to interest on the paid-up capital after the rate of 6 per cent. per annum), and to carry forward the balance of £9,104. 12s. 11d. to the next account. The intention of the directors was to have recommended an increased dividend, but in consequence of the late important failures at Rio de Janeiro, it is deemed more prudent to carry over a large balance, and to make the distribution proposed. The opportune arrival in England of Mr. Saunders from the Rio branch, simultaneously with the announcement of the severe crisis in that city, not only afforded the directors the gratifying intelligence of the satisfactory position of that branch, but also that the losses were likely to be much less than at first anticipated, and there is every reason to hope that these will be more than compensated by diminished competition, and the general improvement of the business of the bank. By the last advices from the branches, the directors are happy to say the operations of the bank are progressing most satisfactorily. They are also glad to report a steady increase of business in Portugal."

The Chairman congratulated the shareholders on the proceedings of the half-year ending 30th June last. The business of the bank during that period had considerably increased. The gross profit made in the previous half-year was £34,000 against £41,000 in the half-year now under consideration, being an increase of £7,000. The charges in the mean time had, however, increased to about £7,000 in the half-year ending June, 1864, from about £4,000 in the previous half-year. Of this increase between £1,400 and £1,500 had arisen from a cause not to be regretted, viz., the additional amount paid for income-tax, £200 from other additional taxation, and £1,400 from what he might consider extraordinary outlay, viz., £800, the reward paid to an officer of the bank who had resigned to enable them to reduce their expenses at Oporto, and which would therefore come back to them in the shape of expenses saved in future years, the balance of this extraordinary outlay being for furnishing the house and offices of the bank at Lisbon. Although the net amount with which they had to deal was equal to, not quite but very nearly, a dividend at the rate of 10 per cent., he believed that the course which the directors recommended was healthy, and, in the position in which the bank stood, necessary. As they were aware, the capital of Rio had recently been visited by one of the severest money panics that had perhaps ever taken place, the failures during three days having amounted to between £10,000,000 and £12,000,000, and it was only the caution and prudence the board had always exercised of looking not so much to present dividend as to the permanent interests of the concern, or in other words, more to principle than what might be deemed expediency, that they had escaped as well as they had. Therefore, when they proposed to pay only a 6 per cent. dividend, carrying over £9,100, which would remain as a fund towards guaranteeing or paying off any losses that might have occurred in consequence of the crisis, he submitted that they were adopting the wisest course. (Hear, hear.) He wished he could say that that £9,000 would be likely to cover all the losses they would have to meet. He believed that it would cover very nearly all the loss at Rio; but they had made a loss of between £3,000 and £4,000 at Pernambuco, for which it would be necessary to provide. Notwithstanding these losses, however, the directors were glad to be able to state that the bank had never stood in a higher position. It had during a period of almost unparalleled

difficulty been enabled to meet all calls upon it. Since the panic its business had largely increased, and without presuming to indulge in prophecies or make promises as to the future, he felt fully justified in saying that its prospects looked remarkably well. In conclusion, he read an extract from a communication from the inspector at Rio, dated 7th December, describing the evident improvement which had taken place in the business of the bank since the previous mail, adding that many new accounts had been opened, and that if the concern was managed with prudence a very splendid future was opening up for it.

The Chairman moved a resolution adopting the report and confirming the dividend.

A Shareholder inquired whether the loss stated by the chairman included all that had resulted to the bank from the monetary crisis in the Brazil.

The Chairman—So far as we can at present estimate it, the entire loss at Rio will not exceed £10,000. The only other loss we have incurred is one of £3,400 upon a cotton bill at Pernambuco. The government of Brazil passed a bill in consequence of the crisis stopping all legal proceedings on account of liabilities for sixty days; and it tells much for the credit of the people of Rio, that we had not a single defaulter during the whole of that period. (Hear, hear.)

Mr. White, referring to the oscillation in the market price of the shares of late, said he had been informed that it was mainly occasioned by the extensive speculative operations of one of the directors, Mr. Bischoffsheim, who, it was alleged, used information obtained by him as a director or privately in influencing the market for his own personal benefit, and to the disadvantage of the general body of the shareholders. Shortly before the news of the financial crisis at Rio the shares stood at 21, or 11 premium, at which sales were pressed, and suddenly they fell to 5 discount, at which for some time they were not saleable. He himself had purchased 50 shares at the high premium, and although the transferrer was not Mr. Bischoffsheim, he had reason to believe they formed a portion of those which had been held by that gentleman.

The Chairman was very sorry that a discussion upon such a subject should have arisen, but although he did not like to see a director dabbling in the shares of the company, and putting them up or down at his pleasure, he should be sorry to admit that a director was debarred from the privilege which every other shareholder possessed, of buying or selling shares as he thought proper. At the same time he agreed with Mr. White that it was most improper for a director to use information which he might receive as a member of the board, and before it was generally known, for the purpose of biasing the market for his own advantage, and he hoped that no member of that board had ever done so.

Mr. White admitted that directors had the same right to go into the market and buy and sell shares as the other shareholders had, but contended that they had no right to avail themselves for that purpose of information which, as members of the board, they might receive, to the prejudice of the other shareholders or of the public.

Mr. Nelson thought some explanation was due to the meeting from Mr. Bischoffsheim, and that if such transactions had taken place as Mr. White had spoken of, steps should be taken effectually to prevent their recurrence.

Mr. Bischoffsheim said—The only reply I shall make is, that I shall be

very happy to give up the very arduous duty which at present devolves upon me in connexion with the directorate of this bank, if such be the desire of the shareholders. If I have ever dealt in the shares of the bank—as I admit I have—it has always been with a view of benefiting the company generally, and not for my own personal advantage.

A Shareholder said he had purchased 40 shares at 24 premium; he had seen them since at 10 discount. That was, he knew a person who, in a moment of fright, sold at that price. He did not mind losing his money, but he did not like to have his property made ducks and drakes of by a director who used the information which he obtained officially to get the shares up to a high price and then selling them, with a view of buying them back at a very low price, and who at some future time could use information reaching him in the same way to reduce the market value.

The Chairman said that so far as his memory served him, he could state that the telegram received at the office announcing the financial crisis at Rio was anything but decisive in so far as it ought to have influenced the market price of the shares. It reported that in regard to the bank everything was satisfactory. The fall, no doubt, arose not from any information from the office, but from the panic which always followed the news of such a crisis. He might add that although the telegram stated that everything in regard to the bank was satisfactory, he thought at the time that it would be necessary to make a call in order to meet the pressure which was likely to come upon them. Not only had that necessity been avoided, but he was happy to say that the bank never stood higher than it did at the present moment, or promised with more certainty to reward those who had embarked capital in it.

Mr. Vilmage bore testimony to the exertions of Mr. Bischoffsheim in furtherance of the interests of the London and Brazilian Bank, and contended that the fall in the value of the shares was the natural result of the reports of failures to so large an extent having occurred at Rio. He knew personally that Mr. Bischoffsheim had discouraged his friends and others from purchasing when the shares stood at the high premium. He regarded the attack upon that gentleman, who was, he believed, the largest shareholder in the company, and had done all he could to promote its interests, as most unjustifiable and unwarranted.

In reply to questions, it was stated that shares were quoted on the Stock Exchange immediately before the news of the financial crisis at Rio reached this country at from 8 to 10 premium, and that Mr. Bischoffsheim still held 281 shares in the company, besides a much larger number held by his family and friends.

A Shareholder suggested that a committee should be appointed to inquire into the charge against Mr. Bischoffsheim.

The Chairman, after speaking to Mr. Bischoffsheim, said that that gentleman objected (as he himself did) to a committee, but was willing to afford Mr. White or any other shareholder every facility for the most searching investigation as to any transfer of shares made by or to him. He did not think that if a person was over anxious to buy, a director was to be blamed for selling at 21, although his opinion might be that the shares were not worth so much.

Mr. Bohn remarked that that might be all very well in the abstract, but it was to be remembered that when a director sold or bought largely it was sure to influence the market.

After some further observations the discussion dropped, and the motion for adopting the report and affirming the dividend of £1. 4s. per share, free of income-tax, was then seconded by Mr. Alexander (director), and carried unanimously.

The directors and auditors retiring by rotation were re-elected, and the usual vote of thanks to the chairman and directors was accorded; in replying to which, the chairman expressed his satisfaction at the progress and prospects of the Portuguese branches.

UNION BANK OF LONDON.

THE half-yearly meeting of the proprietors of this bank was held on the 11th of January, at their house in Princes-street, City. Mr. P. N. Laurie in the chair.

The Assistant Secretary, Mr. O. Beville, in the absence through illness of Mr. Newmarch, the secretary, read the following report and statement of accounts:—

“The directors have to report that the net profits of the bank for the six months ending 31st December last, after payment of all charges (including the sum of £164,375 12s. 4d. for interest paid and due to customers on their current and deposit accounts), and making ample provision for all bad and doubtful debts, amount to £180,195 2s. 11d., which, with £363 6s. 2d. brought forward from 30th June last, amount to £180,558 9s. 1d. The directors now declare a dividend for the last six months at the rate of 15 per cent. per annum, and a bonus of 2½ per cent. on the increased paid-up capital, being at the rate of 20 per cent. per annum, clear of income tax. The 20,000 new shares issued under the authority of the special general meetings held in July last, were all claimed by the proprietors, except 65 shares; and in order to complete the capital, the directors have debited the profits of the half-year with £1,950, the amount of such unclaimed shares. In accordance with the resolutions of those special general meetings, the paid-up capital of the bank has been thus raised from £900,000 to £1,200,000, and the reserved fund from £67,000 (the amount at which it stood in July last) to £300,000, by the addition of £233,000, part of the amount received from premiums on the new shares. The directors are of opinion that the reserved fund is, for the present, adequate in amount, and they have therefore appropriated the balance of the premiums on the new shares, amounting to £67,000 towards a buildings investment account. After payment of the dividend and bonus, amounting together to £119,182 10s., and appropriating £67,000, received from premiums, to the buildings investment account, there will remain a balance of £61,375 19s. 1d. to be carried forward for appropriation at the end of the financial year in July next. The directors recommend that the 65 unclaimed shares should be placed at their disposal, to enable them to apply the dividends in the temporary relief of some of those urgent and unforeseen cases of pressure from illness, which occasionally occur amongst the clerks in the establishment.”

GENERAL BALANCE.

LIABILITIES.

Capital—£10 per share paid up on 60,000 shares £500,000 ; £5 per share added out of reserved profits £300,000 ; £15 per share paid up on 20,000 shares, 1864, £300,000	£1,200,000	0	0
Due by the bank on current accounts, deposit receipts (including interest accrued), and other obligations	18,807,393	3	7

Profit unappropriated on June 30, 1864	£363	6	2
Amount of net profit of the half-year ending Dec. 31, 1864, after deducting all expenses and interest paid and due (£164,375. 12s. 4d.), allowed to customers on their current and deposit accounts	180,195	2	11
			<u>£180,558 9 1</u>		

The Chairman said it became his duty, on behalf of the directors, to declare a dividend for the past half-year of 15 per cent. per annum, and a bonus of 2½ per cent. free of income tax, payable on and after Friday, the 20th January. He had next to move the reception of the report, and he thought that on behalf of the directors he might fairly congratulate them on the balance-sheet which they were able to present (hear, hear), enabling

them to pay a provisional dividend on their increased capital—a capital not in their hands for seven weeks out of the six months, but on which the dividend was paid for the six months. The new capital had not to be paid till the 18th August, and very few persons troubled the bank with their money before that time. He felt it right to point out that the present half-year was somewhat exceptional, seeing the high rate of interest which had ruled, amounting to an average of about 8 per cent. That had now gone down to 6 per cent., he was happy to say, for these high rates of interest were not desirable. For bankers were better off when their customers were rich than when they were poor, and the high rates pressed heavily on the springs of commerce. They must bear in mind this fall in the rate of interest, and not be surprised if in the next half-year there was not so large an amount. It was fortunate that this alteration would take place, if at all, in the latter half of their financial year, and the amount they as usual carried forward would, of course, balance any diminution that might take place, and enable them to look forward to the next year with feelings of hope and congratulation. This being, as he had said, the first six months, the statement laid before them was simply provisional, as was the payment, which was on account. Those of them who lived to meet in July would no doubt find a satisfactory account before them: they would then have before them the profits of the whole financial year, which would have to be dealt with as the circumstances justified. As to the 20,000 new shares, they were readily accepted by the proprietors, and he was happy to say that it had had the effect of increasing their proprietary. It had brought in about 150 new proprietors, and they now numbered 1,500 or 1,600 proprietors second to none in respectability in England. He thought that they would all approve of their completing their capital by debiting the profits of the half-year with £1,950, the amount of the 65 shares that were not taken up. The cause of these shares remaining was twofold; some of them arose from the fractional division of shares, and others were those where parties being entitled to one or two did not think it worth while to take them up. The capital had now been raised to £1,200,000, and the reserve fund to £300,000. The directors thought that was sufficient at present, although at some future time it might be thought desirable to augment it. As to their buildings, they had carried £67,000, the balance of premiums received, to the building investment fund, which the directors thought the best mode of disposing of that sum, and they proposed that whenever it was found advisable and the funds justified it to place a sum of money to the accounts for the cost of their premises. All these were freehold except those in Pall Mall and the building in which they were assembled. This building, however, was held under the Goldsmiths' Company, who dealt very fairly with their tenants, and the value of the lease had considerably increased since the bank had possessed it. He congratulated the proprietors on the large amount carried forward for the end of the financial year, when no doubt they would be able to give a good account of themselves. The condition of their business was highly satisfactory in every department. In the last part of the report they would concur, he was sure, that the 65 shares should be placed at the disposal of the directors to form a fund to meet casualties that must occur from illness or otherwise amongst the clerks of the establishment. The attention of the directors had been frequently directed to making provision for their clerks in age or sickness, but the matter was one of very great difficulty. The London Joint-stock Bank, in 1846, and the London and Westminster Bank, in 1859, proposed creating

a fund for this purpose, but found it impossible, so great were the difficulties besetting such a scheme. The Union Bank of London took this course. They gave such salaries he would make bold to say now—and he hoped he might not be considered as criticising any other establishment, but they paid salaries equal, he would not say more than, the salaries and bonuses paid by any other joint-stock establishment in the City. They were fully impressed with the deserts of this numerous and important part of their establishment, and they treated them with consideration, and gave them salaries that would enable them to make that provision which every prudent man would make. A committee twice each year revised all the salaries, and did justice to all parties. With these observations he moved that the report be adopted.

Mr. Farquhar seconded the resolution, and it was carried unanimously.

Mr. Fitzgerald thought in the state of their accounts at present a bonus to the clerks would be highly desirable. He was quite dissatisfied on this point.

A Shareholder.—You stand in a glorious minority of one. (Laughter).

The report was adopted unanimously.

Mr. Hialop moved a vote of thanks to the chairman and the board of directors.

Several gentlemen rose and expressed their anxiety to second the motion, which was carried unanimously.

The Chairman briefly acknowledged the compliment.

A vote of thanks to Mr. Scrimgeour, the manager, and the officers of the bank was agreed to, and briefly acknowledged by the manager, and the meeting terminated.

METROPOLITAN AND PROVINCIAL BANK.

THE sixth ordinary general meeting of proprietors was held on the 13th January at the London Tavern; Mr. Gilpin, M.P., in the chair.

The following report and statement of accounts was read by the Secretary:—

The directors regret that they cannot congratulate the shareholders on the satisfactory progress of the bank during the half-year ending the 31st December last. They have, unfortunately, to report that a considerable amount of previously reserved profit has been absorbed, and they cannot, therefore, at this meeting, recommend the payment of a dividend. In the preparation of the balance-sheet, provision has been made, amply sufficient in their judgment, for every bad and doubtful debt—the usual proportion of preliminary expenses has been written off—and the current expenses have been paid, with the exception of the amount, appropriated under the Articles of Association, to the remuneration of the directors, which, in the present instance, they propose not to accept.

The position of the bank, on the first of January, may be briefly stated as follows:—

A subscribed capital (held by 535 proprietors) of	£1,934,700	0	0
A paid up capital of	809,380	0	0
A reserved fund of...	10,000	0	0
And a balance of	3,073	5	10
carried forward to the profit and loss new account.					

It is an encouraging fact that, while consequent on the condition of the money market, during the period under consideration, the customers' balances have decreased in amount, no material diminution has taken place in the number of the accounts; and the directors have great confidence that by careful and judicious management, and the co-operation of their shareholders, they will be able to place the bank in a greatly improved position.

The directors who retire by rotation are Charles Gilpin, Esq., M.P., John George Homere, Esq., and John Stewart Margetson, Esq., who are eligible for re-election.

The auditors, Henry Chatteris, Esq., and Arthur Cooper, Esq. (public accountants) both retire, and offer themselves for re-appointment.

The Chairman said that the present meeting was held a fortnight earlier than the usual time, the directors being desirous to take the very earliest opportunity of meeting their brother shareholders, for the purpose of laying before them a full and simple statement of the affairs of the bank, and without any attempt to gloss over the past or excuse anything that had been done, to lay before them the plain facts of the position in which they now stood, and to ask their sanction to the report. (Cheers.) Some dis-appointment had been expressed by one or two shareholders at not receiving the report some days before the meeting, but the early period at which they met had prevented the reports being sent round so far in advance of the meeting as might have been wished. In fact it was only on the previous day that the accounts were signed by the auditors, and the moment they were signed the report was put into the hands of the printers, and copies were sent round as soon as possible. He had held the position of chairman something under twelve months, and it had been his good fortune at the last meeting, six months ago, to congratulate the shareholders on the favourable prospect of their affairs. Now it was his misfortune to have to unite with them in regretting that they had been less successful during the past six months than they had expected. The accounts, as they would see, were somewhat varied in form, as compared with those presented at the previous half-yearly meetings, and he hoped the shareholders present would recognise the alteration as an improvement. (Hear, hear.) I had been made in accordance with the suggestions of several proprietors and partly, as he was bound to admit, in consequence of remarks published in certain leading financial journals as to the general mode of making up banking accounts. As he had said, there was no attempt in the statement now laid before them, to gloss over anything that had occurred, and the names of the auditors who had signed the accounts, and who had, to his knowledge, gone most carefully and accurately through them, were sufficient guarantee that they were in all respects correct. With regard to the overdue bills, the directors did not ask the meeting to take the opinion of the general manager alone as to their value. They had been tested by committee, as well as by the auditors and the professional accountants at the office. In making up the accounts, it would be observed that the amount due from the bank on deposit and current accounts was separated from the amount due on acceptances and credits, while, on the other side, the freehold and leasehold premises and furniture were separated from the preliminary expenses. (Hear, hear.) In the results of the past half-year they had to deplore very considerable losses, but those losses were stated at their full extent, without any attempt to make them appear less than they really were. Those losses might fairly be attributed to the crisis through which they had passed, to the financial pressure which had everywhere prevailed, to the high price of money, and to other circumstances of a similar nature which necessarily weighed with peculiar heaviness upon a new bank. But beyond this the

had incurred serious losses from what he would call exceptional transactions (hear), and which he freely acknowledged on the part of his brother directors and himself would not, with their present experience, have been entered into—(hear)—losses occasioned by unwise advances—(cheers)—not, as was generally supposed, advances made merely upon the security of the shares of the bank, but on securities which the directors, from the information furnished to them, deemed ample at the time, although afterwards they did not turn out to be so, and they were consequently thrown back upon the bank shares which had been deposited with them as a collateral security. (Hear, hear.) He could easily understand the half-cheer with which some of the shareholders present had received the acknowledgment that the bank had made questionable advances; but was it not better that the directors should openly state the facts than attempt to conceal or excuse it? (Hear.) Some articles had appeared in the papers in reference to the alleged impropriety, if not illegality, of making advances upon the security of the shares of the bank under any circumstances. With regard to the undesirableness of such a practice there was no difference of opinion between the board and the editor of the journal he referred to; but the point he wished to insist upon was that the directors had not made advances separately and simply upon the shares of the bank, but upon securities which at the time they had a right, from the best information they could obtain, to believe were sufficient, and that the shares were only taken as a collateral security. Let him add to that, had that information proved correct the bank would have been a very considerable gainer, and not a loser by these transactions. (Hear, hear.) It was some satisfaction to be enabled to say that during the severe crisis through which they had passed the bank had not limited in any way the ordinary accommodation it was accustomed to give to its customers, and although they might fairly have done so, the directors had not made any call upon the new shares, knowing as they did that in such a period of monetary pressure any such step must necessarily have been attended with considerable inconvenience. (Hear.) Then with regard to their paying no dividend, he was quite aware of the unpleasant position in which the chairman of such a company stood in presiding over a meeting when he had to announce that no dividend could be paid; still there was this ground of satisfaction for the proprietors, viz., that the directors were themselves amongst the largest shareholders, and held amongst them, and through their personal friends, a very large proportion of the entire capital of the concern, so that if the general body lost by the unfortunate results of the half-year, they were themselves losers to at least an equal extent. (Hear.) It was stated in the report that the directors did not intend, under the circumstances, to take their fees. Some might think that it might have been as well not to have made any change from the usual course in this respect, or at all events not to have made any reference to it. But the directors felt that as the losses which had resulted in the non-paying a dividend had occurred under their management, there was but one course for them, as men of honour, to pursue, and that was to decline taking anything out of the concern for their own services. (Cheers.) But although they had been serious losers from the financial pressure of the past half-year, they did not stand alone. Other banks had also sustained serious losses, and their directors would, no doubt, do as the directors of the Metropolitan and Provincial were doing—come forward and make a clear statement to the shareholders. All he would say was that if those other establishments

to which he alluded had not made a dividend during the half-year, he hoped they would follow the course taken by this bank and not declare one. (Hear, hear.) But he was old enough to recollect other joint-stock banks that had been in difficulties. Thirty years ago a bank which now held the foremost place amongst the monetary establishments of the City was under a cloud compared with which the present difficulties of the Metropolitan and Provincial were absolutely bright sunshine. He was told, the other day, that thirty years ago that establishment, the giant of Lothbury, which was now second only to the Bank of England, was in such a position of difficulty that its balances were drawn down to the lowest amount, yet it had recovered, and, as they knew, was now the most flourishing joint-stock bank in the country. Another bank, a near neighbour of their own, and also one of the most important, at one time, through the mismanagement of its chairman, had its shares brought down to a very low point, yet it was now recognised as one of the most successful banking concerns in the City; and a still nearer neighbour, which on one occasion, when from unfortunate circumstances it did not make any dividend, had the prudence and the courage not to declare any, found that from that time it increased in public confidence, its business and its profits went on year by year increasing, until now it was one of the most successful financial establishments we had. (Hear.) Having stated the unfortunate results of the past, he would now allude to the encouraging features which appeared in the future. After a commercial storm such as we had rarely seen, or might again expect to see for many years to come, it was a subject for congratulation to find that their capital was intact, and that they had a larger reserve now than they had twelve months ago. (Hear.) They had also a much larger number of accounts, and they had in addition, what ought to be of great advantage to them, a largely added experience. An analysis of the accounts would show that the shares of the bank were, if they closed the concern to-morrow, worth at least £21 each, without reckoning a single farthing for the goodwill of a business which produced a gross profit of from £30,000 to £40,000 in the half-year. (Hear, hear.) These were encouraging features. (Hear, hear.) He moved the adoption of the report, which he submitted on behalf of himself and his colleagues, as a simple statement of facts, thoroughly investigated by professional accountants of character and position, whose names were a sufficient guarantee of the correctness of what they had certified. He invited discussion, and promised to answer all questions put to him fairly and frankly to the best of his ability. (Hear, hear.) All he would ask the gentlemen present was to bear in mind that they had a great property at stake, and so conduct the discussion as not to injure the property. (Hear, hear.) He was asked by a note which had just been handed up to him to state that which was another encouragement—namely, that the present value of certain of their premises—it was not perhaps exactly advisable to particularise—had very largely increased—so much so that according to an estimate recently made by one of the first surveyors of the day the increase would form of itself a very considerable asset. The board had, however, thought the better course was to put down everything in the accounts at cost price—for this reason, that they did not wish to make things appear in any respect better than they really were. (Hear, hear.) It was his turn, he was glad to say, to retire from the direction at the present meeting—(no, no)—and it would be observed that it was not stated in the report that he sought to be re-elected. In fact, it would be to him

personally a very great relief if the proprietors would liberate him from his present position. (No, no.) He took the chairmanship originally very reluctantly, but at the unanimous request of his colleagues. He had paid the best attention in his power to the interests of his brother proprietors, but had failed to achieve what he aimed at. At the same time he was not the man to desert his ship amid the breakers or the supposed breakers—(cheers)—and if it should be the pleasure of the meeting to replace him, not in that (the chairman's) seat, but as one of the directors, they should have the best services he could possibly render. (Cheers.) But whether on the one side of the table or the other, he hoped often to meet his brother shareholders of the Metropolitan and Provincial Bank, and he was greatly mistaken if the day did not soon arrive when the misfortunes and discouragements of the past would be lost and forgotten in the successes and encouragements of the present. (Loud cheers.) He concluded by moving the adoption of the report.

Mr. Balli seconded the motion.

A Shareholder wished to know whether the auditors had signed the report unconditionally.

The Chairman had no hesitation in saying that the auditors had unqualifiedly signed the accounts, and without, as far as he knew, any reservation whatever. (Cheers.)

Mr. Hodges believed the object of the question was to ascertain whether the £44,468 was sufficient to write off for the bad and doubtful debts. (Hear.) Perhaps the chairman would give some explanation on that point.

The Chairman might answer the question by saying that the board had themselves increased the amount written off for bad and doubtful debts from the sum originally put down to that at which it stood in the accounts, and which they had every reason to believe was amply sufficient. (Hear, hear.)

Mr. Burbidge gave credit to the chairman for having only stated what he believed to be the truth; but, frank as it was, he must receive that statement with some reservation. (Oh, oh.) If the directors would assure him that they had completely changed the management, that the manager had resigned and his resignation been accepted, he would sit down.

The Chairman—The whole question of management is to be taken into immediate consideration by the board. (Cheers.)

Mr. Burbidge—That did not satisfy him. The chairman had stated that the capital remained intact, but it was not so. There was a balance of £14,725 on preliminary expenses which could not properly be taken as an asset, and, taking that off, and taking into account the £10,000 reserve fund on the other side, there was something less than 20s. in the pound left. (Hear, hear.) Without a thorough investigation by some independent parties, the confidence of the public in the concern could not be restored, and it was his intention to move an amendment to the effect that the report be merely received, and that a committee of independent shareholders be appointed to investigate the affairs of the bank, to ascertain the real extent of the losses, and the amount advanced upon the shares of the bank, and how far such advances were made for the purpose of rigging the market; that such committee be empowered to examine all books and documents, and to call in a professional accountant; and that the meeting be adjourned to some future time, to receive the report

of such committee. ("Hear, hear," and "No, no.") It was notorious throughout the City that the management of the bank was a disgrace to the commercial public. Some of the parties to whom advances were made, and by whom losses had been incurred, were persons who were wholly unworthy of credit. He concluded by moving his amendment.

Mr. T. Dixon seconded the amendment.

Mr. Hodges believed that the appointment of a committee would seriously damage the concern, and thought that the promise of the chairman that the question of management should be immediately taken into consideration ought to satisfy Mr. Burbidge.

Mr. Gearing suggested that there was an omission in the report, which ought to have contained a passage to this effect:—"That, considering the crisis through which we have passed during the last six months, and considering the losses sustained by other banking establishments, we consider the position of this bank, looking at all the circumstances, is a subject of congratulation to the proprietors." (Cheers and laughter.) The joint-stock banks were like a fleet of merchantmen which had been out during the past half-year on a perilous voyage. Some had been successful, and had not only come back safely, but had produced a profit he was told of 10 or 15 per cent. In their own case it was a subject for congratulation that although they could not show a profit, they came into port with the hull sound, and all the spars and sails standing and in good order. (Hear, hear, and a laugh.)

Mr. Hermann said that he had always had great faith in the chairman, and what had occurred had in no way shaken his confidence. He believed that the board saw the position of the bank as clearly, and more so, than any committee of investigation could do, and had fairly laid it before the shareholders. A committee of investigation was consequently unnecessary. (Hear.) At the same time he must say, speaking from an experience of 25 years of commercial life, that public confidence in the bank was not likely to be restored while it remained under the present management. He had been once or twice at the bank to inquire the cause of the sudden depression in the market price of the shares, and had been told when he asked what amount of losses had been incurred, that the entire loss was £127. 7s., while it must have been known at the time that it amounted to many thousands. He was quite sure that no man knowing anything of banking would ever have allowed three accounts in particular to be overdrawn as they were, the parties being well known as mere speculators with money not their own, and who had been in the habit of paying from 50 to 60 per cent. for accommodation. It would be far better if the bank, instead of encouraging such accounts as those, would afford greater banking facilities to tradesmen who kept moderate balances; but he was sorry to say that it was the habit of most banks to encourage those only who kept large balances, no matter how.

Mr. Serjeant Atkinson urged that a committee of investigation was perfectly unnecessary. Every shareholder had the right to investigate the books of the company for himself, accompanied, if he thought fit, by a professional accountant, and he was quite sure the directors would afford every facility for that purpose. If, therefore, any shareholder was dissatisfied with the statement which had been laid before the meeting, it would be far better to adopt that, the legitimate course, than to expose their affairs to solicitors and professional accountants, and keep open an investigation for weeks perhaps, for the benefit, not of the customers, but of speculators on the Stock Exchange. (Hear.)

Mr. King pointed out that the proposed inquiry would necessarily have a most prejudicial effect upon the business of the bank. If it were understood that every man's private account with the bank was to be investigated and inquired into by a committee and professional accountants their customers would soon leave them. (Hear.)

Mr. Austin hoped that if the amendment was not withdrawn the meeting would negative it by an overwhelming majority. The appointment of the proposed committee would in effect be a declaration that they had no confidence in the directors; and how could they expect, if they carried such a motion, that the public would have confidence in the concern? Taking into account the increased value of their premises, he was satisfied that if they were wound up now, their assets would realise more than 20s. in the pound, independent of what they might expect for the goodwill of a business which realised £40,000 a year. (Hear.)

Mr. Barber likewise opposed the amendment, expressing his belief that if it were carried a very large proportion of their customers would withdraw from the bank rather than have their affairs scrutinized by a committee. They had already all the information which a committee could possibly give them, and besides the character of the chairman, they had the guarantee of professional accountants of high standing that that information was correct. (Hear.)

Mr. Deputy Reed, Mr. Jeffery, of Liverpool, Mr. Rider, and other shareholders joined in recommending Mr. Burbidge to withdraw his amendment.

The Chairman—Before Mr. Burbidge replies, I wish to say that I will undertake, on the part of the board, that an immediate and searching investigation shall be made into the whole of the management of the bank, and without attempting to exculpate on the one hand, or to inculcate on the other, any party, I promise that the result of that investigation shall be laid before you. (Cheers.)

Mr. Burbidge—Nothing can be more satisfactory, frank, or fair, than what Mr. Gilpin has now promised to do. I am perfectly satisfied with that promise, and therefore, with the consent of the seconder, I withdraw the amendment. (Loud cheers.)

The amendment was accordingly withdrawn, and the report was put and carried unanimously, amid loud and almost general cheering.

The directors retiring by rotation were re-elected on the motion of Mr. Jeffery, seconded by Mr. Smith.

Mr. Holden moved, and Mr. Galsworthy seconded, the re-appointment of the auditors, which was carried; and a vote of thanks to the chairman and directors, moved by Mr. Serjeant Atkinson, and seconded by Mr. Burbidge, having been adopted, was briefly acknowledged by the chairman, who took occasion to say that he had never received from the bank a single farthing in the way of accommodation or otherwise, and the proceedings terminated.

CITY BANK.

The eighteenth general meeting of the proprietors of this bank was held on the 17th January, at the London Tavern; Mr. Peter Bell in the chair.

The Secretary (Mr. C. J. Worth) having read the notice convening the meeting, the following report and balance-sheet were presented:—

"The annexed statements of the liabilities and assets of profits and loss for the six months to 31st of December last, show, after payment of interest on current and deposit accounts, a gross profit of £79,933. 15s. 8d., which, added to £7,969. 17s. 9d. brought from last half-year, makes a total of £87,903. 13s. 5d. This result, after providing for current expenses, bad and doubtful debts, rebate of interest on bills discounted not yet due, and the half-yearly deduction from the building account, enables the directors to declare the usual dividend of £6 per cent. per annum on £500,000, the present paid-up capital of the bank, and a bonus of £1. 10s. per share (together equal to £12 per cent. per annum), free of income tax, and to carry forward £4,685. 9s. 11d. to the new profit and loss account. The directors regret that the late severe commercial crisis has not passed without entailing considerable losses on the bank; they have, therefore, decided to reserve a sum of £30,000, which they believe will be amply sufficient to meet any deficiency which may arise upon estates now in course of liquidation. The progress of the Bond Street branch continues satisfactory. The dividend and bonus will be payable at the bank on and after the 24th inst.

Surplus profit brought forward from last half-year

£7,969. 17s. 9d.; since added £79,933. 15s. 8d.	£87,903 13 5
--	--------------

£87,903 13 5

The Chairman next declared the dividend mentioned in the report. He then proceeded to observe that it was very satisfactory to find that the gross earnings of the bank during the past half-year had been quite equal and in point of fact had rather exceeded those of the last half-year, and were considerably in excess of the corresponding half-year. This, no doubt, was attributable first to the increased capital, and next to the high rate of interest which had prevailed during the last twelve months. At the same time, it had not been without its disadvantages. There had been a very serious commercial crisis and great depression, under which several of the customers of the bank had succumbed, and consequently the bank had suffered losses. Both the directors in general and the committee of accounts had given this subject their anxious and earnest attention, and they had come to the conclusion that the best and fairest method of proceeding was to look the matter fully in the face—(hear, hear); and they had accordingly written off from the earnings of the present half-year the sum of £30,000, which they considered a liberal provision to meet the losses entailed on the bank by the failures to which he had alluded. He was glad to say that notwithstanding these drawbacks they were enabled to pay the shareholders the same dividend as at the end of the last year, namely, a dividend after the rate of 12 per cent. per annum, and to carry forward to the new account the sum of £4,600. The other portion of the accounts was pretty much the same as usual, and therefore it was not necessary for him to detain them in reference to that point. He might mention that the writing off of the building account was continued periodically, and that that account was now represented by the sum of £29,000 (including the Bond Street branch), which was scarcely half the value of the property in the possession of the bank. They would observe that the directors had not on the present occasion made any addition to the reserve fund, but that was simply because at the end of the last half-year they added £10,000 to that account, and they had thought it better to allow it to stand as it was at present. Looking to the present position, and the ultimate prospects of the bank, he could not but consider that they were highly satisfactory—(cheers)—and he was sure that under the able management of Mr. Duncan and Mr. Kennedy they would continue to prosper. He concluded by moving the adoption of the report.

The Deputy Chairman seconded the motion.

Mr. Billing inquired whether the sum of £30,000 was estimated to cover only the liabilities of the bank in respect to the estates now being wound up, or whether it included the general provision for bad and doubtful debts.

Another Shareholder asked whether the board was quite sure that it had allowed sufficient to cover the losses they had incurred in respect to the estates now in course of liquidation.

The Chairman replied that it was difficult to ascertain the figures with such an amount of exactness as to state what the loss would be to a pound, but the directors had carefully considered the matter, and what they had

set apart they considered would be amply sufficient to meet their losses in respect to the estates under liquidation. The first item in the debtor side of the profit and loss account included the allowance made to meet the ordinary bad and doubtful debts.

Mr. Rushfield said that he was anxious to address a few observations to the meeting upon a point which concerned the interest not only of the City Bank but that of all other joint-stock banks. He was desirous that this bank should stand well, and without wishing to say a word which might grate upon the ears of the directors, he must impress upon them the desirability that the auditors of such institutions should be well-known and recognised public accountants, wholly unconnected with the company, and not being shareholders in it. (Cheers.) Shareholders elected auditors for the purpose of examining the accounts and reporting upon the position of affairs. He was quite satisfied that their auditors were men of perfect integrity, who would not suffer themselves to be influenced in the slightest degree. At the same time they might not always have such men, and the shareholders must remember that, as a general rule, auditors were looked upon as being but one step from the board, and that they naturally looked forward to be chosen by the directors to fill vacancies; therefore, it was not surprising that they should occasionally be induced to take a different view of matters to that which they would take if they were wholly disinterested, and to suffer a false gloss to be put upon the accounts. In his opinion auditors should be neither under the influence of the directors on the one hand, nor of the shareholders on the other. (Hear.) And he for one should not be satisfied with the position of any joint-stock bank with which he was connected until he saw the post of auditors filled by respectable official accountants, who had no other interest at heart than to report to the shareholders the true state of their affairs. (Cheers.) He was fully convinced that the directors would not consider these observations as in any way casting reflections upon the board, or upon the gentlemen who now filled the post of auditors, for he only argued in favour of the adoption of a general principle, namely, that auditors should be wholly unconnected with and beyond the influence of the companies whose accounts they audited. He thought that the time had now come when the question ought not to be shelved by a reference to the general respectability of the board and the great stake they had in the welfare of the undertaking. He instanced the case of certain institutions whose affairs had proved to be in a most ruinous condition at the very moment when they were paying large dividends, and the surprise of highly respectable directors when they found that accounts which they had all thought correct turned out to be utterly fallacious. It was quite manifest that if such accounts underwent the searching examination of disinterested public accountants such fallacies would long ago have been discovered and exposed. He was quite sure that everybody felt for Alderman Mechi and all connected with the bank of which he was chairman, and he (Mr. Rushfield) called upon the shareholders of this and every other joint-stock bank to adopt a principle which must of necessity make their property more secure and lessen their risks. (Cheers.)

The Chairman, in reply, said that the directors had under their serious consideration the expediency of appointing public auditors. He also explained, in reply to another question, why it was not always expedient to issue the report some days previous to the meeting.

The report was then unanimously adopted, and

On the motion of Alderman Abbiss, seconded by Mr. Rushfield, a cordial vote of thanks was given to the chairman and directors, for the ability and attention they had manifested in conducting the affairs of the bank.

Votes of thanks were also given to the auditors, to the managers, Messrs. Duncan and Kennedy, and also to Mr. Worth, the secretary.

The proceedings then terminated.

SCOTTISH AND UNIVERSAL FINANCE BANK.

An extraordinary general meeting of shareholders in the Scottish and Universal Finance Bank, Limited, was held, on the 18th January, at the London Tavern, Bishopsgate Street. Mr. Gunn took the chair at a few minutes past twelve, and called upon the secretary to read the notice convening the meeting, upon which

The Secretary read a notice convening a meeting at the offices of the bank, in Cheapside, at two o'clock.

Mr. Gunn, before proceeding with the business of the meeting, wished to be certain that none but shareholders were present, and said that he should insist upon all who were not shareholders leaving the room. The statement to be submitted affected shareholders only. He called for the attendance book.

Mr. Smith wished to know by what right Mr. Gunn took the chair. He considered that a chairman should be appointed by that meeting. He called attention to the fact of that being a shareholders' meeting; the circular which had been read, convened on the part of the directors a meeting at the bank at two o'clock. (Loud applause.)

Mr. Gunn considered himself chairman by virtue of his position in the bank. If those who were not shareholders did not leave the room he should not make the statement. (Groans and hisses.) If he was not allowed to preside he should leave, and the meeting would be left in ignorance. (Groans.)

Mr. Morris begged the meeting to give a patient hearing to Mr. Gunn. If it was intended to exclude himself, as acting for a committee, he would take the sense of the meeting upon the question.

Mr. Gunn said it was his intention to exclude all who were not shareholders.

Mr. Smith objected to Mr. Gunn occupying the chair. The directors were upon their trial. They were accused of misappropriating the funds entrusted to them. It was very unseemly for one against whom charges had been cast to preside over that meeting. He proposed that Mr. Henry be called upon to take the chair.

The motion was seconded, put to the meeting, and unanimously adopted, upon which Mr. Gunn vacated the chair, saying he would appeal to the Court of Chancery. He then, accompanied by several others, left the room amid loud groans and hisses.

Mr. Henry then took the chair, and briefly opened the business of the meeting.

Mr. Morris suggested that as Mr. Gunn had re-entered the room, if he had any statement to make he should do so.

Mr. Gunn then made a somewhat lengthy statement, to the effect that he had received from two sound banks offers to amalgamate with the Scottish and Universal Finance Bank, but those offers had been rejected

by the committee, which he complained was not properly constituted, because it was not composed entirely of shareholders. He did not wish to stop inquiry; but, on the contrary, he asked and courted the fullest inquiry into the affairs of the bank; and the terms offered were that the shareholders should be credited with £5 for every £10 paid. They must either amalgamate or wind up.

A Shareholder asked Mr. Gunn whether either of the companies who now offered to amalgamate with the Scottish had been promoted by him.

Mr. Gunn said he had nothing to do with the promotion of either.

Mr. Morris asked whether any commission was to be paid to any one.

Mr. Gunn replied that some commission was to be paid for introduction, but he was to pay it out of his own pocket. (Oh, oh.)

Mr. Morris explained that the meeting had been called by Mr. Pierce, in conformity with an order made by the Court of Chancery upon a petition for winding up the bank, presented by the committee appointed by the shareholders. That step had been taken in anticipation of a similar step being taken by others. They heard about an amalgamation for the first time when they appeared in court, and were most anxious, in the interests of the shareholders, that any definite scheme should have every consideration. He complained that no definite plan was even now submitted. The committee could not recommend the amalgamation as proposed, because it involved the giving up of the whole of their assets for shares in undertakings which were only now struggling into existence. He then entered into a very elaborate statement of various transactions in which Mr. Gunn and other directors had been concerned. He concluded by urging upon the shareholders the absolute necessity of winding up in Chancery, so as to secure at the smallest cost the fullest and most complete inquiry.

Mr. Smith, the accountant, then made a statement as to the qualifications of directors, and the circumstances attending that qualification, which he said were not of the most creditable nature.

Mr. Lowell Price said the gross amount of business done since the establishment of the bank was £33,272. The losses on bad and doubtful debts amounted to £13,121. At that moment the bank was insolvent, as there was a deficiency of £4,000 to be made up. The shareholders, as men of business, might ask themselves whether any bank of standing and respectability would amalgamate with them.

After some discussion,

The Chairman moved: "That this company be wound up in the Court of Chancery, and that Mr. Lowell Price be confirmed as liquidator."

Mr. Jarvis briefly seconded the motion, which was unanimously adopted. The usual compliment to the chairman terminated the proceedings.

NATIONAL DISCOUNT COMPANY.

THE ordinary general meeting of the shareholders of this company was held on the 18th January, at the London Tavern; Mr. F. W. Russell, M.P., in the chair.

The Secretary (Mr. Price) having read the notice convening the meeting, proceeded to read the following report:—

"The directors have the satisfaction to inform the shareholders that by

the completion of the issue of the new shares, the capital of the Company is now as follows, viz.:—Subscribed capital, £3,000,000; paid-up, £600,000; reserve fund, £300,000. The accounts for the half-year ending 31st December show a gross profit of £130,746. 11s. 10d., and after deducting the current expenditure, directors' and auditors' remuneration, making an ample allowance for bad and doubtful debts, writing off proportion of building expenses, and reserving £55,229. 10s. for rebate of interest on bills not yet due, there remains the sum of £62,372. 8s. 3d., which, with £1,830. 3s. 10d. brought forward from the last half-year, amounts to £64,202. 12s. 1d. The directors have therefore the pleasure to recommend that a dividend at the increased rate of 20 per cent. per annum be declared, and that the balance of £4,753. 0s. 4d. be carried forward to the credit of the next half-year's profit and loss account. The directors congratulate the proprietary upon the steady but marked success which this Company has attained; but would still again impress upon them how greatly its prosperity might be extended by each shareholder becoming a depositor with the Company, and by recommending its principles to their various connexions. The directors who go out of office by rotation upon this occasion are George Burnand, Esq., H. H. Toulmin, Esq., and F. C. Wilkins, Esq., all of whom being eligible offer themselves for re-election. The dividend, free of income tax, will be payable on and after the 1st of February. The shareholders will have to elect auditors for the current year, and notice has been given that a resolution will be submitted at the meeting to increase their remuneration from £100 to £150 a year each."

Balance-sheet, December 31st, 1864.

The Chairman, in moving the adoption of the report, said, that if he felt warranted last July in expressing the gratification and pride of the board, how much greater must their gratification be upon the present occasion, after the extraordinary and, he might say, unprecedented success of the last six months. Twelve months ago they offered the shareholders the power of dividing the large sum of £10 per cent., and now they were enabled to propose a dividend double that amount, namely, after the rate of 20 per cent. per annum. (Cheers.) And it must be borne in mind that this success had been achieved, not in ordinary times, but after a period particularly trying—a period during which the attention of all engaged in commercial matters was directed to safety rather than to success. It was manifest that at such a period as that it required from the managers of this company the most extraordinary caution, or they might possibly have involved the company in ruinous engagements, instead of business transactions which had yielded great profit. Notwithstanding the exceptional circumstances of the times they had proceeded steadily in their course, with an amount of debt which was positively insignificant compared with the vast sums of money which passed through their hands. They might really now look upon the National Discount Company as one of the great institutions of the City of London. They had long aspired to that position, and had now attained it. Having attained that position, they might, adopting the words of a very distinguished person—"rest and be thankful." They were thankful, but determined not to rest—(hear, hear)—for they felt that the company could go on through a long career of prosperity if only the shareholders would do their duty, and assist the board, by a long pull, a strong pull, and a pull altogether. (Cheers.) By adopting that course they would raise the company to a pinnacle far higher than that to which it had at present attained. He did not think that the position which the company occupied was at all hazardous, nor did he think there was the slightest probability of their retrograding. They must look forward, not backward, and their motto must be "progress." (Hear, hear.) On the present occasion he had nothing more to do than to congratulate them, and knowing as they did the position of the company from the report and statement of accounts, he would simply content himself by moving their adoption. (Cheers.)

Mr. Chaytor, in rising to second the resolution, said that he wished to occupy the attention of the company a few minutes with a review of the progress of their affairs. The present was an apt opportunity for doing so, and it was only by applying the inferences to be drawn from their past history that they could form a proper judgment of what their future career

was likely to be. They had now been established for eight years and a half, and had experienced several of the difficulties and dangers incident to early youth. In the first whole year of their existence they had to encounter the difficulties entailed by the serious commercial crisis of 1857, and in that year were unable to propose any dividend. The want of dividend was not the only difficulty, because it led to doubts among the shareholders of the possibility of success, and dissatisfaction at the slow progress of the undertaking. They overcame those difficulties, however, and now after an existence of eight years and a half they were enabled to offer the shareholders a dividend of 20 per cent. (Cheers.) Their progress had been in fact marvellously rapid, even when compared with that of the most successful institutions in the city of London. The meeting would, perhaps, be surprised to hear that that most ably managed and successful establishment, the London and Westminster Bank, was twenty-five years in existence before arriving at such a pitch of prosperity as this company had arrived at. It might be said that the case of the two companies was different; and in one respect it was, for the London and Westminster Banking Company were the pioneers of a new description of business altogether as regarded banking, and they had all the prejudices of old and powerful banks to encounter. In some respects the course was cleared for the present company, but still they had to overcome prejudices almost as strong, for they were the first company established to conduct monetary affairs on a large scale under the Limited Liability Act, and the present meeting would be surprised at the prejudices which were expressed against it. They had shown, however, that with ordinary prudence and discrimination the business in which they had embarked was not very hazardous. It was true that money was a very slippery article, and that they, in common with bankers and others who dealt in it, were liable to make insecure investments; still he repeated that, with the prudence exhibited by the managers, the risk was not very formidable. The period during which they had been in existence naturally divided itself into two parts. The first four and a half years included that disastrous year 1857, and also the year 1860, when the great leather failures and frauds affected this company quite as seriously. The average loss upon every £100 discounted in that period amounted to 2s. 3½d. They then turned over a new leaf, and during the last four years the loss per £100 discounted did not exceed 2½d., including the last half-year—(cheers)—making the average loss upon the whole eight and a half years only 1s. 2d. upon each £100 discounted. While on the subject of bad debts, there was one matter on which he might congratulate the meeting. The sums received from bankrupt assets, and appropriated from profits to cover deficiencies that had accrued up to June last, had been so well calculated, that there was a credit due to the company of £150 on that account, which would be further increased by some additions from the assets of estates not yet wound up, and there could be no further demand upon them on that account, because all transactions entered into previous to that time were now determined. (Hear, hear.) As regarded the last half-year the board, which he thought might lay claim to some credit for prudent management, had set aside a sum which they believed would be amply sufficient to meet all contingencies. (Cheers.) He thought therefore that as regarded bad debts this company stood in a most favourable position. (Cheers.) He now wished to say a few words regarding the creation of capital this time twelve months. It was as well to take stock occasionally, because

then they knew what progress they were making. On that occasion he had the honour to point out to the older shareholders the probability that the board would be able to give them a larger dividend, and he thought they would agree with him that that promise had been fulfilled—(hear, hear)—and not only that, but the value of the shares had much increased in the market. What had been the result as regarded themselves? In June they offered a dividend of 16 per cent., which had now been increased to 20, and the shares, which were then worth £10. 10s. were now quoted at £16. As regarded the new shareholders, who paid £10 for their shares, they had been able to offer them a dividend of 8 per cent. on their investment during the first half-year, and now 10 per cent. He had intimated an opinion that the shareholders would find the new shares well worth taking up, and he was glad to find that, with the exception of about 300 shares not taken up from various private causes, the whole of the new shares had been taken by the old shareholders. It ought, therefore, to be another subject of congratulation to think that they had followed the advice of their directors—(hear, hear)—and the directors, on their part, were quite ready to accept any credit due to them for the successes which had been achieved. At the same time, it was only just to state that they were the directors of the company's affairs, and not the managers, and a great deal of the prosperity upon which they were now congratulating themselves was due to the unwearied diligence, great ability, and discrimination exercised in the selection of securities by the managers. (Cheers.) Those gentlemen enjoyed the perfect confidence of the board, and they were well entitled to that of the shareholders. The board had several times invited the shareholders to co-operate with them in extending the business of the company. He could easily understand that, before their success was an ascertained fact, they might have some doubts as to whether it would succeed, and whether it was prudent in them to do so. They had now an ample capital, a good reserve fund, experienced managers, and everything which could give the institution stability. If the shareholders would consider that if the funds at their disposal which they did not immediately want, and which were lying idle elsewhere waiting for investment, were left with the company, it would be to their mutual benefit, and if left for even the shortest periods he was quite sure that they in the aggregate would cause a large increase in the deposits. If they bore this constantly in mind, and took every opportunity which offered of impressing it upon their friends, they would be themselves surprised how often the opportunities would occur of this co-operation with the board. He had now briefly run over the career of the company up to the present time, and although to prophecy was undoubtedly a dangerous thing, he thought a fair inference of what they were capable of doing might be drawn from what they had already achieved. It had been said that nothing succeeded like success; they had experienced managers, which was most important, and they had open to them a field which they did not occupy nearly to the extent of which it was open to them, and the boundaries of which were daily becoming more and more extended by the increased commerce of the country; they must remember that every increase of business must enlarge their profits; and if the shareholders would give the board their assistance in the manner he had pointed out, there was no reason why their future career should not be one of more extended usefulness and greater prosperity. He begged to second the motion for the adoption of the report. (Cheers.)

Mr. Borrodaile congratulated the board and the shareholders on the high state of prosperity to which the company had reached—a far greater prosperity in the time than had been attained by the London and Westminster Bank, which did not divide 20 per cent. until after it had been established twenty-five years. While that bank had increased its deposits from £500,000 to £20,000,000 in the time during which it had been established, the present company, in 8½ years, had increased its deposits to nearly £6,000,000; and if the shareholders co-operated with the board, there was no reason why these deposits should not be more than doubled in the next five years. He thought that on occasions when the board came before them with such prosperous balance-sheets, and such handsome dividends, the managers and other officers of the bank should be permitted to participate in the advantages reaped by the shareholders in the shape of a testimonial. (Hear, hear.)

Mr. Bolton wished to know why it was necessary to charge £789 to provide a redemption fund, because he should have thought, considering the rising value of land in the City, that no such charge would have been necessary. He expressed his gratification at the excellent position in which the institution stood, and pointed out that they had really during the present half-year netted 28 per cent., taking the balance standing to the profit and loss account at £64,000 and adding to it the difference between the rebate of the bills charged last half-year. He thought it would be found that sufficient had been made, with the exception of the current expenses, to enable the directors to declare a dividend of 20 per cent. next half-year.

The Chairman explained that the company's premises being taken for a term of eighty years, it was thought right to establish a redemption fund of £100 a year to restore the ground and the premises to the company at the expiration of the lease. £789 had already been accumulated, and in the course of 60 or 70 years a sufficient sum would be set aside for that purpose. It was unnecessary to say that if they wanted to sell the premises, they would realise a considerable profit upon them.

The report was then unanimously adopted, the dividend declared and agreed to, and the retiring directors re-elected.

Mr. Sewell then proposed, and Mr. Bird seconded, the re-election of Mr. John M. Bell and Mr. Morrison as auditors, and the raising of their remuneration from £100 to £150, which was carried by acclamation.

Mr. Bell, in responding, observed that it must be gratifying to the shareholders to know that the accounts of the company were placed before the auditors in the plainest and most satisfactory manner. The auditors had very onerous duties to perform; they were perfectly independent and impartial in the discharge of their duties, and it was not the least satisfactory circumstance that the officials of the company were always willing and ready to explain everything they required. He must acknowledge that they had on many occasions received the most valuable information from the secretary, which had enabled them to test the accounts when they would have been at a loss to do so if those accounts had simply been placed before them.

In reply to a question from a shareholder,

The Chairman said that the board fully recognised the merits of their officers; the whole scale of salaries had been revised, and he believed that all their servants considered that they treated them with great consideration.

Mr. Borrodaile then moved, and Mr. Barber seconded, a vote of thanks to the managers, the secretary, and the staff, which was carried by acclamation.

A cordial vote of thanks to the chairman and directors for their able management of the affairs of the company concluded the proceedings.

LONDON AND WESTMINSTER BANK.

THE annual general meeting of the proprietors in this bank was held at the bank offices, Lothbury, on the 18th January; Mr. Alderman Salomans, M.P., in the chair.

In opening the proceedings,

The Chairman said,—Gentlemen, we have very great pleasure in meeting you here to-day and laying before you our report of the proceedings of the bank during the past half-year, and of the results of the last year.

The Secretary, Mr. T. P. Shipp, then read the following report:—

“The directors have to report that—after making provision for all bad and doubtful debts, paying the income tax, setting apart £2,000 towards the buildings of the bank, and presenting gratuities on their salaries to all the officers of the establishment—the net profits of the bank for the last half-year amount to £238,405. 16s. 9d. (Cheers.) This sum, added to £8,830. 1s., the unappropriated balance of the preceding half-year, will amount to £247,235. 17s. 9d. Out of this amount interest on the rest or surplus fund at the rate of 5 per cent per annum (£7,500) has been added to such fund, which now amounts to £307,500. The directors now declare a dividend to the shareholders at the rate of 6 per cent. per annum, and by way of further dividend out of the profits, a bonus of 15 per cent. on the paid-up capital. (Cheers.) After these payments are made there will remain a balance of £79,735. 17s. 9d., which the directors have appropriated as follows, viz.:—£27,878. 16s. 4d. on account of the purchase of Messrs. Jones, Lloyd, and Co.’s bank; £20,000 towards the alterations and improvements of the chief office; and £22,500 to be added to the rest, which will then amount to £330,000, and the balance (£9,357. 1s. 5d.) carried to profit and loss account for the current year. The directors who retire by rotation are—John Garratt Cattley, Esq., James Denis De Vitre, Esq., and George Hanson, Esq., all of whom being eligible for re-election offer themselves accordingly.”

"The dividend and bonus (without deduction of income tax, which is paid by the bank) will be payable on Monday, the 23rd January."

The Chairman then rose and said—Gentlemen, the report has been so drawn as to lay clearly before you the condition of this bank, the earnings of the last half-year, and the mode in which we advisedly consider the profits ought to be appropriated. You are aware that we have just passed through a very stormy half-year. In fact the whole of the year has been one of a character that entailed upon every establishment such as this a

great deal of care, mixed at times with a certain amount of anxiety. Nevertheless, I believe the report which we now lay before you will show that we have been enabled successfully to carry the bank through; not only maintaining the old dividend, but adding very largely to our profits. I say this the more emphatically because, like other establishments of the kind, and from the very nature of things, you have heard rumours of our having incurred one or two losses here. The chief of these, and of which you may have seen an account in the newspapers, results from a fraud committed upon one of the customers of the bank, by which a large amount of duplicate bills—otherwise good, but forged and simulated—were deposited with us. That has entailed a considerable loss, the whole of which, however, has been written off. (Cheers.) So that what you see in the balance-sheet is the actual result of the half-year; a liberal allowance having been made for all bad and doubtful debts. Let there then be no misunderstanding on that subject. (Hear, hear.) Turning now to our deposits, I am happy to say that they have been maintained uniformly at about what we left them last half-year. At that time they showed a surplus of nearly three millions over what they stood at this time last year. They are now £150,000, or thereabouts, more than they were in July last; and what is very gratifying to us, and I have no doubt will be so to you, is the fact that our deposits have fluctuated very little during the last half-year, having been at no period much below or much above £18,000,000, in which sum, as you are aware, the acceptances of the bank are not included. We have never thought it right to include the ordinary acceptances, which in the nature of things we cannot avoid, carrying on our business. We have never added these acceptances to the deposits, nor have we published them until now. At our last meeting we offered any gentleman who wished it to give him this information; but finding since that some banks do it, and that there has been a demand for its being generally done by a publication of considerable influence with the commercial world—I allude to the *Economist*, which urges that all banks ought to separate acceptances from general deposits—we had great pleasure in yielding to the suggestion. (Hear, hear.) On the 31st of December, as you will see, our acceptances amounted to £806,604 7s. 4d., a large proportion being acceptances for correspondents in the country, and consisting mostly of 14 and 21 days' bills. With regard to our dividend, we have now the pleasure of declaring a dividend of 16 per cent., which, with 14 per cent. paid on our capital in July last, makes a total of 30 per cent. for the whole year. (Loud cheers.) Perhaps all things considered, during a troublous year, this is not unsatisfactory. (Renewed cheers.) Moreover, we have not paid all our profits away. Pursuing the policy by which we have ever been guided, we have thought that we should endeavour quietly to build up additional capital by taking a portion of our profits and adding it to our reserve fund, thus we have carried up our reserve fund now to £330,000, making our whole capital £1,330,000. (Cheers.) We have also reduced the "Jones Loyd" purchase by £27,878; so that the business which we bought from Jones, Loyd, and Co. may be considered almost entirely paid for, and those large and handsome premises adjoining this bank which, perhaps, we may not require hereafter for our own business, and may therefore look upon as an asset, will stand somewhere about their market value of £80,000. (Hear, hear.) You are aware that we are greatly enlarging our premises. When you enter the bank you can hardly imagine the large amount of space

which we are about to cover for the purposes of our business. Indeed, our business has increased so rapidly at the head office that we have had great difficulty in lodging the clerks with due regard to their comfort and the convenience of the customers. It was very fortunate for us, therefore, not only that we acquired the substantial business of our highly-reputed neighbours, Jones Loyd and Co., but that we are enabled to use their premises for the purpose of carrying on our own current business. (Hear, hear.) We are now, as I said, enlarging our premises; and as the property which we are building has cost a great deal of money, we have thought it desirable, out of the profits of such a year as the last, to take £20,000 in aid of payment for the new premises which we are adding to the bank. Those who have been in the habit of comparing the general expenditure of the bank for the various half-years will have observed that that item has rather increased. No doubt it has; and the reason is this. We have been in the habit annually of adding 10 per cent. to the salaries of our staff generally. At first this was done as a sort of incitement to exertion after what had been a very good year; but it has now become, I fear, a habit (a laugh), and I trust the affairs of the bank will continue to be such that we shall always have the pleasure of making such an appropriation. In addition to this, we have felt that a very large amount of pressure has been thrown upon the staff by the accession of Jones Loyd's business in the course of the year. There is generally quite enough to do in almost all banks in the contracted period between the hours of nine and four or nine and five, in carrying on the ordinary business; but when we weld with that another extensive concern, a large amount of trouble and inconvenience to the staff must necessarily be occasioned. "The labourer is worthy of his hire," but we do not want to look upon our labourers as hired men. If we prosper we wish them to feel that we are inclined to be liberal; and in saying this I know I am expressing your views as well as those of the board. (Hear, hear.) Considering these circumstances, we have, in addition to the 10 per cent. of last year, appropriated another 5 per cent. to this object; so that we have divided among our staff this year 15 per cent. upon their salaries instead of 10 per cent. (Hear, hear.) I have spoken of the difficulties of the year, and the consequent anxiety and labour imposed upon every one who has had to advance and administer a business like this. We have been very careful in the selection of our officers, not only here, but at all our branches. In a year like the past a very great amount of responsibility and anxiety is thrown upon those who are chiefly occupied in sitting at a desk and taking upon themselves the conduct of the executive departments. And I may say here, in the absence, through an accident, of our active town manager, that no man could have acted with greater judgment or more zeal in the discharge of his duty than Mr. Higley. He remained at his post during the whole of the month of October, when the commercial pressure was at its highest (hear, hear); and in the exercise of his good judgment and good temper we went through that period in a manner to excite the admiration of all who came here; and I am sure you will agree with the board that Mr. Higley deserves the warmest eulogiums at our hands. (Cheers.) What I now say in his absence I should have equal pleasure in stating were he present. (Hear, hear.) Then there is our excellent general manager, Mr. Ewings, and, indeed, all the managers, who have had more or less to share in the troubles and anxieties of this trying period. The board have thought that it would not be fair if their services

were allowed to go unrequited. (Hear, hear.) We have, therefore, made them a handsome distribution (it is not necessary that I should state the sum awarded in each case), amounting in the aggregate to £7,000; and which, with the £4,000 distributed the previous half-year, makes the sum appropriated to the heads of departments £11,000 over and above their salaries. (Cheers.) I was sure you would be glad to hear this (hear, hear); and we are glad to have the approval of that side of the table of what we do in this matter. There are none more desirous of acknowledging and rewarding the services of the staff than ourselves. We want no incitement to do these things. What we want is that all the clerks and officers in our employ should feel that they cannot be better off than with the London and Westminster Bank—a large and respectable establishment, with a liberal administration for its government, and a liberal proprietary to support them. (Cheers.) The hon. gentleman concluded by moving that the report be adopted, printed, and circulated among the shareholders.

Captain Creaton seconded the motion, which was put and carried unanimously amid cheers.

Mr. John Garratt Cattley, Mr. James Denis De Vitre, and Mr. John Hanson, were re-elected to seats on the direction, upon the nomination of the chairman.

Mr. Malcom Orme having observed that the excellent report of the directors was the best proof of their able and admirable management, moved that the thanks of the meeting be accorded to them.

The motion was seconded by Mr. Rolls, and carried by acclamation.

The Chairman, in acknowledging the compliment, said that nothing could be more satisfactory to the directors at that time than to feel that they had the warm and active support of the proprietors, and he could assure them that the utmost efforts of the board would ever be directed to secure the continuance of their confidence. The hon. gentleman then proceeded to say—The business would be very incomplete if I did not on behalf of the board, as well as in your names, express to Mr. Ewings, our general manager, and to the other managers, the high appreciation in which we hold their services. I have spoken specially of Mr. Higley because he is absent, and great responsibility rests upon him, inasmuch as the chief employment of the funds of the establishment falls upon him; but we could not get on at all unless every man efficiently discharged the duties of this particular department. All we want is to have the right men in the right places; and I believe we have them. (Cheers.) And I think we cannot do better on these public occasions than convey to Mr. Ewings and the managers the satisfaction we feel, and our sense of how worthy they are of your support and thanks. (Cheers.) I am reminded that I have omitted to mention the name of our excellent secretary, Mr. Shipp. I ought not to do so, for he happens to be one of my constituents, and the last thing I should do is to forget him under any circumstances. (Laughter.) He is a very able and efficient man, a good example to others, and we all highly respect him. I move that the thanks of the meeting be presented to William Ewings, Esq., general manager, the managers, and other officers of the bank, for their services during the past half-year.

Captain Creaton seconded the motion, and it was carried unanimously.

Mr. Ewings, the general manager, on rising to reply was received

with loud cheers. He said—I hardly know what sensation predominates in my mind at the present moment, pride or pleasure; pride at the unexampled success of the London and Westminster Bank during the last year, or pleasure at your kind recognition of the managers' services. (Hear, hear.) It is always a pleasing duty for me to respond on behalf of my colleagues to the kind and genial remarks of our worthy chairman: but that pleasure is very much enhanced by the hearty manner in which you too, the shareholders, endorse his remarks. This is the thirtieth year that I have been a manager in the London and Westminster Bank, and I believe I have not been an unsuccessful one. (Hear, hear.) That long experience induces me to state that it is my firm belief that it will not be the managers' fault if every succeeding year is not as prosperous as, or more so than, its predecessor. (Cheers.) To accomplish that end you may rely upon it that the managers will unitedly use their utmost exertions to retain the confidence of the board of directors; and I am sure that, with this, we shall have the encouragement and support of the proprietors. On behalf of my colleagues and myself I beg again most sincerely to thank you. (Cheers.)

On the motion of Mr. Justin Vulliamy, seconded by Mr. Rolls, the thanks of the meeting were voted to Mr. Alderman Salomans for his able and courteous conduct in the chair; and Mr. Alderman Salomans having briefly responded to the compliment, the proceedings terminated.

MADRID BANK, LIMITED.

AN adjourned general meeting of the shareholders in this company was held on the 19th January, at the London Tavern, to consider the advisability of winding up the company; Mr. J. N. Daniel in the chair.

A report of the directors which has been published, detailing the reasons which compelled the directors to recommend the dissolution of the company, was taken as read.

The Chairman said that as the report and statement of accounts were similar to those which had been laid before the shareholders on the former occasion, he presumed the meeting would take them as read. (Yes, yes.) Such being the case, he would first observe that when they last met, a resolution was submitted for the consideration of the shareholders by the directors; having for its object the winding up of this company. That, however, was negatived by the shareholders present, although it was known that a large number of shareholders were in favour of the resolution, but the act of parliament required that there should be a larger majority than really appeared on that occasion. Subsequently the shareholders wished to have a general meeting, and that day was fixed for the meeting. Since that time nothing had occurred to alter the opinion of the directors as to the necessity of winding up the concern, seeing that by delaying that mode of proceeding, every day, and every hour, and every week, increased the expenses. To avoid these evils the only course was to wind up voluntarily. But subsequently to the last meeting an application had been made by one of the shareholders (Mr. Freeman) to wind up the concern in the Court of Chancery. To this the directors had no objection; they had no objection either to the winding up under the Court of Chancery, or voluntarily under the appointment of a public

accountant ; but they certainly did think that if they wound up voluntarily, much less expense would be incurred than in winding up under the Court of Chancery. Nothing had transpired since the last meeting to alter the opinion of the board as to the necessity of winding up. Those who were acquainted with the usual mode of conducting merely ordinary affairs in Spain, and the difficulty of dealing with more than ordinary cases, would see the peculiar and arduous position in which the directors had been placed. No doubt this company had commenced with too small a capital, but the directors had always considered this as only a nucleus of capital to be raised, because they had been assured, upon what was considered and deemed to be the best information, both in Spain and London, that the greater amount of capital would be raised in Spain ; but in this they were disappointed, for no capital was subscribed in Spain. The honourable gentleman proceeded to show the extraordinary proceedings of the committee of council in Madrid, the efforts made in reference to the concession, &c., and the manner in which the parties in Spain had appropriated certain moneys to themselves, leaving the board in England and the shareholders in the most extraordinary and false position. The powers which had been originally granted to the English shareholders were violated and set at naught, and, notwithstanding the original articles by which absolute control was given to the English shareholders, the Madrid board dealt with the affairs of the company as if they were paramount. The hon. gentleman entered into a variety of details connected with the transactions of the board, &c., and in conclusion he moved that the report and balance-sheet, and the accounts to 10th December last, audited by the accountant, be received and adopted.

Mr. Chapman seconded the motion.

On the question being put,

Mr. Freebody said the directors had not done their duty to the proprietors, and had kept them in the dark. If they had done so, a meeting should have been held in May last. The credit of the bank, if it ever possessed any, had been blown upon, and nothing remained but to wind it up ; but he should like to know if the money the shareholders handed to the directors two years ago had been properly expended. They had heard rumours of £30,000 being advanced to a concern at Costa Rica. He wished to know if the promoters of the bank were entitled to any more than the £7,000 they had already received. Before the matter was wound up, he felt, as a shareholder, that they had not had those explanations given them of the deplorable monetary position of the company which it was the duty of the directors to give. In fact, the whole affair was a failure from the first. He thought the sooner the directors gave explanations the better. The directors ought to have conceded to the shareholders a committee of investigation. He moved that a committee of shareholders be appointed to investigate the affairs of the bank, and that they put themselves into communication with Mr. Freeman, with the view of his petition in Chancery standing over until the shareholders make their report.

The Chairman said he would rather have the affairs of the bank investigated by the Court of Chancery ; but to have two investigations, no. The acts of the directors were able to bear the light. There was one thing he regretted, and that was that a meeting of the shareholders should have been held in May last. It was thought that their Act gave them power to hold the meeting any time in 1864, but there was a general Act which overrode the company's Act. The bank had not advanced any money to a

concern at Costa Rica. With respect to the amount for the promoters of the bank, the articles of association provided that the promoters should be entitled to receive £10,000 at the time of allotment.

Mr. Freeman censured the directors for proceeding to allot the shares when they had to give away half the shareholders' money to the promoters. The money had been misapplied, and by certain Acts of Parliament they could compel those parties to refund the money. If they wound up the bank voluntarily they could not do it, as it could only be done by the Court of Chancery.

The Chairman said the resolution for winding up the bank under the Court of Chancery would meet with no opposition from the directors. £500 was given to certain of the directors to qualify them for the direction, and those directors, instead of taking 25 shares, which was all they had need take, took 200 shares.

A somewhat angry discussion ensued, in which several shareholders complained loudly of the manner in which the concern had been managed.

Mr. Freeman moved, and Mr. Harrison seconded, an amendment that the bank be wound up under the Court of Chancery, but after a slight discussion it was withdrawn.

The amendment for a committee of investigation was then put and carried unanimously.

In answer to a question,

The chairman said they had no desire to keep anything back, but would give the committee of investigation every assistance.

Messrs. Freeman, Vizen, Nutting, Freebody, and Pedler were then appointed as a committee of investigation.

The proceedings then terminated with a vote of thanks to the chairman.

IMPERIAL BANK, LIMITED.

The fifth ordinary general meeting of the shareholders of this bank was held on the 19th January, at the London Tavern; Mr. Alderman Lusk in the chair.

Mr. Manning, the secretary, read the following report:—

"The directors, in accordance with the regulations of the bank, submit the accompanying statement of account and balance-sheet for the half-year ending the 31st December, 1864; together with auditors' report thereon. The proprietors will notice that of the capital authorized to be raised by the issue of the new shares only £6,575 remains to be paid; and also that, from the 31st ult., the amount paid thereon will cease to carry interest, but these shares will, in lieu thereof, participate equally in all future dividends with the other shares in the original capital of the bank. The directors have to report that, after defraying the current charges of the bank, making allowance for bad and doubtful debts, rebate on bills, and providing for a dividend at the rate of 10 per cent. per annum, together with interest on the new shares, there remains a balance of £5,228. 18s., which the directors recommend to be carried forward to the profit and loss new account. The retiring directors, Michael Hall, Andrew Lusk, William Murdoch, and A. P. Petrocchino, Esqrs., being eligible, offer themselves for re-election. The auditors, George Broom and Peter Broad, Esqrs., also retire from office, and offer

themselves for re-appointment. The directors have the gratification to announce that the business of the bank is progressing satisfactorily, and ask the shareholders to assist in extending its operations."

The Chairman, in moving the adoption of the report, said that it would be pure affectation on his part if he were not to say that he was exceedingly glad to meet the shareholders under such favourable circumstances. It was like a meeting of old friends who had got safe on shore again after a rough and dangerous voyage. The last six months were marked in commercial circles by very severe pressure, and were pregnant with great lessons to men in business. There were many crises of no ordinary kind which ended in all but a panic. Strong houses, old institutions, firms and individuals, were obliged to bow their heads to inexorable necessity. Their little vessel rode out the gale admirably, without the straining of a single timber or the loss of a single spar, and yet they did not turn away

a single customer with a good bill or a valid security. They did not re-discount a single farthing, and they had always a shot in the locker too. (Hear, hear.) Yet they must not entertain the idea that for banks there was any royal road to the making of money. The business of banking must be conducted on the same principles as other kinds of business. The merchant who dealt in iron, tea, sugar, or brass, if too ready to give credit, or to dispose of his goods in a bad market, must abide the consequences; and in the same way the banker who dealt in gold, silver, and copper, if too ready to give credit or to take securities that were not convertible would get into trouble, and therefore in the one business as well as in the other it was a matter of sound judgment after all. Young banks had a great many trials to encounter, and a great many dangers to avoid, to which older institutions were not equally exposed; and it was because they had passed safely through these difficulties that he stood before them with so much satisfaction and so much independence. They had made this half-year gross profits amounting to £58,000; and to show that this was a progressive business, he would refer them to the past. For the half-year ending December 31, 1862, their gross earnings were £5,044; and in subsequent half-years they were £10,036, £16,227, £35,855; whilst, as he had said, they were this half-year £58,017. (Hear, hear.) That he thought was a fair progress. The first half-year they made no dividend, and he thought very properly. The next half-year they divided 5 per cent.; last half-year 8 per cent; and now they proposed to divide 10 per cent. They carried to profit and loss the sum of £5,300, being rebate at the bank rate of the day, and they carried forward £5,200, which gave them £10,500 to start the new year with. The preliminary expenses stood as before, but there were some fractional shares, representing about £800, undisposed of, which would reduce the preliminary expenses next year to £1,000. The bank premises stood as they were, but he was informed on good authority that they were worth £15,000 or £20,000 more than they gave for them. (Hear, hear.) Ample provision had been made for bad and doubtful debts. The directors had taken £2,000 as their remuneration, although, having divided 10 per cent., they were entitled to £3,000. The branch at the West End was getting on very well; it paid its expenses the last half-year and left a little balance over. (Hear.) But he must observe that he was not in favour of branch banks, especially when they were at a great distance. He thought they had gone on as favourably as could be expected under the circumstances. He would remind them that it was impossible to go fast if they wanted to go safely. (Hear, hear.) And by going safely, but steadily, he had no doubt they would become a large establishment. In his opinion it was going fast enough to divide 10 per cent. and to put by a reserve £51,000. He believed there was no more safe or sound bank in the metropolis than the little bank at 6, Lothbury, opposite the Bank of England, and next door to the London and Westminster. (Hear, hear, and laughter.)

Mr. Dickson seconded the motion, which was carried unanimously.

The Chairman then moved, "That a dividend be declared at the rate of 10 per cent. per annum, free of income-tax, on the capital paid up on the 12,000 shares included in the first issue, and in lieu of dividend interest at the rate of 5 per cent. per annum, free of income-tax, on the capital paid up on the 10,500 shares included in the second and third issues, such dividend and interest to be payable on and after the 1st of February."

Mr. Antonio Ralli seconded the motion, which was adopted.

The retiring directors and auditors were re-elected.

On the motion of Mr. Flight, seconded by Mr. Vining, a vote of thanks was passed to the directors, and a similar compliment was paid to Mr. Bentham, the manager, and the other officers of the bank.

A vote of thanks to the chairman terminated the proceedings.

LONDON JOINT-STOCK BANK.

THE general meeting of the proprietors took place on the 19th January in the board-room of the bank offices, Princes-street; Mr. F. Rodewald in the chair, when the following report was submitted by the directors:—

“The directors have much pleasure in placing before the shareholders the annexed statement of the liabilities and assets of the bank, and of the profit and loss account for the half-year ending the 31st ultimo, by which it will be seen that the bank has made a net profit of £171,125. 9s. 7d., including £26,976. 7s. 10d. brought forward from the previous half-year. Of this amount the directors have appropriated the sum of £150,000 for the payment of the usual dividend, at the rate of 12½ per centum per annum, with a bonus of £1. 17s. 6d. per share, and have carried £21,125. 9s. 7d. to the credit of the guarantee fund. In pursuance of the resolution of the general meeting of August 18th, confirmed on the 15th September last, the issue of 12,000 new shares has been made, and the directors have the satisfaction to acquaint the shareholders that the subscribed capital of the bank is now £3,600,000, divided into 72,000 shares of £50 each, paid up to the extent of £15 per share, thus making the paid-up capital £1,080,000 entitled to participate in profits from the 1st January. The guarantee fund has been credited with the sum of £1,372. 19s. 6d., realised on the sale of 227 new shares not taken up by the allottees. This fund is also accredited with accruing interest, and debited with £4,875 to cover the depreciation in value of the Government securities since the 30th June, and now amounts to £298,069. 7s. 1d. With a view to avoid the inconvenience of varying the guarantee fund at the close of every half-year by an entry to regulate the market value of the Government securities held by the bank, and which is of no practical utility, inasmuch as these securities are held as a permanent investment, a resolution, of which notice by circular has been given to the shareholders, will be proposed to the meeting, to authorise the directors to value for the future, at par, the Exchequer bills, and at the fixed price of 90 all Consols and New Three per Cents. held by the bank. The following directors retire by rotation, under the provisions of the deed of settlement, viz.: Henry Christy, Esq.; Francis B. Goldney, Esq.; Charles J. Heath, Esq.; Henry Lee, Esq.; and George Pollard, Esq., who being eligible, offer themselves for re-election. The dividend and bonus, free from income tax, will be payable on and after Friday, the 27th inst., and the interest payable on the new share capital and premium is payable on and after the same day.”

Liabilities and Assets, December 31, 1864.

The Chairman, having declared the dividend and bonus in accordance with the report, said that it was his good fortune to preside at this meeting, with the most favourable accounts that the London Joint Stock Bank had yet presented in the course of its uniformly prosperous history. The exceptional value of money during the last six months had enabled the directors to secure the profitable results which they found embodied in the statement they held in their hands. And, speaking in the name of the board, he looked forward with confidence to continued success so long as the same careful superintendence and vigilance were exercised that now characterised the conduct of their affairs. They saw by the report that the important financial operation which was sanctioned by the shareholders on the 18th of August last had been successfully carried out. And this was all the more satisfactory because the enlargement of the basis of their capital would tend to confirm the confidence the bank enjoyed, and which had led to a very large increase of their business in the last year. He moved that the report be received and printed for the use of the shareholders.

Mr. Pollard, deputy chairman, seconded the motion.

A Shareholder requested that some explanation should be given with regard to the disposition of the new shares not taken up by the proprietors to whom they were allotted. He wished to know at what price they had been sold.

Mr. Brooking, chairman of the finance committee, and a director, said that by the resolution passed in August the call upon the new shares was payable on the 1st of September, but the board felt that they ought to give as much license as they could to the old shareholders, and therefore extended the time for payment two months, viz., to December 1. On making up the accounts to that date they ascertained that 227 new shares had not been applied for; they therefore decided that they would put these in the market and sell them for the benefit of the bank at the current rate of the day; and when they did so they found that the shares were worth a fraction over £46. So that, inasmuch as they had been offered to the old shareholders at £40 each, they were thus enabled to realise more than £6 a share, or in the aggregate a profit of £1,372. This the directors thought was a fair item to go to the guarantee fund; and it had accordingly been so disposed of since the 1st of January. The instalment upon the new shares carried interest at the rate of 5 per cent. This financial operation had entailed a large amount of extra duty upon the staff generally, which had been cheerfully and efficiently performed.

A Shareholder inquired if any additional grant had been made to the clerks and other officers for the extra services they had rendered?

Mr. V. Knight advised that that question should be left entirely in the hands of the directors, as it was one in which it would be very bad taste on the part of the shareholders to interfere.

Mr. Billings asked whether provision had been made by a suspense account or otherwise to meet any contingency that might arise in the shape of losses upon bills and liabilities; also whether the accounts had been audited by a committee of shareholders or independent auditors.

The Chairman replied that all bad and doubtful debts had been entirely written off and cleared, the balance-sheet presented a clear statement of the assets and liabilities, and there was nothing whatever behind. (Cheers.) With regard to the audit it was done by the directors, as the deed of settlement did not require that there should be any other.

A Shareholder thought it would be more satisfactory to the directors themselves, as well as to the proprietors, if the affairs of a bank of such magnitude were submitted to an independent audit. If the deed of settlement were faulty in that respect the sooner it was amended the better. He should like to know when the accumulations to the guarantee fund were to come to an end, or what the directors proposed to do with regard to it; for it seemed to him that those whose capital had made the guarantee fund were the persons who ought to have it. It ought not to be postponed for posterity or future proprietors to receive the advantage of that fund. At the same time he congratulated the shareholders and directors upon the result of their recent operations. The report was a brilliant one, and did the board the highest credit.

The Chairman said the bank was bound by the prescriptions contained in the deed of settlement, which were of such a nature that they must be closely adhered to. As to the guarantee fund, it was established by the deed of settlement for the equalisation of dividends, and to meet losses in exceptional years, when they were unable to pay the usual dividend. The business of the bank was a very extensive one, and in his opinion £300,000 was not an excessive guarantee fund.

The resolution was put and carried unanimously; the five retiring directors were re-elected: and a resolution agreed to in the terms of the paragraph in the report authorising the directors to value for the future at par the Exchequer bills, and at the fixed price of 90 all Consols and New Three per Cents. held by the Bank.

A discussion here arose relating to the guarantee fund, which elicited an explanation from the Chairman, to the effect that the deed of settlement could only be altered by act of parliament, and that an attempt having been made by a bill to introduce an alteration, the directors had been defeated and the bill thrown out.

A Shareholder asked whether the guarantee fund was a distinct fund.

Mr. Brooking replied in the affirmative, and added that it was to all intents and purposes a part of the working capital of the bank.

The Chairman said it would be better understood if this fund were termed the reserve; but the deed of settlement described it as a guarantee fund to equalise dividends, and the directors had no choice but to follow that example.

The proceedings terminated with votes of thanks to the chairman and directors for the able and successful manner in which they had conducted the affairs of the bank, and to the manager, secretary, and other officers for their efficient services.

BANK OF LONDON.

The eighteenth general meeting of the shareholders in this bank was held on the 19th January, at the London Tavern; Sir J. V. Shelley, M.P., in the chair.

The Secretary (Mr. C. J. H. Allen) having read the notice convening the meeting, the following report and statement of accounts were presented:—

“By the annexed statement of accounts, made up at the conclusion of the past half-year, which the directors have now the pleasure of submitting, it will be seen that the balance of profit amounts to £101,272. 2s. 2d.

After payment of interest upon the new shares, liquidating the current expenses, including a gratuity to the clerks of the establishment of 10 per cent. upon the amount of their respective salaries, making full provision for all bad or doubtful debts, and allowing for rebate of interest on bills discounted not yet due, there remains for disposal the sum of £62,719. 13s. 5d. The directors declare a dividend at the usual rate of £10 per cent. per annum, and a bonus of £2. 10s. per share, amounting together to £20 per cent. per annum, both free of income tax, and they transfer £30,000 to the reserve fund, which, with the addition of £136,570 received in respect of the new shares now amounts to £296,570. The balance, viz., £2,505. 4s. 8d., is carried to the credit of profit and loss account of the current half-year. The shareholders will be called upon on this occasion to elect an auditor, in the place of Mr. Alfred Lamb, whose resignation has been received. Mr. Francis Nalder, a duly qualified shareholder, has given notice that he is a candidate for the vacant office."

		£296,570	0 0

The Chairman, in moving the adoption of the report, said that he did so with great pleasure, and he supposed that the shareholders would hardly complain that very little variation was necessary in his observations so long as he only had to congratulate them upon the success of the undertaking. (Hear, hear.) They would observe that the sum of £97,550 had been received on 1,951 new shares, and that £136,570 had been added to the reserve fund. There were forty-nine new shares unappropriated, owing to fractional parts in the allotments, and when those were sold, as they would shortly be, the capital of the bank would stand at £400,000, and the reserve fund at £300,000. That had been, as they were well aware, the great object of the directors, and he was bound to say that they had received from the shareholders the greatest possible assistance and co-operation, and the result had been the establishment of a reserve fund which must secure to them the confidence of the public. Without pretending to prophecy what would be their future career, he was justified in expressing a hope that, provided they continued to conduct their business in the same prudent and cautious way as they had hitherto done, they might look forward with confidence to an increased dividend for the future. (Cheers.) He was quite sure that if ever a doubt could have arisen in the minds of the shareholders as to the desirability of setting aside a large guarantee fund for an institution such as this, the monetary crisis from which they were now emerging must have had the effect of utterly dispelling such doubts. He looked upon the price at which their shares stood in the market as the barometer by which they might judge of the public feeling with regard to the bank, and he thought that the shareholders must be perfectly satisfied upon that point. In fact, there never had been a period in which the joint-stock banks of the metropolis—that is to say, those which are well conducted—stood higher in the public estimation. (Hear, hear.) At the same time they must always be prepared for stormy weather, and the heads of this establishment had always felt that not only the shareholders but the public out of doors were deeply interested in their success, because should any difficulty arise, the public as well as the shareholders were liable to suffer; and it was, therefore, the duty of the board in conducting the business of this large institution to look to the interest of the public as well as to that of those immediately connected with the bank. The board firmly believed that the policy which they had adopted of looking rather to the future than to the present had been attended with great success, and that, with their large reserve fund, they might look for-

ward without any dread, come what might. (Cheers.) No doubt the price of money had been extremely high during the past half-year. He need not say that when that is the case institutions of this kind have more difficulties to encounter, and require more care and caution in their management. It may be noticed that to a small extent their figures were reduced, but the answer of the directors was that in such a crisis as that which they had passed through it was necessary to draw in their horns rather than to extend their business, whatever might be the temptation offered by the high price of money, and thereby to increase their risk. (Hear, hear.) That was a policy which they had steadily pursued during the whole period of the crisis. His colleagues and himself had had many anxious moments, but they now looked back upon the proceedings of the last half-year with pleasure, for although they could not go so far as to say that they were entirely unscathed from the numerous failures that had taken place, yet the sum which it had been necessary to set apart for bad debts was one wholly insignificant. (Cheers.) Under those circumstances he hoped that he was not taking upon himself too much when he said that the board met the proprietary under the most favourable auspices on the present occasion. He therefore begged to conclude by moving the adoption of the report.

Mr. Frith seconded the motion.

Mr. E. Tyrrell said that the best thanks of the shareholders were due to the directors and managers of the company for the mode in which they had conducted the affairs of the bank during the last six months, which was acknowledged upon all hands to have been one of the most trying periods of our commercial history. At the same time he wished to make an inquiry with respect to the course which the board proposed to pursue in future. He believed himself that the sum of £300,000 that had been set apart as a reserve fund was quite ample for the purpose of satisfying the public, but having arrived at that position he hoped that the directors would look more to the interests of the shareholders than they had hitherto done (though he would be the last man in the world to say that they had disregarded their interests), and divide among them the amount which they had hitherto placed to the credit of the reserve. As a matter of fact, he did not think that the confidence of the public would be one whit increased whether the reserve was £400,000 or £300,000, but he did think that the future earnings of the bank, after payment of all current claims, should be devoted to increasing the dividends, and thereby raising the value of the shares. (Hear, hear.)

A Shareholder alluded to a rumour that the bank had made a very large bad debt in reference to the account of their late auditor, Mr. Alfred Lamb, and inquired whether there was any truth in it.

The Chairman said that he was very glad the question had been put, because he also had been informed of a variety of rumours, and the real facts only showed how little such rumours were to be relied on. The directors had gone very carefully into the account of Mr. A. Lamb, and it would be satisfactory to the shareholders to inform them that the bank would sustain no loss whatever upon that account. (Cheers.) While the board looked to the shareholders to appoint proper and effective auditors they invariably made it a rule to be specially careful in respect to the account of any officer of the bank, and if they had happened to have sustained any loss upon Mr. Lamb's account, no one

would regret it more than the board. At the same time, while they were always liable to make losses, it was satisfactory to the board to be able to state that none had been made in this instance. (Cheers.) With reference to the question which Mr. Tyrrell had brought before them, he might remark that, as they all rowed in the same boat, it was not likely that any one on his (Sir J. Shelley's) side of the table would object to receive a large dividend, and the only exception which he took to the observations of his hon. friend was that he insinuated that the directors did not look sufficiently after the interests of the shareholders. He contended that the course they had pursued was eminently in the interest of the shareholders, though he refused to give that title to persons who bought into the company with the sole view of selling out when the shares were £2 or £3 higher than when they bought in. (Hear, hear.) He stated boldly that the course they had taken in forming such a reserve fund that nothing could affect them, was a course which was highly conducive to the best interests of the shareholders. At the same time, having attained the position to which they had aspired, the question as to any further increase of the reserve fund would, as was stated in a circular issued last year, receive the grave consideration of the board. He would not pledge the directors that there should be no further increase whatever, because, in the first place there would be the interest of the £300,000 reserve fund, which would naturally be added to it, but he thought that if all other circumstances justified it, and their prudent course of policy was attended by the same successful results, the directors would probably have to consider the expediency of offering an increased dividend, though he reminded the meeting that there would be little to complain of if it was as good as was now offered. (Cheers.)

Mr. Bone, one of the auditors, confirmed the statement of the chairman, that not one penny loss had been sustained by the bank on Mr. Alfred Lamb's account. The attention of himself and his co-auditor had always been called more particularly to Mr. Lamb's account, he being an auditor, and he was perfectly satisfied that no loss could be sustained upon it. He believed the rumour arose out of a statement in a circular which had reference to the wine trade; but although there might be a loss in the wine trade in consequence of his operations, there was none to this bank. (Cheers.) He (Mr. Bone) was also happy to be able to state that the comparatively small sum set apart to cover bad debts would more than cover them; a fact which must be very gratifying, considering the extraordinary commercial crisis through which they had passed. He felt, and had felt from the commencement, that the officers were always on the alert, and although they might have made larger profits they chose wisely and cautiously rather to do a steady and safe business than to jeopardise what they had already gained.

Mr. Haywood considered that the reply given by the chairman to Mr. Tyrrell was, on the whole, satisfactory; but thought that after the distinct statement in a circular issued in April last, the directors ought to divide all the surplus profit after raising the reserve fund to £300,000.

The Chairman quite agreed that they had arrived at a period when the reserve fund would not, according to the words in the circular alluded to, require to be increased to any "considerable extent" out of the future profits, "under ordinary circumstances;" but he could not pledge himself to its not being increased at all. The shareholders must place confidence in the board, and give them credit for doing what was for the real interest

of the company, and depend upon it they would endeavour to do ample justice to the shareholders, always bearing in mind the deep responsibilities under which the directors acted.

A Shareholder asked, with respect to the Charing Cross Branch account, whether the lease had expired and the debt extinguished.

The Chairman said that the board, foreseeing that those premises were likely to become extremely valuable, owing to the Charing Cross Railway coming there, had succeeded in procuring a renewal of the lease for 69 years at a merely nominal addition to the rent. (Cheers.)

Mr. Thompson (auditor) confirmed the statement of Mr. Bone as to the bank being no loser on Mr. Lamb's account.

Mr. Baxter made some observations in support of the view taken by Mr. Haywood with reference to the division of net profits, now that the reserve fund had reached the sum of £300,000, and referred to the position of the London and Westminster Bank and the Union Bank in justification of such a course.

The Chairman reminded the hon. proprietor that this bank had started as a competitor to older institutions; and it was above all things necessary for it to adopt such a course of policy as would gain for it the public confidence, and place it on the same footing as the older banks. They had now attained that position; and though, he repeated, he would pledge the board to nothing, he had no hesitation in saying that if everything went on as well as it had done hitherto, it would be the duty of the directors fairly and properly to consider the interests of the shareholders. (Cheers.)

The report and statement of accounts were then unanimously adopted, and the dividend declared, payable on the 26th instant.

On the motion of Mr. Tyrrell, seconded by Mr. J. Evans, Mr. F. Nalder was unanimously elected auditor in the room of Mr. Lamb, resigned.

Mr. Nalder having returned thanks,

Mr. Tyrrell proposed, and Mr. Beach seconded, a vote of thanks to the chairman and directors for their able and efficient services during the past half-year.

The Chairman having returned thanks,

Mr. Hughes proposed, and Mr. Love seconded, a vote of thanks to Mr. Marshall, Mr. Allen, and the staff of officers.

Mr. Marshall having responded to the compliment, the proceedings terminated.

CONSOLIDATED DISCOUNT COMPANY, LIMITED.

THIS company held its first ordinary general meeting, on the 20th January, at the London Tavern; Mr. T. S. Richardson in the chair.

The following is the directors' report and statement of accounts:—

"The annexed balance-sheet contains a statement of the accounts of the company made up to the 31st December, 1864. The balance carried to the credit of profits, after payment of all current expenses, amounts to £14,681. 2s. 5d.; against this amount, however, the directors regret having to write off a sum of £15,940. 14s. 3d. from losses by bad debts, leaving £1,259. 11s. 10d. to be carried to the debit of next year's account. While regretting this result of their first balance-sheet, the directors would remind the shareholders that the past year has been one of great

commercial distress, and has been characterised by frequent fluctuations in the value of money. In justice to the committee of management, the directors feel bound to state that the principal bad debts have arisen from the failure of firms who had previously enjoyed good credit, and were reputed to be of the highest respectability. During the past year, the expenses of management have been greatly reduced by the retirement of two members of the executive committee; arrangements have consequently been made for carrying on the business of the company at a very considerably less annual cost. In conclusion, the directors have to express their unabated confidence in the future of the company, and anticipate, when next they meet the shareholders, to show a very different result. In accordance with the articles of association the following directors (being the whole board) retire from office, and offer themselves for re-election:—Thos. S. Richardson, Esq.; F. J. Sargood, Esq.; G. W. Constable, Esq.; G. Denny, Esq.; James Thompson, Esq.; William M'Arthur, Esq.; William Little, Esq.; H. F. Sandeman, Esq.; and S. Baker, Esq. The auditors, James Cooper, Esq., and Whitbread Tomson, Esq., also retire, and offer themselves for re-appointment."

Balance-sheet, 31st December, 1864.

Balance carried to the debit of profit and loss new account			1,259 11 10
				<u>£19,833 9 7</u>

The Chairman, in moving the adoption of the report, observed that when the company started a year ago it was in the anticipation of very different results from those which they had now to announce. At the same time, when they considered the commercial crisis which had characterised the last six months, no commercial man could be surprised at the losses which had been incurred, or feel that the managing committee ought to be blamed for them. They had not rushed indiscriminately into the discount market, or discounted paper for parties who were not at the time believed to be worthy of credit, but all their losses had arisen from the failure of firms whose respectability six months ago was undoubted, and whose acceptances would have been taken by any discount house in the City of London. He knew that there was an impression abroad that when money was at a high rate discount houses made large profits, and it might be complained that, considering the high value of money during the period over which the present accounts extended, their profits ought to have been considerably more. But the discount houses were really nothing more than the agents between the lending and the borrowing public. When money was at a high rate they had to pay to the depositors a high rate of interest for it, while on the other hand, that high rate reduced the demand for discount. It might be further said that the high rate of money at least enabled them to realise large profits upon the capital of the company; but that was not the case, seeing that £75,000, which represented the whole of their available capital, was invested in Exchequer bills and Consols, or included in the cash balance in their bankers' hands. As they were aware, upon the money at the bankers' they got no interest, while the Consols and Exchequer bills yielded only about 3 per cent., so that their profits must necessarily come out of the difference between the rate at which they borrowed money and that at which they lent it. Although they were unable on the present occasion to make any dividend, he had every reason to hope for a more favourable result at their next meeting. He ought to add that up to the 1st October they had made but one bad debt, and that amounted to no more than £43 or £45, of which they had already received £37. (Hear.) The entire bulk of the losses had arisen in October and November, and as he had said from the failure of firms whose respectability had up to that time been unquestioned. In reference to the price paid for the business, he might state that such was the confidence of Messrs. Sandeman and Sanderson in it, that they had taken more than half the amount of the purchase in shares, and were now by far the largest partners in the concern. (Hear.) Following the example of the chairman at a meeting of a similar company held the other day, he desired to assure the proprietors that the Consolidated Discount Company had not given any acceptances, not because they had not had the opportunity of doing so, but because the directors held that it was not the business of a discount house to give acceptances, but to confine itself to the legitimate business of borrowing money on the one hand, and lending it out again at a profit on the other. They had purposely made the worst of the case, and he had no doubt they would be able to present a more satisfactory statement next time. (Hear, hear.)

Mr. Sargood seconded the motion.

The Chairman having invited discussion and offered to answer all inquiries that might be put to him, a series of questions were asked by various shareholders, amongst them, how it was that only 9,000 shares were issued

out of the 10,000 authorised? Whether the £15,940 allowed for bad debts represented merely the losses ascertained up to the date of the report, or whether it included losses that might arise from bad or doubtful bills not yet due? How it was that no allowance was charged for rebate of current bills, and whether such rebate had been calculated? Why the 125 shares on which £10 each had been paid were put down as forfeited? On what basis the chairman rested his hopes of a more successful future? What were the names of the respectable firms by whose failure the losses had occurred, and whether it was likely anything would be recovered from them? What remuneration the directors received? Whether Messrs. Sandeman and Co. had been paid the purchase money for the business in full? What were the items of which the current expenses were composed? And what was the amount of the over-due bills?

In reply, the Chairman stated that it would be scarcely judicious to publish the names of the parties by whose failure they had sustained losses, but he should be happy to give the information to any shareholder applying at the office for it. The amount of the over-due bills was about £50,000, of which £12,000 were upon the Leeds Banking Company, and would, he presumed, be recovered in full. Six months ago no one would have said that the managing committee were wrong in discounting bills endorsed by the Leeds Banking Company. (Hear.) The remainder were upon various other parties, who at the time were generally considered respectable. The directors, having examined these bills, and calculated the amount they might expect to get back upon them, estimated the ultimate loss at the sum put down, £15,940.

A Shareholder—Gladstone's house, I believe, is one of those by which we have sustained losses?

The Chairman—Yes, there was one bill of Gladstone's, but, as I have said, I think it hardly fair that we should be called upon to state the names publicly here.

Another Shareholder—I do not see that you need stand upon ceremony in such notorious cases as those of the Leeds Bank and Messrs. Gladstone. (Cheers.)

The first Shareholder—Has there not been also a large loss from the failure of Mr. Solomons?

The Chairman—There has. No doubt we have a large amount of Mr. Solomons' paper; but I am sure no discount-house would have refused to take that paper when we did, and had it not been for the fraud committed upon him he would not have failed, but would have been going on now. We had only one of Gladstone's bills. Now that you know the names by which we have sustained the greater part of the losses, you will, I think, admit that I was perfectly justified in saying that they were those of respectable parties when we discounted their paper. With regard to the forfeited shares, some few of the shareholders failed to pay the last call of £2 per share at the time fixed, and the directors wrote to them that unless they paid before a certain later date the shares would be declared forfeited. Some did pay, but a few did not. These, upon finding that the shares were forfeited, applied to have them re-allotted to them, which the board consented to do on the payment of a small fine. Those who did not pay the fine of course would not have their shares back. With regard to the issuing of the shares, he thought the directors had exercised a very wise discretion, and it might have been better, perhaps, if they had not issued quite so many as they had, as in that case so many would have

been forced upon the market. But the board, in dealing with the applications, knowing that there were many persons who were in the habit of applying for shares merely in order to realise an immediate profit by selling them at a premium in the market, only allotted to persons who were likely to take them as an investment, and not as mere speculators. No doubt, had the rebate on current bills been charged, the balance-sheet would have shown a larger loss; but the auditors, one of whom was a professional man, and the other a manager of a bank, thought it better that the accounts should be made out as they were. The amount of the rebate had been calculated at £7,000.

A Shareholder thought that the auditors had not done their duty in not insisting that the rebate should appear. (Hear, hear.)

The Chairman continued—The basis of his hopes for the future was the good business they had, and which, had it not, in an exceptional year, made some exceptional losses, would have shown a very handsome profit in the present balance-sheet. (Hear, hear.) They were now doing a very good business, and it had doubled since this time last year. (Hear, hear.) The directors had not taken any remuneration for their services, although, having worked for the company to the best of their ability, they felt that they were entitled to it. But they preferred to leave that matter to the shareholders. The entire of the purchase money for the business had been paid, £11,000 in shares, which were still held by Messrs. Sandeman and Sanderson. The current expenses were composed of rent of offices, salaries, and so forth. Messrs. Sandeman and Sanderson were the members of the managing committee who retired.

The motion adopting the report was then put and carried without opposition.

The Board of Directors were, on the motion of Mr. King, seconded by another proprietor of the same name, re-elected *en masse*. The seconder referred to the early difficulties of the National Discount Bank and others of the first monetary establishments, as forming, when contrasted with their present position, ground for encouragement in their own case.

The Chairman briefly expressed the thanks of the board for the renewed confidence of the shareholders.

The auditors were re-elected after a short explanation from Mr. Cooper as to the reasons why the accounts were made out in the form they were.

A motion, awarding twenty guineas each to the auditors for their services, was opposed by two shareholders, on the ground that there was no allusion made in the balance-sheet for rebate on current bills, but on a show of hands the original motion was carried by 20 to 12.

A vote of thanks to the chairman and directors closed the proceedings.

INTERNATIONAL FINANCIAL COMPANY.

THE second annual meeting of this company was held on the 21st January, at the London Tavern; Mr. R. A. Heath in the chair.

The Secretary, having read the notice convening the meeting, read the following report and statement of accounts:—

“The accounts made up on the basis of the valuation of the company's securities at the market price on the 31st of December last, show a net profit, after deducting all current expenses, of £103,808. 11s. 2d. The

directors recommend that this amount be appropriated as follows:—1. £37,500 to payment of interest at 5 per cent. per annum on the called-up capital, whereof one-half (or 2s. 6d. per share) was paid by way of interest on account in July last. 2. £37,500 to bonus of 5s. per share to make, with the half of the above interest now payable, a total dividend of 7s. 6d. per share, being altogether a payment of 10 per cent. per annum, free of income tax. 3. £5,428. 4s. 9d. to reserve fund, in conformity with Clause No. 25 of the Articles of Association, raising the total amount of this fund to £23,429. 4s. 2d. This, after deducting the necessary amount for income tax, will leave a balance of £20,919. 11s. 11d. to be carried forward to new account."

Balance-sheet, 31st December, 1864.

Dr.

Capital account, viz.—Deposit of £2. 10s. per share on 150,000 shares £375,000; first call of £2. 10s. on 150,000 shares £375,000		£750,000	0	0

	£103,808	11	2

The Chairman, in moving the adoption of the report, said that since they last met, on the 1st of March last year, they had, as they all knew, had to go through a very difficult time. There had been no period in the year 1864 when the bank rate of interest had been below 6 per cent., and for one quarter of that year it was as high as 9 per cent. They might very well imagine, under those circumstances, the difficulties with which financial companies had had to contend. A financial company, as he understood the term, ought to have facilities beyond the use of its own capital, which facilities last year could not be obtained without great sacrifice by issuing debentures at a high rate of interest, and that was a course which they did not think it was prudent to adopt. (Hear, hear.) They had therefore been limited in their operation to the use of the capital they had called up—namely, £750,000, of which a considerable portion was, as the shareholders were told at the last meeting, locked up in Hudson's Bay shares. He was happy to be able to inform the meeting that they did not now hold anything like the same number of Hudson's Bay shares as they held on the occasion of the last meeting, and he thought they would think with him that, under the circumstances to which he had alluded, a profit which enabled them to pay a dividend at the rate of 10 per cent. was not to be despised. He should have been glad if the board had been able to announce a larger dividend, but on the whole he thought they would consider it a good one, particularly when he assured them that every security they held was valued on the 31st of December last at the lowest price of the day. Since that time they had sold some few things out of the list at a profit, and none of them below the price at which they stood, and therefore they held no securities whatever in which they had not the most perfect confidence. With respect to the high rate of the bank discount to which he had alluded, he could not help observing what must have been observed by every one conversant with monetary affairs, namely, that taking into consideration the events of last year,

the whole country had been preserved from a wide-spread panic and serious disaster by the exceedingly good management of the Bank of England. The Bank Act had worked remarkably well all through the trying time which they had passed. Since the last meeting this company had brought out various schemes connected with public companies, which had rendered them good commissions. He was not, of course, at liberty to state what the commissions were on each particular scheme, because the business was not exclusively theirs, but belonged to other companies. It would be exceedingly imprudent to give any particular details in respect to the securities which they held, because the information they gave might be used for Stock Exchange purposes, and could do no good. (Hear, hear.) They had a signal proof of that in the position in which the Hudson's Bay property stood in the market shortly after the last meeting. If this board had not stated so openly as they did the exact number of shares it held in that company, the public would not have felt that there was a sort of incubus hanging over them, and that the market might at any time be swamped by a large number of shares being thrown into it. As a matter of fact, however, the shares which they had sold had always been sold on a rising market, and, as he had stated, the company had got rid of a considerable portion of their shares. A good deal of misapprehension existed in respect to one of the operations of the company; he alluded to the loan made to the Cordova and Malaga Railway Company. That loan was, however, guaranteed by five first-rate houses, and the International Company had their bonds for all bills issued by them. They received a good commission and a fair rate of interest for that loan, and their responsibility ceased at the end of the year. It was not a loan, as was stated, and generally believed, to the Spanish government, but a loan made to the railway company, in order to enable them to complete their works. That company were entitled, by their arrangement with the Spanish government, to a subvention, which was divided into three parts. The first part of the line had been completed, and the sum specified in the subvention had been paid. On the second part of the line all the rails had been laid down, but the money had not been paid because some difficulties had arisen with respect to ballasting the line, and most likely the second and third part of that subvention would come due together, and without the assistance of this or some similar institution, the Cordova and Malaga Railway Company could not have finished the line in time. He maintained that the operation entered into by this company in respect to that line, so far from being an assistance to the Spanish government, had in reality brought a considerable pressure to bear upon it. It was that which he wished particularly to draw their attention to, because much misunderstanding had arisen upon it. Those, he could assure them, were the pure and simple facts of the case. (Hear, hear.) He was not aware that he need advert to any other particular point, but he should be happy to answer any questions put by the proprietors, provided they were questions which could be answered with a due regard to the interests of the company. He concluded by proposing the adoption of the report, and that a dividend of 7s. 6d. per share, free of income tax, should be declared in conformity with the same. (Cheers.)

Mr. Morgan seconded the resolution.

Mr. Parminter thought that the majority of the shareholders would agree with him that the balance-sheet should show the exact financial posi-

tion of the company, and he complained that the accounts had not been rendered in sufficient detail to enable the shareholders to form an opinion as to the progress of the institution. All that they could ascertain was that advances had been made on one description of securities to the extent of £600,000, and on another description the market value of which was £450,000. Now, he thought that if that was all the information vouchsafed by the directors, the shareholders would in reality go away very little wiser than they came. They had been told a little about the Malaga Railway advance, but as a private shareholder, holding 200 shares, he did hope that in future no advances would be made to the Spanish government or railways in any shape whatever; for although such operations might render them a large commission and a high rate of interest, yet he thought that the International Financial Society, which was second to none in the City of London, lost a large amount of prestige through such operations. He was delighted to hear that the Hudson's Bay investment had been reduced, but he thought a little more information on that subject was due to the proprietors. Last year they were told that this society held 17,140 shares in the Hudson's Bay Company. He thought they ought to be told whether the board took those shares voluntarily as a speculation of their own, or whether they were compelled to take them from the fact of the public not applying for that number. He had been told that it was a voluntary act on the part of the board; but if so, he must doubt the wisdom of the policy which induced them to lock up so large an amount of their capital in an investment which, whatever may be the intrinsic value of the shares, must necessarily be somewhat slow in its character, and which could only yield a comparatively low rate of interest. He did not want to press too much for details, because there was undoubtedly some truth in the remark of the chairman that to do so might prejudice the interests of the society; but inasmuch as a shareholder in companies in which the International Financial Society held shares would be apt to consider that the company in question must be perfectly safe, otherwise this society would not embark in it, there was not quite so much danger in the chairman giving them full information as would at first sight appear. There was only one other point to which he wished to call the attention of the directors, and that was as to the expediency of holding half-yearly meetings. (Cheers.) He apprehended there would be no difficulty in doing so, because he observed that the accounts which were balanced on the 31st December were audited and completed by the 4th of January. He concluded by expressing his thanks to the directors for the promptness with which they had sent out the accounts.

A Shareholder, who spoke from the body of the room, expressed his satisfaction at the manner in which the directors had conducted the affairs of the association in the trying time through which they had passed. He did not concur in the opinion of the gentleman who had just spoken with respect to the propriety of making their investments public. It might be very well to do so in other companies, but this was a company in which the shareholders deposited their money confidentially in the hands of the board to deal with it in no particular, specific manner, but according to the best of their judgment; therefore they ought to be satisfied when the directors came before them, and without stating the precise operations in which they had engaged, assured the proprietors that they had made a *bonâ fide* profit. They would act most unwisely if they endeavoured to extract from them information as to every individual operation of the company. In a

society such as this the most implicit confidence was required. Unless that confidence was placed in the directors no business at all would be done. This was entirely a question of confidence in the management, and as he had the fullest confidence in the ability and integrity of the board, he must confess that he differed entirely from the views expressed by the last speaker.

The Chairman said that Mr. Parminter was entirely mistaken in supposing that the board had invested their capital in Hudson's Bay shares as a speculation. The gentlemen who brought out that company made an arrangement with the International, the terms of which were stated at the last meeting. By that arrangement the International agreed to take all their £100 stock at £300, and to issue it to the public at £400. The directors of the Hudson's Bay Company promised to use all their influence to obtain the whole amount of the stock from the shareholders, and they succeeded (within a very few thousand pounds) in obtaining promises to transfer the stock from their shareholders to this company. Letters were sent round and the promises obtained; but the obtaining the promises to transfer the stock, and actually transferring into the name of this company so as to enable them to deal with it, were two different things; because, naturally, delay arose, and when the day of allotment came it was found that there was a considerable amount of stock for which they had not obtained the legal transfer, therefore the company were obliged to keep a good deal of it *volens volens*. It was all applied for, and had it been all in the hands of the company at the time it would have been all allotted. The statement therefore that the directors took it as a speculation was unfounded. (Hear, hear.) The Articles of Association prescribed an annual meeting, but gave the board the power of calling extraordinary general meetings, and if the shareholders desired it they would be happy to call one half-yearly. (Cheers.)

M. Villesboisnet considered it would be very imprudent to give explanations with respect to the details of the society's operations at their public meetings, and thought it quite sufficient if the auditors looked carefully into such matters.

The Chairman stated that the minutest details of every transaction were laid before the auditors. (Cheers.)

Mr. Josephs differed entirely from Mr. Parminter in the observations he had made, and as a proprietor, objected to having his property depreciated by gentlemen who came there with the view of putting questions to the directors in reference to the details of their business. He trusted that the board would never forget that besides possessing a large interest in the society, they were also trustees for those who had invested their money in it.

Mr. Bevan complained that the shareholders had no materials in the report or statement of accounts to guide them to anything like a sound judgment in respect to the policy of the investments made by them. He wished to know whether a report which had reached him, that the society had lent £200,000 at £6 per cent. for seven years to the Mauritius Land Credit Company, was true, and also whether they had advanced a large sum of money, which was permanently locked up, on a building speculation in Turin. It had been stated to him that before the seat of the Italian government was removed from Turin the board had committed themselves to a very large investment in that city, and he thought that in a matter of that gravity the shareholders were entitled to some information.

The Chairman did not know whether he ought to be called on to answer the question about the Mauritius Land investment, but the operation was not such as had been described by Mr. Bevan. They had entered into an operation with the Mauritius Land Company, for which they had received a good commission, and had granted certain debentures at 6 per cent. The operation, which in the opinion of the board was a very good one, would extend over a number of years, and more than that he would rather not say. (Hear, hear.) The Turin matter stood entirely on a different footing, and this company were not mixed up with any other in that respect. The Turin building matter was simply this. A concession had been brought to them long before the removal of the capital was contemplated, and the operation was considered a very good one. It was not considered likely that there would be any removal of the Italian capital till it was fixed at Rome, and the interim removal to Florence took every one by surprise. However, the operation after all was not a bad one. They intended to sell the houses as they were finished, and they had sold one already. The investment was calculated to pay at least 10 per cent., and that was the very worst they could see of it.

In answer to a further question,

The Chairman said that the whole amount invested in this speculation was £280,000, which was to be advanced at 6½ per cent., the amount being guaranteed by the municipality of Turin. As, however, they did not spend nearly so much as £280,000, the returns came out higher. It was not to be supposed that it was anything like a permanent investment of £280,000.

A Shareholder in the body of the room expressed his opinion that both the operations referred to were inexpedient, and asked for further information on them.

The Chairman stated that without the general assent of the meeting he must decline going into further details, and it was not in the interests of the company he should do so. (Cheers.)

Mr. Kimber was of opinion that the line must be drawn somewhere. He thought that it would be quite sufficient if the directors could assure them, on their honour and character, as men of business, that the operations in question were likely to turn out profitable.

The Chairman said that he had no hesitation in saying that, in the opinion of the board, the operation in question would realise at the very lowest 10 per cent. He repeated that the directors had every confidence in the securities which they held.

In reply to a question from a Shareholder,

The Chairman stated that at the present moment there was no intention on the part of the directors to make any further call upon the shareholders. They felt that the proper mode of proceeding was to issue debentures at £5 per cent., which might be paid off as they fell due, whereas if they made further calls the result would be that they would have a much larger capital to pay upon.

Mr. Black pointed out that the profit realised by the employment of the extended capital of the company was not equal proportionately to that made last year, and that as it was very important to enlarge the basis of the company by the increase of the number of shareholders, it would be desirable that the chairman should state his views as to the future prospects of the company. (Laughter.)

The motion for the adoption of the report was then put and carried unanimously.

The auditors were then re-elected, and

The Chairman, in putting the question whether there should be a half-yearly meeting, explained that it would not be for the purpose of declaring a dividend; but there would be no objection to the production of a statement of accounts. (Cheers.) Indeed, the observation of Mr. Parminter, with reference to those of December being audited and completed on the 4th of January, might be applied almost to every week in the year, so closely were they kept balanced. (Cheers.) In reference to an observation of the last speaker, he said that he was glad to be able to announce that the number of shareholders, which in March last year was 1,400, had increased to 2,400, and the board hoped that the subdivision of the property which had thus taken place would in some degree put an end to the extreme fluctuation in the value of shares, of which the directors had to complain.

Mr. Galsworthy, in returning thanks, observed that not only were the auditors quite satisfied with respect to the statement of accounts and the soundness of the investments, but it would be a matter of astonishment to the shareholders that the total of the working expenditure, after paying the directors' allowance, did not amount to more than 2 per cent. on the capital. (Cheers.) He might also explain that, although the accounts were made up to the 31st of December, and the audit was completed on the 4th of January, it did not follow that the audit had been completed in four days. On the contrary, the auditors examined all the securities before the end of the year, and only completed their audit on the 4th of January.

This being the whole of the business, a vote of thanks to the chairman concluded the proceedings.

LONDON FINANCIAL ASSOCIATION, LIMITED.

THE third half-yearly general ordinary meeting of this association was held on the 23rd January, at the Baltic (South Sea House), Threadneedle-street, Mr. John Hackblock in the chair, to receive the directors' report and to declare a dividend for the half-year ending 31st December last.

The following report was then read :—

"The directors have now to report to the shareholders the result of the operations of the association for the half-year ending 31st December, 1864. After deducting the current expenses of the half-year, and rebate of interest at the rate of 6 per cent. per annum, the directors are enabled to recommend the payment of a dividend at the rate of 5 per cent., with a bonus at the rate of 10 per cent. per annum, free of income tax; there will then remain a balance of undivided profits of £40,063 8s. 6d. to be carried forward to next half-year. The dividend and bonus together amount to £1 2s. 6d. per share on the old, and 18s. 9d. on the new shares. Henceforth the distinction between the old and new shares will cease, the same amount (£15 per share) being now paid up on each description. By the Articles of Association two directors retire annually in January; in conformity with this regulation Messrs. J. Borradaile and J. Walker go out of office, but being eligible, offer themselves for re-election. The auditors, Messrs. John Ball and Richard B. Wade, also offer themselves for re-election."

*Balance-sheet, 31st December, 1864.**Dr.*

Capital called up, viz.:—£15 per share paid on 40,000 shares	£600,000	0	
Reserve fund, viz.:—Balance at 30th June, 1864, £81,500 ; interest thereon six months, at 5 per cent. £2,037. 10s.	83,537	10	
Liabilities—Comprising amounts due on deposit receipts, interest thereon, and current accounts	697,479	9	
Profit and loss—As per annexed statement	92,624	15	
	£1,473,641	14	1

Gross profits, viz.:—Balance of undivided profits brought forward from 30th June, 1864, £21,408. 18s. 9d.; amount for half-year ending 31st December, 1864, £84,039. 12s. 5d.	£105,448	11	2
Dividend at the rate of £5 per cent. per annum on paid-up capital £13,750 ; bonus, at the rate of £10 per cent. per annum, on paid-up capital £27,500	£41,250	0	0
Income tax	1,726	8	0
Balance, being undivided profits, carried to new account	40,063	8	6
	£83,039	16	6
Balance brought down	£92,624	15	9
Deduct rebate of interest on loans not due, taken at 6 per cent. per annum	9,584	19	3
	£83,039	16	6
Balance of undivided profit carried forward to new account	£40,063	8	6

The Chairman, in moving the adoption of the report and accounts, observed that the report spoke so clearly for itself that it required no comment from him, and the same might be said of the accounts and balance-sheet ; but he wished to offer some explanatory remarks. The more they read the report the better they would like it. If they turned to the credit side of the balance-sheet they would see in the assets,

loans, securities, and current accounts, £1,406,492, and in reference to this, he would repeat what he had said at the last meeting, that these were not their own securities, but they were lodged, the great bulk of them, with the company as collaterals; consequently so long as they had a good margin, over and above their value, the precise amount or value did not interest the shareholders so long as they were well covered. They held on security but a very small portion of their own property, and of that a few shares were taken at the market price of the year. The debentures and bonds which had come to them in the shape of business were all valued at very low rates, and would bear a very good profit. The profit on the half-year had been £84,039; that was by far the best year they had had, and this profit had been made up without any commissions for the introduction of a single new company, but from legitimate business, of a sound and unquestionable character. This, with the balance brought forward from the previous half-year, £21,408, enabled them, after paying current expenses, providing for a dividend at the rate of 5 per cent. per annum, and a bonus at the rate of 10 per cent., and making full allowance for the rebate, to carry forward a balance of £40,063 undivided profit to the credit of the new account, being about £18,000 more than on the previous occasion. The great object the directors had in carrying forward this balance was not merely to show that the whole of their business was conducted with as little speculation as possible, but to give confidence to their depositors and the public. They had not lost a single shilling, nor was it probable—he would not say it was impossible—they should do so, but if such a misfortune should occur, they would have in this amount so carried on the means of providing for it, and of equalising the dividend. For himself he should like to see the balance carried forward, augmented considerably beyond its present amount, so as to have one or two dividends in advance—(hear), which would give increased stability to the company and advance its welfare. The reserve fund had the interest carried to it as before, and would be increased by that amount.

A Shareholder inquired whether it was proposed to carry any portion of the £40,000 surplus to the reserve fund. He thought the reserve should be made up to £100,000, and by transferring £16,200 of the surplus to that account it would be made up to that sum.

The Chairman—The understanding when the new shares were issued was, that this £80,000 should go to the reserve, which should afterwards increase by the addition of its own interest until it reached £100,000. He thought it was sound policy on the part of the directors to carry forward the £40,000 for the purposes he had stated, and he should be happy to see it go further.

Mr. Bevan said it must be exceedingly gratifying to the shareholders to hear that they had not made one shilling bad debts. There had been rumours of extensive Greek operations in the company's shares. He trusted that the Grecian Phalanx, which was invented to oppose an enemy, would not now be used against friends.

Mr. J. E. C. Koch, a director, explained that the transactions referred to were merely transactions in which money had been advanced by members of the Stock Exchange on the security of shares, the company itself having no power to deal with shares in that way.

The Chairman said that he believed very few shares indeed were under loan, and of those that were the company had not the slightest interest in

them. There was no truth in the statement which had been made that losses had been sustained through an individual whose name had been mentioned in reference to these transactions.

The motion for adopting the report was then carried, and a dividend and bonus at the rate of 15 per cent. were declared payable on and after the 24th instant, free of income tax (being a dividend at the rate of 5 per cent. per annum, and a bonus at the rate of 10 per cent.)

The retiring directors and auditors were re-elected, and the sum payable to the auditors was increased to £100 each.

A vote of thanks to the chairman and directors closed the proceedings.

FINANCIAL CORPORATION, LIMITED.

THE second ordinary general meeting of the shareholders of this company was held on the 23rd January, at the London Tavern, for the purpose of receiving the report of the directors and other business. J. Goodson, Esq. the chairman of the company, presided.

The following report was taken as read :—

“The directors have now the satisfaction of placing in the hands of the proprietors the accounts of the corporation, made up to the 31st December last, and duly audited. The gross profits realised during the period the corporation has carried on business (about ten months) is £31,836. 9s. 9d. After deducting the *ad interim* dividend paid in July last, expenses of management as far as ascertained, 20 per cent. of the preliminary expenses, and the rebate on current bills, &c., the net surplus amounts to £19,128. 5s. 10d. The directors, having regard to the fact that many of the transactions in respect of which profits are brought into the present account are not yet matured, and that some of the securities held have been much depreciated by the present pressure on the money market, desire to retain a large proportion of the above sum in hand, and they trust the proprietors will cheerfully concur in this precautionary measure, with a view to the future security of the undertaking. The following apportionment of the net surplus is, therefore, proposed, viz. :—£4,568. 3s. 10d. for a dividend for the past half-year, at the rate of 10 per cent. per annum on the paid-up capital; £10,000 to the formation of a reserve fund, and the balance of £4,560. 2s. to be carried forward to the next account. The directors have received various communications from the proprietors regarding the depressed state of the shares of the corporation upon the market, and suggesting various remedies. They desire to state once for all that the board gave its undertaking to the committee of the Stock Exchange not to traffic in or make advances upon its own shares; and that undertaking has been rigorously adhered to. Since the 31st of December a considerable portion of the calls then in arrear have been paid.”

The Chairman, in moving the adoption of the report and accounts, said everything was pretty clearly expressed in the accounts, and he believed every figure in the balance-sheet was honestly explained. The profits for the last ten months had been £31,836, and although some of the transactions had not been matured, they were justified in declaring the dividend which he would presently submit to them. Of course in an institution of that kind time was necessary for the different transactions to mature, and therefore they could not say at once how they would end, but they had no reason to suppose they would not be satisfied. In declaring a dividend

of 10 per cent. they were aware they had given them an interim dividend, and that absorbed altogether £7,000. Acting with that notion of prudence which ought to regulate every well conducted establishment, they had reserved an amount equal to 75 per cent. on the profits for the purpose of meeting any contingency that might possibly arise. At the same time no contingency had arisen, nor did they expect any. But to be fortified in their position they had taken the opinion of the two able auditors, and their strict and unprejudiced opinion was in favour of the course proposed by the directors. One remark he would make about jobbing in shares. The board had been particularly desirous of having everything done before the world, and the Stock Exchange had had the assurance that nothing of that sort of thing, dealing in shares, would be carried on by the directors or by any one acquainted with them. It was not his custom to carry on trade in that sort of way; he liked everything "above board," and he never wished to bolster up anything for his own profit or the profits of those with whom he was connected. They coveted inquiry, and he should be glad to answer any question that would be asked. He begged to move the adoption of the report.

Mr. J. D. Thompson seconded the motion.

Mr. Preston asked, supposing the statement made by the chairman to be correct, whether there was no risk as to the future on present transactions, were they not carrying too large an amount to the reserve fund—three-fourths—seeing that their shares were unfortunately at a great discount in the market.

Mr. Woolf asked if the directors had advanced the large sum of £47,000 on one security—a security which would be locked up for a very long time.

Mr. Stovin complained that the cost of management was excessive. The cost of management of the International was stated to be only 2 per cent. on the paid-up capital, whilst theirs seemed to amount to 20 per cent. Again, how far were they justified in declaring a dividend at all? The point was this, was there any reason or ground why that rider should be put to the accounts by the auditors? It appeared to him a doubtful question, and one probably that could be answered by the directors, because it had thrown a certain amount of suspicion on their transactions, and depreciated their property in the market. With respect to the promoters' fees, he wanted to know in what way that amount (£7,500) was to be paid, and if the whole of it came out of the allotment fees as stated in the articles of association, or if any certain portion of it had been paid, and if it were to be spread over a certain number of years? In article 89 the qualification of a director was the holding five shares; he wished to ask how this was, for it would be satisfactory to the shareholders to know they held a large stock and had an interest in the affairs of the company.

Mr. Johnson asked how much dividend properly belonged to the past six months?

Mr. Vizer asked if there were any larger amounts standing over, seeing the largeness of the reserve, and if so, what were they?

Mr. Makins asked on what basis "other securities," in the item £368,147 were ascertained?

Mr. Mackney wished to know what position they were in respecting the Graysbrook Iron Company?

Mr. Cornelius Walford said, in reply, that the theory which his colleagues and himself had laid down for the government of the company was that

their shareholders should have full and accurate information upon all necessary points, but having laid down that theory, the question arose how far questions could be asked which affected the confidence between their clients and the company. He was present at a meeting of a large finance company recently, and he was astonished to hear the question put at that meeting—questions which the directors would break faith in answering. The first gentleman spoke of the large appropriation to the reserve, but that arose entirely from a feeling of care, for up to this period the corporation had made no loss, if he excepted £280 in compromising one transaction. When he said the company made no loss, he spoke as the report spoke on this point. They commenced business ten months ago, but they had been only six months in active business, and they entered it in a brilliant state of the money market, with a capital ample to meet any emergency that might arise. But changes had taken place in the money market; there had been an almost unparalleled depreciation in some classes of security, and they not being the owners of the securities but taking them collaterally to meet the taking up of the acceptances not in their possession, they were not in a position to go into the market to realise. With one exception, in the case of a sum of £6,000, they were not in a position to realise on the securities, and they must hold a sufficient amount to meet any contingency. As to the £47,000 which one gentleman said was likely to be locked up, he was not aware of any such transaction. They had advanced, in one instance, £50,000, and, with renewals and commission, about £56,000 was due on the transaction; but they were secured by a company and guaranteed by two individuals, one of whom was represented to be worth a quarter of a million of money, and he took it for granted the whole of the money would be forthcoming when the bills became due. With respect to Mr. Stovin's questions, deducting the directors' remuneration and other items, their expenses would not be more than 3½ per cent. on the paid-up capital at the present time; and it would be very much less than that on the paid-up capital they would have from time to time. As to the question of dividend, it was for them to decide. The directors had made a recommendation of 10 per cent., and it was endorsed by the auditors. They had got 12½ per cent. over the average period on the paid-up capital, which was not a very bad case, and they should leave the directors the balance of profit to deal with if an emergency should arise. As to the preliminary expenses, £7,069, the whole would be written off in five instead of ten years. As to the holding of the directors he was glad to say they held 4,000 shares, besides a large amount of shares standing in the names of their families and friends. The amount absorbed by the present dividend was £4,568 for this half-year, and the previous dividend amounted to £2,430, so that £7,000 had been provided for dividend purposes. As to the question of the value of the securities, they were held with such a guarantee that no loss would accrue. They had not been called upon to realise them. As to the Graysbrook Iron Company, he was bound to plead ignorance; he never heard of the company before (Hear, hear.)

The motion for the adoption of the report was then unanimously adopted, and a dividend at the rate of 10 per cent. per annum for the half-year was declared. The retiring auditors, Messrs. Quilter and Morgan were re-elected; and thanks having been voted to the chairman, directors, and Mr. Walford, the proceedings were brought to a close.

IMPERIAL MERCANTILE CREDIT COMPANY.

The first ordinary general meeting of the shareholders of this company was held on the 23rd January, at the London Tavern; Mr. John Chapman in the chair.

The Secretary (Mr. Winterbottom) having read the notice convening the meeting, then read the following report and statement of accounts:—

"From the statement of accounts which the directors have now the pleasure of submitting to the shareholders, comprising the operations of the united companies from the 1st June to the 31st December last, it will be seen that after payment of the current expenses, allowing for rebate of interest on bills and loans not due, and making ample provision for all contingencies, there remains a balance of net profit amounting to £99,217. 9s. The directors recommend this sum to be appropriated as follows:—Dividend (free of income tax) of 10s. per share, £50,000; income tax, £1,250; balance carried forward to next half-year, £47,967. 9s. The accounts will in future be made up half-yearly, viz., to 30th June and 31st December. In accordance with the articles of association the directors appointed C. J. H. Allen, Esq., and John Young, Esq., as auditors, until the first ordinary meeting of proprietors, on whom the selection of auditors will then devolve. Mr. Allen and Mr. Young are eligible for re-election."

Balance-sheet, 31st day of December, 1864.

The Chairman, in moving the adoption of the report, said that the directors met the proprietors with great pleasure upon the present occasion and hoped to do so for many years. This was the first meeting since the amalgamation of the Mercantile and Imperial Financial Association, and what had passed since the amalgamation was completed must, he thought, convince every one present of the wisdom of the policy by which the junction was brought about. It gave them increased strength, as far as regarded capital, which was certainly found of the greatest importance during the crisis, besides which it conferred upon the company the combined energy and talent of two gentlemen as managers whose names were well known, and whose reputation stood as high as that of any gentleman in the City of London. Neither he nor the directors were sorry that they had passed through what was something of an ordeal, because it had taught them lessons which it was very important to remember. A great caution like this was subject from time to time to financial changes, and even caution and prudence was necessary in the first place to secure their position. He was happy to say that during that period they had, to use a nautical expression, rode out the gale most comfortably, and had not the slightest apprehension with reference to the stability of the institution at any moment. Not only that, but when a great deal was said with respect to the position of other companies, they were not in the least degree moved but continued to do, as they had done from the first, a most satisfactory and legitimate business. As to its being profitable, he trusted that a glance at the balance-sheet was all that was required to satisfy them upon that point. (Cheers.) There was an old saying that "good wine needs no bush," and the figures at any rate ought to speak for themselves. In looking at the statement of accounts he must observe on one circumstance which was a matter of pride and gratification to the board, as showing the confidence which the public placed in the undertaking, namely, the very large amount of deposits that had been placed in their hands. (Cheers.) That was alike a tribute to the solidity of the concern and, he might venture to say, to the prudence of those who managed it. He must say that it was a circumstance of which he was extremely proud, and he need not tell the shareholders that if they continued—as he had not the slightest doubt they would—to enjoy the confidence of the public, it would not only indicate the stability of their position, but would act most favourably with

respect to their future profits. (Cheers.) With respect to the statement of their liabilities he might say at once that the board thought it desirable that they should be as explicit, and go as much into detail, as possible; and, therefore, they included every possible contingency, however remote, in order that they might see their exact position. If they had only followed the usual course, their debit account would appear much less. This company, from its peculiar connections, was very much engaged in large financial operations, which were conducted by eminent firms, both in this and various foreign countries throughout Europe. Those firms were of the highest possible order and respectability, and the connections the company had thus formed would materially add to its character and increase its profits. (Hear, hear.) The board proposed now to declare a dividend of 10s. per share, and to carry forward a considerable sum. Had this been the closing meeting of the financial year, they should have submitted to the shareholders the propriety of carrying a great part of the surplus to the rest which it was proposed to establish, but as it was not the end of the financial year they would carry it forward to Midsummer, when he trusted that they would not only be able to declare a good dividend, but to found a substantial rest, which was essential, and would add to the stability of the concern. If they went on doing a safe business, and enlarging their connections, he did not see why, in the course of a few years, they should not, as another company had done, come before the shareholders and say—"Gentlemen, we have now established a sufficiently large reserve fund, and shall be able to devote ourselves more exclusively to the consideration of the immediate interests of the proprietors. Let us rest and be thankful, and do something in the way of capitalising the bonus and adding to the value of the shares." (Cheers.) He could only say in addition, how much they were satisfied and what comfort they had derived from the fact of two such excellent managers being entrusted with the conduct of the business, and whose combined efforts had proved so successful. (Hear, hear.) He assured the meeting that the directors themselves had given their best attention to the interests of the shareholders, and were determined never to enter into any transactions that could reflect the slightest discredit upon them as honourable commercial men, and hoped never to engage in anything which would meet the disapprobation of the shareholders. He now begged to move the adoption of the report. (Cheers.)

Mr. Alderman Dakin seconded the resolution, which was carried unanimously.

The Chairman then announced a dividend of 10s. per share, payable on the 30th inst.

The next business was the election of auditors, the chairman stating that the board, in the exercise of the discretionary powers vested in them, had appointed Mr. Allen, the talented secretary of the Bank of London, and Mr. J. Young, of the eminent firm of Coleman, Turquand, and Young, who had discharged their duties in the most satisfactory manner. The board now placed the matter in the hands of the shareholders, in whose peculiar province the choice of auditors lay.

On the motion of Mr. Bevan, seconded by Mr. Field, Mr. Allen and Mr. Young were re-elected auditors, and their remuneration fixed at 100 guineas each.

The Chairman, in reply to a question from Mr. Field, stated that the bills which the company had in their possession were drawn upon first-

rate merchants and bankers, and were such as would, to use a common expression, make the mouth of a discount-house water. (Laughter.) With respect to their own acceptances, they were only in connection with first-rate foreign merchants and financiers. They had no bills of contractors whatever ; but their bills were all drawn by foreign bankers.

Mr. Barker stated that the acceptances of the company were chiefly on remittances, and by bankers here to houses of equal standing abroad.

The Chairman stated that all these matters had been carefully examined by the auditors, and he hoped the statement he had made did not require confirmation. (Cheers.)

A Shareholder inquired whether the directors contemplated making a call.

The Chairman—We not only never contemplated it, but never dreamt of such a thing.

On the motion of Mr. Jackson, M.P., seconded by a Shareholder, a cordial vote of thanks was given to the chairman and board of directors, for the admirable way in which they had managed the affairs of the company.

The Chairman having returned thanks,

Mr. Field proposed a vote of thanks to the managers, secretary, and staff, which, having been seconded, was carried by acclamation.

Mr. Barker, in responding, observed that it was gratifying to see their exertions recognised and appreciated by the shareholders, and the present compliment would be a stimulus to them to exert themselves still more, and to continue to merit their approbation. (Cheers.)

The proceedings then terminated.

ALLIANCE BANK, LIMITED.

THE ordinary general meeting of proprietors was held on the 24th January, at the London Tavern ; J. N. Daniell, Esq., in the chair.

The excitement occasioned by the large losses this bank has sustained during the past half-year of financial pressure was evidenced by an extraordinarily full attendance of shareholders, the large banqueting room of the tavern being crowded both in the area and the galleries. On the entrance of the chairman and directors some attempts at a hostile demonstration were made from a small section of the shareholders at one corner of the room, which were immediately replied to by hearty cheers from the large majority.

The following report and accounts were then read :—

“The directors beg to submit to the shareholders a statement of the business of the bank for the half-year ending the 31st December last. The gross profits, including £6,580. 14s. 9d. brought forward from the previous half-year, amount to £185,896. 17s. 8d., which, after deducting current expenses, interest on current and deposit accounts, and rebate on bills discounted but not yet due, leaves a net balance of £66,731. 19s. 9d. The numerous and extensive failures of mercantile houses during the last three months of the past year have pressed with special severity on this company, and the directors regret that the losses to be provided for on accounts now in liquidation will absorb the profits for the half-year, and a further sum of £61,737. 11s. 5d., which has been carried from the reserve fund to the profit and loss account. In addition to these losses, the directors

think it their duty to state that there are transactions not yet matured in connection with a heavy account, which may possibly entail a large additional loss. The bank, however, holds securities, which it is hoped may be realised favourably; but whatever loss may arise may be dealt with separately, and written off the reserve fund. Under these circumstances the declaration of a dividend cannot be recommended. It is satisfactory to the directors to be able to state that after a most careful scrutiny by themselves and the auditors they have every reason to believe that the current business of the bank is in a sound condition, and they look forward with confidence to the future prosperity of the institution. Of the 10,000 shares authorised by the extraordinary meeting in August last to be issued at £20 per share premium, 9,766 have been applied for and allotted, and the amount of premium received thereon has, in accordance with the resolutions passed at that meeting, been added to the reserve fund. The directors have to record with regret the death of Mr. De Castro, and the resignation of Mr. G. P. Thompson, who has left England for India; thus causing two vacancies in the direction."

Balance-sheet, 31st December, 1864.

<i>Dr.</i>			
Capital paid up, viz., £25 per share, on 30,000 shares	£750,000,		
less calls in arrear £3,025—£746,975; £10 per share on 9,776, shares 1864 issue, £97,760; less calls in arrear			
£2,175—£95,485	£842,460 0 0
Amount due to customers on current and deposit accounts, circular notes, &c., £2,331,325. 18s. 7d.; bills payable			
£3,716,750. 6s. 9d.	6,048,076 5 4
Reserve fund, 30th June, 1864, £84,000; premium on 9,776 shares, 1864 issue, £195,320, less arrears £9,325—£185,995—£269,995; less amount transferred to profit and loss

----------------------	-----	-----	-----	-----	-----	-----	-------------------

The Chairman, in moving that the report be adopted, said—Gentlemen, the auspices under which we are assembled here to-day contrast most painfully with those under which we have met you on all previous occasions when the position of the bank has been as satisfactory as it is now the reverse. There can be no doubt that the severe pressure upon financial affairs which marked the latter portion of the past year, and the consequent derangement of all commercial transactions, have resulted in great losses generally, but I regret to say that I hardly know a case in which any banking establishment has had to deplore such heavy losses as we have ourselves. In reviewing and looking over our several accounts and transactions there are many which, with the light we have now, we should say we ought never to have entertained—(hear, hear)—but at the same time there are very many others which have unfortunately fallen through which in ordinary times would have been good and valuable accounts, and which in extraordinary times have fallen through only in consequence of the severe pressure which has been operating. I do not want to take away from any parties the responsibility which properly attaches to them whether directors or others, who have been engaged in the management of the concern. If the management has been wrong in anything, it has, I think, been in the natural eagerness to increase the business of a young company in too great a degree. But we have placed before you the account as naked as possible, and in a form which not only will bear the test of truth, but which, if anything, carries upon them an appearance of loss greater than we hope and believe has been actually incurred. I do not mean to say that our losses have been calculated with absolute certainty but every account upon which there is the slightest chance of loss, has been carefully gone through, and you are here made as perfectly acquainted with the circumstances of the company as we are ourselves, without any reservation whatever on the part of the directors. When, in September

our shares fell so low in consequence of reports that were circulated of our having sustained heavy losses, whereas at that time we had sustained no losses whatever beyond what you knew of at our last meeting, we were obliged to contract our business, the effect of which was, as I believe, to weigh very heavily on many of our customers, and to precipitate failures which, under other circumstances, might have been avoided, and thus possibly our losses may have been increased. It will be observed that we have made an alteration in the mode of drawing out the accounts, and instead of lumping together customers' accounts and bills payable as heretofore, we have divided them, giving separately the items due to customers on deposit and current accounts, circular notes, &c., £2,331,325, and bills payable £3,716,750, making together £6,048,076. The bills payable look a very large amount, but I am happy to say that it is entirely covered, and I may add that these bills are a great source of prosperity to the bank. They are for the most part backed by other banks of large capital, and on no occasion have we lost one farthing by them. (Cheers.) It is true we might, if we pleased, reduce the amount, but if we did so we should reduce our profits in proportion. There is one paragraph in the report to which I would call attention, and which, to those who feel deeply interested in the prosperity of the bank, may occasion some doubt and some fear as to the losses which we may have yet to meet. (Hear, hear.) That paragraph was not framed without considerable difficulty, it being our object not to excite false hopes on the one hand, or false fears on the other. As it appears before you, certainly the fears appear to predominate, but in my opinion the hopes ought to predominate. (Hear, hear.) The paragraph I refer to is that "in addition to these losses the directors think it their duty to state that there are transactions not yet matured in connection with a heavy account, which may possibly entail a large additional loss. The bank, however, holds securities which it is hoped may be realised favourably; but whatever loss may arise will be dealt with separately and written off the reserve fund." Now, it would have been the wish of the directors, if they could have felt that they could have done so properly, to have fixed an amount to these losses as the maximum to which they could reach. (Hear.) But on full consideration of the matter they felt that, in the present state of their information, they might, if they attempted to do so, put down on the one hand a sum far beyond what the realisation would ultimately amount to; or on the other, a sum far below what would ultimately be realised. There are, however, very large securities held against this account, which we have good reason to believe will realise favourably. In the result, perhaps, we may be involved in a loss of £20,000 or of £40,000, or perhaps the loss may be nothing.

A Shareholder.—Would £40,000 be the utmost?

The Chairman.—Really I cannot tell. All I can say is that I should be happy to buy it at that sum. It may be £20,000, it may be £40,000, or it may be £50,000, or it may be nothing. (Some discontent being here exhibited at the vagueness of the reply, the Chairman proceeded)—Mr. Quilter, the accountant, is in the room; he has gone through the account and the securities; perhaps he will give his opinion upon the matter, which will be far more satisfactory than mine. (Cheers.)

Mr. Quilter.—I feel great difficulty in giving anything like an opinion that can be safely relied upon; but after carefully weighing the probabilities as to the realisation of the securities, I am of opinion that under

no circumstances can the loss exceed £50,000 or £60,000. That I regard as the maximum. (Hear.) In my judgment, however, it is quite probable that there will not be the loss of a single penny from the account in question. (Cheers.)

The Chairman continued—I hope that explanation will be considered satisfactory. I just now referred to the evil consequences which ensued to the bank by the unfounded reports which were circulated of losses, and by exaggerated statements of our liabilities and engagements which were circulated during the autumn. Upon this point I repeat, that when the premium upon the shares of the bank fell down almost to nothing, we have experienced no loss at all but that which was known to the shareholders at the previous meeting as resulting from the failure of one party. Then the directors have been accused of making large advances on cotton and in assisting cotton speculation, whereas, from the beginning, we have studiously avoided touching a class of business which we considered in the highest degree speculative, and the result is that we have not lost a single shilling by cotton. (Cheers.) I do not desire to make things appear better than they are, but I do wish to remove false impressions which the rumour so plentifully circulated amongst us may have given rise to. We have sustained some losses no doubt, but still this bank stands from this time in a position that is not unenviable. We are in possession of a large capital. We have a reserve fund, which, after meeting all losses that can possibly come upon us, I believe, will still be over £200,000; and we have a very large number of exceedingly good current accounts, and in short we stand in as good a position in all respects as we did six months ago when our shares were so highly and, as I think, somewhat unduly elevated. (Hear, hear.) Then as to the direction, we have lost a very able director by the death of Mr. De Castro, and another by the departure of Mr. Robinson who has gone to India. The London board is therefore much reduced. It is our wish and intention to increase and re-organise the board; and in doing so, we desire to act in accordance with the wishes of the shareholders. (Hear, hear.) We feel that, however unwittingly, we have involved you under our management with heavy losses, and we are anxious that you yourselves should take any part you may think proper in assisting us to re-organise the board, and making it satisfactory to yourselves. We have not thought it right even to replace the manager who has gone abroad, considering it better to leave the whole thing a *tabula rasa* for you to deal with as you please, and we shall be happy to confer with any persons you may appoint with that view.

Mr. Morris, Liverpool director, seconded the motion.

A Shareholder who addressed the meeting in a very low voice, spoke of some conversation that took place in his presence on the Great Western Railway Company last September, in the course of which it was stated that the Alliance had lost very largely, and in one case to the extent of £160,000, by foreign business, and expressed his wonder that losses which were so notorious should not have been known to the directors.

The Chairman said that in point of fact no losses had at that time arisen.

Mr. Eagle felt dissatisfied at the statement of the chairman, which he said failed to give any explanation of the manner in which those enormous losses had been incurred. He wished to ask what amount of losses had been occasioned by advances upon the shares of the bank? What proportion of its losses had arisen from the London board, and what proportion

from the Liverpool board? (Hear.) Whether any large losses had been incurred by advances on securities not previously examined by the solicitor of the company? It was reported that there had been large advances made in that way, and that considerable losses had resulted. As it was impossible that they could have made a loss of £128,000 on purely mercantile bills, perhaps the chairman would inform the meeting what were the securities by which they had sustained such heavy loss. (Hear.)

The Chairman was glad these questions had been asked, and was very happy to be enabled to give replies which, though they might not be satisfactory—for it was scarcely possible to be satisfied when they had lost money—must, he thought, be deemed sufficient in a business point of view. With regard to the first question—what amount of losses had been occasioned by advances upon shares of the bank—his answer was, none whatever. (Cheers.) Neither had they sustained losses upon securities of the character to which the hon. proprietor had adverted. Their losses had arisen principally upon mercantile bills. They had lost fifty or sixty of their constituents, who had failed during the financial pressure of the latter part of the last half-year, and it was on their accounts that the bulk of the losses had ensued. This was in reference to the London business. He trusted that this explanation would satisfy the shareholders that no irregularity had been committed by the directors in the conduct of the business of the bank. With regard to the question of making advances upon shares, he quite admitted that such transactions were bad; but when shares were offered merely as collateral security, which sometimes it was hardly possible to prevent, he thought it would not be doing justice to the property of the shareholders to refuse them. In this way they were accepted by other banks, and he saw no reason why they should not do the same. Of course, it was always necessary to be certain that the advances were otherwise well covered, and he was happy to say that on advances so made the bank had sustained no loss whatever. (Hear.)

Mr. Morris (Liverpool director) added that as regarded Liverpool there had been no losses upon advances on shares. There had been an exceptional loss, to a heavy amount, upon one single account in Liverpool, arising from misplaced confidence, but for which the Liverpool business would have shown a profit of £18,000, or more than 10 per cent. upon the capital in Liverpool; and he might state further, that up to the 30th June of last year Liverpool had contributed a moiety of the dividend paid to the shareholders and £11,000 to the reserve fund. And withdrawing that £11,000, the Liverpool establishment would have left off this year with its capital perfectly intact, but without paying a dividend. But the bank premises which had cost the company £18,000, the directors had been offered £25,000 for, so that in this item alone they could show a profit of £7,000. (Hear, hear.)

Mr. Conybeare deprecated the hostility which a small section of the shareholders had manifested towards the directors at the commencement of the proceedings, and suggested that the board should examine the list, and select from the proprietary some of the largest holders and the most influential persons to add to the number of the directors, thus giving confidence in the institution to the public out of doors. It must be borne in mind that this was not the first bank that had incurred heavy losses arising from the competition for business during a very critical period, and it was his opinion that this check to their progress while they were yet young would ultimately conduce to their advantage. (Hear, hear.)

He did not agree with a previous speaker, that it was at all extraordinary that so large a loss should have occurred from mercantile bills. He thought, however, that the board were to blame in not stating in the report a maximum sum as the loss which might in the worst case result from the heavy account alluded to in the paragraph quoted by the chairman, nor could he help thinking that the directors had been guilty of considerable imprudence in their dealings with the company through whom that loss had arisen. For some time past the paper of that company had been looked upon with suspicion, and it would have been better if the Alliance had refused to have anything to do with it. At all events he hoped that they had made a large commission on the business. There were all the elements of sound and profitable business, and he believed notwithstanding its present unfortunate position, it would ten years hence be one of the largest banks in the country that had consolidated its business upon nothing.

Mr. F. Clifford thought that there were two points which especially required explanation. The first was as to the issue of the new shares, and the circumstances under which that issue was made. (Cheers.) He held that the issue of those shares at the time was a cruel injustice to the shareholders. (Hear, hear.) It might be said that up to that period they had sustained no losses, and that the premium paid upon the new shares was perfectly fair; but that, if true, was the greatest possible condemnation that could be passed upon the directors. (Cheers.) Because if the losses had not then actually occurred, they must have been accruing, and the board must have been strangely negligent of their duty not to have known of it. The shares were, in fact, issued to the old shareholders at a £20 premium, when it was quite clear it ought to have been known to the directors, if it was not, that they were not worth half that amount. Another point requiring explanation had reference to the absence of the manager. Now he (Mr. Clifford) by no means wished to attack an absent man, but he was quite sure that even the friends of Mr. Thompson must regret that he was not present to face the meeting and explain the circumstances under which these heavy losses had arisen under his management. (Cheers.) He wished to ask whether it was true, as had been alleged, that Mr. Thompson had gone out to India as the servant of another bank, with the concurrence, support, and even at the instance of the chairman of the Alliance Bank?

The Chairman replied that the losses the bank had sustained arose subsequently to the issue of the new shares, and from the commercial crisis and the difficulties which weighed upon commercial affairs generally during the past autumn. At the time the shares were issued the bank had sustained no loss, and was in all respects sound. Whether it was politic to put so high a premium upon those shares as £20 was another question which it was for the shareholders to judge of at the time. But whether or not that premium was now the property of the shareholders, and so much remained of it was part of the assets of the bank. When the proposal was made to the shareholders to rate them at £20 premium the original shares stood at double that premium, and it was a question for the shareholders themselves to determine whether they would take them or not. Undoubtedly Mr. Thompson was one of the managers during the unfortunate period embraced in the report, and although the chief responsibility rested on him, the directors were also in their degree liable. It was not, however, at his (the chairman's) instance that Mr. Thompson went

India. It was true he was the chairman of the bank for which that gentleman had gone out; but the first he knew of the intention to appoint him was from the manager of that bank and Mr. Thompson himself, and seeing that he was peculiarly well qualified for the class of business he would have to manage in India, and that if he remained he was not likely, after what had occurred, to be long retained in his position at the Alliance, he did not think it right to oppose the appointment. The great fault of Mr. Thompson was too great an eagerness to do business, but to that temptation he would not be exposed in his new position.

A Shareholder—But why did he not remain to attend the present meeting? (Hear, hear.)

The Chairman had certainly not wished him to go away, although he did not see any great advantage that could have resulted from his being present; but the fact was, that had he not gone out when he did, he would in all probability have lost the appointment.

Mr. Glanville drew attention to an error of £200 in the accounts, which, he contended, vitiated the entire statement.

A Director explained that the error was in the printing; the additions were all correct.

A Shareholder urged that where there was one error there might be many, and recommended that the accounts should be referred back to the board for revision. He further called for details of the various items, and especially for particulars of the large item of £3,400,000 for bills of exchange, loans to customers, and past-due bills. In the colony which he came from, in order to prevent the gigantic swindling that had been there practised in connection with joint-stock companies, minute details of such items were required, and he thought they should be here. He wanted to know what amount of money had been advanced to shareholders, upon what securities, and what proportions of such advances had been recovered. He had been told that very large advances had been made to Liverpool shareholders to aid them in carrying on cotton speculations. Was that the case?

Mr. Morris—Not to the extent of one shilling. (Cheers.)

Mr. Keston (Director)—In Liverpool we are in the midst of gigantic cotton speculations, but it has been our great object to steer clear of them altogether, and we have been successful in doing so. (Cheers.) We have not made any advances on shares in Liverpool.

A Liverpool Shareholder said that he knew of his own knowledge that the Liverpool business of the bank had been properly conducted.

The Shareholder who had recommended the sending back of the balance-sheet for revision tendered an amendment to that effect, and proposing that the meeting should be adjourned to receive a revised statement of accounts; but the amendment was not seconded.

Mr. Patterson said that every fair question ought to be fully and fairly answered by the board; but unfair questions did not deserve to be answered. (Hear, hear.) They had been asked the amount of the bills outstanding. As stated in the report, it was £3,716,000, the whole of which was fully covered. (Hear, hear.) The Alliance were bankers for a number of foreign institutions, which had the power to draw upon the bank, but only against cover which the directors believed to be satisfactory. Thus, if the Bank of Hindustan, for instance, drew to the extent of £200,000 upon the Alliance, it must send at the same time a draft for £200,000 upon the Union, the London Joint Stock, or some other well-

known bank here, before their bills were accepted. It was only when they had these drafts in hand that the acceptance of the bank was given and it was but right to add that upon such bills they had never lost one farthing, or were ever likely to lose anything, while upon the other hand they realised a very good commission upon the amount of the business done. (Hear, hear.) Some of these foreign banks had an open credit which they were bound to put right twice a year; and should the Bank of Mauritius, for instance, overdraw for a certain time, and for an amount for which they were perfectly good, they were bound to send cover of some kind which should be held satisfactory, every six months. If, therefore, there was any part of the business of the bank which was safe, it was this. The directors were quite ready to go through the whole of the affairs of the bank, and to explain, not only that which was good, but that which was bad. (Hear, hear.) When they last met, it was perfectly well known that a heavy loss had been incurred through one particular customer, and when he told them that the Frankenheim loss, and the loss in Liverpool which had been alluded to, amounted to one-third of the whole of the losses which they had suffered, they would scarcely be inclined to say that the directors had been so very negligent, or had done so very badly. (Hear, hear.) He was quite prepared to go into the matter, and explain how the losses had arisen. (Hear, hear.) They had three descriptions of business—viz., discounting, advances on loans, and credits. It was in the first branch that almost the whole of their losses occurred, and yet when they were told the rule upon which that kind of business was conducted, they would, he thought, admit that it was sound. That rule was, that no bill should be discounted that had not upon it two good names. It was clear that in this department the directors must be very much under the guidance of the manager. When a bill was brought up to the directors the manager was questioned as to the parties whose names appeared upon it, and he explained according to the results of the inquiries he had been enabled to make. If the explanation was considered sufficient the bill was passed, if not it was refused. He mentioned this to show the difficulty under which a young bank seeking business must necessarily labour. Such a bank was generally sought out by young customers, who were not always so strong as older houses; but it was to be remembered that it was of young customers that the oldest and most profitable banking establishments had made up their business. (Hear.) The Barings and the Rothschilds had originally made themselves in that way. (Hear.) The total of the losses from the sources he had mentioned might amount to £80,000; but in estimating these losses, the directors, after calculating them as accurately and as liberally as possible, had, in order to be far above rather than below the mark, put on 20 per cent. (Hear, hear.) Some might not be so sanguine perhaps as he was, but he entertained a very confident hope that the most profitable item in the next six months would be this bad debts account, and that a very large return would be obtained from it. (Cheers.) A word as to the vague account referred to in the report, and which had been already commented upon. Against that account the bank held securities to a considerable amount. At first the directors had made up their minds to write down the probable loss from that account at £50,000. The total amount of the debt was £160,000, but they held securities over that sum to a very large extent. (Cheers.) (A Shareholder—"To what extent?") They held securities of one kind or another against that debt to the amount of £450,000. (Cheers.) Of these,

£103,000, they had good reason to believe, after making every inquiry, would be paid in full. (Hear, hear.) In their estimate, however, the directors had taken the realisation at only 10s. in the pound. Another batch of securities which they were informed by some competent persons would realise 12s. 6d. in the pound, and by others 20s. in the pound, they had also taken at 10s. This would bring the amount up to £120,000, and in addition to these they had a mortgage on fifty acres of property in the immediate neighbourhood of London, worth at least £12,000. Taking, therefore, the character of a public company or railway company as nothing, they had in the securities in their hands assets which might be expected to produce upwards of £130,000. (Hear, hear.) Then as to the Liverpool debt: against that they held a large quantity of sugar, put down at 18s. per cwt., a price at which no one would like to import and sell. He hoped he had satisfied them that they had put down the probable ultimate loss by bad debts at the highest figure, and they had done so in order that they might not have to come again to the shareholders to write off a further sum; but that, on the contrary, they might have something worth accepting to hand over to them from this account next half-year. There were some persons in the room, he feared, whose object was to depreciate the property—persons probably who had sold a large number of shares which they had not in their possession, and whose interest, therefore, it was to keep down the price in the market. His object on the contrary was to raise their property, and the best mode of doing this was to place the facts clearly before the meeting and the public. He saw in the accounts some things which to him appeared full of hope. The gross business of the Alliance Bank would bear comparison with that of any bank in the city of London, and what was the general character of that business might be gathered from the fact that but for these exceptional losses the operations of the last half-year would have shown a net profit at the rate of from 18 to 20 per cent. A friend of his had said that it would be a cheap business if it could be purchased for £200,000, and it was very questionable whether such a business could be got together in London for £200,000. That would be equal to £5 a share. A business that yielded a net profit of £60,000 in the half-year was not to be despised. (Hear, hear.) The duty of the shareholders in such a crisis as the present was to assist the directors, to co-operate with them in giving confidence to the public if they thought them right, or if they thought they had done wrong, then they should remove them. They had a business which was the envy of other banks in London, and it would be their own fault if they did not profit by it. With regard to the premium on the new shares, he considered that the best transaction the shareholders had ever made. (Oh, oh.) If they had not paid the £20 a share, and so established an ample reserve fund to meet losses, he believed their shares, instead of standing at £5 premium, as they now did, would have fallen to £9 or £10 discount. Although they had paid a premium of £20 a share, they had the property in their own hands. They had passed through the storm, and they were enabled to show deposits and current accounts still to the extent of £2,300,000. (Hear, hear.) Did they suppose they would have had anything like that amount of business now if they had not had a large capital and an ample reserve to fall back upon? What would have been their position if the foreign banks would no longer have drawn upon them? It was the amount paid as premiums upon the new shares which

had practically secured to them their present business. The reserve fund was put down at £200,000, but adding arrears due on the new shares and which arrears were charged 10 per cent. interest, and some other matters, it might be taken at £220,000. That was equal to £220 a share; so that taking all things into account, if they were to wind up to-morrow, their shares would be worth £30 each. The loan account which amounted to between £300,000 and £400,000, was covered by securities the most ample, leaving a large margin without the probability of loss, and bringing in a revenue more than the discount account. If they could get plenty of that kind of business it was far better than discounting small bills, which in point of fact was a new class of business which had sprung up of late years, and which the old bankers formerly refused to entertain. As to the credits, he had explained that they yielded a good commission to the bank, and if properly managed they could not possibly result in loss. He held that there was in the bank still a most valuable property, which could not but be highly remunerative if prudently managed. The directors were anxious to take the opinion of the shareholders as to the future organisation of the board, being willing to retire or stay by the ship, as might be decided. (Hear.)

Mr. Heiron expressed his satisfaction with the explanation given by Mr. Patterson. It was the duty of the shareholders to support the board (Hear, hear.) He attributed the opposition to a few large bear shareholders.

Mr. Neish could not see any advantage in adjourning the meeting merely because a clerical error appeared in the accounts, the additions being correct. He condemned a proposition that had been mooted out of doors that a committee of investigation should be appointed, as that would drive away their customers; but he thought a committee of four or five shareholders should be appointed to confer with the board, with a view of taking steps for completing and strengthening the direction, and assisting in establishing a strong and efficient management.

Mr. A. Walls thought such a course would be unnecessary if the directors would themselves select four or five shareholders to co-operate with them in order to reorganise the management.

Mr. King urged the importance of being united in whatever course they decided upon. He thought nothing more was necessary than to pass the resolutions submitted by the board, and if they thus showed their confidence in the directors, he believed that in five years hence they would be stronger and more prosperous than if the present difficulties had never occurred.

Mr. Way spoke in a similar strain, but was of opinion that in filling up the number of the board, men should be chosen who had time and leisure to attend to the duties of the direction, and not such as were engaged in so many concerns that it was impossible they could attend properly to the duties of either. He would support a vote of confidence in the board, and added that, from what he had seen of the late manager, Mr. Thompson, he believed him to be a very able man.

After one or two other shareholders had addressed the meeting, the motion adopting the report was put and carried unanimously, and amid much cheering.

Mr. Conybeare moved a cordial vote of thanks to the chairman and directors, mentioning specially Mr. Patterson, whose lucid and full explanation

tion was most satisfactory. He hoped that this was the only time when the board would have to report such an unfortunate state of affairs as they had now laid before them. (Hear, hear.)

The meeting then separated.

WARRANT FINANCE COMPANY.

THE first half-yearly general meeting of this company was held at the London Tavern, on the 24th of January; Mr. De Pass in the chair.

The following report was read:—

“The directors have the pleasure to submit to the shareholders their report on the business of the company for the first half-year of its operations. After providing for every charge on the business up to the 31st ultimo, there remains a balance of profit of £13,773. 6s. 11d., out of which the directors recommend the payment of a dividend of 7s. 6d. per share, equal to £7. 10s. per cent. per annum, free of income tax. This will leave £6,085. 16s. 11d. to be carried forward. It has been the first object of the directors to maintain a strong financial position during a time of great mercantile depression, by undertaking none but the soundest business, and steadfastly avoiding commitments for lengthened periods. Although this policy has comparatively restricted the business of the company, it has resulted in almost entire immunity from loss, on transactions amounting in the aggregate to £901,870. In the exercise of the power conferred upon them by the articles of association, the directors appointed Messrs. Quilter, Ball & Co. to audit the accounts now presented; and as the appointment of auditors for the ensuing year rests with the shareholders, Messrs. Quilter, Ball & Co. offer themselves for re-election.

“Balance-sheet, 31st December, 1864.—Dr.: To capital subscribed, £1,000,000; called up, £200,000, viz.:—£1 per share, payable on 21st March, 1864, £20,000; £2 per share, payable on 4th April, 1864, £40,000; £2 per share payable on 25th April, 1864, £40,000; £5 per share, payable on 1st September, 1864, £100,000; to bills payable, £334,190; to sundry creditors, £3,173. 14s. 3d.; to profit and loss, balance at credit of that account, £13,773. 6s. 11d.; total, £551,137. 1s. 2d. Cr.:—By cash at company's bankers, on deposit and current accounts, £232,160. 13s. 7d.; by bills receivable on hand, £2,571. 18s.; by customers' accounts for advances against produce, warrants, shares, and other securities, £311,321. 12s. 1d.; by preliminary expenses, £4,860. 16s. 6d.; by office furniture, stamps, &c., £222. 1s.; total, £551,137. 1s. 2d.

“Profit and loss account, from 13th May to 31st December, 1864. Dr.:—To expenses of the establishment, directors' remuneration, and allowance for bad debts, £4,737. 12s. 5d.; to balance carried down, £13,773. 6s. 11d.; total, £18,510. 19s. 4d. To dividend, at the rate of £7. 10s. per cent. per annum on paid-up capital (being 7s. 6d. per share), £7,500.; to income tax on that amount, £187. 10s.; to balance carried to profit and loss new account, £6,085. 16s. 11d.; total, £13,773. 6s. 11d. Cr.:—by interest and commission, £18,454. 18s. 4d.; by transfer fees, £56. 1s.; total, £18,510. 19s. 4d. By balance brought down, £13,773. 6s. 11d.”

The Chairman, in moving the adoption of the report, said the character of the business transacted since the formation of the company, extending over a period of 7½ months, was such as to give the directors every confidence, and he ventured to hope that the result was as satisfactory to the

shareholders as it was to the board. The accounts set forth the precise position of their affairs, and as the assets of the company were mainly composed of cash and securities there need be no apprehension of depreciation. It might be asked why they had not made investments in accordance with the articles of association. They did not do so because they thought it more prudent in a young financial company to keep their cash well in hand, so as to be able to meet any pressure of the moment without incurring the risk of loss or gain arising from fluctuations in market value. The preliminary expenses might seem larger than was at first anticipated, but it should be recollected that the original intention was to carry on operations in London, Liverpool, and Manchester, and that a heavy outlay was incurred on this account, in advertisements, and in the employment of brokers and solicitors. Although their operations were ultimately confined to the metropolis, it was not to be supposed that the money so expended was entirely lost, for they had many applications from provincial towns arising solely from the fact that the business and objects of the company had been well circulated in those towns. The amount of gross profit, £18,454, earned entirely from interest and commission, afforded the directors the pleasure of stating that they believed it to be equal to the expectations of the most sanguine. At all events, if it was borne in mind that the last four or five months had been a period of unexampled depression in the mercantile community, it would be seen that a net result of £13,770 was not a bad profit to have to account for without incurring, comparatively speaking, any great risk. (Hear, hear.) The company was established for the purpose mainly of affording advances on produce, dock warrants, and securities of that description, and considering the enormous magnitude of the trade of this country, he ventured to say that no better field could be presented for operations of that kind than that which the name of this company indicated. But circumstances somewhat militated against their doing the extent of business which they contemplated in this department. They were scarcely well started in harness before the values of the leading articles of produce were seen to undergo not only a fluctuation, but a fluctuation of a downward character. This made the directors cautious to make advances on produce unless they were covered by a large margin. (Hear, hear.) On this account the business in this department was more restricted than they had reason to expect, but the result was so far satisfactory, that they had been saved the anxiety and danger which might have been incurred by having a very large amount of obligations outstanding against produce valued considerably higher than their experience now told them it ought to stand at. That period had passed away, and there was now a more even and regular price for the staple articles of commerce. They could now, therefore, meet their customers on more reasonable terms; that was to say, they need not require so large a margin, whilst the security to the company would be greater than when the margin was larger. From the other branch of the business—the advances against stocks and shares—a more satisfactory result had been obtained, and the profits acquired were much larger than had been contemplated. In both branches the total amount of business transacted was over £900,000. The total amount of the company's operations in advances to customers to the end of the year was about £311,000. Thus it would be at once seen that two-thirds of the whole amount of business had run clearly off, and that £600,000 of transactions had been settled and paid for by their customers. That was a very satisfactory state of things. It

was but justice to the officers of the company to state that the success of the company was very much owing to their zeal, industry, and ability, and there was no business which required closer application and more knowledge of details than that in which they were engaged. The accounts had been audited by Messrs. Quilter, Ball, and Co., and he was happy to say they met with the entire approval of that eminent firm. (Hear.)

Mr. McAndrew seconded the motion.

Mr. Apps asked what were the "other securities" mentioned in the accounts?

The Chairman said they consisted of bonds and other securities which could not properly be classed under the head of warrants or shares, but which were negotiable securities.

A Proprietor asked whether the chairman did not consider the finance branch of business more profitable than that which consisted in advances on warrants.

The Chairman considered that both branches were finance business. He had already explained why the warrant business was of so limited a character, but when the cause he had mentioned was removed there was every reason to hope for an increase of business in that direction. The directors would not lose sight of any opportunity to employ the funds and credit of the company for the advantage of the shareholders. The directors had to exercise a considerable amount of discretion with respect to advances upon produce where the fluctuations of price had been so great. Sugar, for instance, had fallen from 54s. to 36s. They made advances on all negotiable securities, and then only where a sufficient margin was obtained.

The motion was then agreed to, and a dividend of 7s. 6d. per share, free of income-tax, payable on and after the 25th inst., was declared.

On the motion of Mr. Roach, seconded, by Mr. King, Messrs. Quilter, Ball, and Co. were appointed auditors, with a remuneration of £105.

Mr. King moved a vote of thanks to the directors and officers of the company, and expressed his satisfaction at the progress of the company, which was slow but sure. The dividend was satisfactory, and it might have been made larger if the directors were anxious for a showy prosperity. (Hear, hear.)

Mr. Airey seconded the motion, which was adopted.

The Chairman returned thanks, and the proceedings terminated.

NATIONAL BANK OF LIVERPOOL, LIMITED.

An ordinary general meeting of proprietors was held on the 24th January, at the bank, Liverpool; Mr. R. Dirom, deputy chairman, presiding.

The Chairman, before calling upon the manager to report, expressed the regret of the directors that their excellent chairman was unable to preside over the meeting, being detained at home by indisposition. The regret felt by the directors would, no doubt, be shared by the meeting.

Mr. Hyde (general manager) then read the following report:—

"The directors of the National Bank of Liverpool, Limited, have much pleasure in presenting to the proprietors their third report on the business of the company, and the balance-sheet to the 31st December, 1864. During the past half-year, which has been marked by many commercial disasters,

the aim of the directors has been to transact a safe rather than an extensive business; and they are happy to state that they have placed a sum of £12,671. 10s. 6d. to the credit of profit and loss, after writing off all bad debts and amply providing for doubtful debts. To this must be added £5,514. 5s. 4d. carried forward from last half-year, leaving £18,185. 15s. 10d. for distribution, which the directors propose should be applied as follows:—

Dividend of 10s. per share on 20,000 shares, £10 paid	...	£10,000	0
Dividend of 1s. per share on 7,506 shares £1 paid	...	375	6
Reserve fund, increasing it to £97,530	...	5,000	0
Profit and loss next account	...	2,810	9
		£18,185	15

“The dividend herein proposed is at the rate of £10 per cent. per annum (free of income-tax), and as the directors have been able to provide for this, and at the same time to add £5,000 to the reserve fund, and carry forward £2,810. 9s. 10d., they consider they have made as much progress as could have been expected during the past half-year. The assets and liabilities of the bank, and the profit and loss account to the 31st December are as follows:—

ASSETS.			
Cash in hand and at bankers'	...	£124,255	0
Due to the bank on bills discounted, loans to customers &c.	...	1,264,405	1
Bank premises	...	17,757	4
Preliminary expenses	...	1,800	0
		£1,408,217	6

LIABILITIES.			
Capital paid up £211,430; capital paid in anticipation of future calls at 4 per cent. interest, £8,108	...	£219,538	0
Reserve fund	...	92,590	0
Due by the bank on deposit and current accounts, bills on London, &c.	...	1,072,257	10
Rebate	...	5,706	0
Profit and loss	...	18,185	15
		£1,408,217	6

PROFIT AND LOSS ACCOUNT.			
Balance from last half-year	...	£5,514	5
Nett profit for half-year ending December 31, 1864, after writing off bad debts and providing for doubtful debts, £18,677. 10s. 6d.; less rebate at 6 per cent. on bills current £5,706; proportion of preliminary expenses £300—£6,006	...	12,671	10
		£18,185	15

“In accordance with the resolutions of two extraordinary meetings, held respectively on 17th August and 5th September last, 10,000 new shares

were offered to the proprietors at £5 premium; and though between the dates of the meeting and the time fixed for taking up these shares, serious pressure occurred in the money market, 7,506 out of the 10,000 were accepted by the proprietors to whom they were offered, leaving 2,494 on hand, which other shareholders offered to take at the premium of £5 per share, but which offers the directors declined. The premium on the 7,506 new shares, say £37,530, has been carried direct to the reserve fund, in accordance with the resolution of the last half-yearly meeting. The directors now offer to the proprietors the remaining 2,494 new shares, at a premium of £7 per share, in the proportion of one new to ten existing shares, provided the sum of £12, being £5 call and £7 premium, be paid here, or to the National Bank, London, or its branches, on or before the 4th of February next. These shares will hereafter rank the same as the 7,506 new shares, and be liable to the call of £5 which will be made on the whole 10,000 shares, payable about 10th April next. The portion of the new premises not occupied by the bank has been let on satisfactory terms. The directors have re-appointed Mr. Harwood W. Banner, of Liverpool, and Mr. James Costello, of Dublin, as auditors for the present year, which will require the confirmation of the proprietors. The directors who retire by rotation are Joseph Hubback, Robert Higgin, and J. N. McKenna, Esquires, who, being eligible, offer themselves for re-election."

The Chairman, in moving the adoption of the report, said that the balance, as the proprietors would observe, had very much increased; indeed, it more than doubled that of this time last year; and that they had been able to give the shareholders 9 per cent. interest, and to add £10,000 out of the profits to the reserve fund, although the past half year had not been favourable to banking operations. He had observed that in the reports of some of the banks, the amount of which they were under acceptance, was given. This was not given in their report, but he might state that the amount was £23,800. He begged to propose that the report be received and adopted.

Mr. S. R. Graves.—Gentlemen, in seconding the adoption of the report, I have merely one point which perhaps has escaped the chairman's notice. It appears to me desirable that some explanation should be given to you as to why £7 a share has been fixed upon the 2,400 and odd shares in the hands of the directors to dispose of amongst the shareholders of the bank. I may mention that when these shares were returned—for they were not taken up—the market value scarcely came up to the point of £5; but some large shareholders, who had confidence in the bank, made an offer to take the whole of the shares off our hands for the sum of £5 per share. That at the time was a tempting offer—it came amidst a considerable amount of depression—but the directors considered that it was more advisable to retain them, and dispose of them at the proper time amongst the shareholders generally, and not to distribute them amongst any small section of the proprietors. The difficulty we had to contend with in fixing the value of them arose partly from the impossibility of supplying the smaller shareholders with a *pro rata* proportion of these shares. It is proposed that one in ten should be the proportion, and it follows that anyone holding under ten shares will not participate in the advantages which arise from getting the shares at this price. Therefore, as a matter of fairness to the smaller shareholders, it was not considered advisable to offer these shares at the price at which they were previously offered. Then, again,

it is only fair that those shareholders who hold ten and over, and take responsibility of holding them at the price of £7, should receive any vantage arising out of that position. But the smaller shareholders will participate in the advantages which arise from the reserve fund in the same way as any other shareholders of the bank. I may also, perhaps mention that it is the intention of the board, if it should be your pleasure to pass the report, to carry £5 premium of the £7 to the credit of the reserve fund, and to deal specially with the £2, which I shall call "extra premium" for the moment, in paying off preliminary expenses, or in some other way which in the discretion of the directors will best promote the interests of the bank. (Applause.)

The Chairman then put the resolution, which was adopted unanimously.

The Chairman.—I beg now to propose that Messrs. Hubback, Higginson, and M'Kenna, the three directors who retire by rotation, in accordance with the articles of association, be re-elected.

Mr. N. J. Lalor said he had very great pleasure in seconding the resolution. He thought the proprietors would agree with him that they had a source of great gratification in the report and statement of accounts, they had not only been able to declare a very substantial dividend, but also to carry a still more substantial sum to the credit of the reserve fund. He thought if there was any item in the account which pleased him more than another it was that of adding a sum to the reserve fund; because although the financial crisis had passed away, he would be a rash man indeed who would say that the financial horizon was unclouded. The crisis had passed away and they had escaped; and it had done some good, because it had cleared the commercial horizon of a great many of the bubble companies, and a great many other matters which weighed heavily on the Money market. He was sure the proprietors generally would agree with him in saying that the statement of accounts was satisfactory, and that the thanks of the shareholders were due to the directors for the way in which they had conducted the affairs of the company during the past year, aided as they had been by their very able managers.

The chairman then moved, and Mr. J. P. Corcoran seconded the appointment of Mr. Harmood W. Banner, of Liverpool, and Mr. James Costello, of Dublin, as auditors.

The motion was carried unanimously.

Mr. Harmood Banner said that any remarks that he might have had to make as to the affairs of the company had been anticipated by the previous speakers, and he would therefore content himself by moving that the thanks of this meeting be given to the chairman and directors for their able administration of the affairs of the bank.

The motion having been seconded, was carried by acclamation.

On the motion of Mr. P. Hunter, a vote of thanks was unanimously passed to the manager, sub-manager, and other officers of the bank for their efficient services during the past year.

Mr. Hyde briefly responded.

A vote of thanks to the chairman, on the motion of Mr. Henry Harrison, brought the proceedings to a close.

CONSOLIDATED BANK (LIMITED).

The half-yearly general meeting of the shareholders in this bank was held on the 24th January at the London Tavern, Bishopsgate Street; Mr. T. A. Hankey in the chair.

The following report was read by the manager :—

"The directors submit the statement of accounts and balance-sheet of the bank for the half-year ending 31st December, 1864. During that period the capital of the company has been slightly increased by the sale of 593 shares, to make the total issue 150,000 shares, representing £600,000 paid-up. The net profits of the bank during the half-year (after deducting current expenses, rebate of interest on bills not due, interest accrued to customers, income-tax, and directors' remuneration, and making ample provision for bad and doubtful debts) amounted to £62,351 8s. 9d.; the balance left unappropriated on the 30th of June was £6,976. 6s. 10d.; the premiums on shares sold, £4,158. 17s.; making a total of £73,486. 12s. 7d.; from which it is proposed to carry to reserved surplus fund, £15,000; and premium on shares, £4,158. 17s.; to declare a dividend for the half-year at the rate of 10 per cent. per annum, and a bonus of 3s. per share (being an additional 7½ per cent. per annum) free of income-tax, £52,500; to carry forward to next account, £1,827. 15s. 7d.; total £73,486. 12s. 7d.; the reserved surplus fund, which stood on June 30 at £38,500, will, by the addition of six months' interest, £962. 10s., and the appropriations now recommended, £19,158. 17s., be increased to £58,621. 7s. The meeting will be asked to confirm the election by the board of Mr. William Smith as a director of the bank, to supply the vacancy occasioned by the resignation of Mr. Benjamin Wilson in the month of August last. Messrs. Matthew Curtis, Thomas Fairbairn, Edward Ryley Langworthy, Ivo Mackie, John Pender, and James Aspinall Turner, are the directors who retire by rotation; being eligible, they offer themselves for re-election. According to the provisions of the deed of settlement, the auditors offer themselves for re-election by the shareholders at this meeting.

"Balance-sheet.—December 31, 1864.—Liabilities.—Dr.: To capital paid up, viz., 150,000 shares at £4 each, £600,000; to amount due by the bank upon current, deposit, and other accounts, £3,411,206. 2s. 8d.; to acceptances, £658,867. 0s. 9d.; to balance of profit and loss account, brought forward from June 30, 1864, £6,976. 6s. 10d.; to reserve fund, £38,500.; to interest added, £962. 10s.; to premium on shares, £4,158. 17s.—£43,621. 7s.; to balance, being gross profits for the half-year ending December 31, 1864, after payment of interest to customers, and making ample provision for bad and doubtful debts, £99,315. 6s. 4d.; total, £4,819,986. 3s. 7d. Assets.—Cr.: By investment in government stocks, viz., New Three per Cents. and Three per Cents. Reduced, £117,399. 0s. 4d.; by cash in bank, at the Bank of England, and at call, £935,311. 4s. 9d.; by bills discounted, loans, and other securities, £3,748,929. 13s.; by bank premises at Norwich, £1,141. 0s. 2d.; by current expenses in London, Manchester, and Norwich, directors' remuneration, income tax, &c., £17,205. 5s. 4d.; total, £4,819,986. 3s. 7d.

"Profit and Loss Account.—Dr.: To current expenses, rent, taxes, &c., in London, Manchester, and Norwich, directors' remuneration, income tax, &c., £17,205. 5s. 4d.; to rebate of interest on bills discounted, not yet due, £19,758. 12s. 3d.; to proposed dividend for half-year, at 10 per

cent. per annum, and bonus of 3s. per share on 150,000 shares, £52,500 to reserve fund, £15,000; to balance carried forward to next account £1,827. 15s. 7d.; total, £106,291. 13s. 2d. Cr.: By balance of gross profits, brought down, £99,315. 6s. 4d.; by balance brought forward from June 30, 1864, £6,976. 6s. 10d.; total, £106,291. 13s. 2d."

The Chairman said the report which the shareholders had just heard read contained so clear and explicit a statement of the affairs of the bank that there remained but little for him, as the chairman of the day, to do beyond moving that the report be adopted, printed, and circulated amongst the proprietors. The shareholders were aware of the unusual and trying state of the commercial world for many months past. Numerous failures had necessarily entailed losses on nearly all banking companies, and this bank could not pretend to have entirely escaped unscathed; but, acting on the principle on which their business was conducted, of maintaining their financial position on a sound and secure basis, the directors had written off every possible bad debt, and had made ample allowance for any claim which could hereafter arise. Notwithstanding this, after all that had been done, the directors had the gratification of recommending to the shareholders a dividend and bonus, taken together, at the rate of 17½ per cent. per annum, free of income tax, on the paid-up capital of the bank, and seeing that 3 per cent. had been added to the reserve fund, it would make the amount to the good nearly 24 per cent. per annum for the past year. The directors thought this result was highly satisfactory, and he hoped the shareholders would be of the same opinion. (Hear, hear, and applause.) He was not aware that there was any other point of interest to which he need refer. He had only to observe that the interests of the bank would be greatly promoted if the shareholders would exert their influence among their connections to bring new accounts to the bank. (Hear.) One of the encouraging features of joint-stock banks was that they opened channels for a large proprietary, who were naturally led to enhance the interests of the bank in which they were associated. (Hear.) He trusted that the day would come when the Consolidated Bank would emulate her elder sister, the London and Westminster Bank, and show deposits equal to her magnificent neighbour in Lothbury; but her position in respect to depositors was the result of thirty years' existence, and the shareholders in the Consolidated Bank must put forward increased energy to arrive at a similar position. He had not risen for the purpose of making a speech, and as he knew of no topic requiring further notice on his part, he should be happy to reply to any question which might be asked, and to give all the information in his power. He begged to conclude by moving that the report now read be received and adopted, and that the same be printed and circulated amongst the proprietors. (Hear.)

Mr. James A. Turner, M.P., seconded the motion. He had heard with much satisfaction the lucid statement of the chairman as to the state of the affairs of the bank; but he, as representing one portion of the bank which was not settled in London, of which those whom he addressed knew more, and he less, begged to state, as the vice-president of this bank, and presiding over the Consolidated Bank at Manchester, that there was no reason whatever for the shareholders to look with alarm at the state of affairs in Lancashire from the cotton famine of the two past years. (Hear.) This bank was progressing in Manchester as well as any bank in London, they were increasing their accounts, and had steered through all difficulties, showing as the result of their transactions a surplus with

a small loss only incurred. Everything was going on most satisfactorily. He begged to second the motion.

The resolution being put was carried unanimously.

The Chairman then moved the confirmation of the election by the board of Mr. W. Smith as director in the room of Mr. Wilson, who resigned in August last.

Mr. Conybeare, in seconding the motion, spoke of the excellent business qualifications of Mr. Smith to fill the position. The chairman had stated that they hoped one day to rival the London and Westminster Bank, he hoped they would do more. The Consolidated Bank was one of the first which adopted the principle of limited liability, and he considered that the general adoption of that principle would tend more than anything else to fructify and fertilise the large floating capital of the country. The directors of this bank had exercised the utmost caution and prudence. The institution was not a new one, but as its name implied, essentially a consolidated bank. It had already absorbed two or three magnificent establishments which had brought a great deal of business to them, and that business was constantly increasing. He believed that as they went on they would become more and more consolidated by the absorption of other banks, and eventually that they would stand in the same position relatively to the banking world as the consolidated fund did relatively to the finances of the country. (Cheers.)

The resolution having been carried, on the motion of the chairman, seconded by Sir Joshua Rowe, the retiring directors were re-elected. The auditors, Mr. Chadwick and Mr. William Cooper, were also re-elected.

The chairman then moved that a dividend of 10 per cent. per annum with a bonus of 3s. per share be declared.

The motion was seconded by Mr. Wylie, and agreed to.

In reply to a question from a Shareholder,

The chairman observed that to make a call was a question of policy which must rest with the directors, and the expediency of making one could be alone judged of after taking into consideration all the circumstances in which the bank was placed. At the present moment he could only say that the growth of the public confidence in the bank was such that the directors felt no kind of tendency whatever in that direction. They must remember that, although the capital paid up amounted only to £800,000, the public had also the guarantee of an uncalled capital of £1,400,000 held by responsible shareholders, and the board did not see that the credit of the establishment would be increased in any degree by adding to the present paid-up capital. (Cheers.) If, however, at any time the directors thought it desirable for the interest of the shareholders to do so, they might rely upon it the subject would receive the most anxious consideration of the directors. (Cheers.)

On the motion of Sir Joshua Rowe, seconded by a shareholder, a cordial vote of thanks to the chairman and directors closed the proceedings.

EAST LONDON BANK (LIMITED).

THE second ordinary meeting of this company was held on the 2 January, at the London Tavern, Bishopsgate Street, to receive the directors' and auditors' reports and the balance-sheet for the half-year ending 31st December, 1864, to declare a dividend, and to elect auditors for year. The chair was taken by C. S. Butler, Esq., M.P., chairman of board of directors.

Mr. Hurst Daniell, the secretary, read the advertisement convening meeting, and the following report:—The directors submit their second report to the shareholders, together with the accounts for the half-year ending 31st December, 1864, certified by the auditors. During the half-year the business of the bank has steadily and satisfactorily progressed notwithstanding the recent commercial depression. The amount standing to the credit of profit and loss, after making ample provision for bad doubtful debts, is £13,596. 16s. 7d. Deducting the amount of current charges, interest due to customers, rebate on bills not matured (at 6 cent.), and the sums written off the amounts standing to the debit of bank premises and preliminary expenses, there remains a balance of £3,841. 10d. The directors recommend the payment of a dividend at the rate of 5 per cent. per annum, free of income tax, which will absorb £2,500., leave £1,341. 18s. 10d., together with the rebate, £1,893. 10s. 1d., making the sum of £3,235. 8s. 11d. to be carried forward to the present half-year. The premises in Cornhill, for the head office, are on the point of completion with the exception of one house not yet in possession, and they will be ready for occupation during the ensuing month. The auditors, J. Young, Edward Hunter, and J. H. Gordon, Esqrs., retire from office, being eligible, offer themselves for re-election.

General Balance-sheet, 31st December, 1864.

	<u>£13,596 16 7</u>

The Chairman said—Gentlemen, I am sure you will be pleased to hear from me that I shall not have occasion to trespass upon your valuable time at any length. It would be unpardonable in me were I to do so, for our operations during the past six months have really been as much of a routine character as they would have been had our bank been established many years. When I last had the pleasure of addressing you in this room, I occupied the chair for the first time; it was the first half-yearly meeting of the shareholders of this bank—it seemed to me important on every account that your chairman should endeavour to establish confident relations with you, and I did not hesitate, therefore, frankly to state to you my views as to the principles of management, and my hope that you would all earnestly co-operate with your directors in giving an energetic support to the bank; and I ventured the opinion that, so supported, our operations could not fail of success. (Hear, hear.) Well, gentlemen, another six months have passed, and I have now to thank you for much support. I am willing to admit that on the whole we have no right to complain that you have not given us your co-operation. Nevertheless, I must add that there are many influential proprietors who have yet, not only to bring their own accounts, but to use their influence in the circles in which they move. I am sure you will excuse me for being plain in this matter. Of course it is in your interest that I speak; for be assured, if every shareholder now present would open his account with the bank, our shares would be more valuable and your next dividend would be augmented; the effect upon your property would in every way be of a telling character. Well, gentlemen, I do not wish to press this upon you overmuch. I must, however, be permitted to add that the business of a joint-stock bank is not made by the influence of a board of directors only—the words joint-stock seem to me to imply united exertions

as well as united purses. All are partners, all, therefore, are morally bound to exert themselves for the common good. Gentlemen, you have had the balance-sheet before you for several days; no inquiry has been raised with reference to it; I hope, therefore, it is of a satisfactory nature. It has been prepared with great care, and after lengthened investigation by your auditors, one of whom is a professional accountant of known position and of the highest character. They have examined all the securities, upon which they would have reported specially if they had not been correct. Our report intimates to you that during the half-year the business of the bank has steadily and satisfactorily progressed notwithstanding the recent commercial depression. (Hear.) Well, gentlemen, I think you will agree with me that this is by no means an exaggerated statement. Scarcely a day has passed since I last had the pleasure of meeting you without an accession to our number of accounts; and, with reference to the figures we submit to you, I am sure you will not fail to remember that twelve months only preceding this report we commenced the business of the bank. We were then without an account—a bank only in name. That was our position at the commencement of the year. What was our position at the close of the year? After having passed through our till £11,633,077. 9s. 9d. (and this on current accounts alone at the head office only), we had confided to us, by more than one thousand customers, balances amounting to £346,196 on current and deposit accounts exclusively.—(Loud Cheers.) I will not dwell upon this matter; no doubt it will be gratifying to my colleagues if you think, with them, that these figures evidence a steady and a satisfactory progress, and that the public has already acquired a large amount of confidence in the bank. It will remain for us to show our appreciation of this confidence by affording every proper facility to those who are given us such valuable support, and by jealously maintaining the honour of the bank.—(Hear, hear.) You will, perhaps, expect me to advert to the peculiar state of monetary affairs during the past six months. I need not do so, for we are not in the position of having made serious losses. Had we been disposed to depart from our, I think, wholesome rules, we might have been able to present to you much larger figures; but unless large figures are the result of sound business, it is better to be satisfied with more circumscribed arrangements, and a safe and steady, although it may be a comparatively slow progress. Happily our commercial interests are now in a more healthy state.—(Hear.) We owe it to the very judicious course of procedure adopted by the Bank of England that there is now a freedom from the absurd spirit of speculation—I had almost called it gambling—which prevailed only a few months ago. (Hear, hear.) You will see that a slight alteration has been made in the form of stating an important item in the balance-sheet. We now tell you precisely the amount of business we are doing. In speaking of the amount due by the bank we do not adopt the old stereotyped form “Current Deposit and other Accounts;” but we say “Current and Deposit Accounts exclusively.” By this you will see precisely the progress we are making and the estimation in which we are held. (Hear.) Our report intimates to you that “the premises in Cornhill for the head office are on the point of completion, with the exception of one house not yet in possession.” Gentlemen, we are putting up a building, a solid structure, which we hope when it is wholly completed will not disgrace the street architecture of this great city. It will be a plain building suitable for the purpose for which it is

needed; we have avoided excessive ornamentation, believing a quiet plain structure to be more in accordance with the purpose to which it is to be applied. If any of my friends here are disposed to criticise, I must ask them to await the erection of the additional part of the building at the close of the year. We shall then present a bold frontage of 50 feet to the front of Cornhill, the choice spot of this great city, in the highway to these great commercial interests, to assist which our bank was established. We hope to enter upon the occupation in February. Gentlemen, no circumstance has occurred to induce your directors to issue the additional million of capital authorised by you to be taken; but your directors are convinced of the wisdom of the resolution, for we are now in the unusual position of being able to take over, by purchase or otherwise, and bring into limited liability, any bank, or banks, however large. We are now able to raise £1,900,000, should it be advantageous to do so—a pretty rare guarantee for our safety as a bank. With reference to our staff of officers, I cannot imagine a bank to be better served. Our principal officers have been indefatigable in discharge of their duties, and I give expression to the unanimous feeling of the board when I say that Mr. Latter, your manager, and Mr. Platten, are thoroughly devoted to your interests. I ought also to mention that Mr. Daniell, your secretary, and Mr. Finlayson, your accountant, are very zealous; indeed, in so far as it is given me to judge, all our officers are looking to the honour and prosperity of our common property. I am at the head office every day, and I assure you it is very gratifying to me to observe the order and gentlemanly feeling that prevails: it is in my opinion creditable to every officer in the establishment. (Loud cheers.) Our report has intimated to you that the auditors—Mr. John Young, Mr. Edward Hunter, and Mr. J. H. Gordon—retire from office, and that they offer themselves for re-election. The articles constituting the company direct the election of auditors at this meeting; and it is a wise regulation that one at least shall be a professional accountant. I should have been better pleased had two been professional. I candidly own to peculiar notions with reference to the auditing of the accounts of public companies. I am afraid it sometimes happens that gentlemen who are not accustomed to deal with masses of figures and intricate accounts are sometimes appointed to this responsible duty because they are large shareholders, and are influential men. Gentlemen, depend upon it, it is a mistake. (Hear, hear.) Happily, we are fortunate in having good men of business; and I beg it may be understood that my remarks do not in any manner apply to them. If, however, any vacancy should occur, it will then be for you to consider the propriety of appointing a second professional accountant. (Hear.) Gentlemen, I have trespassed too long upon your attention. (No, no, and cheers.) We shall be happy to reply to any questions upon which you may desire information. If your questions refer to the general policy and management of the bank, I, or one of my colleagues, will cheerfully respond. If it should relate to the balance-sheet and accounts, your own officers specially appointed to this particular duty—I mean the auditors—will, of course, render every information. I need not say that my friend, the manager, who is present, will give every proper information with reference to his department. I have now only to express my thanks to you for having listened so indulgently to my humble statement, and my assurance that we all feel the greatest interest in the prosperity of the bank. (Loud cheers.) I beg to move that the report and accounts be received and adopted.

Mr. Capper (Deputy-Chairman) seconded the motion. After the very able speech made by their chairman, it was unnecessary for him to trouble them with any observations. He could assure them, however, that the affairs of their bank were in a most prosperous condition, and would soon be one of the first in London. (Cheers.)

The resolution was then put, and carried unanimously.

Mr. White next moved that a dividend at the rate of 5 per cent. per annum, free of income tax, be paid to the proprietors. He could assure them that the crisis through which they passed was one of no ordinary character, and after so much money passing through their hands, it was really wonderful how trivial had been their losses. At the last meeting he ventured to tell them there was no doubt of the prosperity of the bank, and he repeated now that if the proprietors only assisted the directors they could double even their present business. (Hear, hear.) Indeed, even without that assistance, it might have been more than doubled but for the great care, caution, and judgment manifested during the last six months by those who had the management of its affairs. (Cheers.) Its prosperity and good management were such that he sincerely believed it would ere long be another London and Westminster Bank. (Cheers.)

Mr. Walford seconded the motion, and reminded the proprietors that the proceedings of the East London Bank were characterised by no display, by no speculations, but that their profits resulted from legitimate banking business. (Hear, hear.)

The resolution was then unanimously carried.

Mr. Bristow next moved that a sum of 50 guineas be paid to the auditors, and that they be re-elected. In his opinion their excellent chairman only did justice to the auditors when he spoke of their duties and responsibilities. For example, it would not be very satisfactory to himself if he were to go into a mass of large and intricate accounts, and it was therefore essential that that duty should be performed only by those who thoroughly understood it. (Hear, hear.) He did not believe the sum proposed was too much. (Hear.)

Mr. J. C. Connor seconded it, and the resolution was adopted unanimously.

Mr. A. T. Laport moved a vote of thanks to the chairman and board of directors, and could not help expressing his gratification at the careful and steady course they pursued in a time of difficulty and danger, and thus preventing the proprietors from incurring very large losses. (Hear, hear.)

Mr. Charles Devonport seconded the motion, and it passed unanimously.

The Chairman returned thanks, and in answer to a proprietor who asked him that morning the amount of their losses, he stated that they did not exceed £600, although they discounted bills amounting to more than £700,000 or £800,000 during the last half-year. (Cheers.) After that declaration he believed the proprietors would be of opinion they were not seriously hurt. (Hear, hear, and a laugh.)

In answer to a question put by a shareholder,

Mr. White said there was no intention whatever of making a call for further capital.

Mr. Jervis next moved, and Mr. Ratcliffe seconded, a vote of thanks to the manager, sub-manager, the secretary, and the other officers of the bank for the manner in which they discharged their duties.

The resolution being unanimously adopted,

Mr. Latter (manager) returned thanks.

Mr. Heiron was very much pleased with the progress of the company, and he believed there was no other bank where the business had been transacted without larger losses. He had much pleasure in moving that the best thanks of the meeting be given to Charles Salisbury Butler, Esq. for his courteous conduct in the chair.

Mr. J. C. Stovin thought this meeting would greatly increase the reputation already enjoyed by the bank in the eyes of the public. He, for one, was much better pleased to come there and receive a 5 per cent. dividend which had been earned by sound and legitimate business rather than a 10 or 15 per cent. dividend earned solely by speculation.

A vote of thanks being unanimously carried the proceedings then terminated.

YORK CITY AND COUNTY BANKING COMPANY.

The annual meeting of the shareholders of this company was held on the 26th January, Mr. Alderman Meek, of Middlethorpe Lodge, presiding. The report was of a highly satisfactory nature. A dividend and bonus equal to 14 per cent. on the increased capital of the bank was declared, and a sum of £4,528 odd was carried to the reserved surplus, which now stands at £36,207. 12s. 9d. The undertaking appears to be in a very prosperous condition.

ROYAL BANK OF LIVERPOOL.

The annual meeting of the proprietors was held on the 26th January, Mr. Brancker presiding. The only features of interest were the declaration of a dividend of 7 per cent. and the carrying of a sum of £41,000 to the reserve fund, making it now upwards of £82,000.

ORIENTAL FINANCIAL CORPORATION, LIMITED.

The first ordinary general meeting of the members of this corporation was held on the 27th January at the London Tavern, Mr. W. C. Brown in the chair.

Mr. Priggen, the secretary, read the following report :—

"The directors beg to submit to the shareholders the following report, and the accounts audited to the 31st December, 1864. The gross profits from the commencement of the business in April last have amounted to £21,762. 13s. 2d., which, after deducting expenses of management, rebate of interest on bills, and all other charges, and carrying 10 per cent. to the credit of preliminary expenses and office furniture, leaves a balance of £16,975 18s. 11d. Out of this sum the directors have appropriated £706 3s. to the payment of *ad interim* interest to 30th June last, at the rate of 8 per cent. per annum, and £3,298. 12s. 8d. for dividend to 31st December, 1864, at the rate of 8 per cent. per annum, leaving the sum of £12,971. 3s. 3d. to be carried forward to the next account. The operations in India are upon a satisfactory basis, and are capable of considerable extension,

but the commercial uncertainty which has existed during the last few months has induced the directors to restrict business. The closed accounts from thence for the past year have not yet been received, and they will therefore appear in the next statement. The business which has been undertaken, otherwise than in connection with the East, has principally consisted in advances against the deposit of collateral securities, besides which 'The London Engineering and Iron Ship Building Company (Limited)' has been successfully introduced for the object of taking over the business of Messrs. Westwood, Baillie, and Co. The Borakai Tea Company (Limited) has also been brought forward by this corporation. As it is necessary that a clause in the articles of association should be altered to meet the regulations of the Stock Exchange, which require that companies shall not invest in their own shares, notice of an extraordinary meeting will be given for the purpose of effecting that object, and at the same time of introducing clauses increasing the qualification of directors, and giving additional powers to the corporation for raising money on debentures, and for other purposes."

*Balance-sheet, December 31st, 1864.**Dr.*

Capital 10,000 shares of £50 each £500,000—viz.:—9,445 shares on which £10 has been called up £94,450; less calls in course of payment £5,450—89,000; 555 shares forfeited on which has been paid £1,615	£90,615	0	0

Gross profits	<u>£21,762 13 2</u>

The Chairman, in moving the adoption of the report, said—On the subject of the business in India, they were fortunate enough, very soon after the company was established, to arrange agencies there, and their business was in the hands of gentlemen who were well known and in whom the shareholders must have the greatest confidence. The business into which they had entered was preliminary, with a view of ascertaining the best mode of conducting the affairs of the corporation; and they had now, although they commenced on a very small scale, ascertained the class of business that might be done. The rate of interest in India had been comparatively low, and there had been no very great inducement for pushing it, but they saw there was an opening for a further extension of business if they had the means of entering upon it. Under these circumstances they had thought it better not to lock up the money in India, but to place it in temporary securities. If the corporation could get money on debenture they could lend it on permanent securities. They had not lent money on permanent securities, nor was it thought desirable to do it. Shortly after the commencement of their business they found monetary matters were getting into a difficult position, it was necessary to be very cautious in employing the corporation's funds, and they thought the more desirable plan was to restrict their business. In India they gave strict orders that money was not to be advanced on cotton. They found the agents had been very cautious, and they would see by the accounts, they expected large remittances from India in a few months. Many of their securities had run off without any loss. Their business had therefore become very restricted, and with the exception of two or three accounts there was nothing of any very great importance running connected with the interests of the company. The accounts from India were not completed; they would come into the next accounts, but he did not expect there would be very much difference. It would depend on the rate of exchange at which the funds would be sent home. On looking at the accounts it would be found they had carried over a large amount in proportion to the profits. They divided 8 per cent. and carried over £13,000 to the next account. There were several reasons why they should do this. In the first place, there was a large sum for the establishment of the corporation. £10,000, over which they could exercise no control. They could not help it (cries of "Oh, oh"). Another reason they did not wish to divide too much in dividend was to meet any contingency that might possibly arise. The directors could not give a specific market value to the securities they held, therefore it was desirable to restrict the dividend to 8 per cent., and carry the remainder forward. He had only to ask the shareholders to give them their support in conducting the business. Any

money they could get could be placed out at a fair interest, and if they had a million instead of £100,000 they could lend it more favourably. He moved the adoption of the report.

Mr. R. Grove seconded the motion.

Mr. Knight strongly urged that there should be a sub-division of the items in the account, and called attention to the extraordinary provision in the articles of association providing that Mr. Salter, financial agent, should be paid 1 per cent. on the nominal capital up to and not exceeding one million sterling, such commission to be defrayed out of the first money received from profits and charged against the company.

Mr. Stuart asked whether the corporation had been a loser by Mr. Halliday, who was one of the directors, or by his firm. That circumstance had tended to depreciate their shares, and he did not think that one shilling ought to be lent on shares. He thought the directors could help the preliminary expenses, and they ought not to have had anything to do with an undertaking which involved such a charge. (Hear, hear.) If their business was restricted it would be wise to look out for an amalgamation with some respectable company instead of frittering away their capital. He complained he could not get information as to the accounts, although he had called at the office of the corporation.

Mr. Baker contended that the amount of profit was not more than £3,650.

Mr. Howell asked if it was stated in the prospectus that 1 per cent. on the nominal capital was to be paid for preliminary expenses.

The Chairman did not remember, but the prospectus would refer to the articles of association, where it was stated what the arrangements were.

Mr. Howell said he was only a shareholder in the company by accident, but he could not refrain from denouncing the practice of publishing a prospectus in which such an important matter was kept back. He did not believe any man would pay his £5 if he knew that £1 of it was to be paid to another as commission, namely, for putting it before him whether he would join the company or not. (Hear, hear.) Any company which required such an amount of money to start it could not be worth much to come into. It was very well known that when people came to sign the deed of settlement they did so for the most part without reading it through. They had a balance-sheet which showed 20s. in the pound for their investment, and yet they could not sell it in the market for 10s. What was the use of a large revenue when their capital was so depreciated? (Hear, hear.)

Mr. Crockett thought that a great deal of blame was unjustly thrown on the shoulders of the directors. It was usual for all companies to pay a large sum for preliminary expenses. He thought it was doing well to realise a profit of £21,762, and if they only supported the directors he believed they would do well.

Mr. Lysley, a director, said that if the shareholders were of opinion that there should be no dividend at all he should not complain. The reason why the shares were so low was, that a great many had been allotted to persons who when a pressure came upon the money market were not able to keep them. They were thus thrown on the market in great numbers, and consequently depreciated. They might have kept up the price if they did as other companies—rig the market. (Hear, hear.) None of the directors had received a single penny of the preliminary expenses, and he understood the gentlemen who received the commission risked £3,000 or

£4,000 of his own money in the matter. He, of course, looked for a profit from it. (Hear, hear.)

The Chairman said that the company had not lost a single penny by Mr. Halliday, nor were they under any liability on his account. (Hear.) Mr. Halliday had been one of the directors, and as a director he behaved in the most honourable manner. The directors joined the company as it came to them, and the shareholders joined it in the same way. The loans on deposit amounted to only £6,000 or £7,000, but as a rule they did not want money for short periods. The directors would not hesitate to accept a proposal for amalgamation on fair terms, and he might mention that intimations of the possibility of amalgamation had come to them from one or two quarters. (Hear.) They had now the opportunity of doing a large business in India. The subject of a call was an important one. All he could say was that he saw no necessity for a call at the present time. (Hear, hear.) He hoped there would be no such necessity for three months, or perhaps longer, but he could not give any pledge on that point. If they could raise money on debenture it would obviate the necessity for a call. They had no agency in Madras, because they had as much as they could do in the other two agencies.

The motion was then put and carried.

The auditors were re-elected.

The meeting was then made special, for the purpose of considering certain alterations in the articles of association proposed by the board. The only ones which were objected to by certain of the shareholders were those which proposed that the qualification of the directors should be raised from 5 shares to 20, and that the directors should be empowered to "borrow on behalf of the corporation from any of the directors or members or any other person or company, such sums as they might require upon mortgage of the property of the corporation, or upon bonds or otherwise." With regard to the first, the majority of the meeting was in favour of the qualification of directors being raised to the possession of fifty shares; and with regard to the second, it was proposed that the directors should be empowered to borrow only to the extent of one-third of the paid-up share capital; but on the solicitor stating that no amendment could be made without notice, the proposals of the board in both respects were adopted.

A vote of thanks to the chairman terminated the proceedings.

MIDLAND BANKING COMPANY.

THE third ordinary general meeting was held on the 27th January, at the London Tavern; Mr. Thomas S. Richardson in the chair.

The following is the directors' report, &c. :—

"The directors feel pleasure in laying before the shareholders the following statement of accounts and balance-sheet for the half-year ending 31st December, 1864, duly examined and certified by the auditors. From the balance-sheet it will be seen that the gross profits for the half-year, including £713. 14s. 3d. brought forward from last account, have been £15,563. 9s. 6d., after providing for bad and doubtful debts, and that after deducting all the current expenses of the bank, interest paid to customers, &c., and allowing for rebate of interest on bills discounted and not due, there remains a disposable balance of £4,169. 19s. 11d. The

directors recommend that out of this sum, £384. 3s. 2d., being at the rate of 10 per cent. per annum, should be written off preliminary expenses that £2,029. 18s. should be appropriated to the payment of a dividend at the rate of 5 per cent. per annum, free of income tax, upon the paid-up capital of the company; that £1,000 should be added to the reserve fund, and that the balance, £755. 18s. 9d., should be carried forward to 'profit and loss' new account. The shareholders are aware that in October 1864 arrangements were provisionally concluded between the directors of the company and the directors of the London and Northern Bank, for the amalgamation of the two companies. These arrangements were not confirmed by the shareholders of the London and Northern Bank, but before the close of the year your directors were able to conclude terms for the transfer of the business of the London and Northern Bank at Huddersfield, Leeds, and Sheffield, to the Midland Banking Company, which they believe cannot fail to prove highly advantageous to the shareholders. The directors have also the pleasure to report that, since the date of the accompanying balance-sheet, the position of the bank has been further strengthened by the addition of upwards of 240 names to its proprietary; that number of shareholders in the London and Northern Bank, holding together upwards of 3,800 shares (£25 paid), having applied to have allotted to them a like number of shares in this company (£15 paid) in lieu thereof, with the understanding that they are to receive any sum beyond the £15 per share, which may be realised out of the assets of the London and Northern Bank. By these allotments, the subscribed capital of the bank will be once raised to about £800,000, the new shares being chiefly held by proprietors residing in the districts of the branches, and therefore in a position to promote the success of the bank. Basil T. Woodd, Esq., M.P. of Conyngham Hall, Knarborough, and Charles Poppleton, Esq., Huddersfield, directors of the London and Northern Bank, have joined the direction of this company; and John Stubbs, Esq., a gentleman well known in the district of Wolverhampton, has also been elected to a seat at the board. Resolutions for the approval of the election of the gentlemen as directors will be submitted to the meeting. The directors retiring at this meeting, in conformity with the articles of association, are W. Stratford Dugdale, jun., Esq., J.P., J. H. Lance, Esq., and F. J. Laing, Esq., and these gentlemen, being eligible, offer themselves for re-election. The shareholders will also have to elect two auditors in the place of C. I. A. Martelli, Esq., and John Percivall, Esq., who will retire in accordance with the articles of association, but are eligible for re-election.

"Balance-sheet, Dec. 31, 1864.—Dr.: Capital paid up, £85,389; reserve fund, £1,000; amount due by the bank on current, deposit, and other accounts, £345,484. 5s. 10d.; liabilities on acceptances by the bank, £45,250; together, £390,734. 5s. 10d.; profit and loss balance, brought from last account, £713. 14s. 3d.; gross profit for the half-year, after providing for bad and doubtful debts, £14,839. 15s. 3d.; together, £15,553. 9s. 6d.; total, £492,676. 15s. 4d. Cr.: Cash on hand and call, £57,004. 0s. 4d.; purchase of freehold and copyhold property, at bank fittings at head office and branches, £10,784. 8s. 1d.; purchase of business at Wolverhampton, and also at Hereford, £6,000; bills and promissory notes discounted, and other advances to customers, £400,973. 15s. 9d.; preliminary expenses, and expenses in establishing branches, £7,683. 3s. 8d.; current expenses, including all salaries, rents, &c., at head office and branches, income-tax, and directors' remuneration, £4,957. 1s. 3d.; in

terest paid on current and deposit accounts, &c., £5,274. 6s. 3d.; total, £492,676. 15s. 4d.

"Profit and loss account. — Dr.: Current expenses, as above, £4,957. 1s. 3d.; interest paid to customers, &c., £5,274. 6s. 3d.; rebate on bills not due, carried to new account, £1,152. 2s. 1d.; amount written off preliminary expenses, being at the rate of 10 per cent. per annum, £384. 3s. 2d.; dividend at the rate of 5 per cent. per annum, for the half-year, £2,029. 18s.; amount added to reserve fund, £1,000; balance carried forward, £755. 18s. 9d.; total, £15,553. 9s. 6d. Cr.: By balance brought from last account, £713. 14s. 3d.; gross profit for the half-year, after providing for bad and doubtful debts, £14,839. 15s. 3d.; total, £15,553. 9s. 6d."

The Chairman, in moving the adoption of the report, said he had a great deal of pleasure in drawing the attention of the shareholders to the report which was already in their hands, and in congratulating them on the progress of the bank. They were progressing in every instance. If the shareholders took any or every amount in the report and compared it with the report issued for the previous six months, they would find an increase in everything, and more especially in the item of profit. In the previous six months the deposits amounted to about £191,000; but in the last six months they stood at £345,000. The gross profits for the six months previous were £9,900, and for the six months just ended about £14,800. On comparing the accounts it would be found that while formerly it had taken them eighteen months to declare a dividend of five per cent., they had done the same in the last six months. The reserve fund belonging to the bank was not made up, as in the case of other companies, by premiums on shares. There was no clap-trap about it. It was made up from the profits, and not out of money taken out of the shareholders' pockets. (Hear, hear.) During the month of October preliminary negotiations had been carried on with the London and Northern Bank for a transfer of the business of that bank to the company. These negotiations were not agreed to, but after some further negotiation they came to terms, the company taking the business of the Leeds, Huddersfield, and Sheffield branches of the London and Northern Bank at a purchase of a year and a half. That business was going on very well, as it dove-tailed into the other business of the bank. He concluded by moving the adoption of the report.

Mr. Whitworth, in seconding the motion, said the bank was in a good and sound position.

A Shareholder asked on what terms the business of the London and Northern Bank was taken over, and if the company by taking over that business had contracted any liabilities.

The Chairman said the bank had contracted no liabilities in taking over the business of that bank. They had an efficient inspector of branches. The bank possessed good managers, and everything relating to the business of the bank came under the immediate inspection of the directors.

The report was adopted.

Mr. B. T. Woodd, M.P., Mr. C. Poppleton, directors of the London and Northern Bank, and Mr. John Stubbs, of Wolverhampton, were elected directors of the bank.

A vote of thanks to the directors and the chairman closed the proceedings.

UNION BANK OF IRELAND.

THE fourth ordinary general meeting of the proprietors of this bank held on the 27th January, at the London Tavern; Mr. E. W. Wingfield in the chair.

The Secretary (Mr. Bull) having read the notice convening the meeting proceeded to read the report:—

"The directors have to record their deep regret at the loss the bank sustained by the death of their colleague, the late Henry Bruce, Esq., whose sound judgment, ability, and untiring energy were to the last devoted to its interests. The accounts now submitted show that the gross profits of the half-year ending 31st December, 1864, after making provision for all bad and doubtful debts, amount to £18,782. 16s.; after deducting all current expenses and interest paid and due to customers on current and deposit accounts, there remains (including the amount brought forward from last account) a total available balance of £7,972. 19s. 3d. The directors propose to appropriate the above amount as follows, £500 to reserve fund, £500 in reduction of preliminary expenses, £5,000 in payment of a dividend of 10s. per share (free of income tax), leaving a balance of £1,972. 19s. 3d. to be carried to new account, in which sum is included a rebate of interest on bills discounted not yet due. During the past half-year branches of the bank have been established at Kells, county Meath; Fethard, county Tipperary, and at Tipperary. The first named was opened in August last, and has made good and satisfactory progress; the last-named have not been sufficiently long established to enable the directors to estimate correctly their ultimate success. The expenses attending formation of these branches have been defrayed out of the profits of the past half-year. The general progress made by the bank in all its branches is satisfactorily evinced by the steady increase in the business, the acquisition of several valuable accounts, and a marked appreciation of the liberal policy which has been adopted in its management.

"Statement of accounts to 31st December, 1864.—Dr.: Liabilities.—Capital £220,000; deposits and current accounts, £366,480. 7s. 1d.; seven days and other bills, &c., £19,606. 11s. 3d.; reserve fund, £1,500; balance of profit and loss, £7,972. 19s. 3d.; total, £615,559. 17s. 7d. Assets.—Cash at London bankers', branches, and agents, and loans on interest call and short notice, £166,959. 19s. 4d.; Government and other securities, £16,445. 17s. 11d.; bills discounted, balances due on current accounts, £416,389. 16s. 5d.; bank premises and furniture, £9,466. 1s. 3d.; preliminary expenses, £6,298. 2s. 8d.; total, £615,559. 17s. 7d.

"Profit and Loss Account to Dec. 31, 1864.—Dr.: To charges on London and branches, including directors' fees, rent, salaries, interest paid and due on deposit and current accounts, &c., £12,868. 11s. 10d.; to balance brought forward, £7,972. 19s. 3d.; total, £20,841. 11s. 1d. Cr.: By balance from last statement, £2,058. 15s. 1d.; by gross profit for half-year to Dec. 31, after making full provision for all bad and doubtful debts, £18,782. 16s.; total, £20,841. 11s. 1d.

"Proposed Appropriation.—Dr.: To reserve fund, £500; to preliminary expenses account, £500; to a dividend of 10s. per share, free of income-tax, £5,000; to balance carried to new account, £1,972. 19s. 3d.; total, £7,972. 19s. 3d. Cr.: By balance of profit and loss account brought forward, £7,972. 19s. 3d."

The accounts, which were issued some time since, being taken as read—

The Chairman, in rising to move the adoption of the report, expressed the deep regret which the board felt at the loss of their late excellent and talented chairman, Mr. H. Bruce, who combined singular energy and activity with a soundness of judgment unequalled, and whose uprightness and integrity had won him the esteem of all with whom he was brought into contact. The board felt that they had sustained a severe loss in consequence of that gentleman's lamented death, and the shareholders had lost in him a jealous guardian of their interests. The accounts had been for some days in the hands of the proprietors, and he thought that he could fairly congratulate them upon the progress which the bank had made during the last six months. He referred to the increase of their deposits as the true test of that progress, and more especially as a criterion of public confidence. (Hear, hear.) It was, therefore, most gratifying to him to find that the deposit and current accounts on the 31st of December amounted, as shown by the balance-sheet, to the sum of £366,480, whereas in the preceding June they were only £237,812; they had therefore had an increase in their deposits during the present half-year of nearly £130,000, and they now amounted to double the sum at which they stood this time last year, and more than fourfold the sum at which they stood in June, 1863. He thought they would admit that that was a very satisfactory progress to make, and, of course, the increase of the gross profits, which during the past half-year amounted to £6,270 over that of the preceding, must be equally satisfactory. (Hear, hear.) The charges at London and the various branches, including fees, rent, salaries, and interest paid and due on current and deposit accounts, amounted to £12,868; but it was right to tell them that of this sum £6,700 was interest paid and due on deposit and current accounts, so that the working expenses were represented by the sum of £6,100.

Mr. Huggins expressed a hope that when the accounts were produced at the next half-yearly meeting, the items of interest and general charges would be set down separately.

The Chairman said they had no objection whatever to do so. They had endeavoured to work the bank as economically as possible consistently with efficiency, and with the same working expenses they would be able to deal with much larger funds. They had established, during the past six months, three new branches, and the expenditure connected with their establishment had been defrayed out of the profits of the half-year. One of these branches was opened in August last, and the other two in November, so that of course they had had to provide for an expenditure in those cases without being able as yet to reap any profit, which, however, he trusted would be derived to a considerable extent from them hereafter. It had been the desire of the directors ever since the establishment of this bank to obtain the confidence of the Irish people, and they thought they could not do so better than to confine themselves to legitimate banking business, and by employing in Ireland the deposits they had received in Ireland. (Hear, hear.) They had no doubt whatever that the people of Ireland would appreciate the incalculable advantages which the establishment of this bank had conferred upon the country. It was entirely due to the establishment of the Union Bank of Ireland that the value of deposits had been raised from $1\frac{1}{2}$ per cent. to its present rate—namely, about 4 per cent.—(hear, hear.)—so that it had actually made a differ-

ence to the saving population! of from £200,000 to £250,000 a year, taking the whole amount of deposit money in the country at the figure of £10,000,000. He believed that there was still a large sum of money hoarded, and had been for some time, in consequence of the old banks not offering its possessors sufficient inducement to deposit it with them, and there was no doubt that the policy adopted by this bank, and which had now been followed by others, of offering a fair rate of interest on deposits, would lead to the release of much of the hoarded money, which for all purposes connected with the advancement and prosperity of the country was, at present, absolutely useless. (Hear, hear.) Even the Bank of Ireland, which occupied an analogous position to the Bank of England, except that its notes were not a legal tender, and which formerly gave no interest at all to depositors, have allowed as much as 4 per cent.; and all the old banks had now come forward and followed the same example. The fact that the deposits in this bank exceeded by £130,000 those of the last half-year, showed the amount of confidence which the public placed in it, and led to the expectation that in a very few years they would have a very large amount of money on deposit account. He might also mention that the establishment of the Union Bank had given far greater facilities for the transmission of money between the two countries, which facilities the commercial classes had largely availed themselves of. (Hear, hear.) In respect to the new branches, a remunerative business had already been established at Kells; sufficient time had not, however, yet elapsed to enable the directors to form a judgment upon the other branches, but the most favourable reports had been received from the managers, and this he would say, that the directors would have no hesitation in at once closing any branch which after a fair trial was found to do well. (Cheers.) With respect to the internal prospects of the bank, he was happy to say that they were more cheerful than they had been for some time. The harvest had been a good one, and the crops had been gathered in without loss, and on the whole they were good. The grazing counties had perhaps not done so well on account of the extreme drought in the summer, but the whole position of the country was improved, wages being high and food abundant. (Cheers.) In the course of the late commercial crisis had been a period of anxiety to the directors, but he was happy to say that they had been no losers to any extent, and that that crisis had passed by leaving them unscathed. (Cheers.) They might have noticed that there had been a heavy fall in the woollen trade announced last week; but although it was true that they held some bills drawn by the firm which had failed, yet they were informed by their manager that the bank would not sustain any loss on their account, the bills themselves having excellent second names, and the bank holding collateral securities in addition. In conclusion, he might mention one fact which was most gratifying—namely, that whereas at the allotment the number of English proprietors in the bank was 276, and that of Irish proprietors 141; at present the English shareholders numbered 172, and the Irish 258, so that in point of fact nearly two-thirds of the proprietary was Irish. (Cheers.) It was needless for him to point out how useful the Irish proprietors might be to the bank, and he reminded them that it was a duty they owed alike to the directors and to the brother proprietors, that each shareholder should do all he could to promote the interests of the bank. (Cheers.) He begged now to move the adoption of the report.

The Vice-Chairman seconded the resolution.

A Shareholder inquired whether the bank held any paper of a large firm in the provision trade whose failure had just been announced?

The Chairman said he was happy to say that they held no obligations at all in respect to that firm. (Cheers.) They had excellent means of obtaining accurate information in respect to the position of all parties engaged in the Irish provision trade, which had steered them clear from loss in this instance. (Cheers.)

The report was then put and agreed to unanimously.

On the motion of the Chairman, seconded by Colonel Western, a dividend of 10s. per share, free of income-tax, was then declared.

The Chairman, in reply to a question from a shareholder, stated that the board would be most happy to receive into it an infusion of the Irish element, and that if any gentleman of position and standing were brought forward or offered himself, he would be warmly received by the directors.

On the motion of Sir J. Duke, seconded by Mr. J. Gurney Hoare, a cordial vote of thanks to the chairman and directors was carried by acclamation.

The Chairman, having thanked the meeting for the compliment, moved a vote of thanks to Mr. Quain, the general manager in Ireland, Mr. Bull, the secretary, and the general staff, which was seconded by a shareholder, and carried unanimously.

Mr. Bull returned thanks, observing that the managers were determined to do everything in their power to carry out a steady banking business, feeling convinced that in the long run that was a policy which would prove most successful. (Cheers.)

The meeting then separated.

THE NATIONAL BANK OF AUSTRALASIA.

The half-yearly meeting of this bank was held on the 1st November, at the Head Offices, Melbourne, Mr. T. H. Power in the chair, when a report was submitted, showing a net profit for the half-year of £30,387. 0s. 10d., out of which a dividend at the rate of 10 per cent. per annum was declared, amounting to £20,000; £9,000 was added to the reserve fund, and £1,387. 0s. 10d. carried to the next account.

YORK CITY AND COUNTY BANK.

The following is the report of the directors to the proprietors, at their annual general meeting, held on the 26th January:—

"The directors have the satisfaction to state, in this their thirty-fifth annual report, that, after making provision for bad and doubtful debts, and crediting the reserved surplus fund with £1,218. 8s. 2d. (interest at 4 per cent.) there remains a profit for the year 1864, of £22,028. 19s. 3d., from which they recommend a dividend of 8 per cent. on the increased capital, and a bonus of 30s. per share, (together £17,500,) free from income-tax, and that the balance of £4,528. 19s. 3d. be carried to the reserved surplus fund, which will then amount to £36,207. 12s. 9d. The directors have to notice, with sincere regret, the loss by death, since the last meeting, of two members of the board:—Caleb Fletcher, Esq., who

was many years an ordinary director, and Robert Williamson, Esq., for many years a managing director, and latterly the chairman of the board, whose practical knowledge of banking was of much service to the company. The vacancies at the board thus caused, have been filled up by the appointment of Edward Hotham Newton, Esq., and Caleb Williams, Esq., M.D. The former retires by rotation, and is eligible for re-election, and the appointment of the latter is subject to the approval of the shareholders.

Before dividing the profits, the directors voted a bonus of 10 per cent to the staff, and also voted a gratuity of £1,000 to Mr. Smallwood, in recognition of his long and valuable services.

The following resolutions were adopted:—

“That the report which has been read to the meeting be adopted, printed, and circulated amongst the shareholders. That James Meek, Esq., who retires by rotation, be re-elected a director. That Edward Hotham Newton, Esq., who retires by rotation, having been elected in the place of Robert Williamson, deceased, be re-elected a Director. That the appointment by the directors of Caleb Williams, Esq., M.D., as a director of this Company, in the place of Walter Sellon Gibson, Esq., who resigned after having been elected in the place of Caleb Fletcher, deceased, be approved. That the sum of £800 be placed at the disposal of the managing directors, and £300 be appropriated for the ordinary directors, for their services for the present year. That the thanks of the shareholders be presented to the chairman and the board of directors for their valuable services. That the thanks of the shareholders be presented to the general manager and the officers for their services during the year.”

THE ANGLO-ITALIAN BANK, LIMITED.

ANNEXED is the first report presented at the general meeting, held on the 30th January:—

“The directors have the pleasure of submitting to the proprietors, the first annual balance-sheet of the Anglo-Italian Bank. Although the government readily accorded to your directors the necessary permission to open a bank in Italy, still the legal formalities consequent thereon, together with the difficulty in finding suitable offices and competent managers for the different branches, were productive of considerable delay, so that the office at Turin was only opened for business on the 1st October, and the branch at Milan on the 1st December, 1864. A branch will be opened at Florence in a few days, and the directors also intend to commence business at Naples as soon as possible, a manager and staff having been already appointed. Acting under the power given them by the articles of association the directors have appointed local committees for Turin and Milan. The following gentlemen, representing some of the most influential firms in those cities, have consented to act in this capacity; viz., for Turin—Sig. Giuseppe Dupré, (Dupré père & fils); Sig. Vincenzo Denina; Sig. Gaetano Piaggio; Sig. Gaetano Spinelli, (Fedele Berné & Co.); and for Milan—Sig. Giulio Belinzaghi; Sig. Pietro Brambilla, (Brambilla & Co.); Sig. Giuseppe Oneto, (Oneto Cavajani & Co.); Sig. Giovanni Nosedà, (Nosedà & Burocco.) The directors think themselves most fortunate in having secured the co-operation of these gentlemen. The gross profits up to the

31st December, have amounted to £25,102. 6s. 7d.; deducting £8,420. 5s. 5d. for expenses, and £4,652. 13s. 4d. for rebate, at 7 per cent. per annum, there remains a sum of £12,029. 7s. 10d., out of which after the payment of 6s. per share by way of interest, free of income tax, being at the rate of rather more than 6 per cent. per annum, amounting to £5,500. 10s. your directors recommend that £2,831. 13s. 1d. be written off from preliminary expenses, and £2,000 placed to a reserve fund, leaving a balance of £1,697. 4s. 9d. undivided profit to be carried to the next account. In exercise of the power conferred on the board by the articles of association, the directors have added the following gentlemen to their number, viz:— Sir J. P. Lacaita, K.C.M.G., Member of the Italian Parliament; Sabino Leonino, Esq., of the firm of Leonino Bros., of Genoa, and Commendatore Devincenzi, President of the Royal Commission for the Cultivation of Cotton in Italy, and Member of the Italian Parliament. Sir James Hudson, J. Lubbock, Esq., and R. Benson, Esq., retire from office by rotation, but are eligible, and offer themselves for re-election. The accounts have been audited by Mr. Tucker, actuary of the Pelican Life Insurance Company, and Mr. A. Ricardo, appointed by the council for that purpose. It will rest with the proprietors to appoint auditors for the ensuing year."

Balance Sheet, 31st December, 1864.

CAPITAL AND LIABILITIES.

Capital called up, viz. £10 per share on 20,000 shares, £200,000 ;

[We shall give a report of the proceedings in our next number.]

THE JOINT-STOCK DISCOUNT COMPANY, LIMITED.

THE following is the report of the directors of this company adopted at the third ordinary general meeting of shareholders, held at the London Tavern, on the 31st January:—

"In submitting the annexed statement of accounts, the directors have the pleasure in congratulating the proprietary on a result which they are of opinion will, when the late severe commercial crisis is considered, be regarded as satisfactory. The balance of gross profits made during the six months ending the 31st ulto., after reserving an amount as provision against loss in respect of bad debts greatly exceeding that which is believed will ultimately be found necessary, have been £46,172. 13s. 11d. This amount, after deducting rebate on bills not due, and the current expenses, has enabled the directors to increase the reserve fund to £30,000, to declare a dividend at the rate of 6 per cent. per annum, amounting to 3s. 6d. per share, free of income-tax, and to carry forward £3,243. 2s. 11d. to 'profit and loss' new account. In consequence of the stoppage of the Leeds Banking Company, of whose endorsements this Company at the time held a very large amount, the extreme difficulty in negotiating the best mercantile and financial paper, and the extent of monetary embarrassments, which seriously threatened to terminate in a panic, the directors decided, after the most anxious consideration, that it was in the interest of the proprietors that the company should be immediately placed, not only in a position to meet every contingency, but in one of undoubted strength and that this desirable result would be best secured by making a call. The directors trust that this will be considered a sufficient reason for a step which, in any but the most exceptional times, might have appeared both inconsiderate and unnecessary. The prompt manner in which the call was met by the shareholders proves that they fully appreciated the propriety of the measure. The directors have elected Mr. A. W. Rixon to one of the vacant seats at the board. Owing to the unavoidable absence abroad of Mr. J. P. Judd, one of the company's auditors, the directors have appointed Mr. C. J. H. Allen in his place, which appointment, if approved of, will require confirmation by the shareholders. The company register on the 1st January of this year included no less than 1,150 shareholders, comprising the names of a large number of the leading merchants and traders of London and the provinces, and the directors have no doubt that the position of the company, supported by so influential a constituency, must continuously improve."

Balance-Sheet, 31st December, 1864.

<i>Dr.</i>			
Capital—80,000 shares, £10 paid, £800,000; Less unpaid calls, £44,587. 10s.*	£755,412 10 0

[We shall give a report of the proceedings in our next number, the meeting having taken place too late for present insertion.]

EASTERN EXCHANGE BANK, LIMITED.

THE following is the report of the directors of this company to the proprietors, at their first general meeting, to be held at Liverpool on Feb. 2:—

"The directors in calling the shareholders together for the first time, beg to submit an audited statement of accounts of the bank since its formation to 31st December, 1864. The difficulty in obtaining a suitable manager, the high rate of interest, and the generally embarrassed state of mercantile credit, induced the directors to postpone making calls and

* Since reduced to £25,372. 10s.

opening branches abroad; they have, however, been enabled to employ satisfactorily the amount of capital in their hands during the few months the bank has been in operation, as by the annexed statement, showing a balance of profit of £3,368. 2s. 3d., out of which they recommend a dividend for the half year of 1s. 6d. per share, free of income-tax, say at the rate of 5 per cent. per annum, leaving £368. 2s. 3d. to be carried forward to next account. The directors delegated Mr. J. H. Etheridge (general manager) to proceed to Egypt to establish a branch at Alexandria. The advices received from him are highly satisfactory, and it is anticipated that a large and profitable business will be transacted by the bank there. Mr. R. E. W. Baker, formerly of the Agra and United Service Bank, and of the Bank of Hindustan, China and Japan, has been appointed resident manager at Alexandria. The directors who retire by rotation are Mr. Patrick Hunter, Mr. G. M. Bowen, and Mr. A. Malcolmson, and being eligible for re-election, they offer themselves accordingly. The meeting will also have to elect an auditor for the ensuing year, and fix his remuneration."

THE GLASGOW CHAMBER OF COMMERCE AND THE BANK ACT.

At a meeting of the Glasgow Chamber of Commerce, on the 10th January Mr. Sandeman moved the following resolutions:—

"That, in the opinion of this Chamber, fluctuations in the rate of interest, frequent, extreme, and sudden, to an extent previously unknown and highly injurious to the commercial interests of the country, if not produced, have been greatly aggravated by the enactments and restriction on issue and banking imposed by the act of 1844. This opinion, matured after twenty years' trial of the act, is especially confirmed by recent experience of excessive high rates, and by no less than seventeen changes of the rate having occurred during twelve months.

"That the remarkable success of Scotch banking previous to 1844, under a system of currency and banking entirely free, attested by the great prosperity of Scotland under that system, which had worked so well for bankers and for the public, forms a striking contrast to the experience of English banking, under the opposite system of exclusive privileges and restrictions, ever accompanied by frequent and overwhelming disasters.

"That, for these reasons, this Chamber, in the prospect of some measure on currency and banking for the United Kingdom being introduced during the approaching session, resolves to petition parliament that, previous to further legislation, a special inquiry should be instituted into the principles and operation of the free Scotch banking which prevailed with such signal success previous to 1844, with the view to ascertain how far that freedom, so entirely in accordance with the principles now universally acknowledged by statesmen and by the public, might be extended, and under what modifications, with advantage to the currency and banking of the United Kingdom."

Mr. W. Buchanan, M.P., seconded the resolutions.

Mr. William Kidston proposed an amendment to the effect that, as the matter was at present under consideration of a committee of the directors it should be left in their hands to report to the Chamber.

A second amendment was proposed by Sir James Campbell, omitting the first and second resolutions, and giving a more general scope to the third.

After a good deal of discussion, Mr. Sandeman's resolutions were carried by a large majority.

It was afterwards remitted to the directors to frame a petition to the House of Commons in accordance with the resolutions.

TRADE OF THE UNITED KINGDOM.

THE Board of Trade returns for the month and eleven months ended the 30th November, were issued on the 30th December, and may on the whole be regarded as satisfactory, although the amount of exports is not quite so large as in the corresponding month of last year: but the chief falling off has been, as for the first two or three months, in cotton yarn and cotton manufactures. The total declared value of exports for the month of the present year was £12,065,213, against £12,758,323 in 1863, and £9,761,510 in 1862, being a decrease of £693,110 as compared with the former period, but an increase of £2,303,703 over the latter. For the eleven months of the present year the total was £148,340,865 against £132,135,368 in 1863, and £113,280,779 in 1862; being an increase over 1863 of £16,205,497, and of £35,060,086 as contrasted with 1862. With regard to exports, the articles which show an increase are alkali, beer and ale, coals and culm, linen manufactures, and seed oil; but there has been a decrease in arms and ammunition, cotton yarn, cotton manufactures, earthenware, haberdashery and millinery, hardware and cutlery, linen yarn, iron and steel, thrown silk, silk manufactures, woollen yarn, and woollen manufactures. With respect to imports, there has been an increase in raw cotton, cotton manufactures, hemp, leather manufactures, saltpetre, flaxseed and linseed, wool, cocoa, coffee, and sugar. On the other hand, there has been a falling off in raw silk, tallow, spirits, tea, tobacco, and wine. As regards cereals, there has been an increase in the importation of oats, peas, and Indian corn; but a decrease in wheat, barley, beans, and wheat meal, and flour. In the case of provisions, salt beef and butter present an increase; but in bacon and hams, salt pork, cheese, eggs and lard, there has been a decline. The annexed tables exhibit the variations in the several articles enumerated:—

EXPORTS.

	1863.	1864.
Coals and culm tons	661,823	773,395

Woollen manufactures... .. value £	110,946	93,299

THE ALLIANCE FINANCIAL COMPANY.

THE Alliance Financial Company, Limited, propose to raise £100,000 in 5,000 shares of £20 each, with power to increase to £1,000,000. The object is to assist builders, contractors, and others, by making temporary advances to, and guaranteeing them in the performance of contracts, works, and other obligations, on payment of a moderate premium on the amount guaranteed, the rate of premium being regulated by the risk in each case.

THE UNITY JOINT STOCK MUTUAL BANKING ASSOCIATION.

It appears that the directors of this bank have become antagonistic to the committee of liquidators with reference to the prosecution of Messrs. Terry and Burch, the manager and secretary. It seems that the liquidators in the fulfilment of their duties deemed it right, not only to the shareholders, but for the public interest, that such a prosecution should take place, and the result of preliminary investigations before the Lord Mayor will be found recorded in another part of our present number. To carry out the prosecution heavy expenses would have to be incurred, and the liquidators very naturally propose that they should be defrayed from the funds of the

Company, but this has been objected to by the board of directors, some of whom would doubtless have to appear as unwilling witnesses at the forthcoming trial at the Central Criminal court, and they have accordingly just held a meeting at which the following resolution was passed, "That in the opinion of this board the application of the assets of the company in the proposed prosecution of Terry and Burch without the previous sanction of the shareholders is improper, and that, in the absence of such sanction, this board decline to be answerable for the costs of such prosecution, or to sanction the application of the assets of the company towards the same," and in order to prevent the necessary funds being so obtained they also passed the annexed resolution:—"That the resolution of the 17th of March, 1864, whereby it was resolved that no cheque be drawn unless by order of the board, such drafts to be signed by not less than two of the liquidators, and countersigned by Mr. Howell, the accountant, be and the same is hereby rescinded, and that henceforth all cheques be signed by three directors of the company and countersigned by the secretary." The directors have also called upon the committee of shareholders to forthwith restore to the board the seal of the company, and the various books of account and papers now under the control of the said committee. And so the matter stands at present.

THE UNITY BANK INVESTIGATION.

THE CHARGE OF CONSPIRACY AGAINST THE MANAGER AND SECRETARY.

In *The Banker's Magazine* for December we gave an abstract of the proceedings at the Mansion House before the Lord Mayor, with regard to a charge preferred against Mr. Joseph Wakefield Terry, of Albert Terrace, Wandsworth, and Mr. Thomas Burch, of Edmund Square, Kensington, the former the manager and the latter the secretary of the Unity Bank, for unlawfully circulating and publishing a balance-sheet of the affairs of the said company up to the 30th June, 1862, they then well-knowing the same to be false, with intent thereby to deceive and defraud the members and shareholders of the said company.

Mr. Lewis, jun., attended on behalf of the prosecution; Mr. Sleigh defended Terry, and Mr. Metcalfe was for Burch.

As previously stated, the examination had then extended over five days, and it was not till six other adjournments had taken place that the investigation was brought to a close on the 14th January.

It would be quite impossible to enter into the details of the evidence adduced, and this is rendered the more unnecessary as the charge against the defendants is about to undergo a further investigation at the Central Criminal Court. The inquiry before the Lord Mayor took a very extensive range, embracing the whole period during which the defendants held their respective positions. The chief witness to prove the case was Mr. Oswald Howell, the accountant to the liquidators, who went over an immense mass of figures, the result of which clearly demonstrated that the Bank was in

an insolvent position at the time the defendants were issuing balance sheets which would lead to the inference that it was in a most flourishing state.

The other witnesses examined were Mr. Alderman Mechi, the chairman of the bank, Mr. L. Richard Sykes, one of the branch managers; Mr. Kench, a shareholder; Dr. John Henry Cook, also a shareholder; Mr. the chairman of the committee of liquidation; Mr. George Lewis Philip Eyre, a director, and several other gentlemen connected with the bank. The evidence of Mr. Alderman Mechi was certainly the most important. He endeavoured to show that the directors had been most attentive to their duties, regularly investigated all the accounts, and left nothing undone that should be done by a board of directors; they were, however, deceived through the great confidence reposed in their manager. Mr. Alderman, however, was subjected to one of the most rigid cross-examinations it was possible for any witness to undergo, both by Mr. Sleigh and Mr. Metcalf, in the course of which it was made apparent that great laxity existed as to the manner in which the business was conducted.

At the close of the evidence, the Lord Mayor having intimated that the case would be sent to a higher court for further investigation, the learned counsel for the defendants intimated that they should reserve their client's defence for a future occasion.

Mr. Lewis said that was the case on the part of the prosecution, and should ask the Lord Mayor to commit the defendants upon four charges: first, for conspiring to publish and represent to such of the shareholders as were ignorant of the affairs of the Unity Joint-Stock Banking Association that the bank and its affairs had been, during the half-year preceding the 30th June, 1862, and then were, in a sound and prosperous condition, producing profits divisible amongst the shareholders, the defendants knowing the contrary, with intent to deceive and defraud such of the shareholders as were not aware of the true state of its affairs, and to induce them to continue to hold shares therein, and to become or continue customers and creditors of the bank; secondly, that they, being respectively the manager and secretary of the said bank, did concur in making, and circulating, and publishing a written statement of accounts, knowing the same to be false in material particulars, with intent to deceive the shareholders of the said bank; thirdly, conspiring together to commit the offence; and fourthly, conspiring together to cheat and defraud such of the shareholders as were ignorant of the true state of the bank by inducing them, by false pretences, to purchase and hold additional shares in the bank, the defendants knowing the bank to be in a bad and dangerous condition, and approaching insolvency, and that the shares were unsafe, and might be ruinous to the holders.

The Lord Mayor, addressing the defendants, said they had been placed in positions of great trust and confidence, and he was sorry to find that a strict line of rectitude had been departed from, and it was quite obvious that a false balance-sheet had been made, and he had but one duty to perform, which was to commit the defendants for trial.

After having received the usual caution, the defendants were formally committed, and were admitted to bail in a total sum of £8,000, as before.

TENDERS FOR BILLS ON INDIA.

biddings for 30,00,000 rupees in bills on India took place on the 4th January, at the Bank of England. The proportions allotted were—to Calcutta, 17,33,000 rupees; to Bombay, 12,00,000 rupees; and to Madras, 9,67,000 rupees. The *minimum* price was, as before, 1s. 11½d. on Calcutta and Madras; and 1s. 11¾d. on Bombay. The applications within the day amounted to 71 lacs. Tenders on Calcutta and Madras, at 1s. 11¾d., received about 7 per cent., and on Bombay at 2s. about 76 per cent.; and these prices in full. Further biddings for 30,00,000 rupees took place on the 18th January. The proportions allotted were to Calcutta 17,33,000 rupees, to Bombay 12,00,000 rupees, and to Madras 9,67,000 rupees. The *minimum* price was as before, 1s. 11½d. on Calcutta and Madras, and 1s. 11¾d. on Bombay. Tenders on Calcutta and Madras at 1s. 11¾d. will receive in full, and on Bombay at 1s. 11¾d., about 13 per cent.; above these prices in full.

THE CAPE OF GOOD HOPE LOAN.

Tenders for the Cape of Good Hope loan for £234,000 were opened on the 17th January. A total of £295,000 was offered at prices ranging from 90 to 105. The *minimum* price was 90. The tenders for and above 90s. 6d. received the amount in full; those below were rejected. The principal tenders were from Messrs. J. and A. Scrimgeour, £234,000 at 91s. 0s. 6d., and Messrs. Linton and Clarke, £25,000 at £93. 5s. to 5s.

Communications.

To the Editor of the "*Bankers' Magazine*."

PAYMENT OF CROSSED CHECKS.

Dundee, 28th January, 1865.

SIR,—Having for years admired the manner in which all communications are answered in your excellent magazine, I take the liberty of asking attention about which, in Scotland, there seems a great diversity of opinion, viz.:—If cheques crossed to any particular bank require to be cashed by said bank; or would it suffice that they were endorsed by any bank by whom they may be received?

In answering the above, you will much oblige,

Your obedient servant,

A BANKER'S CLERK.

[According to the rule observed, a cheque crossed to any particular bank may be paid through that bank.]

ISSUE OF NOTES.

SIR,—I shall feel obliged by your favouring me with your opinion on the following in your next number :—

A branch bank, duly licensed to issue notes, has a sub-office, or agency in a neighbouring village. Can the branch notes be legally issued at the agency without a separate license; and if not, what would be the penalty for so doing?

W. C.

[A separate license is required, and the per centage will be the same charged at the branch.]

GRATUITIES TO BANK CLERKS.

THE Commercial Bank of Scotland has, by circular of 21st current, ordered payment of a gratuity of 10 per cent. upon their salaries, to the different officials at the branches. Such a course is very satisfactory.

WE understand that the directors of the York City and County Bank have presented to each of their officers and clerks a bonus of 10 per cent. on their salaries for the past year.

MESSRS. BACON, COBBOLD & Co., of the Ipswich Bank, at the close of the past year generously presented to each of their clerks at Ipswich and Woodbridge the handsome gratuity of 10 per cent. on their respective salaries.

Estates of Failed Firms.

THE ESTATE OF MESSRS. EYLES, EVANS, HANDS, & WELLS.

THE adjourned meeting of the creditors of Messrs. Eyles, Evans, Hands and Wells was held on the 29th December, and was fully attended. After a lengthened discussion as to the liabilities and the probable result of the liquidation, which was fully explained by Mr. White, the accountant, it was unanimously resolved to accept a composition of 11s. in the pound, at four, eight, and twelve months.

THE ESTATE OF MESSRS. GRUNDLER, ORMOND, & CO.

THE meeting of the creditors of Messrs. Grundler, Ormond, and Co., who had recently failed, was held on the 31st December. The statement of accounts was submitted and fully explained by Mr. F. M. Mullaly, the

accountant. At the close of the proceedings it was resolved to wind up the estate under a deed of assignment. A dividend of about 7s. in the pound is expected to be realised.

THE ESTATE OF MESSRS. JOHN NATHAN & SONS.

AN adjourned meeting of the creditors of Mr. John Nathan and Mr. Louis John Nathan, trading as Messrs. John Nathan and Sons was held on the 16th January, when it was agreed to accept a composition of 6s. in the pound, spread over four, eight, twelve, and eighteen months, the last two instalments secured. The house was an old established one, and the present deficiency has principally arisen through losses on consignments. The debts and liabilities, according to the statement of Messrs. Chatteris and Nichols, accountants, represent £62,900, and the direct assets, £6,949. There are other amounts outstanding: £13,413 at Dunedin, New Zealand; £8,186, balance of miscellaneous consignments; and £14,303, shipments to the Confederate States. Of course it is problematical what any of these will produce.

THE ESTATE OF MESSRS. CUADRA, ENCISO, & CO.

A MEETING of the creditors of Messrs. Cuadra, Enciso, and Co., took place on the 17th January, when a statement was submitted by Mr. Hart, of Messrs. Hart Brothers and Hayles, showing debts and liabilities of £93,133, and assets, including claims upon La Industrial and Saens de Santa Maria, £99,800. An opinion was expressed that 20s. in the pound may be ultimately realised. A resolution was passed to wind up the estate under inspection.

THE ESTATE OF MESSRS. REID, IRVING, & CO.

THE following circular has been issued by Messrs. Reid, Irving, and Co., in connection with the liquidation of that estate. It will be read with interest, and shows what exertions have been used to effect this winding up, which on the whole must be considered to have terminated more favourably than was at one time anticipated.

“2, Gresham-place, Lombard-street, London,
31st December, 1864.

“Sir,—With reference to our last circular of 1st October, 1863, we have now to inform you that the sale of the Barritt estates, in Jamaica, on which we held mortgages, took place on the 8th March last. They were all sold then and subsequently, under the direction of the Court of Commissioners for the Sale of Encumbered Estates in the West Indies, but the prices obtained were insignificant compared with their value at the time when our connection with them began. This result, though much to be regretted, was not unexpected, as all Jamaica property has become similarly depreciated. The Court has not yet formally decreed the distribution of the proceeds, but from close investigation it appears that the portion coming to us will only about suffice for the purchase of an annuity for the life of Miss Barritt, which is chargeable upon it.

"We have received a final remittance from our property and claims Mauritius, and the liquidation being thus virtually closed, we have announce a final dividend of 8d. in the pound (making in all 10s. 2d. which will be payable on and from the 12th January next, from eleven to two o'clock, Saturdays excepted.

"That the large mass of assets shown by our statement in 1847 should not have produced more is a cause of deep sorrow to us. To the kindness and forbearance of our creditors we are indebted for having been able to persevere for seventeen years in the patient realisation of colonial property, depressed beyond precedent by Imperial legislation, and to reap the fruit of its partial recovery.

"In this we have been assisted to a most important extent by the perseverance and great talent of our agent in Mauritius, Mr. Currie, without which, it is not too much to say, we should have had to witness the entire wreck of that asset.

"Our special thanks are due to our inspectors, Mr. Baring and Mr. Blyth, whose advice and countenance, together with that of the late Mr. M'Chlery, have been most valuable, and have been continued to us throughout the liquidation of time.

"The liquidation at home has been conducted with admirable efficiency by our friend, Mr. Ebsworth, to whom we feel deeply indebted for the most important and able assistance.

"We append a summary of the accounts (the details of which are open for examination), showing a small surplus for law expenses and other claims not yet ascertained, as well as for the continued expenses of the liquidation, which (apart from charges not incidental thereto) has not exceeded $4\frac{1}{2}$ per cent. on the amount collected.

"We are, Sir, your obedient servants,

"REID, IRVING, AND CO."

Summary of Accounts.

RECEIPTS.

Proceeds of various sugar estates and produce, with sundry debts collected in Mauritius	£275,904 8
Idem, West Indies	17,658 10

Yielding a dividend of 8d. per £ upon the present claims of £696,248. 13s. 6d., reduced from the original amount of £848,791. 8s. 3d....	23,208	5	6
Leaving a surplus of	638	7	0
With an unrealised amount, consisting of a life policy for £1,000, of which the office value is	600	0	0
To meet contingent expenses	£1,238	7	0

THE ESTATE OF MESSRS. JAMES LUNHAM & CO.

At the meeting on the 26th January of the creditors of James Lunham and Co., wholesale cheesemongers and provision agents, who failed on the 11th, with liabilities for £200,061, Mr. Grainger in the chair, the assets were stated to represent only £71,373. According to the representations of the accountants employed, the total deficiency upon three years' trading amounted to £290,000. There were liabilities on bills to the extent of £98,590; bad and doubtful debts, £24,157; bad debts already written off, £45,680; drawings, £5,392; and brokerage charges, &c., for the three years, amounting to £41,783. An offer of 7s. in the pound was made, and a committee of investigation was proposed. A creditor was greatly surprised at the large deficiency in the accounts, and the chairman expressed an opinion that Mr. Lunham ought to make a better offer. Considerable discussion ensued, and, in reply to a creditor, Mr. Linklater observed that he did not know whether the observation of the chairman, that he would rather have 2s. 6d. in the pound in bankruptcy than 7s. in composition, was the feeling of the meeting, but that he could assure them bankruptcy had no terrors for Mr. Lunham or his family. No possible advantage would be gained by forcing a bankruptcy. The real question at issue, in his opinion, was how to realize for the creditors the greatest sum from the estate with as little delay as possible. The chairman thought that there should be a declaration of insolvency or an assignment; and, after some further debate, a committee was appointed to investigate the accounts, with discretionary power to use or not a declaration of insolvency, to be signed by Mr. James Lunham, and placed in the hands of the accountants.

Reviews.

Bank Audits—The Practicability of a thorough independent system considered.—By HENRY FISHER, manager at Wolverhampton of the Midland Bank. Dedicated to Edward Baines, Esq., M.P. London: SIMPKINS, MARSHALL & Co.

THE writer is well known for his views on bank audits. He has, indeed, contributed to the pages of the *Bankers' Magazine* on the subject, and the present pamphlet appears to be an amplification of what he has before advanced on the point. If Mr. Baines shall introduce the question

into Parliament, he will be well fortified by the facts and arguments which Mr. Fisher brings under his consideration. The matter shortly command attention.

The Joint-Stock Companies' Directory for 1865.—By CHARLES BARNES & SONS, Birchin Lane. Messrs. GROOMBRIDGE & SONS, Patern Row.

THIS book, which is well got up and arranged, supplies a want that has been felt for several years. No guide whatever has existed to the various companies, including Railway, Assurance, Banking, Credit and Finance, Shipping, and miscellaneous; but separate volumes have from time to time appeared, giving in ordinary form the class of information alluded to. Here we have the matter brought altogether without the endless repetition with which some of these volumes are encumbered. The type is large and readable, the arrangement clear for reference, and as a desk dictionary must prove most valuable to bankers, merchants, lawyers, the directors of public companies, and even professional promoters. In looking through the contents one is struck with the marvellous number of enterprises that have been encouraged during the last two years, the extraordinary amount of capital subscribed, and the great strides "limited liability" has made among the public. A good deal of the money thus collected will be sacrificed, but it is at the same time evident that joint-stock association is superseding the old plan of private partnerships; where it will succeed is difficult to imagine, though it seems quite certain that with more success the reduced rate there will still be an increase of these undertakings. Every volume will consequently every year become more useful, and if carried out in the spirit with which it has been commenced, it must speedily become a standard work of reference.

CHANGES IN BANKING AND MERCANTILE FIRMS.

THE following changes in banking and mercantile partnerships took place with the commencement of the year:—

Mr. Pascoe Charles Glyn has been admitted a partner in the firm of Messrs. Glyn, Mills, Currie and Co.

Mr. Frederick Drummond has joined the firm of Messrs. Drummond & Co. Messrs. Thomson, Finlay and Co., of Liverpool, join Messrs. F. Hodgson and Co., of London. The names remain unchanged, but the interest in the two firms are identical.

Messrs. Browne, Van Santen and Co., of Liverpool, have opened business in London, under the style of Messrs. Browne, Van Santen and Gau.

Mr. Edward Lazard, of Moorgate Street, having obtained the requisite assistance from his friends, has recommenced his business as a foreign banker, under the style of Messrs. Edward Lazard and Co.

Messrs. Backmeister and Osten have admitted Mr. H. Palmer as a partner, who has been for some time entrusted with their procuration. The business is now carried on under the title of Messrs. Backmeister, Osten and Stone.

Messrs. Bieber and Co. have announced that owing to the death of Mr. V. A. Bieber, his interest in the firm has ceased.

Messrs. Wallace Brothers, of Austin Friars, have admitted Mr. Richard Wallace, late of Messrs. Wallace and Co., of Bombay, as a partner in that firm.

Mr. Dennis Madden retires from the firm of Messrs. Bates, Stokes and Co., of Liverpool, and Mr. Henry Stokes and Mr. Alexander Mickinlay have been admitted partners.

Messrs. W. D. Tomlinson and Co., of Liverpool, have admitted as a partner in that firm, Mr. Francis R. P. Tomlinson, who has for some years taken an active part in the business.

Messrs. Lemonius and Co., of Liverpool, have announced that Mr. William Wallace having resolved to withdraw from commercial pursuits, Mr. Julius Edward Lemonius and Mr. Colin John Macdonald have joined the firm.

Messrs. Abenheim Brothers have commenced business as commission merchants in Gresham Street.

Mr. John Cookes, shipbroker, in the Cape of Good Hope trade, has retired from business, and is succeeded by his nephew, Mr. John Browne, as principal acting manager.

The firm of Middlemist and Hammond, licensed lightermen and custom-house agents, is dissolved; Mr. Hammond retiring. Messrs. Perkins and Homer, of Water Lane, have amalgamated their business with that of Mr. Middlemist, which is now carried on under the style of Messrs. Middlemist, Perkins and Homer, Lower Thames Street.

The partnership between Mr. Edward Shorthouse and Mr. S. J. Scott, copper and general metal agents, of Birmingham, having been dissolved, Mr. S. J. Scott will continue business on the same premises, under the title of Messrs. S. J. Scott and Co.

The liquidation of the old estate of Messrs. Simpson and Co. having been satisfactorily arranged for, Messrs. Simpson Brothers and Co., with the assistance of friends, now carry on the business.

Messrs. Cutler, Palmer and Co., of Mark Lane, announce the retirement of the senior Mr. Cutler, and the accession, as partners, of Mr. John Treacher, Mr. James Robertson Turnbull, Mr. Frederick Frank Egerton Cutler and Mr. R. Gray Cobham.

Mr. A. J. Allen has retired from the firm of Messrs. Nichols, Allen and Allen, and has joined Messrs. David Satow and Co., of Idol Lane. Mr. Nichols and Mr. L. P. Allen now carry on the business of the former as Messrs. Nichols and Allen, by which designation they were for many years known.

Mr. Henry Worms, has been admitted a partner in the firm of Messrs. G. and A. Worms.

MONTHLY CHRONOLOGY.

December 29.—Suspension announced of Messrs. Johan, Holm and Co. of Stockholm, merchants.

January 10.—The directors of the Bank of Holland reduced their rate of discount from $5\frac{1}{2}$ to 5 per cent.

11.—Suspension announced of Messrs. James Lunham & Co. of the Borough, provision merchants, liabilities about £300,000.

12.—The directors of the Bank of England reduced the rate of discount from 6 to 5½ per cent.

14.—Stoppage of Messrs. J. Scholefield and Son, of Mosely, cotton spinners, with £45,000 liabilities.

16.—Announcement of a new Italian loan of £8,000,000 in a 5 per cent. stock, at the price of £77. 10s.

16.—Suspension of Messrs. Halfhead, Fletcher & Co., of Liverpool, the timber trade.

16.—Failure of Messrs. Edmund, Thompson & Co., of Liverpool, Australian merchants, with debts amounting to £60,000.

17.—Stoppage of Mr. Bennett, of the Oldbury Iron Furnaces, South Staffordshire, with liabilities extending to between £60,000 and £70,000.

24.—Suspension of Messrs. Southgate & Barrett, of Fleet Street, book auctioneers.

24.—Stoppage of Messrs. Eccles, Cartwright & Co., of Liverpool, the cotton trade. Liabilities supposed to be large.

26.—The directors of the Bank of England further reduced the rate of discount from 5½ to 5 per cent.

26.—The directors of the Bank of Holland, also further reduced the rate from 5 to 4½ per cent.

MERCANTILE SUSPENSIONS.

The following suspensions have been announced during the past month:

Messrs. Johan, Holm & Co., Stockholm, Merchants.

Messrs. James Lunham & Co., Southwark, Provision Merchants.

Messrs. J. Scholefield & Co., Moseley, Cotton Spinners.

Messrs. Halfhead, Fletcher & Co., Liverpool, Timber Trade.

Messrs. Edmund Thompson & Co., Liverpool, Australian Trade.

Mr. Bennett, Oldbury, Iron Merchant.

Messrs. Southgate & Barrett, London, Book-Auctioneers.

Messrs. Eccles, Cartwright & Co., Liverpool, Cotton Trade.

BANKING OBITUARY.

On the 21st January Mr. John James Cowens, aged 37, clerk in the Bank of England.

BANK MOVEMENTS.

The Gloucestershire Banking Company have opened a branch of their establishment at Monmouth, under the charge of Mr. Henry R. Luckes, their Bristol manager.

Mr. A. Thomson, the manager of the London office of the Alliance Bank, has tendered his resignation, having taken the post of manager of the Bombay branch.

of the Bank of Hindustan, China and Japan, his resignation having been accepted, Mr. U. Miller and Mr. E. S. Parkes have been appointed *pro tempore* acting managers of the Alliance Bank.

The directors of the Asiatic Banking Corporation propose to increase the paid-up capital of the bank from £500,000 to £1,000,000, by an issue of 25,000 new shares of £20 each. It is stated that it has been necessary to augment the capital, owing to the great success of the bank; for although it has only been a short time in operation, the deposits already considerably exceed £3,000,000.

A circular has been addressed to the shareholders of the London and Venezuela Bank, showing the progress made. It is stated that the available capital of the bank is placed at the disposal of the Caracas directors, and is being safely employed at a minimum rate of 12 per cent. per annum. The want of proper banking facilities has been greatly felt in Venezuela, both by the commercial and agricultural interests, and more particularly of late in consequence of the immense annual increase in the cultivation of cotton. Pending the arrangements for commencing business in Caracas, they have, by prudent management of the small capital hitherto raised, made sufficient profit to cover all the current expenses of the London office to the 31st of December.

Monetary Intelligence.

MONETARY REVIEW FOR THE MONTH OF JANUARY.

THE prospects of the money-market have been decidedly more favourable. The course of the present month the rate of discount has been reduced first from 6 to 5½, and then from 5½ to 5 per cent. The effect of this has been satisfactory, but it has not created an extension of speculation. An Italian loan has been brought out, but it has not proved a success, and one or two companies have followed which have secured their subscriptions. It, however, cannot be imagined at present that there is the slightest prospect of a general revival in stocks and shares. Business is restricted, with great dulness in the produce markets, which will continue till the spring is more advanced. An impression prevails in many quarters that we shall have money rather lower, though it is not believed even 4½ per cent. will lead to any fresh expansion. The lessons of the past six months are not yet forgotten, nor will they be for some short period to come. The rates in Lombard Street for first-class paper are about 4½ to 5 per cent. The bankers and brokers now allow 4 per cent. for money at call; 4½ for seven days' notice, and 4½ per cent. for fourteen days. Our space is so fully occupied with the bank and other reports that there is scarcely room for anything else.

Consols have not varied much this month; foreign stocks have fluctuated, but not to any serious extent. The rise has been in Turkish Consolidated in consequence of rumours of a new loan. The Spanish fever has subsided.

Railway shares appear strong on the prospects of dividends. Some fluctuations have taken place in bank shares through the discussions at the meetings. The tendency is likely to improvement. Since the meetings of the finance companies have been concluded, the prices have become weaker.

THE GRAIN TRADE.

THERE has been very little activity displayed in the grain trade during the past month. Wheat has only been in retail demand, and the samples brought to market have generally been in good condition, whilst the supplies from abroad have been equal to the demand, consequently prices do not show any considerable improvement. Barley has been in fair demand and the value has been well supported. For other descriptions of grain there has been only a moderate inquiry, and without any material alteration in prices. The latest official average quotations were:—Wheat, 38s. 10d.; barley, 28s. 9d.; and oats, 19s. 1d. per qr.

The Gazette returns for England and Wales have been:—

Week ending, 1864.	Wheat. Qrs. sold.	Weekly Average. s. d.	Duty. s. d.	Correspondence Six Weeks Last Year s.
Dec. 24	99,355	37 10	1 0	39
„ 31	89,022	37 10	1 0	40
1865.				
Jan. 7	63,806	38 2	1 0	39
„ 14	86,286	38 7	1 0	40
„ 21	78,214	38 10	1 0	40

The importations since the harvest of 1864 have been:—

	Wheat. Cwts.	Other Grain. Cwts.	Total. Cwts.
Twenty-two weeks ended 17th Dec....	9,144,129	11,091,324	20,235,453
Five weeks ended 21st Jan. ...	776,760	1,833,694	2,610,454
	9,920,889	12,925,018	22,845,907
And the weekly averages have been:—			
Twenty-two weeks ended 17th Dec. ...	415,000	504,000	919,000
Five weeks ended 21st Jan. ..	155,000	367,000	522,000
	Less 260,000	137,000	397,000

STATE OF TRADE.

THE state of trade is rather better in some localities, but at present the sympathies of general revival are rather remote.

NOTICES TO CORRESPONDENTS.

We have arranged in future to issue a double number in February and August, instead of formerly in May and November. This has been rendered necessary by the great increase in the meetings of the Banks and Discount Companies, which will be always carefully collected in the pages of the *Bankers' Magazine*. We shall also give the proceedings of the various Credit and Finance Companies as they are more or less associated with banking, so that our subscribers and readers can refer to them without difficulty. Correspondents will please forward communications addressed to the Editor, No. 8, Birch Lane; subscriptions and orders as usual to Messrs. Groombridge and Sons, Paternoster Row, or Messrs. Waterhouse and Sons, Carpenters' Hall, London Wall.

BANKING AND FINANCIAL ANECDOTES.—It will be perceived from notice elsewhere, that the Editor of the *Bankers' Magazine* is collecting and arranging a series of Banking and Financial Anecdotes. Any contributions from subscribers and readers of the *Magazine* will be thankfully received, particularly if the subject-matter shall not have previously appeared in print. Nothing personal or offensive will receive publicity.

BANKERS' MAGAZINE,

AND

of the Money Market.

MARCH, 1865.

PHILOSOPHY OF BUSINESS SUCCESS.

a complex general notion, because of the interests involved, and because business experiences furnish examples of accumulation. A common notion of business success would be, that the result of trading forms a satisfactory fund. Ventures with good and some with bad results; and unsuccessful men still pursue business and the successful men who have been gainers; and those who have relinquished it being gainers to the end of their desires, and the successful men who still pursue gainers to an extent short of their inclination between pursuing and relinquishing is the case that the great majority of the men venture to the end, and figuratively business.

Complexity is owing to the mutations of human life. The generations of business men, like generations of other things, are not simultaneous; the young are constantly being born, the middle aged, and the latter as constantly passing away among those of maturer years. Generalization is a fault; business furnishing the continuous changes of the kaleidoscope. The corner house is to-day a law office; to-morrow it is a club or chamber; and it is an establishment in the boot and shoe trade. This year we recognise new faces on the street; and new names in the ledger and on the books. Note them and watch them with the protection agent, and their interrogation will

make no sensible addition to our general knowledge. The names on the doorways are in time blotted out, and the names in the ledger pass into forgetfulness when the time comes to be fully written up. What becomes of the assets and creditors of the bank, and whether the insurance of the bank is in a good or bad condition when it was wound up or transferred into another, none perhaps can clearly answer. How the bank or chambers were established or broken up is never like to be known. And of the success of the great establishments in the boot and shoe or other trade, the banker, or the bank itself, there are often two—may be doubtful. The mutations of business life almost baffle inquiry.

Passing by for a moment the phenomena of mutations, we turn to their reverse: to that which time has stamped with permanency. Where, for example, is that weather-beaten institution the Bank of England? It is a business success in every meaning of the term. Some will attribute its good fortune to one cause or to one set of causes; others will dispute and advance their own theories. Discarding differences of opinion, a great majority will affirm that the Bank of England is a business success by virtue of its age. Where, again, are the Stock Exchange and Lloyds? They are not of yesterday, nor have they looked for from street to street or from town to town. They are known of all men the wide world over. Some, one might say, will attribute their good fortune to one cause or to one set of causes, and others will dissent. Wherein most will agree is that they have succeeded, and that of their success the continuance is the proof. But the proof is incomplete. The stoutest oak may be decayed at heart, so also may the oldest corporate body, unless vitality appears in all its parts. With that correction the proof is perfect. Age in business is a mark of success so long as no symptoms of decay are to be feared. As a matter of fact, the Bank of England is in possession of a satisfactory fund, the slow growth of years, which has been husbanded with anxious care, and which would be jeoparded were folly to take the place of wisdom in the direction of Bank affairs. As a matter of fact, the Stock Exchange and Lloyds are prosperous and without any considerable accumulation of fund; such accumulation being foreign to the intention of the corporations. Both are successful by reason of their age and the discretion with which they are managed.

Returning to the phenomena of mutations their character is transiency. For example, the antecedents of the American petroleum or shoddy interest relate not to business, but

of those concerned, and for that reason they with interests may nevertheless accumulate a wealth—may become enormously enriched, could be different in kind from that attained in corporations to which reference has been made. The difference would be that whereas the success of the latter is due to the influence of the accident, that of the former, from its accidental nature, creates distrust. Who is ignorant of the proverb that the man whose experience does not point to verification is scarcely to admit of being numbered. The man who becomes rich by one accident or by a series of accidents is in danger of becoming poor by a combination of accidents. "In the sweat of thy face shalt thou eat bread," says the sacred text, which accumulated by the protracted labour of the poor is the most abiding. One of the surest ways of escaping the transient class, whether as a corporation or as an individual, is the avoidance of what the long-established never fails to do. Accidents should take the place of personal antecedents, in reality, being of no value—for there is no security in which to rear the structure of business success. Foreign to the subject it might be shown that the relation of debtor and creditor there may be even a greater liability on the part of the creditor than of the debtor. The former failing to distinguish between receivers to whom merchandise is parted with and beginners, and towards beginners, there is too much reliance on personal antecedents and too little dependence on antecedents.

Success has been said to consist in the satisfaction of the course of trading; and the cases of the two classes of men have to be considered—those who persevere to the end, and those who relinquish it.

View of business success as consisting in the results of a course of trading, several interesting questions are presented for investigation. First of all, the nature of the ventures, so that, in a certain sense, all are styled adventurers. The manufacturer must find a market for his goods, the importer a buyer; and if he cannot obtain readily, there are the alternatives of a low price, or a full market price from a doubtful source. The success of men of business is to be measured by the successful cash realizations when realizations were expected, and by the preference to doubtful credit sales; and much of

the non-success to the adoption of the other course. So as there must be risks or ventures, there should be a perception of the principle on which success depends. Impressions will not do, because the spendthrift is deluding himself with the belief that another straw will not add much to the camel's burden. The man also who keeps no record of his money outgoings is pretty sure to come to trouble from conviction of being within the mark invariably proving mistaken. The averages of business should be always kept doubtfully but positively in view, and on the whole it is questionable whether the course of training at school and in counting-house or shop is the best that might be imparted to commercial youth. The extraordinary number of business failures is, to say the least, a serious imputation on the course of training. In the third place, although some men of business are born rich, and others have riches thrust upon them, there is little doubt that as there is one sure road to failure so there is also one sure road to fortune. We shall not attempt an enumeration of the maxims which have guided the conduct and operations of the most successful men of business. The enumeration (if it were effected) would be useful and confer the greatest possible benefits on the commerce of the country.

That while some successful men of business never give up and others do, is a matter of education and human nature. They who have the faculty of withdrawing their thoughts from the serious occupation of their lives, and have a taste for recreation out of doors, or for reading at their firesides, are almost certain to become satiated in the accumulation of the world's goods. They, on the other hand, without that faculty, are only to be withdrawn from the office, the warehouse, or the shop, to bring their days to an early close. And need we add that accumulation becomes a passion with some men? They will toil early and late to be esteemed wealthy and powerful, although to the last the well-founded apprehension may have haunted them, that as soon as their breath is out, that they possess will pass into improper hands.

C OUTLINES OF AMERICAN FINANCE.

No. XIII.

The crisis of affairs the several states manifested Massachusetts, Connecticut, New York, Delaware, Indiana, and Missouri, condemned the doctrines South Carolina, as destructive of the Constitution. South Carolina and Alabama censured the ordinance, the tariff unconstitutional and unwise. Georgia rebellious policy pursued, but opposed the tariff terms, and proposed a convention of the states North Carolina, South Carolina, Georgia, Alabama, Mississippi, to consider how relief might be given to the protective system. The legislature of Virginia to refer the whole question to a committee on which in which the general powers of government were discussed, and, at the same time, earnestly requested not to take any further action under the ordinance convention or do any act calculated to disturb the peace. The state of New Hampshire abstained from any opinion on the South Carolina doctrines, and passed resolutions in favour of reducing the tariff to the true standard. Massachusetts, Vermont, Rhode Island, and Pennsylvania opposed any alteration

South Carolina convention had promised to remain in session till 1st January, 1833, in other words to continue the same attitude till that date. In the mean time the revenue laws, no attempt being made to repeal the ordinance which prohibited the payment of the tariff duties.

Congress assembled on the 2nd December, 1832, the members, divided in opinion, hesitated what to do.

South Carolina temporized and the southern states refused any amicable accommodation. President Jackson declared the non-loyalty and patriotism of the South, though he wished to repel force by force and rigorously to enforce the laws of Congress. Amidst these difficulties a compromise was effected in the person of Mr. Clay, a highly distinguished statesman and a chief supporter of American manufactures. He proposed a modification of the tariff, which both Houses of Congress and the President ratified. The new law gradually reduced the tariff duties, enacting that where these exceeded

20 per cent. one tenth part of the excess should be deducted and after the 30th December, 1833, and one tenth more in an alternate year until the 1st December, 1841, when one half the residue was to be deducted; and after the 30th June, 1841, the duties on all goods were to be reduced to 20 per cent. on home valuation and were to be paid in cash. Mr. Calhoun, principal statesman of South Carolina, approved this plan, which was carried in the Senate by 29 to 16 votes, and in the House of Representatives by 119 to 85. The amended Tariff Bill received the presidential signature on the 2nd March, 1833.

Within a few days after this settlement of the dispute, South Carolina repealed the ordinance passed by its convention, to vindicate its right of protest and resistance, it retained its statute book the law by which it had armed its militia; it even had the hardihood to pass another ordinance which received the name of the "Nullification Ordinance," because it pretended to nullify an act of Congress, called the "Force Bill," which had empowered the President to use force, if necessary, to collect the Custom dues for the benefit of the federal treasury. This pretension of South Carolina was clearly an act of rebellion, for if any single state could annul an act of the Federal legislature, the Union would have been a rope of sand. However, this insolently defiant measure was favoured by the winking at by the party who styled themselves advocates of "States Rights," and the more violent nullifiers hailed Clay's compromise as the triumph of their party. The protectionists, aware that the free-traders would have a decided majority in the next Congress, congratulated themselves that the question had been settled before the enemies of the manufacturers had been strengthened in the legislature; but there was still a third party, not numerous, but enlightened and patriotic, who strongly reprobated any concession to the demand of a single state, threatening secession. This unhappy dispute shook faith in the permanent stability of the Federal Union; it was too clear that the central government had given way to clamour and betrayed its weakness. States rights came into direct collision with Union rights, and an adjustment founded on a compromise showed that the courage of Congress was not equal to the firmness of the President.

The administration of General Jackson is also memorable for his bitter hostility to the Bank of the United States, and the ruinous consequences that resulted. In his first annual address to Congress, 8th December, 1829, he admitted that the conduct of the managers of the bank had been judicious, but, that

guarded, it was evident to his more intimate friends that he was unfriendly to the institution in its existence. He expressed himself in these terms:—

"The charter of the Bank of the United States expires in 1836. The stockholders will most probably apply for a recharter on the same privileges. In order to avoid the evils resulting from a measure involving such important principles as to keep pecuniary interests, I feel that I cannot, as a member of the parties interested, too soon present it to the consideration of the legislature and the people. But the wisdom and expediency of the law creating this institution is questioned by a large portion of our fellow citizens. It must be admitted to have failed in the great object of creating a uniform and sound currency."

It was also intimated that when the public debt was liquidated, it might be proper to divide all the property among the several states of the Union, according to population. What more alluring bait could be held out to the voters in the several states by a canvass for a second presidential election? The report was referred to the financial committee whose report was published by the President.

The President recommended Congress to inquire into the expediency of discontinuing the bank on the expiry of its charter, and substituting in its place a bank based on the public debt, without the power of making loans or purchasing securities. At the same session Mr. Benton submitted a motion for the renewal of the charter, which was defeated by 20 votes, and this division was a sign of collision between the legislature and the executive, for the hostility to the bank was but thinly disguised. In his speech he observed that the institution, owing to its size, was dangerous to liberty, of which many citizens were becoming convinced, and he thought it would be wise to discontinue it. It would not be possible to secure the advantages of the present bank, through the agency of a Bank of the United States so modified in its principles and structure as to meet the constitutional and other objections, on which thereon he proposed the following terms:—

"That it be possible to organise such a bank, with the same powers as a branch of the treasury department, based on the public debt, without individual deposits, without power to make loans on property, which shall remit the funds of the treasury, and the expense of which may be paid, if thought

advisable, by allowing its officers to sell bills of exchange to private individuals at a moderate premium. Not being a rate body, having no stockholders, debt, or property, and a few officers, it would not be obnoxious to constitutional objections which are urged against the present bank; and having means to operate on the hopes, fears, or interests of large portions of the community, it would be shorn of the influence which makes that bank formidable. The states would be strengthened by having in their own hands the means of furnishing the paper currency through their own banks, while the Bank of the United States, though issuing no paper, would check the operations of the states banks by taking their notes as deposits and exchanging only so long as they continue to be redeemed in specie."

This was a very plain intimation that the independence of the bank as a distinct institution was to be destroyed, government officials being substituted for bank directors, as the President would nominate those officials, all effective control would be transferred to his hands.

In his third annual message, 6th December, 1831, General Jackson congratulated Congress on the abounding and increasing prosperity of the country, but he no longer attributed merit to the bank. He took all the credit to himself. The surplus of revenue over expenditure was even greater than in former years, and the exulting President expressed his hope that the whole public debt might be extinguished, either by redemption or purchase, within the four years of his administration, when America would exhibit the unexampled spectacle of a great nation abounding in all the means of happiness and security altogether free from debt. He repeated for the first time his objections to the bank, but the directors now asked for a renewal of the charter. Such was the perverseness of the opposition that it was contended the application was premature, though during two years the President had alluded to the subject in his messages, and in terms well calculated to put the directors on their guard. The application was brought before the Senate, who referred it to a select committee. The committee reported in favour of the renewal of the charter for fifteen years, with some modifications. In the House of Representatives there were two reports; the majority of the committee there appointed were hostile, but there was a respectable minority in favour of renewal. Finally, on bills being presented in both houses, the bank triumphed in the Senate by 28 votes; and in the Assembly of Representatives by 107

 ed against it. One Congress in 1815 de-
 nk; another, in 1816, established a bank."
 ontradictory views was urged against a deci-
 e Court, which had ruled that the bank was

a constitutional institution, for General Jackson argued that if one Congress could found a bank, every other Congress had an equal right; but the Congress of 1816 which established the first bank existing in 1832, had taken away the right from its successors for twenty years by giving it a monopoly for that time, and the Congress of 1832 proposed again to continue this monopoly for fifteen years, which restriction on all other competitors the President pronounced unconstitutional. Congress, he contended, was only allowed by the constitution to grant monopolies and exclusive privileges in two specified cases—"to promote the progress of science and useful arts by securing, for a limited time, to authors and inventors the exclusive right to their respective writings and discoveries."

The Bank Act, proposed by Congress, contained a clause which exempted from all national and state taxation bank property held by foreigners; that clause the veto declared unconstitutional.

The President then remarked that at the formation of the constitution the several states reserved power to regulate commerce, control titles and transfers of real property, and most, if not all of them, had laws disqualifying aliens from acquiring or holding lands within their limits. The proposed Bank measure contravened that law. The government of the United States had no constitutional power to purchase lands within any of the states, except for "the erection of forts, magazines, arsenals, dockyards, and other needful buildings;" and, even for these objects, only "with the consent of the legislature of the state in which the same shall be." By making themselves stockholders in the bank, and granting to the corporation the power to purchase lands for other purposes, Congress would assume a power not conveyed to it in the constitution, and grant to others what they did not themselves possess.

General Jackson then insisted that the bank only contemplated its private interests, not those of the country. He observed that the first Bank of the United States possessed only ten millions which was then deemed sufficient. The capital of the present bank was thirty-five millions, and the national debt was not paid off: yet, on its renewal, it was proposed to augment its capital to fifty millions. Therefore, argued the President, the large capital was not for public, but for private purposes. The original charter one million and a half was paid by the government to the bank. For its extension three millions were offered to the government. The Act of 1816 declared that the bonus was paid "in consideration of the exclusive privileges and benefits conferred

said bank." The Act of 1832, would, in the
e the bonus to be granted, "in consideration
enefits and privileges continued by this Act to
n as aforesaid." Therefore, continued the

as required to submit his reasons to Congress
urse. In support of the views of President
tary of the Treasury expressed his doubts of
deposits, if continued in the custody of the
of the Treasury was then instructed to investi-

gate its affairs, and he reported that the institution held a valuable assets in excess of its liabilities to the amount of more than seven millions of dollars over and beyond its capital of 35,000,000 dollars, thus proving that the Secretary of the Treasury had no grounds for his want of confidence. Thus thwarted, the execution of the President vented itself in a new form: he recommended a sale of the stock of the bank belonging to the United States, after it had been proved to be in trustworthy hands. The recommendation was rejected by the House of Representatives on the first reading, by 102 votes to 91. The House of Representatives also decided, by 109 votes to 96, that the deposits might be safely confided to the custody of the bank. These successive defeats so infuriated General Jackson that his judgment appeared to have been blinded, for in his fourth annual message on December, 1832, he said in allusion to the bank, "An interference into the transactions of the institution, embracing the branch banks as well as the principal bank, seems called for by the character which is given throughout the country to many serious charges impeaching its character, and which, if true, may justify a just apprehension that it is no longer a safe depository for the money of the people." This was an insult founded on falsehood, for the vindictive charge was not sustained by a particle of evidence.

General Jackson was re-elected President for a second term of four years, again entering office on the 4th March, 1835. South Carolina had now relinquished its nullification doctrine, and the modification of the tariff had tranquilized the public mind on that subject. The Bill to re-charter the bank had been rejected by the veto of the President, but its existing charter did not expire till the year 1836; and as Congress had refused to remove the deposits from its custody, General Jackson determined to compass that end by other means. Some changes had taken place in the administration. Mr. Livingstone, Secretary of State, had been appointed minister to France; he was replaced by Mr. Maclane, Secretary to the Treasury, who had declined to remove the deposits from the bank though urged by the President to do so, after the Committee of Ways and Means had reported against their removal. Mr. Duane succeeded Mr. Maclane, but he was not more pliable than his predecessor. However, the President prevailed on him to appoint Mr. Amos Kendall as an agent, to communicate with the several states to ascertain on what terms they would receive the public deposits. The negotiator proposed as a basis that they should mutually guarantee each other. This was refused, and then the President determined to remove them at all hazards, but in that a

vengeance he required the co-operation of the Treasury. Mr. Duane objected to lend his ass officially ordered by Congress to take so extreme. To extricate himself from this dilemma he convened his cabinet on the 10th September, denouncing the bank in unmeasured terms, and placed all the responsibility of removing the deposit on the 1st of October next following to carry out execution. Mr. Duane reflected on the subject, and on September 15th formally announced to the President to carry his order into effect, and further, that he signed. As the Secretary to the Treasury was thus empowered to give a legal order for the transference, the President deprived Mr. Duane of his office, succeeded by Mr. Taney, the Attorney-General, who issued the necessary order. The public moneys were removed to the local banks of such states as they chose to select. At the time when these measures were adopted the government deposits amounted to \$4,350,000 dollars, the whole of which were removed in a few months, the greater part during the first four months of the year. When this arbitrary blow was struck, the country was prosperous in all departments, and commercial activity was established. The advances of the bank to the community, on the 1st October, 1833, exceeded \$10,000,000 dollars, and the directors immediately limited the accommodation, the consequence of which was immediate general distress. Strictly speaking, the removal was not an illegal act; it was technically covered by the charter; but as the bank had paid to the government \$1,000,000 dollars for its privileges, among which was the right to the deposits, as investigation had proved their worthiness, and as no act of malversation had been committed by the directors, the arbitrary act of the President, motivated by hatred and spitefulness, was worthy of no other than a severe reprobation.

THE FRENCH BUDGET.

M. FOULD'S FINANCIAL REPORT.

THE following report of M. Fould, the French Minister of Finance published at Paris on the 10th January :—

"Sire,—In addressing to your Majesty to-day my annual report enabled to place before your Majesty an almost complete *exposé* of the principal elements of our financial situation.

"BUDGET OF 1863.

"The year 1863 will give a better result than I had anticipated last report. In place of a deficit of 43 millions, this Budget will add 28 millions to our former deficit. The total of these difficulties stated last year as 972 millions does not amount definitively to more than 960. By means of the loan of 300 millions, now almost entirely liquidated, this amount will be reduced to 660 millions.

"BUDGET OF 1864.

"It is not yet possible to foresee with exactitude what will be the result of 1864.

"The new law as to sugars, by permitting the temporarily free import of raw sugars, has substituted for the former mode of levying duty guaranties dischargeable at the end of four months. The diminution of duties collected which will result from this change will not amount to more than 50 millions at the end of the current year; but it may be permitted to hope that the greatest portion of this sum, which belongs to the Budget of 1864, will be recovered during the first half of 1865. Save the exceptionality I have just pointed out, the provisions of the Budget of 1864 will be fully accomplished. In fact, if the customs show a diminution of duties, the taxation has been even more easily levied in 1864 than in preceding years; the taxes upon stamps, upon beverages, upon tobacco, and of postage, have at least an equivalent improvement. It is therefore certain that, if there is a deficiency in 1864, it will be limited to the diminution which may take place in the receipts arising from the consumption of sugars, and the Treasury will, nevertheless, have sustained a loss of 6,500,000*fr.*, in consequence of the suppression during the second half-year of half the second half-year upon registration.

"The non-realisation of the bonds of the Mexican Loan which were received in reimbursement of our advances, conformably to the Treaty of Miramar, cannot be considered as a deficit. These bonds, calculated at a rate of 60*fr.*, represent a sum of 54,000,000*fr.*, 40,100,000*fr.* of which will be paid to the Budget of 1864, and 13,900,000*fr.* to the Budget of 1865. The situation of the Treasury enables us to await more favourable circumstances for the negotiation of these bonds, which there is every reason to believe will belong in coming to pass. In the meantime the budget of 1864 will be advantaged by the interest of the nominal capital at the rate of 6 per cent.—i.e., by a sum of 5,400,000*fr.* With regard to the 12,500,000*fr.* which is to be paid by the Mexican Government from its own resources during the second half of 1864, and which appear in the Budget of that year, they have been regularly discharged.

"Although the past year has been favoured by an abundant harvest, our business has had to suffer by the continuation of the American war.

arrangements which have weighed upon enterprise. It has, nevertheless, been less severely tried than other countries. The rate of interest was for a short time at 8 per cent., in England it was raised to 9 per cent., and has always been higher than in France. Despite the inconvenience this occasionally occasioned, the prudence of our commercial men has prevented a large number of failures and their importance has only been limited. People have been much occupied with seeking to reduce the rate of interest some years past, at frequent intervals and at almost every session have brought about the rise in the rate of interest, and have recently addressed to your Majesty to ask that this be the subject of inquiry. The Bank of France has seen the necessity, and, although convinced that no blame could be placed upon it, it has itself manifested the desire to have the rate of discount take place, and should be extended to all the facts of the dearth of capital. If your Majesty should deign to accept of such a useful manifestation to reassure the public, a favourable public opinion will result from the impartial and frank discussion of this important question. I will not terminate my report on the results of 1864 without stating that we have been faithful to the strict execution of the prescriptions of the law of December 31, 1861. Although we have had to make large disbursements in Algeria, and to send thither considerable reinforcements, that we shall not ask any supplementary credit of Parliament, and that if this eventuality should occur, which I have not yet ascertained, it will be restricted within very narrow limits.

ANTICIPATORY BUDGET OF 1865.

The sum opened for the Anticipatory Budget of 1865 amounts to 36,000,000f.; but this sum cannot fail to be reduced. In fact, the less ruling the arrangement of the expenditure, the more will be anticipated in the Budget of 1865 will be found in the balance, by a sum estimated at 36 millions at least, to give rise to corresponding abatements. (The total of the sum has been—in 1859, 52,439,932f.; in 1860, 48,544,882f.; in 1861, 48,544,882f.; in 1862, 71,427,144f.; and in 1863 this amount will be increased by the increase which this Budget will necessitate will be 46 millions. Upon the other hand, the sum opened for the anticipatory Budget amount to 36,000,000f. plus will therefore result of 18,000,000f., which may be added to the ordinary Budget of 1866.

Means of expenditure in the anticipatory Budget of

Ministry of War, 36,000,000f.

asked last year for this service in the rectified Budget

Ministry of the Marine and the Colonies, 29,000,000f.

asked last year for the Ministry of Marine and the Colonies, 29,000,000f.

Public Works, 4,500,000f.

Ministry of Public Works was only charged with a sum of 4,500,000f. in the rectified Budget of 1864.

Finance :—

"New Post-office, 6,000,000f.; re-coinage of silver, &c., 3,000,000f.

"5. Some further expenses for the Ministries of the Interior, of Instruction, of the Emperor's Household, and of the Fine Arts, and of Algeria—together, 2,600,000f.

"The revenue of the rectified Budget of 1865 arises principally:

"1. From direct and indirect taxes, which were calculated with moderation in the Budget voted 18 months ago. Their total value would exceed 31,000,000f.

"2. From the annuity due by Mexico, 25,000,000f.

"3. From a sum to be received from the companies of Orleans and Lyons, 3,000,000f.

"4. From the payment of a credit reserved for inundations, 1,000,000f.

"5. From some other sources, amounting together to 3,300,000f.

"ORDINARY BUDGET OF 1866.

"The ordinary Budget of 1866 contains no new burden upon the taxpayers, and we have even ceased to include the tax upon equipage and horses kept by private persons. By your Majesty's order, a Bill was presented for the purpose of including this tax in future in the ordinary Budgets. Notwithstanding this diminution, the ordinary Budget of 1866 balances at present with a surplus of over a million, and we have nevertheless been able to increase the amount devoted to the Ministry of Marine by 2,500,000f., and that to the Ministry of Public Works by 1,500,000f.

"EXTRAORDINARY BUDGET FOR 1866.

"The Extraordinary Budget for 1866 amounts in revenue to 145,000,000f., and in expenditure to 144,500,000f., thus leaving a surplus of about 500,000f.

"The resources of this Budget consist of,—

"1. The sum of 18,000,000f. (of which I have already spoken, and which forms the surplus of revenue of the Anticipatory Budget of 1865.)

"2. 90,000,000f., arising from the Sinking Fund.

"3. About 29,000,000f., (being the amount of the indemnity to be received from Mexico, China, and Cochin-China.)

"4. 7,500,000f. (arising from divers sources, which are detailed in the draught of the Budget.)

"The principal items of expenditure are:—

"FOR THE MINISTRY OF PUBLIC WORKS.

"Subvention and annuities to the railway companies, 22,200,000f.; guarantee of interest to the companies, 31,000,000f.; railway works executed by the State, 5,400,000f.; works for bridges and roads, 38,800,000f. total 97,400,000f.

"For the Ministry of Marine, destined for the continuation of works for the transformation of the fleet, 12,500,000f.

"All the other Ministries and the Government of Algeria obtain at least equal to those which were accorded them last year; these amount together to about 34,000,000f.

"FLOATING DEBT.

"It remains for me to make known to your Majesty the state of the Floating Debt. As I said at the beginning, the total of our deficits

3 amounts to 660,000,000*f*. The Floating Debt is more than this sum. The difference arises :—
of 15,000,000*f*. (which we have to receive on the

the levy of the duties on sugar, to the amount

ization of the Mexican Bonds, for 54,000,000*f*.

LOVE V. CHARITY.

Thomas Guy, the founder of Guy's Hospital, who was originally the son of a poor lighterman, gained an immense sum of money by selling up all the South Sea stock he could procure, and selling it just at the moment when the fever was at its height. He had been very penurious, and was in the habit of dining before the counter of his shop in Lombard Street—his dinner consisted of a penny loaf and a small bit of meat, with a piece of paper for a cloth; but, falling in love with his maid-servant, he resolved on the luxury of a wife. The match was agreed upon, and arrangements were in progress. Whether arising or not out of these arrangements, history says not, but at all events a portion of the pavement before Guy's shop had to be taken up, and he gave strict orders—that the expense would fall on himself—that the repairs should extend to a certain mark, and not one atom further. The *fiancée*, however, presumed somewhat upon her position, and ventured to direct the workmen to go a little over the boundary. This so enraged him that he not only broke off the match, but showed his spite to his once intended wife by declaring that he would give his money to found a hospital—a promise involving some quarter of a million which he faithfully kept.

THE GOLDSMID FAMILY.—THE MILLIONAIRE SUICIDES.

The history of the Goldsmid family has its sad episodes as well as its brilliant pages. Perhaps no financial firm had a higher reputation at the beginning of the present century than that of Abraham Goldsmid, the Jewish bankers and money brokers.

* *Railway News*, April, 1864.

ed highly as merchant princes, but they were generous and noble dispositions. Like many n, their origin was an humble one. In Good- usly poor neighbourhood, towards the end of was a broker's shop. This shop was kept by and Benjamin Goldsmid. The business pros- rs set up as money-lenders near the Exchange. ate enough to make the acquaintance and gain ham Newland, chief cashier of the Bank of an made the brothers Goldsmid his financial here was an understanding, on the part of the ank of England, that a portion of the Govern- ys be reserved for the chief cashier of that war time too, and loans were frequent. To to such a man was, to use perhaps an appro- th a Jew's eye." The firm of the Goldsmids eir contracts for loans being on a large scale, arge profits. The brothers became immensely miserly. On the contrary, they gave magni- ribed handsomely to charitable objects, and incely style. But both brothers came to a

the younger brother, lived at Roehampton, a before the ruthless invasion of railways. He fectionate wife, and a charming family. To e went for the last time, after business hours, 1808. of the family were yet to culminate in the ther. Whether the mind of Abraham Gold- r the suicide of his brother, or whether it was vice of the deceased was a serious blow to the that the speculations of the survivor were

Loss after loss followed, and, at last, Mr. ayed for a desperate stake. He and Mr. eted, in 1810, for the Government loan of

14 millions. The stock fell, and fell, and continued falling said, Mr. Goldsmid's losses reached a quarter of a million. 28th September, 1810, the loan was at $6\frac{1}{2}$ discount, and on the day of that day Abraham Goldsmid left the City gloomily for home. He had a splendid mansion at Morden, not many miles from London where his brother had lived. There was no great change in his demeanour observable at dinner time ; and after a game of billiards he went out into the grounds for a walk. The report of a shot was heard. Abraham Goldsmid had shot himself. Next day the Government loan of 14 millions fell 5 per cent.

Two anecdotes of Abraham Goldsmid are related, though the proofs of his good-nature have probably died with him. He was regularly at one hour, and noticing that the waiter was nervous and spirited, the kind hearted Jew inquired the cause. He found the man was in pecuniary difficulty, and he instantly gave him the amount he required, refusing to receive any acknowledgment of the money, or even any thanks. At another time Abraham Goldsmid became acquainted with a clergyman of the Church of England who was but little better off than Goldsmith's village curate, and who was "rich with forty pounds a year." Commiserating his poverty, Goldsmid actually sent the clergyman a letter informing him that his share in a new loan had been allotted to him ! The good clergyman stared with astonishment when he received the letter, and, suspecting the conclusion that some hoax was being played, he put the letter on one side. The next day, however, another letter arrived, giving him the pleasant information that a goodly sum had been realised in the transaction.

BLACK MONDAY.

When the failure of Alexander Fordyce, of the firm Neale & Co. became known—when it was discovered that his name was attached to bills in circulation, to the tune of £1,000,000 millions—there was immediately a panic. The news transpired on Monday the 8th of June, 1772, and so disastrous were its effects that the day was commonly called "Black Monday." Among the events in Scotland, was the destruction of the first joint-stock bank of Douglas, Heron & Co., at Ayr, with a capital of some £96,000 a proprietary of about 140 shareholders. When the news

failures became known in Scotland, there was im-
n this bank. In vain did some of the leading
them the Duke of Buccleuch—implore the Bank
ance : it was refused, and the bank fell, dragging
good Ayrshire family.

BANK NOTES ISSUE BILL.

THE following bill to make provision for empowering country banks to obtain relief from certain restrictions, upon payment from time of a certain charge in respect thereof, has just been introduced into the House of Commons by the Chancellor of the Exchequer :—

Whereas divers restrictions are imposed by act of parliament on bankers in England issuing their own bank notes : and whereas it is expedient to permit the said bankers to exempt themselves from the said restrictions by payment of such percentage on their issues of notes as is hereinafter mentioned : Be it enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows :—

1. This Act may be cited for all purposes, as "The Country Banks Notes Issue Act, 1865."

2. This Act shall not extend to Scotland or Ireland.

3. This Act, and the Act 7 and 8 Vict. c. 32, to be read as one Act.

4. Definitions.

5. There shall be repealed, so far as respects any bank of issue taking to pay such percentage on its issue of bank notes as is hereinafter mentioned, any provision of any act of parliament whereby the number of partners in certain banks of issue is restricted to six, or whereby banks of issue are prohibited from having a house of business or establishment as bankers in London, or at any place not exceeding sixty-five miles from London, or whereby banks of issue are prohibited from issuing or making payable bank notes in London, or at any place exceeding the distance of sixty-five miles from London; subject to the proviso, that nothing in this act contained shall authorise any bank to issue or re-issue bank notes within the city of London, or within six miles thereof.

6. Any bank of issue, or any number of banks of issue, may transfer to any other bank of issue the right of issue vested in it or them, or any part or parts thereof, on such last-mentioned bank undertaking to pay such percentage in respect of its own issue, and of the issue or issues so transferred as is hereinafter mentioned.

7. No change in the personal composition of any bank that has accepted the conditions of this act, and no alteration in the constitution of any bank made in accordance with law, shall affect or prejudice the exercise by the bank of the rights and privileges conferred on it by this act.

8. Provides that the issue of banks accepting conditions of act, shall continue till 1st January, 1890.

9. The undertaking of a bank for the purposes of this act shall be bound to Her Majesty, &c., in such sum, as may be prescribed by the Commissioners of Inland Revenue, with the sanction of the treasury. The undertaking may be executed by the bank or the public officer thereof, or such or some of the directors or managers thereof or partners therein, or all or any of the said parties, as the said commissioners, with such sanction as aforesaid, shall think fit to make obligors. The commissioners, when they have approved the undertaking of a bank, shall forthwith publish in the "London Gazette" notice of such bank having entered into such an undertaking; and the notice in the Gazette containing such notice shall for all purposes be conclusive evidence of the fact therein stated, and the said undertaking shall

Effect from the date of the publication of the notice in the

bank that has accepted the conditions of this act in respect of a percentage on its issue of notes, and which bank is entitled to as a privileged bank, shall pay into the receipt of the Receiver-General a sum after the rate of £2. 5s. by the year upon the average amount of bank notes circulated by that bank of a year. For the purposes of this section, the average amount of bank notes circulated during any quarter by any bank shall be the monthly averages as ascertained by the Commissioners under the Bank Act, 1844. The percentage payable on shall be instead of license duty and composition for the issue of bank notes issued by a privileged bank, and no bank shall be required by any bank paying the same, and shall be entitled to the same privileges in respect of the issue of bank notes if it were duly licensed and had duly paid composition for the same. The said percentage shall be paid quarterly to the Receiver-General on the 31st day of March, the 30th day of May, the 30th day of September, and the 31st day of December in every year. Payment shall be made on the first of the said quarterly periods after the publication in the Gazette of the notice of the rate to be paid, and shall consist of the proportion only that shall be due up to the said day.

Every bank taking by bond given by or on behalf of a bank in pursuance of this act shall be renewed from time to time as the Commissioners may require; and if any privileged Bank refuses or neglects to give any such bond, after being required so to do by notice in writing by or on behalf of the Commissioners of Inland Revenue, it shall incur a penalty not exceeding £100, to be recovered by Her Majesty's superior courts, and on being convicted shall forfeit to the Crown all its rights of issue.

The Commissioners of Inland Revenue shall from time to time on the application of any privileged bank, certify to that bank the amount of notes issued by it; they shall also, at the expense of the bank, publish a certificate in the next succeeding London Gazette in which the amount shall be conveniently inserted; and a copy of the Gazette in which the certificate is made shall be conclusive evidence of the amount of notes issued by that bank is authorised to issue.

If a privileged bank become bankrupt its right of issuing notes shall be determined, but there shall be paid by the Bank of England out of a part of the assets thereof, by way of compensation for the loss of its right to issue notes, a sum equal to the then present value of the right at the rate of one per cent. on the average quarterly amount of notes issued by the bank during the preceding year, and payable to the Bank of England until the 1st of January, 1890, or as long as it can be ascertained. Any compensation paid by the Bank of England in pursuance of this section shall be repaid to it out of Her Majesty's Exchequer, in such manner and at such time as may be agreed between the Commissioners of the Treasury and the Bank of England. If a bank of issue assume to act as a privileged bank without complying with the provisions of this act entitling it to do so, the right of issue in that bank shall be forfeited to the Crown, and may be exercised either by being altogether extinguished, or by being transferred to another bank, as to the treasury may seem good.

15. A privileged bank, notwithstanding it carries on business in or within sixty-five miles thereof, may, on obtaining a license, as by the act of the ninth year of the reign of King George the third chapter twenty-three, compound for the issue on unstamped promissory notes payable to order at any period not exceeding six months after sight, and its bills of exchange, wherever payable, in manner provided by the last-mentioned Act, and shall be entitled to all the privileges exercised or enjoyed by it previously to its becoming a privileged bank.

16. The Bank of England may compound, in manner provided by the Bank Act, 1844, with any privileged bank, in the same manner as it is thereby empowered to compound with banks of issue that are not privileged.

17. A privileged bank of issue shall be subject to all the provisions of the acts of parliament relating to banks of issue, except in so far as they are repealed by this act in relation to such bank.

BANK OF IRELAND.

THE following bill, to make further provision for the management of the unredeemed public debt in Ireland, and for the reduction of the interest payable on certain sums advanced by the Bank of Ireland for public service, has been brought into the House of Commons by the Chancellor of the Exchequer:—

Whereas it has been agreed that the rate of interest hitherto payable to the Governor and Company of the Bank of Ireland on the sums advanced for the public service shall be reduced, and that provision shall be made for the payment to the said governor and company for their management of the unredeemed public debt in Ireland: Be it enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

1. From and after the 6th April, 1865, certain provisions of the Acts 8 & 9 Vict., c. 37, shall be repealed as relates to the payment of interest on said sums, amounting to £2,630,769. 4s. 8d., and the whole of the third section of the said act, shall be and the same are hereby repealed.

2. There shall be paid to the Governor and Company of the Bank of Ireland, on the 6th April, 1865, out of the Consolidated Fund, in discharge of the said sum of £2,630,769. 4s. 8d., at the rate of £3. 5s. per cent. per annum, for the quarter ending on the 5th day of April, 1865.

3. Provides that from 6th April, 1865, interest on the debt to be redeemed of Ireland be reduced to £3 per cent. per annum.

4. There shall be paid to the Governor and Company of the Bank of Ireland, on some day between the 6th April and the 5th July, 1865, out of the Consolidated Fund, for their charges in the management of the unredeemed public debt in Ireland for the year ending on the 5th April, 1866, and in the like manner on the same day between the 6th April and the 5th July in every succeeding year, for the management of the debt for the preceding year ended on the 5th April, in each year until the 5th April 1886, and thenceforth in any and every succeeding year. No Parliamentary remuneration shall otherwise direct, remuneration at the rates fixed by that is to say:—1st. While the whole of such unredeemed debt

of Ireland, computed as hereinafter mentioned, shall be £30,000,000, a sum at the rate of £450 per annum for the capital. 2d. While the whole of such unredeemed debt shall exceed £30,000,000 and shall not exceed £40,000,000, a sum at the rate of £300 per annum for each million of the capital. 3d. While the whole of such unredeemed debt shall exceed £40,000,000, a sum at the rate of £150 per annum for every million of the capital up to £40,000,000, and at the rate of £150 per annum for every million of the capital amount. Provided always that in estimating the amount of the debt for the purposes of this act, annuities for terms of years shall be taken into account, and shall for the purpose of making a purchase be valued at fifteen years purchase, if originally granted for a term of more than fifty years, and at ten years' purchase if granted for a term of years or under.

the Commissioners of National Debt shall transmit to the Secretary of the Treasury the amount of the debt in Ireland, and the allowance to be computed thereon.

Legal Miscellany.

R. PROCURING DIRECTORS.—DRAPER AND ANOTHER V.
THE IMPERIAL BANK.

fore Lord Chief-Justice Erle, in the Court of Common
February.

on to recover remuneration for having procured three
me directors of the Imperial Bank, Limited.

and Sir George Honeyman, appeared for the plaintiff; C. C., Mr. Brett, Q.C., and Mr. Turner, for the defendants. Mr. Draper was a wool broker in London Wall, and the defendant, Mr. Carati, was an insurance broker in Threadneedle Street. It was that the Imperial Bank was founded in 1862, and at the end of that year they became aware that it was thought the board of directors should be strengthened by the accession of a few merchants of eminence, and they consequently set about this result. Mr. Draper was acquainted with Mr. Edenborough, who was also in the wool trade, and who was a director of the bank. Mr. Edenborough consulted his brother directors, and after they were well pleased with the proposal, provided that the persons introduced were first-class people. It was stated that when they joined the board, should have an allotment of shares at the then market price; £20 had been paid upon the shares, and £2 premium. At the first meeting Mr. Draper had said that Mr. Carati would expect remuneration upon the same principles as the other directors. Mr. Edenborough requested Mr. Draper to consult Mr. Bentham, the manager of the bank, and he and Mr. Draper then mentioned that the names of the new directors should be Petrocchino, of the firm of Rodoconachi, Sons, and Antonio, and P. C. Ralli. The plaintiffs introduced these persons, and mentioned, both to Mr. Bentham and to the defendant, that they, the plaintiffs, would expect remuneration, and that in Messrs. Petrocchino and Ralli became directors.

and received an allotment of 2,000 shares. The arrangement proved advantageous to the bank that the shares rose rapidly, until they gave a £26 or £27 premium. The Greek gentlemen gave the plaintiffs 100 shares each at 22, they being at that time 26 in the market, and plaintiffs' claims were afterwards applied to the bank for an allotment of shares, but this claim was not recognised. Some correspondence took place, and after a time Mr. Lusk, Murdock, and Westley were appointed a committee of directors to see and confer with Messrs. Draper and Carati, and to learn from them the grounds on which they assume a claim against the bank." The committee did not in fact see the plaintiffs, but on the 17th of May the plaintiffs received a letter, which stated, "Your letter of the 23rd of February has been read before the board and considered; and I am instructed to inform you that the directors cannot recognise the claim you have put forward." The plaintiffs were made by the plaintiffs to refer the subject of their claim to arbitration, but this was not acceded to by the defendants; hence this action.

Mr. Bovill submitted that there was no evidence of any contract which would bind the shareholders of the bank, for the only way in which the bank could be bound was by the act of the board of directors, whilst here all that was said to have been done was by an individual director and by the majority.

Mr. Field, on the other hand, contended that although the bank was a corporation, still it was a corporation of a peculiar kind. It was formed under the Companies Act of 1862, and that act placed no limitation upon the power of the directors to make a contract. In addition, it was said that the directors had ratified what had been done, by acting upon the recommendation of the committee.

The Lord Chief-Justice, after some discussion, said that he would stop the case, but would give the defendants' counsel leave to move for a nonsuit.

The case for the defendants was that when the bank was originally formed, the question was discussed whether they should have some Greek gentlemen on the board, but the suggestion was not at that time adopted. The bank having prospered, the three gentlemen who had been named as directors were very desirous of joining the bank, and the negotiation was opened at their instance, and not at the instance of the bank. It was not true that the plaintiffs had ever been promised anything on behalf of the bank, or that Mr. Edenborough or Mr. Bentham had ever assented to any suggestion that they should be remunerated. The first thing that Mr. Edenborough heard of remuneration was after the Greek gentlemen had been introduced to the bank, when Mr. Draper wrote in these terms:—"Should I be justified in asking you as a director to make an allotment of 100 shares each to Carati and myself, who have negotiated the matter, such shares to be given to us at the same rate as to our Greek friends?" It was contended that the terms of this letter were strong to show that there was no contract. Subsequently there was another letter that Mr. Carati thought that the directors might allot them 200 shares each.

The jury found a verdict for the defendants.

THE COMPANIES ACT, 1862.—*RE THE SCOTTISH AND UNIVERSAL FIRE INSURANCE BANK, LIMITED.*—*EX PARTE JAMES SHIP.*

THIS case was heard before Vice-Chancellor Wood, in the Court of Chancery, on the 16th February.

It was a motion of a novel character, and was in fact, we believe, the

section of the Companies Act, 1862, has been taken advantage of. This section provides that when a shareholder's name has been improperly inserted on the register of a company, and is moved by the shareholder will order his name to be struck off. In the case Mr. Ship authorised the directors of the above company to insert his name on the list of shareholders, believing from a prospectus that it was a banking and bullion company. The objects of the company the objects of the company were those proposed in the prospectus, and railway making, and other works, &c., were included. The Company is now being wound up. The petitioner moved that his name be struck off the register, as the company is essentially different to that which he intended to subscribe.

Mr. and Mr. Locock Webb were for the motion, and Mr. Morris opposed.

The learned Judge stigmatised the conduct of the directors in acting in this manner. The petitioner had given them authority to insert his name on the register of a banking company, and they had inserted it on the register of a railway company. The petitioner's name must be struck off the register, and the costs of the application.

IMPERIAL PRIVILEGED UNION BANK OF AUSTRIA.—BARON DE THIERRY v. ANOTHER V. LORD FERMOY, M.P., AND OTHERS.

Decided in the Court of Queen's Bench, before the Lord Chief Justice, with a special jury, on the 20th February.

The plaintiff sought to recover the sum of £20,000 for the assignment of the Imperial Privileged Union Bank of Austria.

The defence by the defendants' pleas was substantially a denial that the bank was not duly obtained by the defendants, that the bank was not formed or the shares allotted within the time of the agreement; and further, that the defendants were not bound to accept and pay for the concession as agreed between the Austrian government afterwards made material alterations. The defendants further pleaded that the agreement was not an Austrian contract, and to be carried out and enforced in the empire of Austria, and that the validity of the agreement entered into was and is illegal and void as against public policy and incapable of being legally enforced by the courts of England, though they well knew, but which the defendants did not intend to make the agreement.

Mr. Mellish, Q.C., and Mr. Kingdon were counsel for the plaintiff, and Mr. Lush, Q.C., Mr. Hawkins, Q.C., and Mr. Garth, were counsel for the defendants.

The learned Judge, in giving the case to the jury, said this was an action to recover the sum of £20,000 in reality, and interest from the sum of £1,800; and also to recover the sum of £1,800 for certain expenses incurred in carrying out the agreement entered into between the plaintiff and the Austrian government from the Austrian government in Austria a bank upon the limited liability system. The plaintiff, Baron de Thierry, was a gentleman of con-

siderable distinction, and was for nearly thirty years minister of the Austrian empire. He retired from the public service of his country in 1861, receiving the thanks of his sovereign and the highest pension. He was admitted to be granted in Austria to a public servant, and at the time of this concession was granted he had ceased to be a minister of the empire. Mr. J. O. Lever was well known as a promoter of the Galway Banking Company, and M.P. for Galway, and for some time past he had interested himself in promoting matters of interest to this country, and also in the establishment of a banking system in Austria. Mr. Lever having become acquainted with Baron de Thierry, was desirous of promoting and establishing the English banking system in Austria. In Austria, it appeared, there were only seven banks, with their branches, whilst there were in Great Britain something like 12,000, and it occurred to Mr. Lever that it would be very desirable to introduce the English banking system into Austria. The Emperor also appeared equally desirous that it should be done; and after considerable communication had been taken place between Mr. Lever and the Austrian government, the Emperor, Baron de Thierry, the Austrian government, on the 8th of December, 1862, granted a preliminary concession to Baron de Thierry and Mr. Lever, authorising them to take steps for the formation of a banking company subject to two conditions—first, that proof should be given that the necessary means would be forthcoming for carrying on the bank at Vienna; secondly, that the draft of the statutes should be framed according to the Austrian laws, the statutes being what are called in this country articles of deed of settlement, or articles of association. Having obtained the preliminary concession, it became necessary to provide a capital for carrying out, and Mr. Lever put himself in communication with Lord Fermoy, for Marylebone, who was then chairman of the Metropolitan Provincial Bank, and the result was that it was determined that Lord Fermoy should go to Vienna and see the authorities, both on his own behalf and those with whom he acted, and £200 was advanced to Mr. Lever to Lord Fermoy to pay the expenses of this mission. A correspondence afterwards took place between Lord Fermoy and Mr. O'Byrne, another defendant, on the one side, and Mr. Lever, Baron de Thierry, and the Austrian government, on the other. In Lord Fermoy's last letter to the Austrian Finance Minister, before leaving Vienna, he asked to be informed whether the preliminary concession would be finally confirmed, as little delay as possible as was consistent with the due examination of the adaptation of the statutes to the Austrian laws, and he sent a copy of the letter to Baron de Thierry. The Finance Minister replied that the Austrian government would grant every facility with regard to the proposed banking company to be established according to the Austrian laws. The statutes were afterwards prepared and approved by Lord Fermoy, and submitted to the Austrian government in February, 1863. The principal establishment was to be in Vienna, and it was arranged that the president of the bank in that country should receive a salary of £1,000 a year, and Lord Fermoy, as the chairman of the English bank, £800 a year. Lord Fermoy and Mr. O'Byrne entered into the preliminary agreement for the purchase of the bank, although it was evident there were certain capitalists behind the cause at a subsequent period Messrs. Masterman and Co., and Messrs. Overend, Gurney, and Co.'s names appeared in the course of the negotiations. The arrangement entered into and signed by Lord Fermoy and Mr. O'Byrne was that they would pay the plaintiff £1,800 expenses, and a further sum of £30,000, half in cash and half in shares, on the a

ite concessions, and within 30 days after the allotment of bank. There was also a further arrangement between out of the £30,000 Lord Fermoy and Mr. O'Byrne should bringing the matter about, and procuring the assistance carry out the undertaking. The next step was to submit the Austrian government, and a paper was accordingly for- Austrian government signed by Lord Fermoy, four of the rs. Masterman and Co's bank; the brokers, Messrs. Hill, ; Messrs. Kelson, Tritton, and Co.; Mr. Wm. Dent; nd Robertson; and Messrs. Robertson, Fleming, and Co. ubt that O'Byrne was acting for Messrs. Overend, Gurney, they introduced the matter to Messrs. Masterman and Co. aintiffs were authorised to take the necessary steps for se-, and a prospectus was issued on the 4th or 5th of May, and y £1,600,000 was subscribed for out of the capital of two he 11th, more than the whole of the capital had been sub- siderable negotiation the definite concession was granted on er, and they were to declare the names of the capitalists and open the bank within three months, but which was led to six months. A definite prospectus, with the names was issued, and an allotment of shares took place; but not opened by the 3rd October, the Austrian government t cession, and the Anglo-Austrian Bank was established in amenced business in the premises originally intended for ana. The plaintiffs contended that they had performed bargain, and were entitled to the sum sued for. then called in support of the plaintiffs' case, which was documentary character. In one of the letters Lord tified as "71," for the purpose of telegraphing. on of the plaintiff's case, f Justice asked Mr. Hawkins whether, on the part of the ould materially alter the facts of the case. aid he did not think he could; upon that the Lord Chief t that it would be better that a verdict should be entered for the amount claimed in the declaration, subject to the ourt above, on a special case. The Court to have power ages to £20,000 if they should think fit. unsel on both sides agreed to this suggestion; and hen entered for the plaintiff, subject to the opinion of on a special case.

Reports of Joint-Stock Banks.

THE UNITY BANK.

shareholders of this bank was held in the London Tavern ary in order to consider the recent extraordinary con- ors in repudiating the acts and powers of the liquidators ointed on the 15th March last. There was a numerous strong feeling of indignation appeared to pervade the conduct of the directors. Dr. Cook, chairman of the

committee of liquidators, was called to the chair, and the notice of the meeting having been read,

The Chairman proceeded to say that he very much regretted the any necessity for calling them together again upon what he might call the Unity Bank swindle, but the extraordinary conduct of the directors rendered it imperative upon him again to call upon the shareholders at a public meeting assembled to consider the position of their affairs. As the bank stopped payment, they would remember that the directors were the only liquidators, and for eighteen months they never called a public meeting—they never offered any explanation of their conduct, they never gave the shareholders the least idea of the progress they were making in winding-up and realising the assets of the bank. At last the shareholders' patience became exhausted—a requisition was made to them to call a public meeting, and in February last a meeting was called, at which Mr. Alderman Mechi proposed there should be a committee of liquidators on behalf of the shareholders appointed to assist the directors in the winding-up of the affairs of the bank. That proposal was unanimously agreed to. He was so anxious to have the transactions of the bank legally and properly carried out that he waited upon the solicitor next morning to inquire whether the appointment that had been made was legally valid. The reply was distinctly in the affirmative. When the liquidators called at the office they found that there were a great many persons who owed money to the bank who had not been called upon to pay it, and also that there were many favourites of the bank who had not been called upon to pay the interest they owed. The liquidators, however, set to work earnestly, and in a short time compelled those persons to pay in £100,000 on account of money owing, and the favourites were in like manner compelled to pay up. They also examined a bill of the London and Manchester Bank of £6,000, from which they took off no less than £3,400, and found that the security-book of the West-end branch had been lost, and that many of the securities which had been given were not entered in the security-book at the chief office. In consequence of their efforts they were able to call a meeting of shareholders in September last, and returned to them £3 a share, after paying all the debts of the bank. (Heard.) But the liquidators had also discovered that the directors had received money without the sanction of the shareholders, and they had commenced proceedings against them for the recovery of that money. The directors pleaded guilty to the last amount of £50, but with regard to the rest they had pleaded the Statute of Limitations. (Cries of "Shame.") He said that the directors had proved themselves incompetent, incapable, and neglectful as directors and as liquidators. (Cheers.) The liquidators returned in a short time after their appointment returned £3 a share, and they soon have wound up the affair if they had been seconded by the directors. They had also instituted proceedings against the late manager and secretary, not only to show that their position was an important one, but also that they could not violate their trust with impunity, but also to protect the *bona fides* of the liquidators to the Guarantee Society, which was a guarantee for the manager and secretary to the amount of £3,000. After the document issued by the directors, of which an abstract had already been published in the *Bankers' Magazine*, the directors said, in order to prevent the shareholders from being troubled in Chancery the liquidators had resigned. They, however, knew that the shareholders ought to do, what money they ought to have, and they, the liquidators, would watch their proceedings with

hear.) The directors were now trying to throw on the
 sense of prosecuting the late manager and secretary. At
 ch the prosecution was decided upon, although they did
 did not vote against it; on the contrary, they entirely
 were as much parties to that prosecution as the liquidat-
 uth was, the excuse was a mean and paltry one on the
 s. They wanted the proceedings against themselves to
 as those against the secretary and manager, and they
 examination at the Old Bailey, which they would be
 l to. Mr. Heywood, one of the directors, was also a
 rantee Society, which was surety for the late manager
 could assure the meeting that if they did not get the
 three months, and have £3 a share more back, if the
 and their affairs were thrown into Chancery, they would
 ectors and not the liquidators to blame for it. Dr. Cook
 ng a resolution in accordance with his statements, and
 e conduct of the directors in repudiating the acts and
 dators rendered it necessary in order to save the bank
 into Chancery that these gentlemen should resign their
 tors, and they tendered their resignation accordingly.
 ed if it would not be better if some one else moved the
 of the chairman.

ainly.
 , as one of the liquidators, he begged to second the re-
 ing so to state that the liquidators were going on satis-
 winding-up, when they were suddenly stopped in their
 e of the directors. (Hear, hear.) He was happy to say
 was not at the meeting at which the resolution was
 irectors, and that he washed his hands of it. He was
 ecause he had stated on former occasions that though in
 alderman had shown weakness and sometimes acted
 ed him to be actuated by the best motives, and that he
 e best intentions. (Hear.) The three directors who had
 ion were Deputy Bower, Mr. Eyre, and Mr. Heywood.
 hree gentlemen who were determined to set aside the
 dators of the bank. With regard to the letter they had
 eholders in justification of their conduct, he thought
 verbiage of which much of it consisted, and its state-
 rs with which every shareholder was familiar before,
 e gone a little further back, and told how it was that
 ars the bank was under their direction they had lost
 e paid-up capital, and had then remaining only the paltry
 e. He should like to have some explanations respecting
 lance-sheet made up in December, 1862, which stated
 due to the shareholders, and yet during the period in
 ngs should have been held, and subsequently to that
 irectors did not tell the shareholders of the losses
 place. He should like to know how it was that when
 ed to hold a meeting in February of last year, it was
 00 had dwindled down to little more than £40,000, and
 id no part of the sums due to the shareholders who
 o the London and Middlesex Bank. Again, when the
 1863 was presented, they were told that though no
 l happened, only about £8,000 would be received for

the Unity shareholders; they did not declare positively that even a small amount would be paid; but they promised fair, though he thought that these promises and statements would have turned out like those that preceded them, and he sincerely believed that but for the appointment of a shareholders' audit committee and their report, which led to the appointment of a committee of liquidators, that instead of what they would not have been paid £1,000, while the liquidators in three months had realised not £8,000, but £10,000. (Cheers.) In addition to this, a claim of £4,400 on the bank had been settled by the liquidators for £1,000. (Hear, hear.) The directors would never have found out the unjust and unfounded nature of that claim, because they said that it had been ticked off and verified by their accountants, Harding, and Co., and therefore the whole of that sum would have been paid to the detriment of the shareholders. He would say further, that if the liquidators had known as much of that claim at the time it was settled for a smaller amount, they never would have paid one farthing of it, and it had been since ascertained that the amount placed to the debit of the Unity Bank might as well have been placed to the account of a bank in New Zealand or Australia. (Hear, hear.) The directors had never kept a single book of entry in their own bank of this claim. It was as if it was a pass-book with another bank, and they never rendered an account of it until the liquidators demanded it. Yet these were the men who had turned round upon the shareholders and repudiated the acts of the liquidators appointed by them, who said that the directors must not be prosecuted without their consent, and who pleaded the Statute of Limitations as a bar to the claims that had been made upon them for repayment of the sums lost. He believed, however much that statute might be a bar in a common law court, it would not be a bar in a court of equity, or it would have been pleaded before this time. It was very well for the liquidators to say that they had resigned, but the fact was they had been deposed. The directors had no power to do so by the terms of the royal charter, but for the liquidators were duly appointed at a legally constituted meeting of the shareholders, and in repudiating them the directors were like those who repudiated the acts of the shareholders themselves. (Hear, hear.) The directors thought themselves justified in that course, why did they not call the shareholders together within fourteen or fifteen days, and state their views on the matter? (Hear, hear.) But that did not suit them. They now contended that this meeting not being called by them, and given seven instead of fourteen days' notice, they were not bound to attend, and they would not honour it at all by their presence, and if the liquidators proceeded further they threatened to go to the Court of Chancery for powers to wind up the bank out of the court. If that was done, Mr. Howell, the able accountant of the liquidators, would be deposed, as well as the friends of the directors. Messrs. Harding, Pulein, and Co. would be called in, a fresh set of expenses would be incurred, and if the shareholders getting anything back there would be a call upon them to make up their quota of these expenses. It was to prevent this that the liquidators felt called upon to resign. (Hear, hear.)

Mr. Sutton said before the resolution was put, that he was surprised and taken by surprise at the course which had been taken on that point. He must say that he hoped the resolution which would deprive the shareholders of the most valuable services of the liquidators would not be passed without some careful thought, and that the liquidators themselves

 shareholders, were it not for the question

the liquidators not to come to a hasty
 days more, and give notice of a legally

constituted meeting of the shareholders, to which they could commit their ultimate decision.

The Chairman said, by resigning and avoiding litigation there shortly be a dividend of £3 on each share.

Mr. Hawkins, so far from feeling convinced by that reason, rather put his hands into his pockets deeper to pay for prosecuting really guilty parties. (Hear.) He did not believe the liquidators legally resign at that meeting, and they had better let the matter over. He should be sorry to think of their resignation, even if legal, for he was sure the meeting felt deeply indebted to them for the course they had taken in the matter, and for their valuable assistance hitherto. As to going into Chancery, he did not think the directors dare to do so.

Mr. Proctor said they were in this difficulty, that under the Royal Charter any meeting called with fourteen days' notice to be legal must be called by the directors. If any one present on the part of the directors would give an assurance on their behalf that they would call a meeting that would get rid of the difficulty.

Mr. Bazin said, as the partner of Mr. Alderman Mechi, he was sure he might state that he would agree to a meeting being called. (Hear.)

Mr. Josiah Merriman suggested that the best course would be to request the directors to be signed from that meeting requesting the directors to call a meeting. If Alderman Mechi consented to call that meeting, and the directors refused, and afterwards went to Chancery, he did not believe any Vice-Chancellor would allow them to proceed. (Cheers.)

A Proprietor, as a shareholder and member of the bar, said he could not see in the view just taken by Mr. Merriman; and further urged that the liquidators continued in their corporate capacity they could appear before the Court by counsel. (Hear.)

Mr. Bazin said, on his own behalf—and he might say for Alderman Mechi, although not instructed specially on the subject—that his object was to act with the shareholders and liquidators in every question affecting their interests; and further that, notwithstanding his already heavy responsibilities, the alderman was quite prepared to pay up any proved claim against the bank. The alderman had always supported the liquidators. He (Mr. Bazin) supported them; they had done much good, and it would be the best thing in the world for them now to resign. (Hear, hear.)

The Chairman here read a number of letters urging the liquidators to prosecute the directors, who were stigmatised in language which of libel forbids reporting; and, indeed, many of the speakers insisted on it freely in similar terms.

Ultimately, on the suggestion of Mr. Merriman,

Mr. Hawkins moved, and Mr. Sherwood seconded, the following resolution:—"That the directors be requested to call a public legal meeting of the shareholders forthwith, to consider the recent extraordinary conduct of the directors in repudiating the acts and powers of the liquidators appointed by the proprietors on the 15th March last; also to take into consideration the prosecution of the late manager and secretary of the bank."

In a conversation which ensued as to the course to be pursued in the latter question,

The Chairman explained that the liquidators were bound over to prosecute, and that the case would probably come before the grand jury that day in the Central Criminal Court.

expression of a determination to support them, if the costs. The motion for the resignation of the liquidator, and the resolution was unanimously agreed to. A cordial vote of thanks to the liquidators for their valuable services, which was seconded by Mr. Sorter, and amidst great applause.

and Mr. Lambert seconded, "That the meeting be adjourned to the 1st day, at twelve o'clock, to receive the reply of the liquidators to the business as might be necessary."

Mr. Sutton, seconded by Mr. Kench, it was unanimously agreed that the best thanks of this meeting are due, and are tendered to Oswald Howell, the accountant, for the valuable services rendered by him and the liquidators in winding up the affairs of the bank, and in the criminal prosecution of the late manager.

The motion was also carried by acclamation:—"That the thanks be tendered to Dr. Cook and the rest of the directors, by the shareholders, for the eminent services which they have rendered to their brother shareholders in the management of the bank, and particularly for their spirited conduct in the prosecution now pending against the late manager, and in exposing the means by which concealment of the paid-up capital of the bank has been wholly effected, and to conceal the fact from the shareholders; and that the directors be and sanction the steps which they have taken, and urge them to continue such prosecution if possible." (Cheers.)

The meeting was of a very animated character, then terminated.

A general meeting was held on the 3rd February, Dr. Cook in the chair. It was announced that the directors had agreed to call a meeting to consider the arrangements that might be made with Mr. Alder-son of the bank.]

ANGLO-ITALIAN BANK.

A general meeting of shareholders was held on the 30th January, at the Tavern, Mr. John Lubbock presiding.

The following was read:—

It gives me the pleasure of submitting to the proprietors the report of the Anglo-Italian Bank. Although the bank has not yet opened, I have the pleasure to inform you that I have obtained from your Directors the necessary permission to proceed with the legal formalities consequent thereon, together with the necessary offices, and competent managers for the management of the bank, which were productive of considerable delay, so that the bank has now opened for business on the 1st October, and the 1st December, 1864. A branch will be opened at London, and the Directors also intend to commence business as soon as possible, a manager and staff having been already appointed. The power given them by the Articles of Association has enabled me to appoint local committees for Turin and Milan, representing some of the most influential firms in the city, and to act in this capacity; viz., for Turin—

Sigr. Giuseppe Dupré (Dupré père et fils); Sigr. Vincenzo Denin Gaetano Piaggio; Sigr. Gaetano Spinelli (Fedele Bernéo and Co.) Milan—Sigr. Giulio Belinzaghi; Sigr. Pietro Brambilla (Brambilla Co.); Sigr. Giuseppe Oneto (Oneto, Cavajani and Co.); Sigr. Nosedà (Nosedà and Burocco). The Directors think themselves fortunate in having secured the co-operation of these gentlemen. Profits up to the 31st December have amounted to £25,102 6s. 7d., less £8,420 5s. 5d. for expenses, and £4,652 13s. 4d. for rebate, at 7 per cent. per annum, there remains a sum of £12,029 7s. 10d., out of which the payment of 6s. per share by way of interest, free of income tax, at the rate of rather more than 6 per cent. per annum, amounts to £5,500 10s., your directors recommend that £2,831 13s. 1d. be withdrawn from preliminary expenses, and £2,000 placed to a reserve fund, leaving a balance of £1,697 4s. 9d. undivided profit to be carried to the profit and loss account. In exercise of the power conferred on the board by the constitution of association, the Directors have added the following gentlemen to the council, viz.:—Sir J. P. Lacaita, K.C.M.G., Member of the Italian Parliament; Sabino Leonino, Esq., of the firm of Leonino Brothers, Genoa; and Commendatore Devincenzi, President of the Royal Commission for the Cultivation of Cotton in Italy, and Member of the Italian Parliament. Sir Jas. Hudson, J. Lubbock, Esq., and R. Benson retire from office by rotation, but are eligible, and offer themselves for re-election. The accounts have been audited by Mr. Tucker, Actuary of the Pelican Life Insurance Company, and Mr. A. Ricardo, appointed by the council for that purpose. It will rest with the proprietors to elect auditors for the ensuing year."

Balance-sheet, December 31, 1864.

congratulated the meeting upon the present position of last year they had had to pass through very difficult interest had been unusually, and he might almost say, high, and of course, as resulting from that, the had been large; but they had unfortunately seen some profits, however large, had been more than swallowed up. He was happy to say that that had not been the year—they had been able to secure the advantage of prevailed, and had not as yet made any bad debts. expenses of a bank at first were necessarily unusually managers, officers, and a staff not proportionate to being done, but to that which they might fairly hope A great deal of the labour at the commencement con- on, which, though bringing no immediate profit, was stance, for upon that depended in the greatest measure rity of an institution. He would not attempt to con- vers were a little disappointed as to the amount of busi- one up to the present time, though he did not think any of ed that a large profit would have been realised. Circum- the organisation of their establishment. Before any ould be transacted in Italy, it was necessary to obtain a ough they had every reason to thank the Italian Govern- iness with which their decree had been given, the con- rms in which it was to be drawn up, and other ques- h it, had caused delay, and it was not till the close of ad been able to begin business. They then found ing suitable offices. Till within the last few years chief town in a small state, but owing to the confi- with which she was regarded throughout Italy, she rself the capital of a great monarchy. Recently, and er change had taken place, and though of course, Turin great dissatisfaction and regret the change of capital ace, all must admire the magnanimity and patriotism ople of that city had abandoned for the good of their n which they might have hoped to retain at least for large enough for all that might take place in Turin a necessarily too small when it became the capital of a

great kingdom like Italy, and then the company had found difficulty in obtaining offices suitable for the business they hoped to carry on. Another difficulty had been in obtaining managers. The business of banking, as carried on in this country, was not well understood by many of those here who were perfectly conversant with the business of the country, and of those here who were familiar with the Italian language. Under the circumstances it was proposed to have in each of the branches a gentleman having a knowledge of the business of the country, and the standing of the firms there, and to associate with him a gentleman of standing in the country who was well acquainted with the English banking system. In the circumstances it was proposed to have in each of the branches a gentleman of the highest standing. To avoid the risk of heavy losses, the local committees had been elected for the two branches in operation in that way had received the co-operation of some of the most influential firms of Turin and Milan. The directors would have been glad to have begun with one branch, and when they had in that way felt their way, they have gradually extended their operations to other Italian cities, but they found it necessary to commence business at Turin because that was the capital of the kingdom, and they also found it impossible to give a trial to any banking in Italy unless they were to open at Milan. Naples, where they might expect eventually the most profitable business to be conducted. They found it necessary, therefore, to commence with three offices, and the change of capital which was about to take place obliged them to open a branch at Florence. They did not propose to open any other branches until they had experience of these, though they had many other cities in Italy at which they hoped eventually, and in the long run, to establish themselves. Of course the change of capital from Turin to Florence, however advantageous for the kingdom of Italy, generally, could not be effected without considerable loss falling on certain institutions; and it had been stated in newspapers that the Anglo-Italian Bank had been one of the principal sufferers. That was an entire mistake—they had suffered no loss whatever by the change. (Hear, hear.) In the course of the year, in conjunction with the International Financial Society, they had brought out the Italian Banking Company, and as some of those present might be shareholders in the company, he might mention that the anticipations of its board had been fully realised, and that the concern was in a prosperous condition. It would no doubt prove very profitable to those who had invested money in it. The bank directors had decided to receive deposits at 4 per cent. The rate of interest was generally higher in Italy than in this country, and though they did not feel disposed at present to take money at 4 per cent, they were willing to receive deposits for periods of not less than 6 months, allowing at the present bank rate 5 per cent. The statement of auditors for the past year rested with the directors, and they had appointed Mr. Tucker and Mr. A. Ricardo, and those gentlemen were perfectly satisfied with the form in which the accounts were presented. He wished to say a word as to the circumstances which had induced the belief with the directors that the bank was likely to become a large and profitable business. They did not point particularly to the receipts of the past year, because, satisfactory though they were, they were still but the transactions of so short a period that it was not

them. It was not because they had been successful that he thought they might hope to be so in the future upon general principles. He believed that banking which had been brought to such great perfection would be of great importance and great benefit which it was adopted; he thought it might be, and for that reason he thought this company was successful. (Hear, hear.) The profits which a bank shareholders had been a very small part of the advantage offered to the public; in fact, they were but incidental advantages—the real advantage being that it made the country more productive, that it facilitated circulation, and so on. In 1844 the exports of this country amounted to £20,500,000, and the circulation of bank notes upon the average to £40,000,000. Our exports had increased to the enormous sum of £20,500,000, and the bank notes had actually fallen to £20,500,000. When they examined these results they would be found remarkable. There was a kind of superstition with the country of cheques, and people would rather waste two hours in cab fare to make a payment which could be economically paid by a cheque through the post. The circulation of small notes had considerably increased. The coin in circulation in 1844 was £40,000,000, whereas in 1864 it was £100,000,000. He had not examined the calculations of those figures were based, but as regarded the notes in circulation. The authorities of the Bank of England had estimated that the small notes of from £5 to £100, which in 1845 had risen in 1864 to £17,100,000, showing an increase of £12,100,000, but the large notes of from £200 to £1,000, those used in commerce, had actually during the time decreased, namely, from £4,900,000 to £3,500,000, or in other words, a decrease of £1,400,000. Thus while the commerce of the country was rapidly increasing, owing to the increased facilities for banking, the banks were able to carry on the proper business which they were doing twenty years ago. (Hear, hear.) From another point of view which would show this even more clearly, in order to get an idea of the extent to which cheques were used in the transactions of the banks some days of last week were taken—taking a total of the transactions of £21,000,000 in the City of London there was only £1,000,000 paid in the City of London there was only £1,000,000 paid in Bank of England notes, and £7,500 in actual cash, the rest £955,000 paid by means of cheques. (Hear, hear.) It was clear that if the banking system was not what it is they would require a very large amount of actual silver and gold and bank notes they would require a very large proportion of it, and to back up a large amount of capital in an unproductive way, and the large staffs to carry on their present business. There was no business now carried on in London which yielded large profits, it were not for this system, would have to be abandoned the grounds upon which the directors thought the system likely to prove a great undertaking. (Hear, hear.) It was the French bank to come over here, because they introduced an improvement upon the present system; it was brought to such perfection in this country that they

might reasonably hope to introduce the English system into other tries, with profit to themselves, and with still greater advantage to countries to which they directed their attention. Of course it was no use attempting to introduce the system into the Hudson's Bay territories, but in a country so highly civilised as Italy, where there was much wealth and commerce, and where land was so highly cultivated, there was a large field for their exertions. (Hear, hear.) He was surprised to find their balance-sheet so satisfactory, and he believed eventually they would be very successful. It, of course, would take time to introduce a new system, and the shareholders must not be disappointed for such dividends as were paid by some other concerns, hoped every year would be more profitable than the last, and that finally the Anglo-Italian Bank would prove as important and as profitable an institution as the great banking institutions of the City of London. (Cheers.) He moved the adoption of the report, and that a dividend be declared of 6s. per share, free of income tax, being at the rate of more than 6 per cent. per annum.

Mr. Borradaile, after expressing the greatest confidence in the directors pointed out some matters which, he thought, required explanation which had escaped the notice of the chairman in his very lucid statement. With such names upon the board, and having regard also to the reputation with which the permission had been granted by the Italian government, he was surprised to find an item of £14,000 for preliminary expenses. He wanted to know how much of that sum went to the International Financial Company. Then there were shares unallotted amounting to £16,500. At first the shares were at a premium, and every one who had been allotted then, for experience showed that reserves for contingencies were never taken up. But even if it had been politic in this country to make such a reserve, the shares should have been since issued at a premium, that within the last five months they had stood at 2½ premium. (Hear.) The directors had not, he thought, acted wisely in establishing four branches—they should, in his opinion, have tried a large experiment with two principal banks, and it would have been time enough to open four or four years hence to speak of more. He asked when a call might be anticipated, what the amount would be, and how much the directors thought would be required to be called up to carry the undertaking to a successful issue; and also if the shares upon which arrears were charged with 10 per cent. interest upon the arrears, and if the directors were in a position to forfeit those shares if they thought fit.

Mr. Short inquired why Mr. F. Doulton had resigned his seat on the board.

Mr. Maxwell wanted to know whether there would be any objection to holding their meetings half-yearly.

The Chairman said there would be no objection to holding meetings half-yearly if such was the wish of the shareholders, but they could not declare a dividend yearly. As to Mr. Doulton's resignation, the directors would be to refer to that gentleman himself for any explanation of his reasons for so doing. With reference to the preliminary expenses of the bank was brought out by the International Financial Company, of course they were paid a commission; but the question was very much considered at the time, and it was thought there were advantages in connection with that company which made it worth while to employ it, and the experience of the year had confirmed that opinion. As regards the 1,665 unallotted shares, the board were anxious to

the best men in Italy, and they felt that they could pay a considerable premium upon the shares of an had not commenced working. A moderate number ved for that purpose, and he thought there was no circumstance, for if the number of shares were less, much larger. Those shares would be allotted if it ble, otherwise they might be employed as a nest The arrears on the calls were large, owing to the pay- December, when many shareholders were away; but , and 10 per cent. would be charged upon all arrears. the branches, he agreed with Mr. Borradaile, but tances had driven them into establishing a greater than were in the first instance contemplated. He than two more calls, if that, would be required. £1,000,000, £200,000 was a small proportion to be not desirable that more should be asked for till it employed. In a month or two the board might per- to making a further call, but due notice would be ssary pressure would be put upon the shareholders. d whether the directors felt themselves at liberty to shares at a discount.

certainly not. There are too small a number to be olders, but if we ever part with them at less than the be to secure the services of some influential gentle-

s from Mr. Broomhall, rried, and the retiring directors, Sir James Hudson, Lubbock, were re-elected. d A. Ricardo, the auditors, were also re-appointed, of £50 each, and the proceedings closed with the the directors.

LD SOUTH WESTERN BANK, LIMITED.

General meeting was held at the London Tavern on r. J. W. Johns in the chair. rt and balance-sheet were read by Mr. E. G. Cleather,

re the pleasure to submit to the proprietors a statement ank for the half-year ending 31st December last. On ance-sheet it will be seen that, after making ample d doubtful debts, the gross profits, including the sum arried forward from last account, amount to £20,391. after deducting all charges for expenses, interest to re remains a disposable balance of £7,533. 18s. 2d. mend that £3,770. 16s. 8d. be appropriated to the end at the rate of 6 per cent. per annum, free of e sum of £500 be written off preliminary expenses; to the reserve fund, and £1,102. 8s. 2d. be set aside of bills not matured, leaving the balance of £1,660. ied forward to profit and loss new account. 									£20,3

The Chairman, in moving the adoption of the report, stated reason for holding the meeting at the London Tavern instead of in Street, as heretofore, that the number of shareholders had doubled figures now presented would, he trusted, be received with as much satisfaction as it gave the board to present them. They had passed very trying times—times when it behoved the direction not only to provide proper accommodation for their shareholders, but also to guard the bank in such a manner as to prevent the bank from suffering any serious loss during a crisis such as they had just passed through. The directors would show the caution that had been exercised by the board, and their institution might now be considered as established on a very solid and firm foundation. Comparing the present balance-sheet with

o, a very considerable alteration would be noticed
 ery case the alteration was in the right direction.
 little to reproach itself with in the shape of
 d not draw comparisons between their own and
 at respect, but there were banks of a very large
 which had not escaped so fortunately as they had
 l up had increased during the six months about
 and would, by the addition proposed to be made
 £15,000; and their current balances—and that
 e tests of the confidence displayed by the public—
 £5,000 upon the six months' working, and these
 balances, which were a very material evidence of
 their standing. The gross profit for the half-year
 upon the last occasion. That was an increase of
 £2,000 a year beyond the figures presented to the
 other hand, the cash in hand decreased £20,000,
 y the fact that people had to pay their bills at
 the necessary effects of which was to reduce the

 ture of course increased by the opening of new
 were fully represented by the asset of the pur-
 t to write off preliminary expenses £500, or at the
 that, taking that mode of dealing with it, in ten
 ould have disappeared from their balance-sheet
 ticed, perhaps, that the amount carried over was
 eirs, and in that respect their balance-sheet con-
 rth those of a number of banks which had recently
 e was, for instance, one case of a modern bank like
 st declared a dividend of 10 per cent., and the shares
 en £5 and £6 premium, but which only carried
 rs had had a discussion amongst themselves upon
 opinion was that it would add very much to the
 e bank if they carried over a more respectable
 hey had chosen they could have given another 2
 end of 8 per cent., by taking £1,000 from the
 er, but they were assured that the shareholders
 aginary loss upon the present occasion for the
 e bank. (Hear, hear.) The £1,660 was not the
 hey might be considered to carry forward, for
 s also a profit made, though it was not divided
 ff safely and came properly to hand. They carried
 700 to a new account. The gross profit of the
 eptable figure, showing that they were working at
 ar, and when he stated that very ample provision
 d debts, he felt confident that the balance-sheet
 to the shareholders. Their total number of
 ir new accounts during the last half-year numbered
 ts since January 1st were 120, and with these facts
 hey all had reason to congratulate themselves for
 e concern. (Hear, hear.) They commenced the
 ers; at Christmas, 1863, the number had increased

to 270, and at the end of the present year it stood at 420, a very satisfactory result to the customers and depositors, as the liability was over so much larger an area. It might also be satisfactory to the holders to know, having reference to recent proceedings elsewhere, that they had had a very strict and careful audit by the board of every and every transaction of the bank; that there had been a director of as comprehensive and careful a nature as it was possible to have that they had found everything in a correct and satisfactory condition. (Hear, hear.) In conclusion, he proposed that the report, balance sheet, and statement of accounts should be adopted, and that a dividend should be declared for the half-year at the rate of 6 per cent. per annum, less income tax.

Mr. Hadley seconded the resolution, which was carried, the chairman remarking, in putting it to the meeting, that he hoped that it was the time the directors would appear before the shareholders with a 6 per cent. dividend.

A Shareholder asked whether it was contemplated to have the office in the City—a position which he thought very unfortunate for a commercial undertaking of this character.

The Chairman said the board had considered the matter on more than one occasion, but they did not think the time had yet arrived for the step suggested. The City business was conducted through the City and County Bank.

The Shareholder—When do you intend to make a call upon the shareholders?

The Chairman—We have done so this morning—(laughter)—a gentleman desirous of paying up upon his new shares in full will be able to take whatever dividend we may declare in June next.

The retiring directors were unanimously re-elected, the auditors also been re-elected.

Mr. Galsworthy, in returning thanks, took occasion to comment on one of the articles of association which empowered the directors to pay for their remuneration £2,000 from the commencement of operations, and £2,000 more when the dividend was over 6 per cent. and up to 8 per cent. and £1,000 for every 2 per cent. extra dividend beyond that. Such a provision was nothing more than an injurious invention on the part of promoters to induce gentlemen to join the board, and though he had every confidence in the present directors he did not like to see such a power hanging over the heads of the shareholders. (Hear, hear.)

The Chairman observed that the clause was rather a usual one, and an unusual one with institutions established in modern times, but at the same time there need be no fear of the directors approaching the figure mentioned, and they would be ready to discuss the question at any time. Instead of taking now, as they might be entitled to take, between £2,000 and £6,000, they only proposed to take up to the end of the year £2,000, and he thought they were entitled to a continuance of the confidence of the proprietary.

Mr. Galsworthy said his objection was one of principle.

The Chairman replied that the article should be altered at the next meeting if such was the wish of the shareholders. (Hear, hear.)

A vote of thanks was then passed to the chairman and directors, a similar compliment having been passed to the manager, branch managers, and other officers of the bank.

Mr. G. A. Addison acknowledged the vote, urging the shareholders

to bring customers to the bank, and giving as his
on great experience of banking, that so long as their
its present small amount it would be madness for them
separated.

NATIONAL BANK.

general meeting of the proprietors of this bank was
uary, at the Bank Buildings, Old Broad Street, City;

---	--------

£859,85

"Since these accounts were made up a dividend at the rate of cent. per annum on the capital of the bank, and an extra dividend of 16s. per share, have been struck on the old shares of the company, £16,000 up, and a pro rata dividend of £1. per share has been declared on the new shares issued, £15 paid up, which will be payable at the head office and branches of the Company on and after 8th February. In the half-yearly accounts issued by the directors in July last, they announced that it was their intention to adhere to the same rate of dividend until the new shares were paid up to the amount of £30 per share, so that the shareholders of the different classes might equally participate in the increased profits which have resulted in consequence of the increased capital and reserves. There has been a call of £5 per share made on the new shares during the present year. The next call will be made in April, and the sixth call (which will be the amount of the paid-up capital to £30 per share on the new shares, thus assimilate them to the old) will be made in July next. When the last-mentioned call shall have been made, the directors propose to call for two special general meetings of the proprietors to sanction the issue of 10,000 other new £50 shares, £30 paid up, for which the provision is transferred from the rest. These shares, paid up to £30 each, the directors propose should be presented free of charge and by way of bonus to the proprietors of the bank for the time being, in the proportion of one new £30 paid up, for every four shares held by each shareholder respectively. This operation, when carried out, will increase the paid-up capital of the bank to one million and a-half sterling, and will leave the undivided profits at it is estimated, at nearly half a million. The directors believe this mode of augmenting the stock of the company, and thereby the revenue to the shareholders, is preferable to a sudden distribution of increased dividends or cash bonuses, and they advise the proprietors thus early of their intention, because the rate of profit is already so far in excess of the dividend that it is proper the directors should explain how they propose to distribute their increased revenue. On the 1st October the directors opened their fifth metropolitan branch at No. 23, Old Cavendish

On the 22nd August they opened a branch of the bank at Ballymahon, in the county of Wexford. They are working satisfactorily. The directors have to act as an agency for several banking companies, negotiated and brought into operation in the present, and will, it is expected, be a profitable department of the Company's business. At the annual meeting of the Company, held on the 23rd of May, the directors were elected by rotation as Jeremiah Dunne, Esq., M.P., Rowland Ronald, Esq., and M. Osborne, Esq., who offer themselves as candidates for re-election."

On moving the adoption of the report, said—I had the pleasure of attending the meetings of the shareholders held on the 23rd and 24th of May, and at the annual general-meeting held last May, during which the bank's increase of capital was in progress, and now we have been brought to a prosperous issue, and that we have a larger enterprise, my colleagues have again selected me to make such observations as a very proper custom of the chairman, in addition to the text of the report, to express my hopes that the tenor of the report and of the accounts submitted to you, are deemed satisfactory.

Looking back on the year 1864, it is competent for me to say that it would have been easy for us to have realized during the year than £191,000, which the ordinary dividend yielded. I may very truly say this might easily have been done, but it is not possible to make the maximum of profit without incurring risks which, in the long run, would be avoided, and which we have accordingly avoided. I may say for myself and myself, that we have been far more desirous to make such observations as a very proper custom of the chairman, in addition to the text of the report, to express my hopes that the tenor of the report and of the accounts submitted to you, are deemed satisfactory. (Hear, hear.) Having said so much, the prudence of our proceedings, I think I am fully justified in the shareholders on the results we have achieved, and the available reserves, as compared to liabilities, such as no other bank in the United Kingdom exceeds. (Cheers.) I have been surprised in Ireland to notice some commentaries which have appeared in the newspapers touching the so-called injustice involved in the working of two large Irish banking companies—London boards. These observations I understand to be directed to our friends and neighbours in this street. I have no objection, as they have always done, give a good account of our business, and I will now occupy myself simply with the business of the bank in Ireland, and the amount of advances in Ireland, taken together, exceed the amount of the balance to credit of customers' current accounts. (Cheers.) Nay, I will go on further to say that the amount accruing to our shareholders in Ireland, and the amount amongst them, now exceeds the whole earnings of the bank in Ireland. (Renewed cheers.) So here, at least, is one institution in that country, but which is, in fact, a source of profit to the bank in the best interests of the shareholders.

holders, and, to the best of our ability, in the interest of the community on both sides of the Channel. Perhaps it is not now out for me to say, as bearing upon the business intercourse between countries, that this institution has not only found no prejudices against in this country, but that, whether in London or in Liverpool, any other part of England with which we have relations, they have been recognised and appreciated with as much and as early a favour as it had sprung up on the foundation of the oldest bank in England (hear.) I know it will be gratifying to our friends in Ireland to hear that it is simply a tribute to truth to state it. Great, however, as the actual progress has been, I consider this bank only in an early stage of growth. I look forward with confidence to its increased development. I do not wish, nor does this board desire, to increase the business of the bank, except commensurately with capital and reserves. I have touched upon that portion of the report which refers to the proposition of the board to increase the capital of the bank by the issue of 10,000 shares, £30 paid up on each, which I presume will be carried in August. You will observe that during the progress of the call for new shares, the profits of the bank increased in a ratio greatly exceeding the actual increase of the capital. No doubt this was due to the fact that half a million sterling was realized as a premium on the new shares at a time that money was very valuable. To have distributed the increased revenue in the shape of dividend before the new shares were paid up equally to the old would have been, in our opinion, to have been inequitably towards those shareholders who had contributed more capital, and the directors determined to abide the equalization of the classes of shares before increasing their rates of dividend. Moreover, however, propositions for increased business from new and valuable connections poured in on us; such was the effect of the bank's re-organization of business that proposals for valuable business flowed in on one side, whilst the public confidence daily increased our resources on the other, all through the period of the pressure. This determined the directors to pursue the course they have announced to you in the report rather to recommend to you to carry out, namely, to convert £300,000 of the rest into 10,000 new shares; to leave the paid-up capital of the bank at a million and a half, and the reserve fund about half a million. At the end of the operation will leave, as I believe, the paid-up capital of this bank at £1,500,000, reserve fund of the bank the largest of any bank in England save the Bank of England, and the largest of any bank in Ireland except the Bank of Ireland. Our first view has been safety, and we know no more than to it except by large capital and reserves. (Hear, hear.) The business of the banker is to borrow money, repayable at short notice or on demand, and to lend it, repayable at various dates. There is no security that the banker can continue to treat his customers with liberality during times of depression if he has not a large capital, and we have secured this essential by the low rates of interest on money have fallen since the year opened to 5 per cent. per annum. This bank has upwards of £4,000,000 of resources, of which it has to pay no interest, except 7s. per cent. per annum on the balance of it as is represented by circulation; and although the statement of this is so may deprive us of some of the credit that attaches to the bank, yet we desire large profits from money borrowed at high rates, we are quite sure that we should be judged by the results and on our merits, such as we are. I will now, gentlemen, move that the report just read to you be printed and circulated amongst the proprietors, and if any proprietor

or questions to ask I shall be prepared, when all each where it is requisite.

P., in seconding the resolution, said that, after of the chairman, it was hardly necessary for him with any remarks. The report, he thought, must of all present that the business had been conducted with a view to the interests of the shareholders, with whom they had to deal. He was glad to shareholders in the room, participating as they value of their property, and rejoicing in the position attained. The most cursory examination of the would show them that it would have been very easy have presented legitimately even a more favourable done, but as the chairman had said the motto of on and safety. He congratulated the shareholders ings they possessed, both in London and Ireland, old all agree with him that the value put down for was ridiculously small. In conclusion, he could n of the chairman that whatever progress they yet in its infancy. (Cheers.)

s opinion that the report was one of the most been issued by the board, and more especially ook into account the recent commercial crisis, ded to no inconsiderable extent the progress of er in which their business had been conducted isible credit on the governing body. (Cheers.) meeting of the proprietors, and no doubt in that board had gained great experience. The ab- new capital within the last few months, bore ation of the institution by the public, and the operation had been carried out at a profit of half (Cheers.) It was very gratifying to know that the advantage resulting from the employment of ntry, but of the increased profit derivable from pressed a firm opinion that the future of Ireland uly did she possess in abundance the elements of er geographical position and her connection with at there could be no doubt that she would before e the seat of future enterprise. They were that equal to 14 per cent., and they were moreover used to appropriate the undivided capital, in the e extent of £300,000. The result of this would ishment they would have had returned to them half a million three times over. (Cheers.) He res now contemplated would add greatly to the f the bank, would enable it to carry on all its ility, and to advance all those objects for the pro- rrat created. He learnt with great pleasure that ed the services of its able managers and officers, of their prosperity. (Cheers.)

unanimously adopted.

Chairman, seconded by a Shareholder, the retiring

It was then moved by Sir Benjamin Morris and seconded by Wheeler, "That, in consideration of the increased business of the and the highly prosperous condition of its affairs, the remuneration of the directors should be allowed to receive should be increased by the of £2,400 per annum, being an increase by one-half of the amount by the deed of settlement."

The resolution having been put by the chairman, was carried unanimously.

The Chairman, in returning thanks, observed that the board appreciated the compliment, and valued it more as a mark of confidence than they did as an increase of their remuneration.

On the motion of Mr. Fox, a vote of thanks was passed by acclamation to Mr. M. J. Power, the secretary, to the managers, and to the various officers of the bank, for their zeal and assiduity in promoting its prosperity.

Mr. M. J. Power having acknowledged the compliment,

A cordial vote of thanks to the chairman for his able conduct in the chair, moved by Mr. Harvey Lewis, and also carried by acclamation terminated the proceedings.

THE JOINT-STOCK DISCOUNT COMPANY, LIMITED.

THE third ordinary general meeting of the shareholders of this company was held on the 31st January, at the London Tavern, W. C. Brown, in the chair.

Mr. Westrup, the secretary, read the report, which was as follows:

"In submitting the annexed statement of accounts, the directors take pleasure in congratulating the proprietary on a result which they are of opinion will, when the late severe commercial crisis is considered, be regarded as satisfactory. The balance of gross profits made during the six months ending the 31st ult., after reserving an amount as provision against the respect of bad debts, greatly exceeding that which it is believed ultimately be found necessary, has been £46,172, 13s. 10d. This amount, after deducting rebate on bills not due and the current expenses, enabled the directors to increase the reserve fund to £30,000, to declare a dividend at the rate of 6 per cent. per annum, amounting to 3s. 6d. per share, and to carry forward £3,243. 2s. 11d. to profit and loss account. In consequence of the stoppage of the Leeds Banking Company, of whose endorsements this Company at one time held a very large amount, and the extreme difficulty in negotiating the best mercantile and financial bills, and the extent of monetary embarrassments, which seriously threatened to terminate in a panic, the directors decided, after the most anxious consideration, that it was in the interest of the proprietors that the Company should be immediately placed, not only in a position to meet every contingency, but in one of undoubted strength, and that this desirable result would be best secured by making a call. The directors trust that this will be considered a sufficient reason for a step which, in any but the exceptional times, might have appeared both inconsiderate and unnecessary. The prompt manner in which the call was met by the shareholders is a proof that they fully appreciated the propriety of the measure. The directors have elected Mr. A. W. Rixon to one of the vacant seats at the London Tavern. Owing to the unavoidable absence abroad of Mr. J. P. Judd, one of

the directors have appointed Mr. C. J. H. Allen in
 ment, if approved of, will require confirmation by
 the Company's register on the 1st of January of this
 than 1,150 shareholders, comprising the names of a

moving the adoption of the report, said he did not
 very long by any lengthened remarks on the subject
 points, but one or two points required to be referred
 gross profit accounts there was a considerable dis-
 nts for December against those of June. This was
 large amount of bills they had to rebate in June, and
 y had to rebate in December. At the end of December
 £20,800, and in June £24,000, with a balance in their
 00 in June, as against December. But in comparing

these accounts in June nothing was carried forward as against balance, whereas in December they had carried £30,000 to the contingent fund for the purpose of meeting anything that might arise; and if they had added £30,000—supposing the bad debts not to arise—they would have had a profit of £40,000 against £24,000 at the end of December. Another feature that appeared very strongly in the present half-year was this: in estimating the rebate on the 30th June they took the rebate at 5½ per cent. Considering what followed in the money market, which could not have been anticipated, the rebate was taken at a low rate, and as the money market advanced up to 9 per cent. the loss or rebate, which came in the December half-year, was very considerable; and if they had taken the rebate at 9 per cent. higher than they did on the 30th June they found it would have made a difference of £7,000 against the June half-year and in favour of the December half-year, and that was a considerable increase of profit. He thought they would find that the profits had by no means diminished, but that they had in reality considerably increased. Under these circumstances they thought it better to put their dividend at 6 per cent. than at 8 per cent., for the purpose of making the position of the company as strong as possible. The call they made a few months ago required to state the reasons which led to it. It had been said they made the call because they had made an enormous amount of bad debts, that they had an enormous amount of bad bills. The real cause of their making the call was that a real stringency came over the money market, and that they had a large amount of securities that were not negotiable. They held a large amount of the Leeds bank paper, with the endorsements of the bank, which was perfectly useless in the market. They held a large amount of financial paper which had become useless in the market, and a large amount of commercial bills; and such was the stringency that they had to look at the matter seriously, and to think the time had arrived when it was necessary to make themselves safe, and to be enabled to meet any contingencies. At the time they decided to make a call they had a large amount of paper in their till. They were not in a state of bankruptcy. They had plenty of paper, but it was un-negotiable, and the question was whether they should force those on the market and obtain money at a rate of 20 per cent. to enable them to carry on their business. They thought with their reserve fund they would not be acting consistently with their business interests if they were to pay large sums to other companies for advances, and they thought the time had come when they must make a call on their capital. It was objectionable to the shareholders, but it was a matter of necessity. His own opinion was that the company was in a better position, and with the assistance of the shareholders they would do good instead of doing harm. He moved the adoption of the report.

Mr. W. Dent seconded the motion, and said they had a very valuable amount of Mr. M'Henry's paper, and with respect to that paper a report would show it to be as valuable as it was, in his opinion, when taken. He admitted they had made a mistake in not telling them they were about to make a call. He believed they could make as much use of their capital of £400,000 as with £800,000, and he suggested that some of the paid-up capital should be returned. The manager worked day and night, and could not obtain competent assistance. Their estimated loss was £20,000, but he thought £12,000 would represent the amount.

A Shareholder asked if there was any loss on the Leeds Bank paper, and, if so, to what extent?

and they could not say there was any loss on the Leeds paper was expected to be paid in full with interest.

Did he was satisfied the company had made great progress? After examination of its affairs, he believed the company was in a better state than it was six months ago. In support of his statement, he entered into a detailed statement of the accounts. Under the circumstances, the directors did right to make a call. It was whether now some portion of their capital could be made the profits divisible on a smaller capital.

He intimated the directors on having made the call. He thought they ought not to leave their descendants to regret; and as a family man, he could scarcely sleep when he thought of companies with £50 shares, and only one-tenth of the value. The company stood high, their preliminary expenses were not great, they might have for a larger dividend on a future

call. He strongly objected to the last call, as they would have to pay the same dividend on the increased capital.

He inquired if there was any power to return the paid-up capital. He was objected to one of the solicitors of the board being present, for influential commercial men were essential to the company. The amount of bad debts for which credit had been given was discounted any of Lloyd's bonds?

Mr. Rixon expressed themselves strongly against the late call, Mr. Rixon, the solicitor, being made a director.

He replied, stated that they had really had less capital to work with the last than in the previous half-year. The bills and notes were regarded as capital, seeing that it was usual to have bills and others advances against them. Private deposits were not a footing, and were available for carrying on the business, but these had been considerably reduced during the half-year. Expenses had increased about £1,000, consequent upon additions to the staff, a larger sum paid for income-tax, and a charge for advertising. With regard to the probability of the business being reduced by the increased capital, which would have been the case if the additional capital would be profitably employed on their own dividend. (Hear, hear.) Mr. Rixon, who had been a director a member of the board, was one of the solicitors of the company; but he did not think that their law adviser was so incompatible with the office of a director. The board should decline to avail themselves of the great assistance which that gentleman could bring to the assistance of the company as a member of the direction. He was doubtful if the bank would legally return capital when once called up. The bank were considered in every respect satisfactory, as they formerly were. He could not state what amount of capital was held which were not convertible, as the convertibility depended upon the state of the money market, but the amount of capital they did hold a small amount of Lloyd's bonds, but not a security. The gross profits of the half-year were put at £20,000, and if they added the £20,000 carried over to the previous year, it would make the total £66,000.

Mr. Godfrey protested against the solicitor of the company having a seat on the board, the two positions being incompatible.

A Shareholder suggested that there should be an increase in the number of the directors, in order to bring in some City gentlemen of commercial and financial experience and influence.

The Chairman said they were most anxious to do so as opportunities were offered. In reply to a question, he added that no further call was contemplated.

A Proprietor, who said he had deposited money with the company in consequence of the managing director having told him that he was a shareholder, and meant to keep his shares under all circumstances, asked whether it was true that that gentleman had recently sold out, and if so, whether he held no shares whatever in the concern.

The Chairman declined to enter into the private affairs of any of the shareholders, and added that it was not provided by the deed of incorporation that the manager should hold any share qualification.

After some conversation on this point, in which some shareholders expressed the view of the chairman, and others the contrary.

Mr. Wilkinson the managing director, stated that he had originally held 2,800 shares; that he had sold some, but still held several—more than a director's qualification. (Hear, hear.) This explanation was completely satisfactory, and the resolution adopting the report was carried unanimously.

The auditors were re-appointed, and the proceedings terminated by the usual compliment to the chairman and his colleagues.

LONDON, HAMBURG, AND CONTINENTAL EXCHANGE BANK, LIMITED.

A MEETING of the shareholders of this bank was held on the 31st January at the offices in Lombard-street, for the purpose of receiving a statement of accounts to 31st December last; Mr. Edward Tombs in the chair.

The circular convening the meeting having been read,

The Secretary proceeded to read the following report of the directors which had been sent round to the shareholders:—

"In fulfilment of the promise held out in their circular of the 16th December last, the directors have called you together to submit to you a statement of the bank's position. This statement is now before you, and the directors trust that you will consider it much more favourable than you have been led to expect from the wild and unfounded rumours so industriously circulated for the past few months. (Hear, hear.) The long-continued pressure on the commercial circles, from which we are now emerging, will account for many of these rumours from which we have suffered in common with other institutions much stronger in every sense than our own. In the face of great difficulties you will not expect that the business of the bank during the interval which has elapsed since our last meeting, has maintained the development and extent which its earlier career promised; but if that business has been of necessity curtailed, the directors can only state that no losses have been incurred by the bank in its recent transactions, and that the losses that now appear, though heavy, were anticipated at your last meeting, have been in reality the result of the sequence of previous transactions. The directors find that the profits of the bank for the fourteen months of its existence, amounting to

which £9,494. 5s. 3d. has been earned during the past losses during the entire period amount to £8,652. e that they will be able shortly to announce that they cies caused since the last meeting by the retirement rs from the board by gentlemen of high commercial lso in treaty with a gentleman of great experience and ant post of manager. The petition by a shareholder upany, which was the subject of the circular before tly after withdrawn, and the admission of the solicitors there was no ground for such a proceeding, proves as the attempt thus made to damage the credit of the rs have every confidence in the future career of the see it ere long strengthened in credit and capital. ef statement will serve to dissipate the doubts and ear to have weighed on the minds of many of the duce them to give the bank their confidence and sup- han they have hitherto done. The shareholders will for themselves that their property has not been de- ent indicated by the late very low quotations of the

The Chairman, in rising to move the adoption of the report, claimed the privilege to make a few observations, and they should be brief, because the report and statement of accounts contained the gist of all he had to say. In the first place, the shareholders would be surprised to find the share of the bank quoted so low. This, however, was the result of want of confidence, and malicious rumours which had been spread by certain parties. There would be no doubt on that point. (Hear.) He hoped the shareholders would be satisfied that, though their losses had been heavy, still the bank was on its last legs—(hear, hear)—as some people had hoped and wished it to be. (Hear.) The petition for winding up the company, which was presented to him in the report, was the petition of one of the shareholders, who was not delegated to that proceeding from the fact of the company being at issue with him on a question of account. To protect himself from the consequences of this action he purchased five shares, and, as a shareholder, he petitioned the court. The petition was simply a defence to the action which had been brought against him by the board of directors, and the result was that the affair was settled. He thought he might now simply move that the report be adopted.

Mr. Sebag had great pleasure in seconding the motion, and he thought that great praise was due to the directors. He believed, indeed, that the bank was not quite in good working order, and that the figures which appeared on the face of the accounts were not to be regarded as a criterion of what might be done hereafter. They might be said to be in the position of a large ship not sufficiently manned by a proper crew. He said this without offence to the directors, but they had not so largely consulted a board as they themselves might desire. The shareholders would remark that this bank was established under favourable auspices, and it was now a question whether they had given too much for it; it was looking back and he trusted the shareholders would manfully second the exertions of the directors, and that they would express their satisfaction with the report. For himself he cordially and gratefully seconded the motion.

A Shareholder reminded the proprietors that at the last meeting the directors pledged themselves to use their utmost exertions to secure the success of a manager. Had anything been done to attain that object?

A Shareholder asked how it was that the accounts were not audited.

The Chairman, in reply, stated that they had not received the accounts till the middle of the previous day. This was not an ordinary

had been made by the board that a statement of account should be made out on this occasion. At the proper time the statement was read. With respect to the inquiry made as to the appointment of a manager, he begged to refer the honourable shareholder to the fact that the board were in treaty with a gentleman to come in as manager, but did not say that the appointment was fixed, for it was not yet known what gentleman they required must have a thorough knowledge of Spanish, and Italian languages, and such a person could not be found every day. For himself he should hail with joy the appointment of any gentleman, who would relieve him and the board of the much responsibility in filling a thankless task. He then put that the report and statement of accounts be adopted.

The resolutions were passed to the chairman and directors, with the concurrence of the members, Messrs. Schmidt and Standsen, which were read by the chairman, and subsequently by the chairman. The meeting was marked by the best possible spirit.

EUROPEAN AND AMERICAN FINANCE CORPORATION, LIMITED.

A general meeting of the shareholders of this corporation was held on the 12th of February, at the London Tavern, Edward Ruston Esq. in the chair.

At the meeting was convened was thus stated:—For the purpose of carrying out an agreement provisionally entered into, dated the 1st of January 1890, between the Public Works Credit Company of London and the European and American Finance Corporation, a duplicate of which now lies at the offices of the said corporation, for the purpose of confirming and carrying the same into effect; for the declaration of a dividend, and for such other resolutions as may be necessary or considered desirable in connection with the said agreement, or incidental thereto.

The secretary, read the report, which stated that shareholders of the European and American Finance Corporation, Limited, in shares of £20 each, with £2 per share paid, will receive from the Public Works Credit Company, with £5 paid up (or for every two shares), and they will receive an interest of 2s. per share. In addition to this, the new shares of the Public Works Credit Company in dividend from the Public Works Credit Company in shares confidently anticipated, will prove highly satisfactory. The Public Works Credit Company's shares are on the official list of the London Stock Exchange, and its position and prospects are such as, in the opinion of the directors, to render the alliance a matter of congratulation.

Four of the directors will join the board of the Public Works Credit Company, and steps will forthwith be taken for the purpose of the European and American Finance Corporation, to form to wind up and extinguish that company.

The solicitor would now read to them the proposed articles of association of the Public Works Credit Company of London and Paris,

Mr. Kimber then read the terms of the agreement arranged between the companies.

The Chairman said they had heard the directors' report, and the provisional agreement which was referred to in the report. The report of the directors was so sufficiently clear it did not require much elucidation on his hands. He would proceed to state, as shortly as he could, what he thought necessary to notice, and he would first bring before the shareholders the balance-sheet of the company up to the 30th of December last, which was exhibited a profit of £2,000, or 20 per cent. on the paid-up capital of the company, which was evidence that the directors had been idle in their humble exertions to promote the interests of the shareholders. This amount of profit would have enabled the directors at their last annual and ordinary meeting in March next to declare a dividend of 10 per cent. besides commencing a reserve fund, and paying off a fair portion of the preliminary expenses. They were, however, assembled on the present occasion to have a different course recommended to them. The report had already informed them that their directors had had from the first time a growing conviction that an amalgamation of that company with one of a kindred character would be highly beneficial, provided it could be done on satisfactory terms. That opportunity had occurred, and the directors had improved upon it, and they had executed a provisional agreement which they now, with their sanction, proposed to carry into effect with the company stated in the report, the Public Works' Credit Company of London and Paris, Limited. The report, with the balance-sheet annexed, had been circulated amongst the shareholders, and if the shareholders read that report and balance-sheet as the directors did, they would not do otherwise than feel it had an encouraging aspect. In accordance with the report and balance-sheet the directors, for their guidance in their investigation, which had been somewhat protracted and anxious, had laid before them a statement of the operations of the Public Works' Credit Company, and a balance sheet to the 31st December last, which showed that for that six months the profits had exceeded by 50 per cent. those of the preceding twelve months. From that balance-sheet he might infer that the paid-up capital to the 31st of December amounted to nearly equal to the paid-up capital of their company. He mentioned this because several gentlemen had written to the directors to know whether there was to be an amalgamation with a company with less paid-up capital. That was not so, as they would perceive. Every facility had been afforded to their directors in their investigation, and they had no hesitation in stating all the statements laid before them as true, and the accounts correct. To enable them to carry out this proposition it would be necessary to place the unissued shares of the company, somewhat short of the number. The directors proposed that these should carry equal value with those already issued. The directors felt no difficulty in accomplishing that end, but before taking any step in that direction they found themselves bound to take the sense of the meeting. (Hear, hear.) All the conditions of the corporation with the shareholders would be observed in the company with which they proposed to amalgamate. As to the time at which they had notice some time ago, in stringent times, they did not think it necessary to make that call. He begged to move that the provisional agreement entered into, dated January 9, 1865, between the Public Works Credit Company of London and Paris, Limited, and the European and American Finance Corporation, be approved, and carried into effect.

ndler seconded the motion; and after some conversa-
carried.

ings came to a conclusion.

LEICESTERSHIRE BANKING COMPANY.

neral annual meeting of proprietors of this bank was
el, Leicester, on the 1st February; William Evans
the chair.

nted the following report:—

e pleasure in meeting the proprietors on this occa-
before them the results of the business of the past
4 opened with a general advance in the value of
he whole year greater changes have taken place in
han can be remembered in any former period; this
aces has required unusual watchfulness and care, and
d to be able to report that the result of the business
very satisfactory. The profits, after making ample
l debts and paying all expenses and losses, amount
5. 0s. 7d.; this, with the balance of £3,802. 4s. 9d.
December, 1863, makes a total of £36,497. 5s. 4d. to
The directors recommend the payment of a dividend
the old shares, and of 6s. per share on the new
e tax, being at the rate of £6 per cent. for the half-
omment that £9,049 be placed to the reserved fund,
be carried to the credit of the account for 1865, the
under:—

	£	s.	d.
in August on old shares.....	10,125	0	0
in August on new shares.....	951	0	0
old shares as now recommended	10,125	0	0
new shares as now recommended	1,902	0	0
come tax	860	0	0
ud	9,049	0	0
loss for 1865	3,485	5	4
	<u>£36,497</u>	<u>5</u>	<u>4</u>

f the bank is now £200,450, consisting of 13,500 old
each, fully paid up, and 6,340 new shares of like
£5 per share has been paid. The reserved fund, with
n (together with the addition of £1,120 received for
ares sold), will now amount to £72,000. The pro-
that the directors are carrying a larger amount than
ference to declaring an increased dividend, but
ation they are satisfied it will be the best course to

adopt, having regard to the increasing business of the bank, and the increase in the capital which will be made when the whole of the calls on the new shares shall have been paid up. The directors recommend this meeting should make a further call of £2. 10s. per share upon the holders of the new shares, to be paid upon the third day of July next, making the amount paid up on these shares £7. 10s. per share. The holders have been informed by the circular convening this meeting that Thomas Pares, Esq., one of the directors whose term of office now expires, has expressed a wish not to be re-elected, in consequence of his impaired health; the directors feel sure that the whole body of shareholders will unite with them in the expression of their deep regret for his retirement. Mr. Pares was first elected a director in 1841, and during the lengthened period of twenty-four years he has most kindly and efficiently attended to the interests of the bank. Charles Thomas Freer, Esq., of Billingham, Coplow, has been put in nomination as a director in the place of Mr. Pares; the other director retiring by rotation is Mr. William Billson. No other names having been proposed, those gentlemen are alone eligible at this meeting."

It was then resolved—

"That the report of the directors be received and adopted, and printed, and a copy sent to each proprietor."

"That Charles Thomas Freer, Esq., be elected a director of this company in the place of Thomas Pares, Esq."

"That Mr. William Billson be re-elected a director of this company."

"That all the proprietors or other holders of the new shares of the capital of the company created in 1863 be called upon to pay, on the third day of July next, a further instalment of £2. 10s. per share in addition to the sums which have been already paid in respect thereof."

"That this meeting, while deeply regretting that impaired health has caused the retirement from the direction of the bank of Thomas Pares, Esq., beg to offer him their cordial thanks for his assistance and valuable services for the past twenty-four years, a period which comprises almost the entire existence of the present company."

"That this meeting present to the board of directors its best thanks for their kind attention to the interests of the company, and for the satisfactory report this day presented."

"That the thanks of the proprietors be given to the several directors of the company for their efficient services."

"That the thanks of the meeting be given to the chairman for his able conduct in the chair."

SHEFFIELD AND ROTHERHAM BANK.

THE ordinary general meeting of proprietors was held at the Bank, Sheffield on the 1st of February, George Hounsfield, Esq., in the chair.

The following report was read:—

"Your directors in presenting to the shareholders their annual report have much pleasure in saying the business and profits of the bank for the last year have far exceeded those of any former year. In consequence of the increasing business at the Buxton branch, your directors have found it necessary to take more commodious premises and open the bank at Buxton. The new bank premises were opened on the 1st June last, and

"In terms of the 64th clause of the deed of settlement, it will be the duty of the directors to report to the shareholders on this meeting to elect an auditor for the year ensuing. Mr. Blackburn, being eligible, offers himself for re-election."

AUDITOR'S REPORT.

"By the 64th clause of your deed of settlement, the auditor is empowered from time to time, if he thinks necessary, to make a report to the shareholders of the bank. During the eight years I have had to look after your interests, no necessity has ever arisen for making a separate report: nor is there anything in the affairs of the bank at the present time requiring such notice. My reasons for departing from the usual course on this occasion arise out of the disastrous and spread ruin caused by the suspension of the Leeds Banking Company, which to the outside world was apparently as prosperous as the Yorkshire Banking Company. Twice in each year there is laid before the shareholders a balance-sheet and statement of the assets and liabilities of the bank, as certified by me, and for which I am individually responsible as a public professional auditor. In the case of the Leeds Banking Company no statement of assets and liabilities was laid before the shareholders, nor was any public professional auditor appointed to verify the correctness of the accounts of the bank. The same irregular course of proceeding applied

ing the business of the bank. Mr. Greenland allowed his management on the part of his directors, not even ally appointed to confer with and assist him in such manager, Mr. Scott, takes upon himself no such res- res it with his directors, with some of whom he is ion, and once a week the affairs of the bank are whole board. The great source of loss and disaster nks that have hitherto suspended has arisen from the nd re-discount of bills. In the Yorkshire Banking ransactions are known; the bills received from and omers remain in the hands of the bank until they when they are sent up to London for collection; so ver unprepared to meet any demands made upon it, rces in its own coffers to provide for any call or abilities of the bank on endorsements never at any

We might have looked part of the public, but none such was shown, either any of our branches; and I was surprised and so to find that instead of our deposits being withdrawn, ave expected, they rather increased than otherwise. d that the auditor has thought it his duty to make he way in which the business of this bank is con- not blind to the natural fears which the Leeds Bank ed throughout Yorkshire, and we quite concur with re entitled to know how your own affairs are managed. twenty years your chairman, and have too large a

stake in the prosperity of this bank, and so have my brother direct give the reins into the hands of any manager. We have a great deal for our manager, but we think for ourselves. We do not un- being directors only in name and not in reality, and we therefore to see and know all that is going on from week to week. As Mr. Blackburn has told you, we have no re-discounting, but our bills remain case until due, ready to meet any emergency that may happen. the course we shall continue to pursue. Our profit for the last enables us to carry a large sum to the new share account, and I doubt that if I am spared to meet you next August, it will be- nounce that we have then saved out of profits the whole of the ne- and to create the 5,491 new shares. In the meantime I have to my unbounded satisfaction at the prosperity which has attended my fullest confidence that, by pursuing the prudent course we have done, this bank will continue to retain the same confidence in pu- mation, and be productive of the same advantages to you as shares as have hitherto attended us. I have now to move the adoption of the report."

Mr. Edward Brown, of Bath, seconded the adoption of the report suggested that the remarks which had been made by the chairman be printed with the two reports, and circulated among the shareholders.

This suggestion, as well as the reports, were unanimously adopted at the meeting.

Resolutions were then passed approving the dividend, and also the appropriation of the surplus profits towards the new share fund, as proposed by the directors' report.

Mr. Blackburn, the auditor, was unanimously re-elected, after he first answered several questions put to him; and a very cordial vote of thanks was passed to Mr. Scott, the general manager, for the manner in which he has conducted the bank's concerns for so many years. A similar acknowledgment was paid to the managers of the other branches.

The meeting separated with a unanimous vote of thanks to the directors and managers.

EASTERN EXCHANGE BANK, LIMITED.

The first ordinary meeting of the Company was held at the bank, 10, Abchurch Lane, London, on February 2nd; Patrick Hunter, Esq., deputy chairman, presiding, in the absence of Edward Comber, Esq., chairman of the company. Amongst the shareholders present were, Messrs. T. C. M. Bowen, R. Dirom, A. W. Malcomson, E. Banner, J. Bigham, J. W. Radcliffe, I. Gill, William Barry, William Douglas, Swinfen O. Earle, David Malcomson, Thomas Comber, J. S. Smythe, F. I. T. Maxwell, Thomas Lapham, Henry Beasley, W. G. Nicholson, Langenbach, James Johnson, Rogers Waterhouse, W. C. Nicholson, Sproule, William Carson, &c., &c.

The Chairman said he must crave the indulgence of the shareholders in filling the chair. He was extremely sorry to say that their chairman was confined at home by serious illness.

The company's seal having been fixed to the transfer of shares.

The notice convening the meeting was read by Mr. Andrew sub-manager and secretary.

an, sub-manager and secretary, then read the following:—

calling the shareholders together for the first time, and statement of accounts of the bank since its formation, 1864. The difficulty in obtaining a suitable rate of interest, and the generally embarrassed state of affairs, induced the directors to postpone making calls and open- they have, however, been enabled to employ satisfactory capital in their hands, during the few months the operation, as appears by the annexed statement, showing £3,368. 2s. 3d., out of which they recommend a dividend of 1s. 6d. per share, free of income-tax, say at the end of the annum, leaving £368. 2s. 3d. to be carried forward. The directors delegated Mr. J. H. Etheridge, general manager, to Egypt to establish a branch at Alexandria. The results are highly satisfactory, and it is anticipated that considerable business will be transacted by the bank there. Formerly of the Agra and United Service Bank, and of Calcutta, China, and Japan, has been appointed resident manager. The directors who retire by rotation are Mr. G. M. Bowen, and Mr. A. Malcomson, and being re-elected they offer themselves accordingly. The meeting has appointed an auditor for the ensuing year, and fix his remuneration at £100.

and Balance-sheet for the Half-year ending the 31st December, 1864.

The Chairman said: "Gentlemen, in moving the adoption of this I have merely a very few remarks to put before you. In the first we are quite prepared to hear complaints of over-cautiousness, and of doing business; but I think, when we look at the reports of some of the Liverpool and London banks—establishments of old and experienced management—we have been perfectly justified in the course we have adopted, in waiting until the storm and crisis has blown over, and particularly in starting a new financial scheme—purely an exchange bank, the first that has been established at Liverpool—it was the care of the directors that nothing should be done to impair the confidence of the public in its position for the future. It would have been a happy state of things to have reported that even this small bank of £5,500 had been made out of actual business of banking; but it has arisen purely out of interest. We confined ourselves entirely to the most reliable securities, which were taken at a moderate rate of interest, and at any time, when opportunities arose, we would be in a position to convert them into cash if called upon, and commence the operation of an exchange bank. At the time of our formation, as will be in the memory of many of you, the mania for banks and financial schemes got to such a height in India, and particularly in Bombay, that the demand for managers was great as to induce the ordinary staffs to remain there instead of coming to England. Great inducements being offered to them to remain in India, on the one hand, and salaries being increased at home, had we at once engaged a manager, we should have entailed a very heavy annual expense on the bank; but through the assistance of our chairman and his friends in London, we in the course of time met with our present manager, Mr. Edwards, and I am happy to say that the directors are perfectly satisfied with the gentleman whom we have selected to undertake the management of this concern. (Hear, hear.) He is at present in Egypt: he was designated by the board to proceed there to open a branch in Alexandria, to place Mr. Baker, who has had some considerable experience at Calcutta, Bombay, and Kurrachee, as the manager at Alexandria. From the reports which we have received from both these gentlemen, we have every reason to anticipate a large and profitable business there. We shall immediately appoint agents in the East, in Australia, and elsewhere, and as soon as we have sufficient capital we hope to have our own branches in these parts. I don't know, gentlemen, that there is anything else for me to say. Our accounts are all very plain and explicit, but if any one wishes to ask questions with regard to them, I shall be very happy to answer them. The directors have nothing whatever to keep back. There is one item upon which the shareholders may require some additional information, namely, the £6,000 for 'preliminary expenses.' I may state that the amount is made up:—Stationery, printing, postage, &c., £1,249; brokerage, £1,275; advertising, £2,547; solicitors' expenses, £1,050. I may also state, in justice to our solicitors, that the charges are very much less than they would have been but for the precaution the directors took in issuing separate share certificates, a step which they considered a safeguard against fraud. That has also increased the printing expenses. The advertising is a large amount certainly, but you must remember that it was the very week in which we invited applications for shares that the London rate was raised to 9 per cent., and had we not advertised in the newspapers and down the country we certainly might have had a difficulty in getting the company. But we were well repaid for the trouble, as the immense numbers of applications, much more than we had reason-

confidence which has been expressed by many of the every reason to hope that this will be a successful s. (Hear, hear, and cheers.) It will take time. I r, that every day, business is gradually coming in to ave a branch in Egypt we are prepared to do business h our different agencies in the East and in Australia. a pleasure in moving the adoption of the report."

then put and carried unanimously.

. Chairman, I have much pleasure in proposing that Mr. G. M. Bowen, and Mr. A. Malcomson be re-elected . Mr. Hunter has been practically our chairman ation of the bank, because, unfortunately, Mr. exceedingly bad health, which I trust will not con- the opportunity of saying, however, that the atten- der has devoted to the interests of the shareholders am sure, will merit at their hands the continuance dence. Mr. Bowen and Mr. Malcomson have not n the welfare of the bank as ordinary directors, and is the pleasure of the shareholders again to elect , they will devote the utmost service they can give beg to move that these gentlemen be re-elected

eg to second that resolution ; and, as I am pretty well an habitual grumbler, perhaps it would be well if I the meeting for two or three minutes in commenting s. In the first place, these accounts are given in an satisfactory and understandable manner ; and, as you o which any exception could be taken in the prelim- been explained and detailed in a way that cannot but those persons who have read the reports of similar e been established during the past two or three years, read at recent meetings. Not having had much e-sheets I can only judge of this by its contrast with out prominently as a most favourable one for the ad the management of the concern, and is a satisfac- holders. One item in contrast with others of a ally small—I mean the £1,050 to the solicitors. That sed at, because everything that appears to have gone of the solicitors seems to have been of the same r. I have had occasion during the last month or of at least thirty or forty companies, and I can safely

say this, that with no exception this deed stands eminently one of the most remarkable and just to the shareholders we read. It is drawn up with credit by the eminent firm who are of it, and it is certainly satisfactory to find that the directors tioned it, for it warrants us in giving our confidence to them for I will contrast one single clause in the deed with that which heard of in others—viz., clause 78—which says that ‘the directors be entitled to set apart and receive for their remuneration in every year, commencing from the incorporation of the company, a sum of money as shall be voted to them by the resolution of the shareholders in the annual general meeting.’ (Hear, hear.) How did the directors acted upon this occasion? First of all, they have given accounts, without any remuneration being specified, or an intimation pressed of their expecting one, and I believe it is not their intention to receive it through the legitimate course, namely, the vote of the shareholders on this occasion, upon the ground that they have no banking business, and therefore will not take the allowance. (I could mention two or three other clauses equally creditworthy concerned connected with this deed, but I am so unaccustomed to laudatory terms of anybody that I feel rather a difficulty in pursuing the subject—(laughter and cheers)—though, no doubt, praise is most coming from me—particularly as I have no personal knowledge of the directors except the chairman, and as I have no interest in the company except that of a shareholder. I am perfectly satisfied with what has been done, and perfectly hopeful of what is to come. (Cheers.) I second the resolution.”

The resolution was then put and carried unanimously.

The Chairman, after acknowledging the re-election on his own part of his colleagues, said the directors had not the slightest intention to receive any fees. They only hoped that at the end of twelve months they would be able to lay a satisfactory statement before the shareholders, and then they might receive whatever reward the shareholders approved. (Hear, hear.)

The Chairman then moved the election of Messrs. Harman and Sons as auditors of the company, and that they be paid £50 for their services in auditing the accounts of the bank as at the 31st December last. The chairman said he had great pleasure in moving this resolution, having known Mr. Banner for a great many years, in fact, ever since he had been in Liverpool.

Mr. G. H. Higham seconded the resolution, which was put and carried unanimously.

Mr. Douglas proposed, “That the cordial thanks of the meeting be tendered to the chairman and board of directors for the judicious manner in which they have managed the affairs of the bank.”

Mr. Williams seconded the resolution, which was unanimously carried.

The Chairman, in reply, said that the directors were very much indebted to the shareholders, and it would be their constant endeavour to maintain the confidence which was reposed in them.

The Chairman—“I have now the very pleasing duty to propose to tender thanks to the manager, sub-manager, and other officers of the bank. When the idea of forming a branch in Egypt arose it was in the hands of Mr. Etheridge, the manager, that it would be very desirable that either he or the sub-manager should visit Alexandria to make himself master of the nature of the business. Mr. Etheridge being

family, it was rather a delicate thing to ask him to go and without the slightest hesitation, placed himself in the chairman and board of directors, and proceeded at once. It is very satisfactory that he has done so, for although the age of a gentleman at the board who is connected with the bank's visit there has made him completely master of the business, and we hope on his return that we shall be able to carry on our business there. Therefore I have great pleasure in expressing our thanks to the officers of the company." The resolution, which was carried unanimously.

EXTRAORDINARY MEETING.

That ends the ordinary meeting, and we now form an extraordinary general meeting for the purpose of altering the articles of association.

I read the notice, to the effect that the meeting was called for the purpose of taking into consideration the provisions in the articles of association, as to the mode of investing the funds of the Company, for making up the statement of accounts, and the mode of auditing the same, and to make such alteration in the articles of association as may be necessary therein."

The reason, gentlemen, for altering the first clause of the articles of association is to satisfy the requirements of the Stock Exchange. The old clause was that the directors should not be able to purchase or deal in the shares of the Company. I have no doubt the whole of the shareholders will quite understand and give a letter to the effect that the board would not purchase shares at the first general meeting, otherwise we should have a day of settlement on the Stock Exchange. The slightest doubt will be confirmed. The other is a clause as to the mode of making up our accounts. At present it states that the accounts shall be made up at the meeting, but if we go to India, Australia, or elsewhere, it will not be time to make up the accounts; therefore we have altered the clause to four months. I have no objection to it."

The second clause of the 98th regulation of the articles of association is hereby repealed, and in lieu thereof the following is substituted, that is to say:—"They may invest such parts of the funds of the company as they shall think fit in or upon any government securities, or upon such other investments or securities as may be approved by the directors, or upon such other investments or securities as they may think expedient, and may from time to time convert the same as occasion shall require."

I second that resolution."

The resolution was unanimously carried.

On the motion of Mr. Dirom seconded, the following resolution was carried:

"The 98th regulation of the articles of association shall be and the same is hereby repealed, and in lieu thereof the following shall be substituted, that is to say:—"The directors shall lay before the shareholders at every ordinary meeting the directors shall lay before the shareholders a statement of accounts of the company made up to a date not more than six months before the meeting from the time when the last statement was made; or in case of the first statement, from the

commencement of the company; and every statement shall be accompanied by a report of the directors as to the state and condition of the company and as to the amount which they recommend to be paid out of the profits by way of dividend or bonus to the shareholders, and the amount (if any) which they recommend to be retained for the formation of a reserve fund.

It was also resolved:—

“That a general meeting of the company be held on Thursday, the 1st day of February, 1866, at 12 o'clock noon, for the purpose of confirming the above resolutions.”

On the motion of Mr. Bigham, seconded by Mr. Prowse, a vote of thanks was passed to the chairman, and the proceedings closed.

LONDON AND COUNTY BANKING COMPANY.

THE annual general meeting of the proprietors of this company was held on the 2nd February, at the London Tavern; Mr. W. Nicol, M.P., in the chair.

The notice convening the meeting having been read, Mr. McKee, the general manager, read the following report and statement of accounts:—

“The directors have the pleasure to submit to the shareholders the balance-sheet of the bank for the half-year ending 31st December 1865. They have satisfaction in reporting that, after payment of all charges and interest to customers, making provision for bad and doubtful debts, and presenting a gratuity to each officer, the net profits amount to £126,431. 17s. 4d., which, with £21,726. 16s. 2d. brought forward from the last account, produces the sum of £148,158. 13s. 6d. for appropriation. The directors recommend the payment of the usual dividend of 6 per cent. on the half-year, together with a bonus of 12 per cent., making 18 per cent. for the six months; these payments will absorb £129,529. 1s. 3d., leaving £18,629. 12s. 3d. to be carried forward to profit and loss new account. The directors regret to announce the decease of their late esteemed member, James Laming, Esq., and report that they have elected Nathaniel Alexander, Esq., of Great Winchester Street, East India merchant, to fill the vacancy thus created. The directors retiring by rotation are William Burmester, Esq., John Fleming, Esq., and William Champlin Jones, Esq., who being eligible, offer themselves for re-election. Dividend and bonus (together £3. 12s. per share) free of income tax will be payable at the head office, or at any of the branches, on or after Monday the 13th February.”

Balance-sheet, December 31st, 1864.

moving the adoption of the report, said that it had often to address the proprietors of the bank at their meetings done so with such unqualified satisfaction as he occasion. In the earlier years of his connection with difficulties to struggle with, arising entirely from the unhappy man who had long ceased to exist. Years ago in a suicidal grave they had suffered from the effects and were deprived of those fair gains which they had attained to such an extent did his misconduct affect the bank, they thought that it would never be able to recover itself; but they had confidence in the bank and in the directors, aided by the able officers in the conduct of the business—(hear, hear) he enabled them to face the storm which existed for the last year, when he addressed them, he had to announce the decision of a court of justice against the bank, which, happily to say, was reversed on an appeal to a higher court. At the time to the present he was glad to say they had not

had a cloud of any kind to impede the sunshine of their prospects (Cheers.) During the last year the commerce of the country had been severely tried, and many branches of trade had sustained enormous losses. Many persons who at the commencement of the last year believed themselves possessed of ample fortunes had before its conclusion been obliged to yield to the storm, and several banks had been severely tried. He was happy to say that this bank had escaped with the most trifling loss, and the board were enabled to come before the proprietors that day offering them the largest dividend that any bank had made, and which left the institution in as prosperous a condition as any bank in England. (Cheers.) He would now turn to the accounts. It would be recollected that at the year it was agreed to increase the capital of the bank from £600,000 to £750,000. That had been done, and now, with a reserve of £250,000, the capital had been raised to £1,000,000. That increase of capital, he assured the meeting, had been a very great comfort to the directors during the past year, because they had felt confidence in the capital of the bank, that confidence had enabled them to take into consideration overtures of business which perhaps they would not have been able to entertain had it not been for that increased capital. It had been the custom in some banks to invest the reserve fund in Consols or other government securities which yielded only 3½ per cent., but if their reserve fund had during the last nine years been so invested the difference in the interest would have been so material as to have considerably affected their profits, and the directors felt that having a capital in cash on hand and at call of £2,500,000, the reserve fund of £250,000 in Consols would make very little difference to the safety of the undertaking. The next item in the account was the balance which he was very glad to refer to, namely, customers' balances, £9,779,000, showing an increase over last year's account of above a million and a half sterling. (Cheers.) That was extremely satisfactory, as showing the confidence reposed by the public in the bank, and he thought that he was justified in expressing his opinion that that was not the largest sum of money which would have placed with them in this way. They had separated the amount due for customers' balances from the item of liabilities on acceptances, and had done so for some years. Occasionally they saw common newspapers with reference to the omission of some other establishment to adopt this system, and some dissatisfaction had been expressed on the subject. It was the opinion of the board that customers' balances, which might always be taken as the gauge of public confidence, should always be separated from the liabilities on acceptances. (Hear, hear.) He thought that the amount of gross profit, which, including £21,726 brought over from the previous account, amounted to £352,000, would be most satisfactory, especially when they considered that the most ample provision had been made for the payment of bad and doubtful debts. The total gross profits of this bank during the past six months had been something like £2,000. (Cheers.) The interest on discounted bills and advances to customers amounted to the large sum of £9,833,000, and perhaps the meeting would like to know what was the usual practice pursued by the bank in investing the capital. Necessarily the larger portion was employed in discounting bills and lending to customers both in town and country. In the country the applications were generally for moderate sums, and if the manager thought that they were safe, they were remitted to London, and having been first scrutinized by their skilful and able general manager and the chief inspector, they were next sent to the committee of directors and underwent a second scrutiny. The only exception to this was that the general manager had

money on government stocks, application for which immediate attention. With respect to the item for premises that was an item which naturally increased their business, and it might be that they would have sum in times to come for this purpose. All he was, that he should be perfectly satisfied to be one of their property off their hands at the cost at which The item for salaries and expenses amounted to and to say that never was money better earned than salaries to their officers. (Cheers.) They had a staff of officers certainly equal, and he believed truth superior, to that of any other banking company to inform the shareholders that the increase of officers had been received with great thankfulness if possible, redoubled the zeal and assiduity of the admirable mode of distribution adopted by their able hands this matter was placed, an increase of 10 per cent. on the salaries of the whole staff, and, in addition a certain number of years and upwards in the service, received one-fourth per cent. for every year of those who had been 20 years in the service received an increase, and some two or three who had been as long in the service received an increase of about 17 per cent. With respect to the item £1,575, voted to three of them, all he could say was that it was received as a tribute of confidence on the part of the shareholders. (Cheers.) Turning to the profit and loss account, he saw that the sum of £39,429 had been set aside, not yet due, and that sum had been carried to the interest was taken at a high rate. The directors were a dividend at 6 per cent. for the half-year, and a bonus at the rate of 12 per cent. for the same time they carried forward a balance of £18,629. At the meeting the number of accounts had increased by 1,767 customers, which resulted in a business both in town and country. (Hear, hear.) The directors had entered the field in competition with them, but the increasing accounts showed that the company had them. New branches had been established at Newington, Hackney, Caledonian Road, and Slough, the London branches being raised to that position from several new sub-branches had been established in the request of persons in the various districts. Altogether the company was in the most flourishing condition, and, to the credit of the directors, might its shadow never grow less. (Cheers.) The chairman, seconded the motion. He asked whether it was possible for the proprietors to meet them some days before the meeting. He also asked the chairman could state that the concern was in a good condition, and that the report was a real bonum as a shareholder he had no wish to be placed in the hands of bank shareholders.

The Chairman said that owing to the number of returns to be made from the various branches, and the time it took to draw up the statement of accounts, it was impossible to issue the report before the meeting held. To say that the report was not an honest one would be to say that the directors, managers, and clerks were all rogues. He could only say that the most constant care and vigilance were exercised in checking various accounts and scrutinising the business offered to the bank. There had two sets of inspectors who were constantly travelling from one branch to another, inspecting and scrutinising the accounts; in addition to Mr. Jones, the deputy-chairman, himself went weekly through the returns sent from the various branches to the head-office.

A Shareholder, in reference to the vacancy in the board caused by the decease of Mr. J. Laming, and its being filled up by the appointment of Mr. Alexander by the board, expressed an opinion that the shareholder ought to be consulted with reference to the filling up of such vacancies.

Mr. McEwan called the attention of the shareholder to the fact that the deed of settlement absolutely directed the board to fill up any vacancy.

The report was then put and adopted unanimously, and a dividend in accordance with its terms was declared.

The retiring directors and auditors having been re-elected, cordial votes of thanks were given to the chairman and directors, and to the managers and staff, and the proceedings terminated.

BANK OF EGYPT.

THE ninth annual general meeting of the proprietors of this bank was held at the London Tavern on the 3rd February; Mr. W. Tite, M.P., in the chair.

The Secretary having read the notice and the minutes of the last meeting, read the following report:—

"The directors of the Bank of Egypt have the pleasure, at this ninth annual general meeting, to submit to the shareholders the annual statement of accounts for the half-year which ended on the 31st of December, 1864. The net profits, after providing for bad and doubtful debts, amount to £20,028. 13s. 9d. This, added to £6,272. 12s. 8d., the balance brought forward from the previous half-year, makes a total of £26,300. 6s. 5d. available for appropriation. The directors recommend that £6,000 be carried to the reserve fund, which will then amount to £20,000; the dividend be declared, as on the last occasion, at the rate of 10 per cent per annum for the half-year (£12,500) free of income tax; and the bonus of 5s. per share (£2,500) be added thereto, leaving a balance of £4,819. 6s. 5d. to be carried forward to the next account. In conformity with the provisions of the deed of settlement, William Tite, Esq., M.P., and Patrick F. Robertson, Esq., go out of office, and being eligible themselves for re-election. The auditors also retire from office and are eligible for re-election."

The Chairman, in moving the adoption of the report, said that he very few observations with which to trouble the meeting. The affairs of the bank were in a very flourishing condition, and they were enabled to declare a higher dividend than they had hitherto done. The gross profit of the half-year amounted to £26,808, which was a much larger sum than was earned in the corresponding period of last year. The expenses

ed, being £6,780, which left a net profit of £20,028. ly satisfied with the management in Egypt, and commercial affairs in that country, they considered hat country had been managed most skilfully and management in Egypt consisted of three persons, one of Alexandria, and the other two gentlemen were most satisfactory to be able to report that there had tatever within the last six months. The rate of ex- matter of consideration with them, and had been r as they were concerned. Their capital had always rate of exchange being 95½, which was pretty much the difference being in favour of the company. They ve fund the sum of £6,282, and he was happy to say w amounted to a substantial sum, viz., £20,000. uld learn with satisfaction that, it being the in Thurburn, one of their directors, to proceed to his own private affairs, he had kindly undertaken to of the bank in Egypt, with a view to ascertain how extended and its prosperity increased. The board owered Mr. Thurburn, in conjunction with the act for the company in any way which he considered sfit of the institution. The board were convinced erests of the bank in the hands of Mr. Thurburn, knowledge of Egyptian commerce, they were placing a wise and prudent man, and they anticipated the he visit of that gentleman to Egypt. He concluded a of the report, and the declaration of a dividend of us of 5s. per share, payable on the 10th inst. n, Mr. P. F. Robertson, seconded the resolution. s by Mr. Wright,

that, although the bank received a fair share of the competition to which they were subjected, that they could calculate much upon. They, however, claim. The directors were not of opinion that it was a reserve in Consols, on account of the large loss of result.

adopted.

Mr. Mangles, seconded by Mr. Bramley Moore, M.P.,
 The directors were re-elected.

of Mr. Taunton, seconded by Mr. Tidmarsh, Mr. Morgan were re-elected as auditors.

whether, considering the wonderful expansion of

in that country.

that the subject of the increase of capital was under the directors, they being quite in a position to obtain as desirable. To that point Mr. Thurburn would insist, and the board would to a great extent be guided might make to them. He (the chairman) was of the opinion that had arrived when the capital might be judiciously increased to the issue of notes in Egypt, the directors had the Egyptian management the advisability of issuing

them, but unfortunately the gentleman who took a principal management when the bank was first established, and who in such difficulty, took a very different view, and all the notes were actually printed and sent over, the board could not do otherwise. He had very little doubt that if the notes had been issued at that time a very large number might have been sent out; but the time is now gone by, and the ground being occupied by other parties the chance of getting them issued.

Mr. Thurburn confirmed the chairman's views on this point, that the trade and commerce of Egypt were increasing so rapidly, that there could be no doubt that the prosperity which had attended this trade would not only be continued, but greatly increased. (Cheers.)

A cordial vote of thanks to the chairman and directors was carried. The proceedings.

UNION BANK OF AUSTRALIA.

A SPECIAL general meeting of proprietors was held at the office of the bank in Old Broad Street, on the 3rd February, to consider a proposal for increasing the remuneration of the board of directors, in accordance with a requisition signed by the requisite number of shareholders; Mr. Carter presided.

The Chairman remarked that the question to be considered was entirely a proprietors' question, that no explanation from the directors was necessary; therefore he would call upon Mr. Hamilton to move the motion of which he had given notice.

Mr. Hamilton moved that the annual remuneration of the board, now £3,500, be increased from the 1st January last to £3,600, to be divided among the twelve ordinary directors, to be appropriated by them as they think fit, and that £1,200 be allowed to Mr. Cumming, so long as he holds the position of chairman of committees. He proposed this increase in the interest of the shareholders themselves, to whom it was of great importance that the same high standard of qualification which had characterised the direction should be preserved, and this would be secured by offering an adequate inducement to gentlemen of recognised position, and experience, to undertake the responsibility attending the employment of so large a capital in a field so vast, so full of difficulties, and in the face of so much competition. He pointed to the heavy remuneration paid in some of the principal London joint-stock banks, whose capital and average profits did not exceed their own, as affording an example in affirming the proposal. The present allowance to the ordinary directors was fixed in 1852, when they had only eleven branches, and a capital of £800,000. Now they had branches in all parts of Australia, New Zealand, and a capital of a million and a quarter. The increase in the number of branches and of the general business of the bank necessarily entailed upon the board a great addition to their duties and responsibilities.

Mr. Botley seconded the motion.

Mr. J. Yettis did not think it expedient that there should be any increase in the directors' remuneration; and in regard to the rate of interest given to directors in some of the London banks, remarked that the duties and responsibilities of management in London banks were greater than those of a bank whose business was carried on in the colonies.

specially appointed for the purpose, and who were, able parties. He further reminded the meeting that largely interested as shareholders, and in taking care of the company they were looking after their own interests. The proposed increase would bring up the directors' per cent. on the net profits of the concern.

believed the duties and responsibilities of directors in the company to be infinitely less than those of the directors of a bank at the other end of the world. As to Mr. Cumming, he was of opinion that the performance of his duties, and had relinquished all other duties in order that he might devote his entire attention to the management of this bank.

thought it out of place that they should discuss this question of the directors themselves, and suggested that it should be left to a half-a-dozen shareholders on each side to consider the matter at the next ordinary meeting. The proposed increase would absorb the entire amount carried over at the meeting. If they resolved upon making this addition to the directors, how could they refuse a similar demand from the directors of the colonial branches?

to know whether proxies had been issued from the shareholders, and if they were to be used in favour of this motion?

replied that of course they would be used—they had been used before.

added that it was necessary to issue the proxies from the shareholders not being known to the requi-

though as strenuous an advocate for economy as any one, he was of opinion that to pay its directors adequately, and considering the duties he did not consider the proposed remuneration and expenses of management he admitted were very heavy,

observing that there were not forty shareholders present, he adjourned the discussion to the next general meeting.

The motion was put and lost by 17 votes against 11, and the proposed increase carried by 18 votes to 10.

The meeting then terminated.

BANK OF WALES.

A general meeting of shareholders was held on the 4th of January at the London Tavern; John N. Daniell, Esq., in the chair.

The directors' report:—

We have the pleasure of submitting the following report for the half-year ending the 31st December last. The statement shows that the gross profit for the last six months, £8d. brought forward from last account, amounts to £1,940. 3s. 7d. and that, after deducting current expenses, directors' fees, there remains a balance of £1,808. 15s. 7d. The directors recommend that £1,808. 15s. be appropriated at the rate of 5 per cent. per annum for the half-year. The shareholders have already been informed by circular that arrangements have been made for an amalgamation of this bank with the Provincial Bank, upon equal terms. Your directors were induced to

take this step in consequence of the rapid development of the Welsh branches requiring more capital than was at their disposal, and the large available resources of the Provincial Banking Corporation. It was that want without necessitating a further call upon the shareholders which was satisfactory to state, after some experience of the working of combined banks, that this fusion of interest will considerably add to the success of the amalgamated bank, and enable it at all times to meet the requirement of the branches. Your directors cannot make this statement to the shareholders without tendering their thanks for the confidence in them, and they have no doubt that their property—being restated upon a substantial basis—will materially increase in value.

"Balance sheet to December 31, 1864. Dr.: To capital, to reserve, £500; to amount due on current, deposit, and other accounts, £164,222. 16s.; to gross profit: From last account, £203. 10s.; from forfeited shares, £2,500; profit after making provision for doubtful debts, £7,670. 13s. 7d.; together, £10,374. 10s. 3d. Cr.: By preliminary expenses, £6,278. 12s. 6d.; cash on hand and at bankers', £38,994. 8s. 3d.; by freehold and premises, furniture, expenses of establishing and purchasing branches, £19,261. 16s. 9d.; by bills discounted, loans, &c., £174,563. 2s. 6d.; current expenses, including arrears of directors' fees, &c., £1,000. 1d.; by interest paid, £2,027. 14s. 7d.: £247,532. 6s. 3d.

"Profit and loss account.—Dr.: To current expenses as above, £12s. 1d.; to interest paid, £2,027. 14s. 7d.; to dividend at 5 per cent. annum, £1,808. 15s.; to balance carried forward, £131. 8s. 7d. Cr.: By gross profit, £10,374. 10s. 3d.; total, £247,532. 6s. 3d."

The Chairman, in moving the adoption of the report, remarked that he met the shareholders, with mingled feelings of pleasure and regret, at the last time. It was a matter of pleasure from the circumstances which the property of the bank was placed, and he regretted the termination of the short acquaintance he had had with the shareholders. He was glad to see the cases of amalgamation of this kind, when once it was on foot, and that action was essential and necessary. Anything that admitted of delay or cavil, beyond a thorough investigation of all accounts, rendered it difficult to carry out such a thing, although in the ordinary mode of doing business it might be a matter easily carried out. On the other hand, the board had a feeling that it would be well for all their sakes that the matter be kept a secret until the arrangements were perfected. They were going on with the Bank of Wales profitably and well, but there was one thing which met them in the face in whatever direction they turned, namely, the want of capital. They had a vast field open to them as far as their capital went they made it productive; but it was not sufficient for the business of so large a province. This was not the first time they had made to join other banks, but it was the first attempt emanating from another bank, and not from the Bank of Wales, and in which they were willing to take them on equal terms. They could admit of no inferiority, and the shares were equal. They had the happiness of being joined to a company with a large independent capital, but it had no business to expend it upon, whilst they had a large business with one. They had means of inspecting the accounts, and nothing more promising for the future interests of the Bank of Wales than was carried with them their manager, and he felt certain that they would be called upon for further subscriptions. (Hear, hear.) He moved the adoption of the report.

EDIT AND FINANCE COMPANY OF LONDON, LIMITED.

general meeting of the proprietors of this company
February, at the London Tavern; Mr. S. Laing in

J. R. Butler) having read the advertisement con-
read the following report and statement of ac-

accounts of the Company's operations for the first
istence, viz., 1864, the Directors have much pleasure
shareholders on the results. The paid-up capital
00 during the first six months, and £1,000,000
months, or on the average £750,000 during the year.
its of the year (less rebate) amount to £287,906.

But of this, £125,000 results from the premium of £1 per share on the creation of new capital, and £31,250 from 5s. per share in lieu of interest on the new shares, so as to entitle them to receive dividend from the 1st January, 1864. Apart, therefore, from the new shares, the result would have been a net profit of £131,650. In this account of profit all securities had been taken at their market price on the 31st of December. As the creation of new shares is an exceptional source of profit, the directors recommend that a balance of £125,000 resulting therefrom be carried to a reserve fund. A balance of £180,731, out of which an interim dividend of 10s. per share, amounting to £25,000 has been already paid. The directors recommend that an additional dividend of 10s. per share, to come tax, be now declared, amounting to £125,000, and that the 2s. paid in August, a total dividend of 12s. for the year, at the rate of 15 per cent. on the whole capital of £1,000,000. The balance of £22,440, to be carried forward to next year's account with the reserve fund of £125,000 a sum of £147,440 undivided to the £150,000 distributed as dividend. The directors recommend in accordance with the provisions of the articles of association the vacancy caused by the retirement of Mr. Charles Devanport to the election of his brother and partner, Mr. Alexander Devanport. Quilter, Ball, and Co., the auditors appointed at last Meeting, to stand for re-election."

xt year's account the balance of £22,440 undivided
at was a prudent policy, and that the declaration of

a dividend of 12s. per share for the year, which amounted to 15 on the whole capital of a million, was going as far as was prudent able, in the first year of an institution which was looking forward to the future. If they paid very large dividends at first, and the shareholders got accustomed to excessive dividends, and the shares regulated in the market accordingly, disappointment might be felt and experienced at every meeting at which they did not declare 20 or 25 per cent. and there was considerable risk that, in order to make such large dividends in order to satisfy the shareholders, the directors might be led to hazardous speculations rather than meet a disappointed body of shareholders accustomed to high dividends. So long as they did not do bad business or run any great risks, but confined themselves to a moderate course, making good interest for their money, transacting every business and sound financial business wherever it offered without running excessive risks, he was convinced that they would do well. But they concealed from themselves that in every institution of this character there was a great temptation to boards of directors to take hazardous business for the sake of a large profit, and though they might once or twice obtain an excessive profit, yet in the long run he believed they would be safe to be caught, and in all probability then have to disgorge a portion of the profits which they had previously made. (Hear, hear.) He was therefore strongly of opinion, and the other directors concurred, that the wise and prudent policy was to go on year by year paying only what was within what had been earned, keeping up a large reserve and only launching out into a larger dividend when they saw that their affairs would really admit of it in prudence. Before he moved in resolution he would refer to one or two large operations in which the company had been engaged, because they had, he might almost say, a great interest. They had just brought out one very large affair, the State Loan, which had been entirely taken up. (Cheers.) The nominal capital, which was £8,000,000 nominal capital, had been uncovered by public subscriptions, consequently it had all been covered by *bond fide* subscribers, and the contractors were not left saddled with a portion of it. (Hear, hear.) They realised a very fair profit and no loss upon the business, and were not left with any material risk or liability. (Cheers.) They had also been instrumental in offering to the public here an investment which looking at the rate of interest on the one hand, and at the nature of the security on the other—a fair investment in a foreign loan; and although in a matter of business they were in pounds, shillings and pence, and did not let other considerations enter into their minds, still it was a source of satisfaction to feel that what was called a good business on sound commercial principles, was also been instrumental in naturalising Italian securities in the English market and drawing closer together the ties that connected this country with Italy as a free constitutional kingdom, likely to stand in the relation of a political ally with this country. (Hear, hear.) There was another operation in which the name of this company had been previously brought before the public in connection with the Spanish Government. That negotiation did not lead to any result, because the provision which had been signed was not ratified by the Spanish Cortes. At the same time he thought the public opinion was that while the company was perfectly right, on the other hand, to refuse to advance money unless they saw their way to a satisfactory settlement with the

other hand, justified in entering into a negotiation which would lead to the formation of a practical scheme for the adjustment of a complicated and difficult question, it would have the effect of raising the value of the shares, and that in re-opening the Exchanges, both of Paris and London, the Spanish government, they were engaging in an operation which would be beneficial to all parties. Although that negotiation had not been carried into effect, he was still of opinion that a similar basis would be most beneficial to all parties. At the same time he was bound to say that no imputation could be put upon the Spanish government on account of its having not ratified the treaty, as the treaty was expressly understood to be a proposal for ratification. That it was not ratified he thought was due to the state of excitement and confusion with regard to the question, and Senor Salamanca, the Spanish Minister, had acted with perfect honour and good faith, and never misled the shareholders. He thought they had made a very good arrangement which would be subject to ratification, and that it was not ratified was due to the conclusion, he might say that the question had admitted of a settlement, and that this very negotiation had been the means of settling it. He therefore hoped that before many months had passed through this or some other quarter, the Spanish government would open its eyes to its true interests, and that a fair settlement might be come to. (Cheers.) He merely adverted to the fact that the Italian loan were the two large operations in which the General Credit Company had been brought prominently into notice, and the mere fact that they had been engaged in such operations showed that they must have made considerable progress. They first started with their way to make in the world, and of a completely novel and experimental character, and many old-fashioned bankers and capitalists shrugged their shoulders and doubted whether they would not come to grief in the end. (Cheers.) He concluded by moving the resolution, and the declaration of a dividend of 10s. a share, for the 20th of February, making, with the *ad interim* dividend, 15 per cent.

He then asked whether any business was being transacted by the company with regard to Turkey.

He said that negotiations were going on with respect to the state of the accounts, the allotment of the shares, and that the General Credit, the transactions entered into by the General Credit and the Société Générale of Paris, the half-yearly meetings, the Anglo-Egyptian Loan, the dividends, and other matters.

He then asked by the shareholders with respect to the state of the accounts, the allotment of the shares, and that the General Credit, the transactions entered into by the General Credit and the Société Générale of Paris, the half-yearly meetings, the Anglo-Egyptian Loan, the dividends, and other matters. He then called the attention of the board to the way in which the company was getting up, which he complained of as vague, indefinite, and without any actual results of the company's operations. As it appeared that the rebate, the premium of £1 per share

and the interest of 5s., the net profits would be £123,365, which would be the bona fide earnings of the company. They had divided Now, if they referred to the 18th article of association, it was that no division should be made except out of earnings, and he conceived that the £1 premium and 5s. interest could be treated as earnings. He wished to know whether the directors had taken their salaries out of those premiums, after deducting the 5 per cent., which was first deducted. In his view such premium could not be treated as earnings.

Another Shareholder said that if any profit had been realised out of the French Société Générale shares, he thought that would be on the same condition as the premium referred to. He wished some explanation to be given in respect to the French shares. Various other questions were asked amidst the impatience of the meeting, but inasmuch as they were answered in detail in the speech reported below, it is unnecessary to repeat them here.

The Chairman, in reply, said that he would proceed to answer the various questions which had been put to him. With reference to the appeal of one hon. proprietor not to disclose too much in detail of the investments, he could assure him that he need not be anxious to do so, for as long as he had the honour of being in that chair, he would never do anything inconsistent either with the interests of the shareholders or the fair interests of other parties. It so happened that on one occasion there was nothing at all in their table of investments, and on this occasion his word, which could not be explained before the whole meeting, was affecting any interest or doing any harm, but which on the contrary would redound to the credit of the company. At the same time it might perfectly well be otherwise, and it might happen that another year they might have investments which, though perfectly sound and justifiable, might place them in a critical position, and he for one would not establish a principle of detailing their investments under circumstances which might be prejudicial to the company and grossly unfair to other persons. There was, however, on this occasion one exception, because it related to a business which was nearly wound up, and with which they had been previously associated. He alluded to the Société Générale. It was perfectly true to ask the nature of the company's connection with that company, and whether there were any liabilities or engagements of that company, in which this one was concerned. The connection between the two companies consisted of a treaty by which in all large affairs they reciprocally offered to one another a certain proportion of business, which it was free for each to accept or reject. Of course it was equally free to this company to refuse any business offered by the Société Générale, which, from being a French company, or from any other cause, was a description of business in which they did not see their way to a profit. It was perfectly true that the company originally held 20,000 of the French shares; and when they met in the meeting some time last year, those shares were at a premium of £120,000. It was perfectly true that he stated that so far as the company then saw, taking into account the issue of new shares, and the value of the shares, the profit of the year would come out between £400,000 and £450,000, and he thought that that statement had been very correct. The profit, as it stood on the balance-sheet, was £190,000. On round numbers £200,000, to which must be added the reserve

a profit shown on the balance-sheet generated which brought the whole 100,000. The market price of the premium, therefore there was a profit, however, were not under the condition under which their being locked up in what was not under this company's control, might say at once, as it was no longer. They could not dispose of premium, and when the time came a large number of shares were thrown price went down as low as £2. 10s. if the whole of that profit might intrinsic goodness of the concession business was such that the French prices, bought up the shares, and that this company had been able to considerable profit, and the remainder (leaving them.) They had them valued on—much lower than they stood at profits for the past year did not have done. Since then they had than they had been valued at, and above the figure at which they were consequence of which was that a from them in the current year. respect to the propriety of limitation which they must deal with it be distinctly understood that no commission under the articles of amount placed to the reserve fund—so that when they recommended did so in effect at their own expense entitled to their 10 per cent. upon interest, it was considered highly was made, that instead of having at Exchange with different values, same position as the old, and thereas paid up from the 1st of January, and upon them. Such a proceeding proprietors of the new shares, the bought a new share at £1. 5s. per share which was now worth £3; portions of shares, one of which did year, they would not have been in as therefore legitimate interest actually was astonished by the ingenious considered that because they were able a capital of £375,000, they were 17½ upon a capital of £750,000. ingenious, but if they tested it by the evidence, they would soon see what it

was worth. Public opinion on this question was the best test. the time alluded to, the total amount of premium which the public considered the shares of this company were worth, was, at 3 prem. 125,000 shares, £375, but now the value of the premium set by the public on its shares, was £750,000, so he was quite at a loss to see how they could be in a worse position now than then. He expressed himself opposed to half-yearly meetings in a company of this description, because it was like a bank where the transactions consisted simply of discounting, where the accounts could be made up with perfect ease and accuracy every half-year. In their case they were constantly involved in large and complicated operations—such as foreign concession loans, and so on—which took a long time to mature, and the results of which could be only anticipated. In the case of the *Société Générale*, for example, in what way could it have been brought before them at a half-yearly meeting? Either the shareholders would have to be very reserved in their communications, or they would as was more probable, indulge in anticipations that might not be realized, and thus act upon a puffing system, to which he was entirely opposed. In the course it was in the power of the shareholders to alter the articles of association by holding two special meetings, and to hold half-yearly meetings in opposition to the views of the board, and then of course the board would have to consider its own position in relation to the proprietors. It was his decided opinion, and that of the board, that the present system was better for the permanent interest of the company. The only objection point was the Venezuelan loan. That loan was started by the General Credit Company on commission at a fair risk. The public must understand that when loans were offered at a low price, and at 10 or 11 per cent. interest, they could not expect to invest their money in such security with the same amount of certainty as if they were investing them in Three per cent. Consols. The question was whether the high rate of interest compensated for the risk, and the only duty of the General Credit Company in this case had been to see that the statements put forth in the prospectus were *bonâ fide*. They found them to be so, and hitherto the Venezuelan government had acted upon them; therefore, so far as the General Credit was concerned, there had been no misleading of the public. What they did was to send an agent out to Venezuela, who ascertained that every statement was fully certified before it was accepted. The Venezuelan government had acted with perfect good faith in regard to the contract entered into, and had remitted, and were in course of remitting the customs' duties to meet the loan. That being the case, the General Credit Company was free from responsibility in the matter, and the public who invested their money at 10 or 11 per cent. with their eyes open. The company had in respect to this loan done the business of a commission agent, and of course it was not for them to guarantee the holders of the loan from wars and revolutions in South America. All that he could say was that the Venezuelan government had hitherto carried out the arrangements made for meeting the loan in perfect good faith.

A Proprietor reminded the chairman that he had inquired whether in the event of this company bringing out others, the shares could not be allotted *pro ratâ* among the proprietors.

The Chairman said that he was glad that the hon. proprietor had reminded him of that question. The General Credit Company had not for some time past brought out any companies. When they did bring out any the board would be happy to enter into an arrangement with any number of the shareholders that they should subscribe the whole of

or bind themselves to accept the shares allotted better or worse. As long as that was not the case, the business must know that, if the shareholders speculate upon getting, a certain number of shares turned into the market when they were at a premium, that the possibility of bringing out any company, besides Messrs. Mangles, would take the responsibility of issuing when a large number were in the hands of parties who had been brought in to swamp the market. It was tried in the case of Mr. Bay shares, with what result they knew, and the Eastern Banking Company were not going to repeat the

question, that the company did not itself hold any of the

put and carried unanimously, and the auditors, Messrs. Mangles & Co., having been re-elected, on the motion of Mr. Mark Phillips, a cordial vote of thanks to the directors concluded the proceedings.

EASTERN BANKING COMPANY.

A general meeting of proprietors was held on the 6th of January at the Tavern; Mr. A. Laurie in the chair.

The balance-sheet were read by the Secretary as

follows:—The directors presented to the shareholders a statement of accounts to the 31st December 1886, showing the business of Messrs. Mangles & Co., established in 1836, and carried on at Guildford as a nucleus, and shortly afterwards the business of Messrs. Burgess and Canham, the Ramsgate branch, which has proved highly satisfactory. Since the establishment of these agencies have since been opened, making where the bank is now carrying on business. By the statement it will be seen that the gross profit up to the 31st December 1886 was £4,117. 13s. 8d. After deducting interest paid to the holders of current accounts, current expenses, rebate on deposits, and providing for a loss of £216. 5s. 1d. in the year, there remains a net profit of £4,845. 6s. 3d. The directors proposed the payment of a dividend at the rate of £6 per cent. (after income tax) on the paid-up capital, which will be £367. 15s. be written off the preliminary expenses of the purchase of the old banks, being at the rate of 10 per cent.—and that the sum of £500 be appropriated to the reserve fund, which will leave £476. 19s. 11d., together with rebate on deposits, £1,030. 8s. 11d., making the sum of £1,507. 8s. 11d. carried forward to new profit and loss account. The directors of the articles of association all retire, and themselves for re-election. The auditors, Charles Robert Smith, Esq., vacate their offices, and being

eligible, offer themselves for re-election. The dividend will be on and after the 7th inst.

"Balance Sheet.—Dr.: To capital, viz., 10,000 shares of £25 each which £10 per share have been called up, £100,000; less out calls, £4,635; amount due to customers on current and deposit account, £279,367. 14s. 5d.; gross profit up to Dec. 31, 1864, carried to profit and loss account, £14,117. 13s. 8d.; total, £388,850. 8s. 1d.—Cr.: By branches, City Bank, and call, £66,382. 0s. 9d.; bills discounted and other securities, £274,384. 14s. 6d.; sundry stamps, £432. preliminary expenses, £7,354. 17s. 10d.; purchase of old banks, £22,258. 3s. 4d.; leaseholds of bank premises, fittings, safes, furniture at head office and branches, £7,461. 12s. 2d.; cost of establishing branches and three agencies, including solicitor's charges, travelling expenses, &c., £2,334. 13s. 9d.; interest on current and deposit account, £2,491. 16s. 2d.; salaries and other expenses at head office and branches, £5,750. 2s. 4d.; total, £388,850. 8s. 1d.

"Profit and Loss Account.—To interest on current and deposit account, £2,491. 16s. 2d.; current expenses, including rent, rates, salaries, stamps, &c., £5,075. 10s. 7d.; loss of notes and drafts in transit through branches, £216. 5s. 1d.; directors' remuneration for 1864, £458. 6s. 8d.; rent of bills discounted, £1,030. 8s. 11d. Net profit:—Amount written off preliminary expenses, at the rate of 10 per cent. per annum, £360. amount written off purchase of old banks, at the rate of 10 per cent. per annum, £1,112. 18s.; dividend at 6 per cent., £2,387. 13s. 4d.; carried to reserve fund, £500; amount carried forward to profit and loss account, £476. 19s. 11d.; total, £14,117. 13s. 8d.; by gross profit the half-year, brought down, £14,117. 13s. 8d.; total £14,117. 13s. 8d.

The Chairman said that the report gave all the information necessary, but he should be happy to answer any question that might be put. There was one remark he wished to make in reference to the £500 placed in the reserve fund. That sum might appear small, but there was a clause in the articles of association which stated that the directors should, before recommending a dividend, place a sum to the reserve; and to comply with all legal requirements they had placed £500 to that fund, which they hoped soon to increase to a much larger amount. In conclusion, he moved that the report be adopted.

Mr. Bradshaw seconded the motion.

A Shareholder inquired whether the £216. 5s. 1d. lost in transit through the post had been forwarded in notes or cheques, and whether the same had been registered.

The Chairman—It was contained in two parcels forwarded to the same branch. It consisted of notes and cheques. The notes had been cashed, and the cheques which have not been presented have been cashed. The parcels were not registered, and in this the manager disobeyed the regulations of the bank, for which he has been reprimanded.

In answer to other questions,

The Chairman stated that the manager of the branch in question was a very zealous servant, and as it might damp his energies to mention his name, he hoped he should not be pressed to do so. (Hear.) There had been no bad debts to provide for.

Mr. Sharp complained that a sufficient sum was not set apart for meeting the preliminary expenses and the purchase money for old banks, and moved that the dividend be at the rate of 5 inst.

the balance be credited to the purposes he had at the difference would be only £400, and he did not think the directors would wish to have their dividend reduced in order to put the fund for repaying the preliminary expenses of the old banks.

being seconded fell to the ground, and the report, which was put and carried unanimously.

Addressing the directors, who, under the deed of association, elicited an objection from Mr. G. Taylor, whom he highly eulogised for his business qualifications of many other joint-stock companies, and urged some of his other occupations, in order that he should not attend to his duties at the South Eastern board. He had been suffered by some other banks had all been not looking sufficiently after their manager.

that there was no director more regular in his attendance than Captain Mangles, whose services were of the greatest concern. (Hear, hear.)

He stated that many of the boards of which he was a member were only nominal duties. He had retired from the directors in order that he might devote more of his time to his private business. (Hear, hear.)

Several directors were then put seriatim, and their remuneration was re-elected, and twenty guineas each awarded

to the chairman and directors, and a similar compliment to the manager, having been accorded and acknowledged. His reply took occasion to observe upon the rapid increase of business at the several branches, adding that from the commencement he never re-discounted a single bill.

Several special resolutions were proposed and carried in the articles empowering the directors to sell the company (the alteration being necessary in order to comply with the requirements of the Stock Exchange), changing the name to the Counties Joint-Stock Bank Association, and increasing the capital of the company, by the issue of new shares to any amount not exceeding £1,000,000.

The chairman, holder, stated that the new shares would in all probability be taken up, which would go to the augmentation of the reserve fund.

The chairman concluded the proceedings.

AL BANKING CORPORATION, LIMITED.

At a general meeting of the shareholders of this corporation held on the 12th of February, at the London Tavern; G. F. Holroyd,

was read, stated that the directors recommend the dividend at the rate of 5 per cent. per annum, which will leave a disposable balance of £776. 0s. 8d.

The Chairman, in moving the adoption of the report, said, as a very long time had elapsed since they met them there, it would not be necessary for him to address them at any great length. The most important action of the board since they had last the pleasure of meeting them had been the amalgamation with the Bank of Wales. (Hear, hear.) The board had given that matter the most careful consideration. They went fully into the business and prosperity of that bank; they took especial care to inform themselves of the prospects of the business that they would be likely to obtain in that way. They found that these were very good, and at the same time they found the bank itself was not able to develop the business on the want of sufficient capital. On the other hand, this corporation had a very large amount of money in their hands, arising from the deposits and current accounts of customers, which they could not employ profitably in their business was not of such a nature as to require the employment of that large amount. The shareholders would see by the accounts that there was an excess of amount due to customers on deposit, current, and other accounts, over that due from customers and others on current bills of exchange. The surplus was something like £170,000. That sum, therefore, they might have been lying idle, because, inasmuch as the board had no use for it in the carrying on of their own legitimate business, they had to place it on deposit with the bankers at the ordinary price. They received from it no more than the interest the public received for their deposits, therefore no more than they were obtaining from their own customers. Looking at all these considerations, the Chairman felt there was a good opportunity, through the means of the Bank of Wales, for obtaining the means of disposing of their surplus capital, and doing so in a way of it profitably, in the way of the business of this corporation, and this led the board to amalgamation with the Bank of Wales. The amalgamation had been carried out entirely on equal terms. The shares of the Bank of Wales had been £100 shares, on which £20 had been paid up. The shares of the Provincial Banking Corporation were £50 shares, on which £5 had been paid, so that the shareholders of the Bank of Wales would receive two £50 shares for £100. Upon those shares they would be credited with £10 as paid up, so that if in the course of time any new shares were issued by the corporation, when a further £5 was called for, the shares of both classes would merge into one. He thought from what he had stated it would be seen, and the directors hoped and believed that the course they had taken in adopting this amalgamation would be to the benefit of the corporation, and would meet with their approval. As regarded the progress of the bank, if they compared the present balance-sheet with that which was submitted at the last meeting, in November, they would see there was a steady increase of the prosperity of the corporation both in the amount of deposits and also in the amount of the bills discounted, and so forth. That, he thought, would show that the business of the branches, as carried out before the amalgamation with the Bank of Wales, was gradually and steadily improving. At their last meeting the directors had opened two new branches, one at Kingsland and the other at the Edgware Road. They were induced to open those branches by a requisition signed by a large number of influential and respectable men of business in those several localities, and he had every reason to believe these branches would be likely to prove successful. In looking at the net profit, it would not do without an amalgamation to take it in any way as a criterion of what it would be in the future, although they actually commenced in July, they had at that time

The East of England Bank was not taken over and the business could not be said to have commenced August, so that their working did not extend over a year. On the other hand, from the reasons he stated, from the money on hand, practically unemployed, the profits were small if they had had a field sufficiently large to employ it. At that place, the expenses were large: they had taken over the Kingsland Bank; it was necessary to take over their liabilities. They were giving their best exertions to the reduction of the expenses. They had succeeded in reducing them, and they hoped that from what he said, they would see the corporation had a good prospect of becoming a sound and successful one. (Hear, hear.) It only remained for him, therefore, before the meeting of the report, that he should state, that as this was the wish of the proprietors, it was their (the directors') duty to trust they had hitherto reposed in them, and to ask for a renewal of their confidence. He could only say that he would extend that confidence to them for the future, he himself and his colleagues promise that they would devote their attention to the shareholders' interests, and they would endeavour to be at all times informed of the real state of the bank, so that if any loss should occur, which he did not think likely, they would be able to keep it secret from them. He begged to move the adoption

of the motion.

He stated what amount had been expended in opening the Kingsland branch. He did not think that the class of people living in the neighbourhood was a likely class to benefit a corporation of this kind.

He complained of the meagre appearance of the office.

He stated out that the current expenses of branches were not small, and of establishing the bank, and remarked that but for the fact of opening up the account they might not have heard of the amalgamation, he believed that the Bank of Wales was the best of the bargain.

In reply to various questions, stated that it had been the intention not to incur, in establishing the Kingsland branch, any expense absolutely necessary, and, therefore, they had only taken a room for six months at a small rent. (Hear, hear.) That they had incurred as yet in respect of that branch, and there was no doubt in favour of a branch being opened there, that if they had taken the matter up some other would have been the interest paid to customers was large as compared with the great amount of capital unemployed. The cost that had been spent, or would have to be paid, for the establishment of the branch was not small.

The current expenses of the two new branches, Kingsland and the other, were not small, but it was considered that it would be worth the profits of the bank to make up the account in the end. At the commencement little or no business could be expected. The sum was very small, and could not in any way be taken out of the dividend. Upon the question of a call, he

stated that at the last meeting the directors had not had an opportunity testing the business which they had taken over in the East of England Bank, but they had since found that they had a large sum unemployed and therefore they did not think it advisable at present to make a call. Of course they must be guided in making calls by the requirements of the bank, and by whether the money could be usefully and profitably employed. (Hear, hear.) No doubt as the business developed a call would be necessary. The working capital of the united banks amounted at present from £85,000 to £90,000, and the large amount of the deposits showed the confidence of the public in the concern. There was no truth whatever in the statement that an amalgamation was contemplated with the South Eastern Bank.

A Shareholder having expressed an opinion that their paid-up capital was exceedingly small for a bank with twenty-nine branches, and that it would have been better had the directors adhered to their original intention of making a call.

Mr. Michell observed that the very essence of successful banking was to trade with as little money as they could, because it was obvious that the smaller the capital the dividend had to be paid upon, the larger would the dividend be. And with regard to the security of the public, they rested not so much upon the paid-up capital as upon the capital uncalled. (Hear, hear.) This company had £1,300,000 of uncalled capital, and was upon that that they claimed public confidence, and that they would be able successfully to carry on the operations of the corporation.

The motion was then agreed to; the dividend at the rate of 5 per cent. per annum was declared; and the directors were re-elected, £500 being voted as remuneration for their past services.

Mr. Galsworthy drew attention to a clause in the articles of association by which a person described as the promoter of the company was to receive not only £5,000, but 5 per cent. upon future issue of shares; and urged the directors to exercise their ingenuity to get rid, if possible, of the objectionable clause altogether.

The Chairman said the directors were no parties to the articles, as they were registered before the board was formed, but they were anxious to get rid of the clause referred to, and would do their best to accomplish the object.

The auditors, Messrs. Cooper and Smallfield, were reappointed, and a vote of thanks accorded to them for their audit of the half-yearly accounts.

Complimentary votes were also passed to the directors, and to the managers and other officers of the corporation, and the meeting then separated.

ENGLISH AND FOREIGN CREDIT COMPANY, LIMITED.

The first general meeting of this company was held on the 6th February at the London Tavern, Mr. George Sheward in the chair.

The following report and statement of accounts were read:—

“The directors of the English and Foreign Credit Company, Limited, have much pleasure in meeting the shareholders and in laying before them the result of the Company's operations from the commencement of business until 31st December, 1864, a period of a few days over six months. After allowance being made for the preliminary expenses, and also

all current liabilities, and for rebate (£556. 17s. 10d.)
ons, there remains a balance of £5,836. 0s. 7d., which
e to employ in the payment of a dividend of 5s. per
sorb £3,553. 5s., and to carry the balance, £2,282. 15s.
year 1865, showing, with rebate, £2,839. 13s. 6d. at the
nts. Although by the articles of association one-third
s should retire, yet as this is the first opportunity of
tuents, they place the whole of their seats at the dis-
holders, but offer themselves for re-election. The
r and W. H. Notman, Esqrs., likewise present them-

The Chairman said he had little to add to the report, but that the progress they had made was very satisfactory. When they made the report they had entered into engagements a little beyond their strength, but there were three courses open—amalgamation, which was disadvantageous to any company when under difficulties, as it frequently involved a sacrifice of interest, and even of part of their capital; the next expedient was the renewal of the securities, and the directors thought it better to put money in the pockets of the shareholders than any one else's; and the last course was liquidation, and that could not be done without the consent of the shareholders. The directors, therefore, consulted some of the largest shareholders, and agreed with the directors that the most advisable course would be to call a dividend, and so divide the profits amongst the shareholders. Some shareholders were no doubt dissatisfied with the market price of the shares. They must recollect that to the men who bought these shares as an investment the market price was a matter of no importance; he rather looked to the dividends. As to amalgamation, they would be willing to amalgamate if it was with such a company as clearly to improve their position, but this company was not being hawked on the market for that purpose. He moved that the report be adopted.

The motion was seconded.

Mr. Hart said the thanks of the meeting were pre-eminently due to the directors for the manner in which they had conducted the affairs of the company, and he had the fullest confidence that they would have a successful future.

After some conversation the report was adopted.

The following gentlemen were elected directors for the ensuing year: Messrs. G. Sheward, Joseph Bray, James Hendrey, Charles E. M. Forrester, R. B. Oakeley, Harrison, J. Stenhouse, and C. B. Town.

The auditors were re-elected, and awarded £25 each for their services, and the meeting terminated with a vote of thanks to the chairman and board of directors.

LONDON MERCANTILE DISCOUNT COMPANY.

The first ordinary general meeting of this company took place on the 1st of February, at the London Tavern, Bishopsgate Street; Mr. George M. Mingham in the chair.

The report (which comprehended only ten months' working, the company having commenced business on the 1st of March) stated that the shareholders would observe that "overdue bills" were taken as a source of item from "bills discounted," and after a most careful examination of the former, made by a committee of the directors, assisted by the managers, the directors, they had been estimated at an amount under, rather than over, the sum which they might reasonably be expected to realise. During the first six months of the company's operations a profit was made which was encouraging to the directors; but the monetary embarrassments of the last half-year, and the numerous commercial failures which had

affected the London Mercantile Discount Company, in many other establishments of a similar character. The directors, acting with a prudence which the board could not but commend their operations during the late commercial crisis; and adoption of this course necessarily lessened the amount of loss which might otherwise have been done, the directors feel confident that such exercise of caution the losses might have been avoided. The directors regretted having in their first year to account for losses, but bearing in mind the very exceptional circumstances of the past half-year, the commercial crisis which had been gone through, and frequent fluctuations of the value of money, they thought it prudent to ratulate the shareholders that the loss was not more, and to give allowance for bad and doubtful debts the balance carried down to the next year's account was only £2,978. 17s. 5d. The directors have full confidence in the future working of the company: there is profitable business doing; and from the valuable counsel given by the company, this was capable of being greatly increased by employment of additional capital; they therefore fully expected that they next met their shareholders to present a much more improved statement.

The directors, in moving that the report be adopted, observed that the shareholders much pleased to meet the shareholders on this occasion, and to hear them regarding the position and prospects of the company. He said that they had sacrificed their capital, and that that result was due at by reason of their having embarked in undertakings of an abnormal character. He was anxious to take the present opportunity of contradicting that statement, and to assure those who felt concerned on the subject that the loss they had sustained arose entirely from the panic and trepidation which seized the public mind last year in the money market. So great was the feeling of doubt and suspicion in the metropolis that it was not to be wondered at that a firm like this should have suffered from the causes which affected other and older ones. They had, however, benefited much by the prudence of their managing directors, Messrs. Wormsley and Burdett, and the business they had purchased on advantageous terms, the high credit of that firm being well known in the city of London. The directors now given the shareholders a fair and intelligible balance-sheet, and a neat exposition of their affairs; and that was all that they could expect in a document of this nature. The managing directors said that they had not a more prosperous balance-sheet to present, and that they were fully aware of the interests which operated against the company in regard to the loss they had sustained, he submitted that that was all. Supposing, however, it had been much larger, they would not have been alarmed or intimidated, because they knew the stability in the company which would secure them against the effects of ill luck. The directors not only had made the arrangements to be made with Messrs. Wormsley and Burdett, but they had the business of the British Reversionary Company, which, under the present circumstances, would have cost the shareholders a great deal of money to procure; and a great portion of their capital had been expended. In the future they would all have their fair share of prosperity which it was hoped that good times might bring; and they earnestly hoped that when they next assembled they should

be able to meet their co-shareholders with more smiling faces and encouraging cheer than at the present moment.

A long discussion ensued, in the course of which certain of the holders took exception to the policy pursued by the directors in the chase of the business of Messrs. Wormsley and Burt, and of the British Reversionary Company, the amount described in the balance as having been paid for those businesses being £26,000.

The Chairman explained that the directors had acted under circumstances which they felt would be for the ultimate advantage of the company as regarded Messrs. Wormsley and Burt, the arrangement with them was made upon the understanding that in the event of the transaction realising the expectations of all parties a portion of the purchase should be returned, and Messrs. Wormsley and Burt had accordingly funded upwards of £11,000; so that the company was, in fact, placed in a comparatively easy position.

An amendment was then moved by Mr. Addison, and seconded by Mr. Zuccani, to the effect that the report be not received, and that a committee be appointed to inquire into the affairs of the company.

Upon this a further discussion took place: and it was contended, on the other things, that the board of directors required stronger assistance from gentlemen connected with the mercantile interests than they at present enjoyed. The directors having expressed their perfect willingness to step down from their position if requested to do so, or to strengthen their position in any manner that might appear most expedient, the amendment was ultimately withdrawn, and the report was received and adopted. The directors and auditors were then re-elected.

A vote of thanks was passed to Messrs. Wormsley and Burt for having attracted attention to the interests of the company, and to the chairman for the satisfactory manner in which he had discharged the duties of the day.

A question was raised as to whether the directors should be remunerated for their services, but it was agreed that this point should be deferred to the next meeting.

The meeting was then made special, for the purpose of making such practical alterations in the articles of association, including the passing of a resolution that it is advisable that each share of £50 with £5 thereon, shall be divided into two shares of £25 each, with £5 paid up on each share, and that the board be requested to take the requisite steps for the purpose, under article 9 of the articles of association. Resolutions to carry out these objects in view were agreed to, and the business terminated.

MERCANTILE AND EXCHANGE BANK.

THE second annual meeting of the shareholders of this bank was held on the 8th February, at the new offices, Castle-street, Liverpool; Mr. Forwood in the chair. Among the other gentlemen present were Mr. R. W. Ronald, Francis Boulton, Arnold Baruchson, Joseph Kitchen, P. Bowring, Wm. Lucas Merry, John T. Lawrence, and Charles Sainsbury, directors; Geo. M. Brown, general manager; William Brown, manager, Glasgow; George Haigh, solicitor to the company; and H. Banner, secretary to the company; and amongst other shareholders the following:—Lionel K. Ronald, John Bigham, A. P. MacEwen, R. S. Deane, J. S. Wm. McGill, Thomas Carey, J. Smethurst, J. W. S. May, John G.

. H. Syers, R. Nicholson, James Marshall, T. H. Bowen, J. A. Hall, A. C. Brown, Henry Thompson, William Kendall, Thos. Poole, R. H. Coddington, T. S. Todd, G. E. Taunton, Geo. Chamberlain, Geo. M'Corquodale, J. A. Joseph, J. H. Yates, W. T. Roper, R. Hemingway, J. Smythe, John Curtis, Wm. Hill, G. R. Black, Edward An, Andrew Pixton, C. F. Sise, Edward Young, John White, Dr. Edwards, Wm. Elam, H. F. Fenton, Thomas Appole, Ronald Bridgett, Thomas Callan, Thos. Holgate, Satterfield, John Palk Fox, Wm. Wardle, Hy. Dobson, Holmes, G. H. Wilkinson, Hy. Peploe Forwood, Robert aner, A. R. Strickland, T. Binks, T. Binks, jun., J. Oates, John King, P. H. Holzberg, W. L. Bankes, H. Hyatt, John erton, J. M. Wilson, Edward Burton, Henry Lovatt, and

said that before proceeding to the most important business he would just mention to them that the directors had the press to that meeting. They were aware that some of a similar kind, considering that their annual meetings of the shareholders who were partners in a common did not think it necessary to have reporters present, transactions were between the shareholders who were summoned to the meetings and the customers of the bank who had. The directors of that company, however, had never determined to have the press present. He thought it a wise measure, because they knew that on the wings of the word the report of that meeting would be carried to the most distant parts of the country, and might be read in every commercial kingdom: and he must say of the press generally in London might be an exception—that they were at all times ready to encourage every local enterprise, and to promote the best particular institutions of which that company formed

of the Chairman, Mr. Brown read the notice convening the proceedings of the previous general meeting of the bank, which had been confirmed, and the seal of the company affixed by the proprietors, the following report of the directors was read, and the accounts being taken as read:—

The directors beg to annex a balance-sheet of the bank's operations for the year ending 31st December, 1864. The period over which this has been marked by an intense monetary pressure, and the value of the great staple articles of import, so rapid an increase on occasion numerous mercantile failures here, in London, and several of the customers, suffering heavily from these, upon the bank considerable loss, which was increased by the transactions of the late London manager, and further aggravated at a period when financial pressure was most intense, and sudden and unexpected difficulties in the way of the bank's business of a very harassing and trying character. Happily these difficulties were surmounted, and that without resorting to the proprietors during the crisis. The gross earnings of the bank for the year ending 31st December, 1864, were £35,108. 15s. 9d., showing a satisfactory increase. On the directors regret that, from the causes already referred

And on new shares	2,760 0 0

£68,595 11 5

He then said it was his business to move that the report just with the statement of accounts, be confirmed and adopted. So he thought he need scarcely assure the shareholders was a painful duty which the directors had in hand to him any report which did not show a profitable working of the period it embraced, but rather the reverse. It was more unsatisfactory to the shareholders than it was to the directors. The wish and desire and anxiety of the directors for the shareholders and for themselves a profit which was successful in doing for the last half-year, and it was to great regret. In starting a new bank the directors, in other parties, had had something to learn, and they had to. The trade had not been so satisfactory as could have the report embraced the transactions of the bank from the and they would be aware that their next balance-sheet annual meeting, and would close up to the 31st December. thought that it was correct that they should consider the bank in reference to the whole of the work of the past year—working of the half-year embraced in that report, then at the end of 1864. Looking at it in that point of view, they that on the 19th August they met them with a statement of the half-year ending 30th June was £16,772. He told calculating on the profits which that bank had earned, bank of Scotland had to pay them a bonus for a certain of £40,000. Another contingency arose from the amalgamation gave them another £10,000 on their premiums, so that the to £50,000. That bonus was distributed among the the 20th of August, when the shareholders had divided the profits of that half-year, the £16,672 and the £50,000 the Scotland bank. At that time the directors were also off the whole of the preliminary expenses left in the ending to £3,745, so that in fact the amount of £70,000 had the bank. They then came to the position of affairs for year, and they found that the gross earnings of the bank up to number were £35,108. 15s. 9d. If they deducted the expenses, to £12,960, and the rebate on bills not due, at 6 per cent.,

£3,604, they would see that the annual working of the bank for the half year, after deducting all the debts, was £18,544. The net earning amounted to £85,216. They had to set against that for the present half year an amount of bad debts, according to the balance-sheet, amounting to £88,000. So that the bad debts written off rather exceeded the amount of profit. Proceeding through the report just read, he had to make a few observations on it as well as on the balance-sheet. The directors stated that the period over which the report extended had been marked by an intense monetary pressure. Every one knew that that pressure had been a very severe one. It had been more than usually severe. The average rate of the Bank of England for the last year was equal to $7\frac{1}{2}$ per cent. and for the half-year over which their trading had not been quite so prosperous as they could have wished, the average rate had been very nearly within a fraction of 8 per cent. When they started that bank in 1863 the average rate for that year was only $4\frac{1}{2}$, and during the year of crisis, 1857, which brought down many commercial houses, and caused a great disaster in the country, the average rate of interest was only 7 per cent., so that they had had a higher rate of interest for the last half-year than during that period of most severe pressure. They were aware that it had been stated from that chair that the directors of that bank did not suppose that a high rate of interest was conducive to the progress of local banks. In that respect they differed from the London banks, where they got very large deposits at low rates, and therefore the high rate of interest at which they lent out their money was very good for the purpose of dividends. But high rates of interest in local banks, where enterprise was strong, gradually diminished the means of their customers, for taking 5 per cent. as the normal rate, they would have in addition to that 3 per cent., which would be a very serious reduction from the profits of every man who traded in that country. Then the pressure had been particularly oppressive in those directions where they had opened up their banking operations. It had affected most peculiarly the produce market. To that they had made special reference, and they thought in regard to Liverpool, London, and Glasgow, it would be obvious to every man who had been in trade that the produce markets there had been most seriously affected by the pressure. Take, for instance, one article in which the customers of that bank had had considerable dealings—sugar. On the 15th June the average price of two particular classes of sugar—Manilla and Brazil—was 28s. 6d.; on the 15th October it had fallen from 28s. 6d., as the medium price, down to 18s. 6d., or a loss of 10s. per ton. The stock in Liverpool in October was 15,000 tons, the stock in the country being no less than 226,000 tons. They must be aware how seriously that would have affected all importations of sugar. Then, again, let them take three descriptions of cotton—Bengal, China, and American. On the 15th July it was 22d.; on the 15th October it was only $14\frac{1}{2}$ d., or an average decline of $7\frac{1}{2}$ d. per lb. Egyptian cotton, which was also dealt in by some of their customers, declined in the same period from 29d. to 18d. a lb. The stock in Liverpool at the time was 112,000 bales. Again, let them take the price of grain in October, 1863, and October, 1864. They would find there had been a decline of from 10s. to 11s. They all knew the immense value of the grain trade, and the immense stock that was held to their account, and they could therefore judge how far trading in that article might have been unsatisfactory. Without going further into details, they would all see it had been a very exceptional

parties who traded in Liverpool and the seaports. They much pain and reluctance that the directors had to the unfortunate death, and the cause of it, of their London manager, Williams committed suicide on the 18th of October, and they please to refer to the state of the money market on that occasion. They could see that previous to that time the intense monetary depression had produced a revulsion in all produce, and that though the interest was 5 per cent., it was very difficult for commercial men to keep their money. It did not therefore need any extraneous difficulties to the directors. Unfortunately at that time they had to meet the extra expense of the suicide of their London manager. To tell them of the personal trials of each of the directors to carry the bank through that occasion—to tell them what effect that suicide had on all the credit which with great effort they had opened up on the continent and tell them how that event was made use of by parties inimical to that bank—to tell them how the channels of traffic were closed on the continent, but at home—to tell them how it affected the directors and shareholders, he should have to go through a great deal to elicit for the directors every sympathy at their hands. The removal was a severe one. The removal instantly on the news of that suicide of the valuable business which they were carrying on in London and Glasgow was a matter which he need not say was very rapid. The removal of their deposit account and the difficulties which the directors had to undergo. He had on deposit account just within a month of that time was reduced to 5 per cent., and on the current balance of 50 per cent. It was a great difficulty as those that the directors had to bring that through that resorting to making a call upon them, the directors would not resist their pressure; and the question was, whether they should resist their own. They were happy to say that they had brought the bank through all those difficulties, and they hoped they were entering for that period of prosperity which, with the assistance of the directors, he was sure they would yet attain. (Applause.) There was added another difficulty, about which they would want to say they were perfectly aware that the directors had made arrangements to amalgamate their bank with the London Bank of Scotland. It had been expected that as they had paid their bonus, and not against the reserve fund, the directors would have done so particularly after the last half-yearly meeting, to have made arrangements. But the suicide of their manager was a great difficulty, and the directors of the London Bank of Scotland before completing that arrangement. The result was, a little controversy and some little contesting of their part by the directors of the Mercantile and Exchange Bank. The satisfaction of the London Bank of Scotland, that the manager should himself go over the London accounts of the bank, and also the Liverpool accounts and the Glasgow accounts in the manner he chose, and satisfy himself as to the position of the bank. He showed, at all events, the opinion which the directors held of their trading. He was happy to say that after the audit of the bank if he might so call it, carried out by gentlemen who were interested in the interests of their shareholders that they should not enter into any risk to which any risk might be attached, they had come to a decision to carry out that amalgamation as speedily as possible.

That must be satisfactory to the shareholders. It would also be another of the difficulties that circumstance had thrown in their way. He was happy to say to them that, although he had occasion just now to the removal of deposit and current accounts, the confidence in the bank was happily returning; that the number of their accounts was in fact that in one item alone they had a very large increase from November to June; the amount of one of those items was just double in January than it was in November. They were also continually adding valuable additions to their bank, so that by the energy of the directors and their confidence in the bank they were bringing back that confidence which had been rudely shaken. It might be well for him to say, because they had been asked within the last few days, that with regard to the appointment of Mr. Williams to the post of London manager, he was a perfect stranger before his appointment, both to the directors in Liverpool and in London. They advertised for a manager in London before his appointment, and they had many applications, but Mr. Williams was selected. He had self-made personal inquiries in conjunction with their Liverpool directors about him at other banks where he had served for many years, and they found a good character for him as to his capabilities and his capacity for managing the bank, and it was upon the strength of that that they placed over the bank in London. He might say that the London directors were continually informing them that they believed Mr. Williams was a very efficient man, that he was very zealous in his duties, and that he was prepared, at great personal sacrifice, to meet every requirement. Immediately their London colleagues heard of Mr. Williams's death, they communicated with them by telegram, to the effect that upon an investigation of the accounts and securities, they believed the affairs of the bank were not seriously affected by his death. That their London directors had paid attention to the business of the bank they fully believed. That the communication was made known on the Stock Exchange on the 10th of October, and the London directors believed, until circumstances showed that such would be the position of affairs. Unfortunately it did not turn out that, although he had not actually taken the money of the bank out of the till, yet by a system of adroit bookkeeping, he had disguised several of his losses by means of his entries, which when they came to be sifted and examined, did not represent the facts, and did not, in some cases, represent the particulars mentioned. (Hear.) But there was no possibility of their detecting that at the time. They traced their heaviest loss to that circumstance, and their London directors told them that not one-third of the London losses could be ascribed to the ordinary trading; the rest must be traced to the most improper transactions of the late London manager. However, they were happy to say that they now knew the worst of the matter.

A Shareholder—What's the amount? (Hear.)

The Chairman—The amount to be wiped off for bad debts was a fraction of £50,000, not more than a third of which the London directors said was attributable to the ordinary trading business of the bank, the remainder being attributable to the late London manager. It was a very difficult, no doubt, for the London board to say precisely what had been the sum, but in judging of that they must remember that the London directors had the losses on account, as the directors said, of the difficulties connected with the rate of interest they had to pay arising from the same circumstance. The £18,000 profits would probably have been largely swallowed up by their trading—

A Shareholder—Was there no security with the manager?

—We had securities, for which, of course, the sureties are a certain security which was considered by the directors sufficient for the manager to give. We have that to come

—Have those securities been realised as against this the London loss was £50,000, do you hold any security-amount, or have they been realised; or is it an absolute

—It is an absolute loss, written off in the account of debts.

—That is, included in the £88,000 of bad debts.

—Yes. He did not know that he need trouble them with variations on the report, nor had he very much to say in balance-sheet, but he thought it was due to the shareholders explanation should be made by him. For instance, it that he should explain the large item of £12,960. 11s. 7d. in reference to that item he had first of all to state that it of management, and all expenses of that description, rent, and charges connected with the London branch and such, as well as the head offices and some small expenses their foreign agencies. So that these were the expenses banks. He need not go through the whole of the items are, but he might say that it embraced an increase in the which for the last half-year amounted to £448. That sum thought was very moderate, although it largely swelled the previous half-year. The law costs for the previous £100. Then there was an item of £270 for travelling another of £219 for the auditing, which had been most The largest increase in that item of £12,000 arose from ss. In the previous half-year the amount debited to rent the present half-year the amount of rent and taxes was ss upon the three branches. It arose from this circumstance debited the bank with an amount of rent for the bank in the opinion of the surveyor it would let for in the ordinants. That would be the course they should follow in future. led the amount of charges, there was a set-off in that respect. the profits of the bank an interest of 5 per cent. on the cost of ses. It would be satisfactory to them to know that ank premises at 5 per cent., and putting the rent of the debit, there would be a profit to the bank of £1,100 at year; and that item of rent would be still further ey had let some other portions of the premises, for which get a good rent. The salaries for the three branches £70, and he must not forget the branch office in Bury was a large item for stationery and advertising, amounting irectors' fees were set down at £1,000, and he could only of himself and his colleagues, that if the shareholders umeration too great for the trouble they had had, they ly return it. (Applause.) He did not know that there m in the balance-sheet that required to be brought under ice. He wished to correct some ideas that were preard to their opening a foreign exchange business—that s in exchange; and, in fact, that it brought them into interfered with dealers of exchange in London. That

was a very wrong notion. The object of their foreign agency enable parties to obtain the same facilities for buying and selling continental bills as they could get in London. (Hear, hear.) been a source of profit to them to a large extent, and no source of loss. He should be very sorry indeed if it went abroad that their company were resorting to novel measures for the purpose of making a profit out of them. That bank was now in connection with some of the best banks in Europe; they received information every day which they had to act on at considerable cost and pains, and would prove very profitable to the shareholders. (Hear.) They had proceeded with their New York business with every care and precaution. It had been worked properly, there had been one or two bad bills in connection with it, but they were from bad produce. They were included in the £88,000 placed on the debit. After bearing his testimony to the efficient manner in which the Glasgow managers did their duty, the chairman said he believed the bank remained very much with the shareholders to do their part in order to get the bank to attain that position they all desired and expected it to have reached. After explaining that the directors thought it right to place on the debit side a sum of £30,000 to meet contingencies, he concluded by complimenting the directors and the auditors on the excellent manner in which they had discharged their duties.

A Shareholder asked whether a continuous audit was made, or a periodic audit.

The Chairman replied that it was a continuous audit, in the sense in which a bank account could be so audited.

Mr. Roland, a director, having seconded the adoption of the resolution, moved for accounts,

Mr. Binks (Birkenhead) asked whether the £30,000 was the cost of one individual account or several accounts.

The Chairman replied upon the whole accounts of the three banks. As to justice to Glasgow he thought he should say that he did not think it had to put down a single contingency.

Mr. Binks said it appeared to him to be somewhat similar to other accounts of the Alliance Bank, and it would be satisfactory to know the prospects of the shareholders might be in that account.

The Chairman.—I think we have twenty or thirty accounts, some large and some small.

A Shareholder.—How often do the London board of directors meet? What guarantee have we that the things which have happened in London will not occur again? Who is responsible in London for the conduct of the bank there now?

Dr. Smythe.—How is the loss of the reserve to be made up? (Laughter.)

The Chairman said the London board was presided over by the directors, who were all of them daily attendants. Then they had a manager acting under them *pro tem.* in the interests of that bank as soon as the arrangements of the London Bank of Scotland were completed they should have to appoint an agent to the London office. With regard to the reserve fund, they hoped to make it up by the profits. (Laughter.)

Dr. Smythe.—That's a pathological remark.

Mr. Bigham believed the bank to be in a perfectly sound state, ready to go on and prosper. Still there was a great deal to regret in the past, and much to blame. He thought the deed of association

a way as to prove acceptable to the shareholders, and that the lawyers who drew it up would say that it contained clauses which ought to be erased, and many which ought to be added. He hoped the directors would make the deed more in accordance with the deeds of old companies in that town. In no deed of old and provincial banks would they find such clauses as were in the deeds of the new companies. One of the clauses in the deed was to the effect that the directors should be entitled to take a salary of £4,000 per annum—for remuneration without asking the shareholders. He was sure that that was not a good thing. (Hear, hear.) It would be more pleasant to the directors than to allow the directors to take. It would not have that clause altered, and there were others of a kind that could be revised. He did not see any reason to object to the amount taken by the directors as remuneration for the services they would put it to them whether, under the present circumstances, it would be politic for them to take it. He wished to know if the London directors had retained their share of the £4,000, and if they were prepared to make the same offer the Liverpool

Their fees are not included in the £1,000.

It was a matter of taste on their part, but he thought it would be politic for them to take any remuneration. He could not say in the past six months some persons connected with the "ring" had been buying the shares on the Stock Exchange. So long as there was a speculation behind the scenes, and made use of it in disservice to the bank could not prosper. He thought the prospects of the bank were as good as any in the town, and that under the prudent management of their chairman they should attain that position in the future.

He wanted to know how much of the £2,009,468. 8s. 11d., was in the bank, exchange, current and on hand, loans to customers, and what was in the form of negotiable securities.

That in the reserve fund account there was credited the amount received from the London Bank of Scotland; and from the report he saw that the amalgamation had not taken place. The profit and loss on the capital account were really set off against the £21,000 that had been lost to the capital, and £21,000 which was in the reserved fund account.

He said that perhaps it would be saving time if he said that £21,000 was to be taken from the reserve fund from the London Bank of Scotland, and whatever might be their position in the reserve fund which they had from that bank in respect to which they had consented. They believed the London Bank of Scotland would carry out the amalgamation, but he was not sure the money was in their hands.

He asked the amalgamation does not take place that money would be paid back again?

No.

Does it not make that £31,000 into £52,000?

He replied in the negative. They had that money in the hands of the directors had rightly placed it to their credit. These were the directors would ask the shareholders in their own interest to do so. They had no reason to suppose that the amalgama-

tion would go off. The bank had placed in their hands *sec* amount of £71,000.

Mr. Kendall asked the chairman whether the directors had to suppose that they had realised the extent of the losses *ca* Williams.

Mr. Bigham wished to know if the directors had any intention a call. (Hear.)

Mr. Thomson pointed out the desirability of that bank having the London clearing-house.

Mr. McQueen said that although he came to the meeting with pleasure and pain, he should, after the very lucid statement of the leave the room with feelings of great satisfaction.

The Chairman, in reply to Mr. Bigham, said the alteration of association could not be effected without some difficulty. As to the remuneration, he would prefer that the shareholders should exactly what charge was made by the directors, so that they could put their minds upon it. In answer to Mr. Moss he said there were negotiable bills in the £2,009,468. He believed the directors to the utmost of the losses caused by Mr. Williams. With regard to the of a call, no such subject had been before the board at all. With to the suggestion made by Mr. Thomson, he said the board would be glad if they could make any arrangements by which they could leave the London clearing-house.

The report and statement of accounts were then carried and the motions.

Mr. Nicholson, in proposing the re-election of Mr. W. L. Baruchson, and Mr. Ronald, to the board of directors, said that there were any persons connected with the bank who were "bears" they were got rid of them the better.

Mr. Baruchson said that since June last he held 100 shares at 100 at 10s, and he had never sold them, neither did he intend to do he could get the same amount of premium.

The Chairman assured the shareholders that the practice of association had been made by Mr. Nicholson and Mr. Bigham was on the board, and they should most rigorously deal with the case as it came under their notice.

The motion was then carried, and Messrs. Banner, McCorr, Hickie having been appointed auditors, votes of thanks were given to the chairman and board of directors, and to the auditors and the proceedings terminated.

LIVERPOOL FINANCIAL ASSOCIATION.

THE first general meeting of this association was held on the 9th in the rooms of the Law Association, Cook Street; William T. Esq., chairman, presiding. There was a large attendance of members.

The Chairman said they could not call that the annual meeting of the association, because it was not twelve months in existence; but the first general meeting of the proprietors, he begged to say with pleasure, and he had no doubt that of the other directors, at the shareholders personally for the first time.

Mr. P. B. McQuie having read the notice calling the meeting and the report of the directors as follows :—

of the Liverpool Financial Association, Limited, in pre-
half-yearly balance-sheet, congratulate their shareholders
which has attended the operations of the company from
of its business to the 31st of December, 1864. During
ve steadily kept in view the objects for which the com-
d, as set forth in the prospectus, and have to report
eral large blocks of freehold and leasehold property, in
ing localities in the town, which will eventually prove
rable profit, and even now yield a fair return in their
d condition. The directors have every reason to believe
ne properties purchased may be fairly estimated, in the
ount considerably greater than that paid for them, and
a large but not divisible profit has accrued to the
to the only source of profit has been from the tempo-
the paid-up capital. Some of the properties purchased
in cash; and advantageous terms have been secured
that the completion of the purchase shall extend over
nd the purchase-money remain at a low rate of interest.
-sheet, therefore, affords no complete indication of the
association, which time and opportunity can alone
directors have pleasure in announcing that they believe
hold to be in every way sound. Hereafter it may be
end the operations of the association without having
nd the directors are prepared to receive deposits for
es of interest to be agreed upon, and to issue debent-
ly coupons attached, constituting a first charge upon
company. It will be seen by the accounts sent here-
ent economy, consistent with judicious management,
in the administration of the company's affairs: and
of the company have not been extended by means of
ations of a similar character, which in time of panic
imental to financial and other monetary institutions.

ints, viz.:—Reserved fund (as provided by article
2d.; and contingent fund (to be dealt with at a future
ne retiring directors are Messrs. Arnold Baruchson and
eligible for re-election."

Balance-sheet, made up to December 31st, 1864.

ABSTRACT.

—Nominal capital, 25,000 shares of £20
of which 19,750 shares have been issued,
per share has been called up £95,750 0 0

Deduct arrears of call on 31st December, 1864 on account of
1st call £165; on account of 2nd call due 21st January,
1865, £29,079; calls on 25 shares, Nos. 16,483 to 16,512,
forfeited by resolution of the board dated 3rd November
£87. 10s. 29,

Creditors—For balance owing in respect of properties pur-
chased 69,
Shareholders—For calls in advance with interest to date ... 67,
Sundries—For rates, taxes, and sundry accounts ... 1,
Unclaimed allotment deposit
Reserved fund—Amount transferred to credit of this fund as
provided by article No. 24
Contingent fund—Amount transferred to credit of this fund
to meet contingencies
Profit and loss account—Balance available for dividend ... 2,
Rebate of interest on current loans

£142,2

Cr.

Property and assets—Freehold estates £76,6
Leasehold estates 6,2

Office furniture and fixtures £82,
Debtors—For loans on various securities 24,2
Sundries—For rents, interest, &c. 6
Preliminary expenses £1,895. 10s. 6d.; less proportion written
off £379. 2s. 1d. 18
Cash in Mercantile and Exchange and North and South Wales
Banks 32,9
Disputed charges
Cash in hands of manager

£142,5

stated out of doors that the property might have been had at a much less sum than was paid for it; but they made the purchase after great deliberation and consideration, after looking all the difficulties in the matter and with their eyes open. There were, no doubt, some difficulties in the property—there were some leases, and the Corporation wanted to get front of it; but if they had patience he thought that before next month they would have to congratulate them on something handsome realised from that property. (Hear, hear.) Its position would be that it was and most eligible in Liverpool; and if they did not use it for their own purposes, they would have plenty of candidates for it. (Hear, hear.) As to the price, he understood that for property in Castle Street it was 50 per cent. more had been paid within the last month than they had paid for the Lancaster-buildings, so that he thought it was not at all a bad purchase. (Applause.) Another source of profit to the association had not yet been called into exercise; that was the loans on debentures. It had been more like an ordinary loan association than anything else. They had not pressed very hard upon the proprietors; they had made their calls by degrees; and when the money market was at a very high rate, and they thought it would not suit the pockets of the shareholders to pay up a call, they had had some consideration for the majority of them and did not make the call. With nearly £100,000 capital put up they could look the public in the face; and if they (the public) chose to give their money to the association, and get its debentures, they could have with the satisfaction that it was a safe investment for the public, and could be turned to good account for the shareholders. (Hear.) The profits of the association so far, amounted to something between ten and twelve per cent., but, of course, in the formation of an infant institution like that, the expenses were considerably more than they would be after. The amount of £1,800 for the promotion of the preliminary expenses was not, perhaps, more than could be expected for a concern of that kind; but they had thought it well to throw that over five years. The articles of association provided for a reserved fund, and also a contingency fund, to which they placed the balance, after deducting the dividend of 2s. 6d. per share, which they proposed now to pay. They could not touch the reserved fund until it reached £50,000; but the contingent fund was one upon which they could operate at any general meeting. He concluded by moving the adoption of the report and accounts.

Mr. C. T. Bowring, vice-president, in seconding the resolution, congratulated the shareholders on the position in which the association stood. The shareholders would be very glad to learn what the chairman had told them; and the best idea that he (Mr. Bowring) could give was the confidence which the directors had in the stability of the concern was the increasing interest which they took in it. The directors began with a small amount of stock in their own names of about 1,750 shares, and they had now held nearly 2,600 shares amongst them (applause), showing that they themselves were interested in the beneficial working of that institution to a far greater extent than they were in the first instance; and that, instead of losing faith in the concern, they, as it went on, gained confidence in the idea that it was going to be a very profitable and excellent institution to this town, in supplying a want which had been long felt in Liverpool. (Applause.) He was not aware that there was the slightest intention at the present time, to increase the call to any extent whatever. Perhaps the call might never be increased; but all he could say at present was that he

on the part of the directors to propose to the shareholders the stock of the association. Up to the present time not a of any kind—by acceptance or otherwise—had been in the purchase of the properties referred to by the chair—and not a single loss had been incurred in the course of transactions of the period during which they had been in (hear, hear.) He thought that must be very satisfactory and at the troublous times which they had gone through. were blamed for anything at all it would be for erring on ence. The directors had really and *bonâ fide* been offered upon some of their purchases. (Applause.) That offer ken, because they looked for better things in the future, ty remained as a source, he hoped, of profit for future

asked what was the original cost of the property on which ferred a profit of £5,000.

He said the property would cost about £31,000, but the g to the profit they would realise upon it. They might they had some good property, which would give them a ere long. The accounts as they were made up contained *bonâ fide* realised profit; and they took no credit for an- f any kind.

A shareholder, the chairman stated that the value of their £2,924. 14s. 9d., and £1,686 had been paid for calls in interest.

Lieut. Colonel M'Corquodale, the chairman said there were did not wish the particular property named from which 000 a year, but any shareholder would get the informa- at the office.

was then adopted.

On the part of the chairman, seconded by Colonel Mawdsley, Mr. Mr. Beloe, the retiring directors, were re-elected.

and they had embarked in a business which many of them table—that of buying up old buildings, renovating, and and his conviction was that the future of this institution d prosperity.

He also expressed his confidence in the success of the

inquired whether it was the feeling of the directors that a ld be made this year.

He said, if they saw it would be for the interest of the associ- another call, he would not like the hands of the directors mise not to do so—(hear, hear)—but they had no call in present.

Mr. Hall said he had resigned from the directorate simply be- sufficient time to attend to the duties of that office, and nt of confidence in the institution. He believed it to be growth and great prosperity. They saw from its great scope would be. They saw elegant blocks of buildings rpool—Brown's-buildings and others. It required very capital to erect such buildings, which yielded, he believed, r cent. The object of that association was to enable men small means to unite those means together in the acquisi- in commanding situations, and which could be improved

or re-erected, and rendered most profitable. (Hear, hear.) The increase of commerce of Liverpool and the increasing value of the buildings year by year, in the vicinity of the Exchange, rendered that town a field in which they could hardly fail to realize a great profit. The issue of negotiable debentures would also be of much value to those who deposited their money with the association, besides being a means of profit to the shareholders. They must not be afraid of calls if they intended to command public confidence and become a strong institution. (Hear, hear.) They must have something solid to back the debentures, if they were to issue them. (Applause.)

At the request of the meeting Mr. Hall withdrew his resignation as a director.

On the motion of the chairman, seconded by Mr. John Hedley, Messrs. W. Chalmers and Mr. A. C. Boreham were appointed auditors.

It having been at this point suggested that they had not declared a dividend,

The Chairman moved, and Mr. Bowring seconded, the declaration of a dividend of 2s. 6d. per share, free of income tax.

A vote of thanks having been passed to Mr. McQuie, secretary, and a similar compliment having been paid to the chairman, the meeting separated.

CREDIT FONCIER OF MAURITIUS, LIMITED.

THE first ordinary meeting of the shareholders in this company was held on the 9th February, at the London Tavern; Sir L. Grant presiding in the chair.

The following report of the directors was read:—

"The Directors, in presenting their first annual report and balance sheet to the shareholders, beg to state that the meeting has been fixed for the 10th day, in conformity with the articles of association, which prescribe that the first general meeting shall be held within one year from the registration of the company. The articles also prescribe that the accounts presented to the meeting shall be made up to the 31st of December. Owing to the distance from Mauritius, complete accounts to the 31st of December last only have been forwarded by the local board. A preliminary statement, however, has been received, showing the payments to be made in Mauritius between the 15th and 31st December; and, as this statement merely embraces items for further loans agreed for and fixed to be repaid by the borrowers before the end of the year, and for the salaries to employees and office rent due at the same period, there can be no practical objection to introducing these items into the statement presented to the meeting. This course has, therefore, been adopted, with a view to conform, as far as practicable, to the conditions prescribed by the deed, and to show to the shareholders the full amount of transactions reported by the local board up to the end of the year. The directors propose that the next annual meetings shall be held in the month of March or April, so as to allow sufficient time for the accounts to the 31st of December to be received and prepared for presentation to the meeting. It will be in the recollection of the shareholders that this company was incorporated on the 10th February last; it necessarily took some time to organize the establishment in Mauritius, and to place funds there; and, with a view to commence operations; further delay was also inevitable on account of the time required for the investigation of title-deeds, and the

of the properties offered as security for loans. The company in the island consequently only commenced in July last—embracing, to the end of the year, a period of six months. During that period loans have been made, up to the amount of £126,640; in addition to the amount the board had granted, and arranged to pay, between the 15th of December, other loans to the amount of £24,900; making £151,540; from which, deducting the amounts repaid by instalments of loans outstanding on the 31st December bearing interest at 6 per cent, £1,754. 5s. By the rules laid down for the guidance of the directors, which have been strictly carried out by them, all loans are secured by mortgage of real property, and are restricted to one-half the carefully appraised value of the property mortgaged in the colony. The title-deeds are carefully examined by the legal company, and the company's lien on the property advanced in cases, duly registered in the government mortgage register in the colony, and an official certificate of the non-existence of any other mortgage is required before the money is paid. The loans are repaid all based upon the principle of gradual repayment by instalments half-yearly in advance. Interest is also payable twice a year. The directors congratulate the shareholders on having for their business in the colony, a board consisting of gentlemen of standing and great local experience, who have zealously devoted their best attention to the interests of the company, and, under the presidency of the Hon. C. Antelme, have conducted your business in the most satisfactory manner. The accounts now submitted show a gross profit, to the 31st December, of £9,043. 13s. 3d., deducting expenses of management in London and Mauritius, interest on current charges, and writing £500 off preliminary expenses, £7. 10s. 7d., leaves an available surplus of £5,196. 2s. 8d., which, after a dividend of 6s. a share, being at the rate of a little more than 10 per cent per annum upon the capital called up, from the respective calls became due; and to leave the sum of £2,196. 2s. 8d. in reserve for credit of new account. The directors accordingly propose at the meeting, to declare the above dividend. Applying the majority appear to be of a very eligible character, and the amount of £800,000, had been presented to the directors at the date of the last advices. This fact will show the extent of the ample field which the company has before it. The inadequate amount of debenture capital at a rate of interest higher than the ordinary English rates, is all that is required to meet the increasing dividends; and the rate of interest here having been reduced of unusual pressure, become more moderate, there is now every prospect of satisfactory progress towards the attainment of this object.

Balance-sheet, 31st day of December, 1864.

"To supply an omission in the working of the articles of association of the company, and to fulfil what was always the object of these articles."

will be proposed to the meeting to add to the 103rd article words: 'Provided that no money of the company be employed in the purchase of shares of the company.' By their articles of association, the borrowing powers of the company are limited to the aggregate amount of obligations outstanding not exceeding the aggregate amount invested) may be exercised on account not exceeding four times the subscribed capital. The directors are of opinion that the restriction of this limit to an amount equal to the subscribed capital for the time being would be an improvement in the constitution of this company. It would give to the debenture-holder a double security, both an English and a colonial security; first, the security of the unpaid-up capital of the company; and secondly, the security of the properties, on the security of which the money has been invested. The directors will propose a resolution to amend the articles of association to the above effect.

Turquand, Youngs and Company, having, in consequence of articles of association, been appointed by the board the managing directors of the company until the first general meeting, it now remains for the meeting to elect an auditor or auditors to act until the next general meeting, to be held in 1866. The board recommending that the same gentlemen be re-appointed."

Mr. Youngs, in moving that the report be received and adopted, said he had endeavoured to make both the report and balance-sheet as intelligible as possible, so that on reading them each shareholder should be in a position to understand the company's affairs. In drawing them up he had adopted rather a shareholder's than a manager's view of the company's affairs. The shareholders were, no doubt, aware of the origin of the company, as it had been brought out exactly one year ago, under the name of the Mortgage Bank of India, to do in Mauritius exactly what the Mortgage Bank of India had done in India. The position of the company to which he referred, the eminent position which it had attained, the fact that he had both bad and good to communicate to the meeting, that he would speak of the bad first. He (the chairman) would then tell this meeting, and would follow the same course. In the extraordinary monetary pressure during the past year, they had been successful in the issue of the debentures of the company as they had fully hoped to be able to do, and that, of course, had been a great satisfaction of a company like theirs, which proposed to work on debenture capital. He was now, however, happy to say that the money market was far more encouraging, and the direct-banking arrangements under which they would, he confidently expected, be able to place a large amount of their debentures in the market. He had now to come to what had been good in the company's past year, and in speaking of the position and prospects of the company in Mauritius, and of the manner in which they had been received, he could most sincerely state that their reception and success had been even more encouraging than any of the directors could have hoped when they commenced business. Their rules for the local business, which had been very carefully framed upon the French model, were understood and appreciated (the element being very large in the colony), and were highly satisfactory by all the proprietors who had good reason to be so. The consequence was that the company had had, from

the first, its choice from amongst the best estates in the island. position then was this, that without the help of debentures they were to pay a moderate dividend, and in proportion as they succeeded in paying their debentures, so would their dividends increase. He had no doubt they would soon be able to do so to an extent that would render the company one of the great successes of the day. All that was required was the company's position, its system, and its prospects should become known, and that capitalists should understand on what safe principles business was conducted, and how rich and extensive was its field of operations. The manner in which they conducted their business was as follows. They lent out their money on first mortgage of real property. When they did so, however, they had the property carefully appraised, and did not lend a farthing in excess of half the valuation. Nay, more, they received the first half-yearly payment of interest, &c., say 5 per cent. in advance, the margin of their security was really 55 per cent. They had the most able law officer in Monsieur de Nanteuil, a French barrister, thoroughly skilled in the French law—for the Code Napoléon was in force in Mauritius—and deeply interested in the success of the company. The system of registry, both of title and encumbrances, was so perfect, that it was really safer to advance money on mortgage in that colony than in any other country. When a loan was granted, not a farthing was paid until the borrower received the certificate of the proper government officer, to the effect that there was not any prior charge on the property. Two months after the loan was granted, notice was the time allowed for the registration of claims to persons who might have claims upon a property which the owner desires to mortgage, and if they fail to do so within that time, their claims are barred. The importance of the island was not very generally known. Many people thought of it only in connection with the story of Paul and Virginia. The company had to do with something more real than that story. The sugar estates on the island were alone, at a low valuation, worth £5,000,000 sterling. Taking the produce for 1863 (and there had been many better years) at 121,000 tons, its value was nearly £2,500,000 sterling annuum. The planters were a most intelligent and enterprising set of men. Of the 260 sugar estates in the island, all, or nearly all of which were now fitted up with improved machinery, upwards of seventy are provided with vacuum pans, capable of turning out sugar equal in quality to refined—such sugar as, owing to our Custom laws (a rag and tatter of protection which he hoped soon to see torn off), was only too good, and required little spoiling for the English market. Still, owing to the favourable geographical position of the island, that excellent sugar, unspoiled, was a ready and a good market in the ports in the Oriental hemisphere. Of the 121,000 tons mentioned, one-half came to this country, one-eighth was brought to France, and the remaining three-eighths went to Australia, Bombay, the Cape of Good Hope, and other eastern ports. In short, the geographical situation gave Mauritius, on the one hand, an unlimited supply of labour, and, on the other hand, a great and increasing market at its own door. These were the things which he wished the shareholders to bear in mind, so that they might make the position of the company known to their friends. With respect to the item "Management," in which the shareholders would find on the credit side of the profit and loss account, he wished to explain, as he had been told that the nature of the item was not fully understood, that it was a fixed charge paid by the mortgagor throughout the whole period of the loan. The item of interest, of course, was reduced in each case every six months, as the principal

tem of "management fees" remained the should last for thirty years. Supposing to be twenty years, this item capitalised, the value of an annuity of £2,000 a year increase with every new transaction. With more calls, he had to state that the directors the course announced in the original proposal would be called up, and then that debentures the directors had followed, and they in the directors could give no pledge never to capital of the company. The credit of of making calls, and it was on its credit to thrive. But though he could not be the subject, he could say that the directors all, and that they saw not the least probability of another call.

the mails were not due till March, it
the meeting till that month, and it would

be also necessary to pass resolutions for holding their general meetings in March or April. Although they could not, on that occasion, exhibit accounts, they had them down to November, and from the several branches they had information that the results of their operations had been quite as satisfactory as they had anticipated. Their business had been an undoubted success, and the directors were perfectly satisfied with what had been done by the branches abroad. At their former meeting he had ventured to predict that they would make 10 per cent. profit at the close of the year. He would say nothing as to the period up to December, which would show a profit considerably over 10 per cent. This was satisfactory for an average period of eight months only. They had been successful in Lima, in Peru, and the manager had not opened the branch in Mexico till the month of August, and then there were really but two months' operations. They had made gross profits to the extent of £25,000, and few banks, he could venture to say, had done so much in the same period; but a considerable rebate had to be made. Thus, in Columbia, the rebate would be to the extent of half the bills; and so in the case of Mexico, from the 1st of August there would be a considerable rebate, but the dividend, he was satisfied, would reach 10 per cent., besides carrying a good sum to the reserve fund. Now, it might be interesting to the shareholders to know what the total amount of rebate would be. It would be something like £8,000, which would come into the present half-year. It would also be interesting to the shareholders to know that all their managers had given satisfaction. (Hear.) At the last meeting he had intimated the fact of the opening of the branch at Callao. Their head manager at Peru had informed the board that his predecessor had done nothing which he did not consider to be satisfactory, he had entered into no transaction to which exception could be taken. (Hear.) And when they took into consideration the peculiar state of that country, in consequence of the misunderstanding with Spain, he thought the merit of their managers was the greater. In Columbia and Bogota they had been well received. They had, in the United States of Columbia, the right of issue, and the government had received them in the most favourable manner; and the people sought for their notes in preference to silver. The business which was opening up in Bogota was a most satisfactory one, and the exchange business would be of a very extensive character in Peru. He then went to Mexico, where everything was progressing. When the board last met the shareholders, they asked for powers to put the bank in such a position as to enable them to obtain a concession, but it had since gone into the hands of Frenchmen; but the bank was in perfect harmony with the one referred to, and under such auspices the bank could not but be benefited. The profits to be gained in the Mexican field were larger than the other branches; and they could do much more with a larger capital (hear, hear) but the board, acting on what they believed to be the feeling of the great body of proprietors, preferred going on safely and slowly for the present leaving to a future time to consider this important element. In conclusion the hon. gentleman moved that this meeting be adjourned till the 14th March next, at the same place and hour.—Carried.

The meeting was then made an extraordinary one, and, in conformity with the advertisement, resolutions were carried increasing the qualifications of directors from 20 shares to 50 shares, and for altering the day for holding the general meeting to the second week in April.

The proceedings closed with a vote of thanks to the chairman and directors.

passed unanimously:—
 adopted; and that the same be printed,
 binding, and a copy sent to each pro-

"That a half-yearly dividend of 10s. and a bonus of 10s. on the old shares, and a proportionate amount according to the value on the new shares, be now declared, payable without deduction on the 1st day of March next, and that the transfer mentioned in the resolution be approved.

"Messrs. Edwin Laundry and William Henry Reece having presented the lists sent in by the proprietors, and having certified that the gentlemen have the greatest number of votes, they are declared elected to the office of directors for the ensuing year :—William George Richards Elkington, Sampson Lloyd Foster, Ralph Heath Taylor Horton, Samuel Wilfred Lucas, John Breasley Pay Pemberton, John Poncia, Henry Van Wart, James Watson, and Isaac Welch.

"That the thanks of this meeting be presented to the directors for their valuable services.

"That the best thanks of this meeting are due and are hereby presented to the directors for their valuable services, and that a sum of £2,000 per annum be placed at their disposal for the future.

"That the best thanks of the proprietors are hereby presented to Frederick Isaac Welch, J. B. Payn, and S. W. Lucas, Esquire, for their valuable services as consulting directors.

"That the best thanks of this meeting be presented to the Chairman, Mr. W. H. Beaumont, and the other officers of the company for their attention to the interests of the bank.

"That the best thanks of this meeting be presented to Frederick Isaac Welch, Esq., for his able conduct in the chair."

The proceedings then terminated.

ORIENTAL FINANCIAL CORPORATION, LIMITED

AN extraordinary general meeting of the members of this corporation was held at the London Tavern on the 15th February, for the purpose of confirming certain resolutions which were passed at an extraordinary meeting of the members on the 27th January, having for the purpose certain alterations in various clauses of the articles of association, and adding the following words to the 50th article :—"The directors may from time to time, for the purposes of the corporation, borrow on behalf of the corporation from any of the directors or members, or any other person, such sums as they may require upon mortgage of the property of the corporation, or upon bonds, or otherwise." Mr. W. C. Beaumont occupied the chair, and after the usual preliminaries,

The Chairman said that the object of the meeting was to confirm certain resolutions which were passed at the meeting of the 27th January. He suggested that they should confine themselves to the business of the meeting at first, and then, as some rumours had been spread as to the position of the company, he would most willingly listen to any statement upon that subject. He moved the confirmation of the resolutions.

The motion was seconded by Mr. Carew, and a long and desultory discussion ensued as to the course of proceeding which should be adopted.

Major King said that he had proposed to bring forward two resolutions, one of which he was informed would meet the views of the directors.

man said that the course for them to pursue was to confirm or negative the confirmation. It would not be legal to pass any other resolution than for the objects for which the meeting had been called.

He could not see that the passing of the resolutions would improve the position of the shareholders in any respect. Although the directors must regret the unfortunate position of the corporation, still they would be throwing a barrier in the way of the improvement of the position of the property of the company. He thought they should pass the resolutions and hear the statement the chairman had volunteered to make, and then take what steps were expedient upon that statement by calling a special meeting of the shareholders or otherwise.

He thought they had a weak board, and needed an addition of a new element. They should as soon as possible effect an amalgamation with some other company.

His suggestions were then confirmed.

He then said he would not occupy much of their time, but it was necessary to say a few words, as within the last two or three years since the last meeting there had been a great amount of fear and confusion—amounting almost to a panic—with regard to the corporation—company. The result had been that the shares had gone down materially, numerous letters had been written, and rumours spread abroad. That, no doubt, was to be attributed in a great measure to the retirement of Mr. Crawford from the board. He did not go into the particulars of that gentleman's retirement, but it was of great importance which some attached to it. It had involved the corporation in considerable difficulties, as he (Mr. Crawford) had retired after the directors were made up, and just upon the eve of a general meeting. The directors had not been at all affected by it. They were as straight as they could be, and the securities were all sound. The money advanced upon good collateral security, which was not like the practice of lending money on Consols or bills; their securities could be sold at once, it required time. He was glad to say that the value of the securities held by the corporation was improving rather than declining (Hear.) There was a proposition for an amalgamation between the corporation and another company, but he did not know whether it would be successful.

A committee had been appointed to look into the accounts of the corporation, as it was not the intention of the board to amalgamate with a company whose securities were worthless.

He then expressed himself dissatisfied with the balance-sheet, and the directors ought not to make any further calls. At the same time he would assist the board in bringing about an improvement in their affairs, which was much needed, when he told them that the value of the securities was depreciated 80 per cent.

He, a director, said that he did not think that at present there was any necessity for making that call which the shareholders appeared to be opposed to.

The directors had tried to conduct the business of the corporation for the general good, and when it was found necessary to make a call upon the shareholders, the business to be carried on or enlarged, the directors were to make it. As to the retirement of Mr. Crawford from the corporation, Mr. Wynne went into a long statement showing that he was a great loss to the corporation, and regretted his resignation. He gave his accounts which were passed, and then he received a letter

from Mr. Crawford, stating that he did not think that a dividend be declared, considering the class of the securities held by them. He (Mr. Lysney) said that if the company was in danger he would leave it; but he knew it was not in danger; for all the advances made had been backed by good collateral securities, in some cases three times the amount of the advance. He thought they should declare a dividend, unless they had a great loss come on them. He thought that Mr. Crawford would rejoin the board, but he had since written to Mr. Crawford, and hoped he should have a satisfactory explanation. The consequence was that the board had been divided, and two shareholders being delegated by themselves to meet the others, had called upon the officials to produce the securities. The officials had been declined, but after a long conversation he believed the gentlemen went away very well satisfied. He had to suggest that they should divide the £50 shares, upon which £10 had been paid, into 10 shares of £25 each, that would give only £5 paid upon each share, and not increase the responsibility. He thought that the company should amalgamate with some other company; but they should do so with his consent, except with a company which was respected in the direction. They would amalgamate if they could find such a company. It would be the best thing for this corporation, as they could carry out their business without a large addition of capital. He also thought that they should open a register in India, which would be of great advantage when the shares were affected in England. In many things could be done for the good of the corporation if the shareholders worked with the directors, as the welfare of the company was much affected by the expressions of the shareholders, which often depreciated their property than any other cause.

Some discussion then ensued, in which the majority of the expressed their satisfaction at the explanations of the board that the suggestions thrown out by the chairman and direct amalgamation and the making of calls only when absolute for the interests of the company, would be carried into effect.

Mr. Powell congratulated the meeting upon the conciliatory had been adopted, and sincerely trusted that a speedy amalgamation be effected with some other company, as a capital of £10,000 be worked almost with as low a staff as a capital of £100,000.

The Chairman briefly replied to the observations which were made, and promised that they should receive due consideration on the hands of the board. He trusted they would get on prosperously and more amicably after the explanations which had been given (hear).

Thanks were voted to the Chairman, and the meeting separated.

OTTOMAN FINANCIAL ASSOCIATION.

The first ordinary general meeting of the proprietors of the was held *pro forma*, on the 15th February; Mr. G. P. K. chair.

explained that the accounts had only arrived from the day preceding the meeting, and the directors were unable to place them in the hands of the proprietors; he therefore proposed it should be adjourned till the

conversation ensued as to whether questions should be referred at this meeting or not, which resulted in the adjournment till the 28th, being moved by Mr. Sirrell, seconded and carried.

CONTRACT CORPORATION, LIMITED.

At a general meeting of the members of this corporation held at the London Tavern, on the 16th February; Mr. Joseph Handfield presiding.

Mr. J. C. Handfield having read the advertisement contained in the Standard, read the following report:—

The accounts herewith submitted show that the balance of profits was £6s., after allowing rebate of interest upon bills not yet received; we propose that a dividend be declared at the rate of £10 per cent., free of income tax, which will absorb £3,000, and, with the balance, make the dividend for the year £12½ per cent. The state of the money market during the autumn months has been such as to exercise the greatest caution, and indeed to refrain from undertakings requiring an immediate and large outlay, in order to wait for a more favourable season before embarking on a new project of moment. The result of the proceedings of the half-year has been necessarily small, but the directors believe that the same has best served the interests of the shareholders, and will be met with approval. An opportunity now offers for largely and profitably engaging in the special business for which the corporation was formed. The directors have the gratification to announce that they have secured the co-operation of the well-known firm of Messrs. Messrs. and Co. This arrangement, which has received the directors' consideration, and has been made subject to the approval of the shareholders, wants only their confirmation to enable the corporation to commence extensive operations, from which satisfactory results are expected. Resolutions in reference thereto will be submitted at the extraordinary meeting, to be held immediately after the adjournment, has been concluded."

Balance-sheet, December 31st, 1864.

The Chairman, in moving the adoption of the report, said that for itself, but as some letters had been received by the board, dissatisfaction at the reduction of the dividend this half-year, a of explanation might be satisfactory. He called the attention of holders to the fact that besides paying 12½ per cent. for the year a reserve fund of £4,500, which was equal on the paid-up capital cent. more, thus making the profits 20 per cent. They had also mind that up to the present their expenses had necessarily compared with the amount of business they had done. They had on the undertaking new to the work, and the past year might be a year of apprenticeship. An amount of business had been brought them which was almost appalling for its vastness, and such corporation with so small an amount of capital paid up as they not entertain except to a very small degree. They had then fined their business very much to financial matters connected tracts, and it was from those operations that the profits of the tion had accrued. With the experience they now had they proposed to extend their operations in the direction of the purposes for which pany was originally formed, and with that view they had made ments, which would be submitted to the proprietors for their with Messrs. Watson and Overend, from which they anticipated satisfactory results. In order to carry out the arrangement a of directors had been appointed to inquire into the nature of the of Messrs. Watson and Overend, of which Captain Jervis was man, and that gentleman would explain to them the mode in which proposed to carry the arrangement into effect. They thought it directors of what they believed would become a very important

sanction of the shareholders upon such they now proposed to take up, and there- the report, he would call upon Captain er to enable him to state what was pro-

ing the motion, said that he had taken e arrangement they had made they did ion, any of the actual contracts which n hand, but had secured their hearty all future business. Consequently in the shape of bad or doubtful con- nly believed, two of the best men in ness for the transaction of which the he exceptions to which he alluded were ilway, and two other small railways had considered most seriously what n their business, and they had come to the present paid-up capital, further r share, extending over a period of would give them a sufficient capital blic works. So far they had operated me their serious duty to consider what tors had therefore turned their atten- justified in the steps they had taken, ty approval of the shareholders. The in the matter, and had stated that e their arrangements without consult- felt that they would much rather ith the shareholders, and, with that m. (Cheers.)

at the nature of the business was on nting to something like 40 per cent.,

afraid that if they entered into any ransacted they would shortly have say was that it was of a most satis-

uses had been heavy in consequence of doing little business, from the causes n connected with business for thirty mself, he had never done so much this corporation. Of course, as the d greatly lessen proportionately, but ed charges, which they had to pay . With respect to the payment for

Messrs. Watson and Overend's business, that was to be settled, and every care had been taken to protect the interest of the corporation. The balance of £5,043 was carried forward to the account in preference to being carried to the reserve fund, because the amount carried to that fund (£4,500) was equal to $7\frac{1}{2}$ per cent on the capital, which was considered quite sufficient. (Hear, hear.) They had not have divided considerably more, but they considered that it was prudent at the present moment to carry forward a considerable balance.

A Shareholder thought the course adopted by the directors to be wise and prudent. He wished to ask whether the directors had taken into account as their remuneration which they were empowered to do by the articles of association.

The Chairman said that they had not. He explained that the directors were twelve in number, and that they were to be remunerated by a fixed sum and a per centage, namely, £4,000 a year, and 5 per cent on the surplus, after 5 per cent. had been paid to the shareholders. They had taken the £4,000, but not the per centage.

Mr. Hodgson was glad to hear the statement of Captain Jervis, and believed the whole of their advances had been made on good securities, and asked whether the securities in question had been examined and approved by the auditors.

Mr. C. J. H. Allen, an auditor, replied in the affirmative.

The report was then unanimously adopted, and a dividend at the rate of 10 per cent. per annum, free of income tax, declared.

On the motion of Mr. E. Makins, seconded by Mr. Ricketts, the auditors, Mr. C. J. H. Allen and Messrs. Deliotte, Greenwood, and others, were re-elected.

This closed the business of the ordinary general meeting, which was then adjourned to the next day, when it was to be held itself into an extraordinary general meeting.

Captain Jervis moved that the agreement which was entered into between the corporation and Messrs. Watson and Overend on the 1st of February, for the acquisition by the corporation of Messrs. Watson and Overend's business, be confirmed.

Mr. Alderman Dakin seconded the resolution. The committee had gone most carefully into the matter, deeming it of the greatest importance to the interest of the company. The board had felt, during the preceding year, the want of some competent and efficient advisers, and it was a matter of the greatest gratification to obtain the co-operation and assistance of such eminent men as Messrs. Watson and Overend, who had been so successful hitherto in everything they had undertaken. It was the pleasure of knowing those gentlemen personally as well as by reputation, and he was satisfied that the co-operation of two such experienced railway engineers would be of great advantage to the company. The board having felt the necessity of abstaining from entering into those operations for which the company was formed from the efficient assistance, the acquaintance of Messrs. Watson and Overend, and the promised great success to it. They had heard from Captain Jervis that co-operation would be obtained without mixing up this company with the enterprises which Messrs. Watson and Overend had been carrying on. Whatever was taken over by the company would be fairly valued, and Messrs. Watson and Co. had put themselves entirely into the hands of the corporation to decide what was the most equitable way for them to carry out the agreement; therefore they had every assurance that the corporation would pay no more for the plant, &c., than their own arbitrator would decide was just.

in reply to a question, stated the arrangement did not of the Mid-Wales line.

ing been put, was carried unanimously.

ft, M.P., moved that the amended articles of association for the old articles.

led the motion.

led the attention of the meeting to the fact that the board gave power to the board to increase the capital of any amount, without consulting the shareholders.

said that he was quite of opinion that such an unlimited power be placed in the hands of the board; and, after a short time subject, it was agreed that the power of the board to the creation of a capital of two millions only beyond of existing capital, thus leaving the same power in the hands as they possessed under the old articles.

led the attention of the board to the small amount of capital compared with the nominal capital, and asked the chairman what the shares were to be reduced.

said that the application to Parliament was to reduce the shares, and it was contemplated to call not exceeding during 18 months on the £100 shares, making the paid-up capital per share. Of course, the calls on the £20 shares would be £80. The whole matter would, he believed, be referred to a select committee of the House of Commons, with a view to the passing of a bill.

said that several banks had found it necessary to apply for a bill, and they had all been referred to one committee.

other question,

stated that by the arrangement made with Messrs. Watkinson they would become large shareholders, and that such a bill would be due to them on a valuation of the plant should be made in anticipation of calls.

that it appeared to him that the effect of the reduction would be that they would be £20 shares with £2. 10s. paid up. He thought the disproportion between the paid-up and the nominal would be too great. He thought it would be better if it was £10, or even £10 paid-up on the £20 shares.

said that at present the question was before Parliament, and he was unable to tell what course would be taken there, because the bill would fix the shares at £25 or £50.

asked whether in the event of the shares being reduced the shareholders would be prepared to hold five times the number of shares for the same qualification?

discussion upon this point it was agreed that the qualifications should remain as it stood at present, namely, the shares to be the nominal value of £5,000.

subject to the two alterations agreed upon, were then put a formal vote of thanks to the chairman and directors for the way they had displayed in the management of the concern. The motion of Mr. Makins, seconded by Mr. H. Barker, carried by a large majority.

having expressed his thanks, and those of the board, for the meeting, the proceedings terminated.

LEICESTERSHIRE BANKING COMPANY.

The thirty-fifth annual general meeting of the shareholders was held at the Three Crowns Hotel, Leicester, on the 8th February, 1864, Mr. Bankart, Esq., in the chair.

The following report was read :—

"The directors have pleasure in submitting to the proprietors the balance-sheets for the half-years ending the 30th of June, and the 31st of December last. After making provision for bad and doubtful debts, and paying the income tax, the net profit of the bank for the past year amounts to £25,231. 7s. 7d. This sum, added to £4,440. 17s. 5d., the undivided balance of the preceding year, makes a total of £29,671. 12s. 12d., which amount is included £1,124. 12s., for interest on the guarantee fund. The directors paid a dividend of £1. 10s. per share for the half-year ending the 30th of June, amounting to £7,500, and they now recommend the dividend for the half-year ending the 31st of December last be 10 per share, being 10 per cent. on the paid-up capital. After the payment of these dividends, and the appropriation of the interest on the guarantee fund as above, a balance of profit amounting to £13,547. 13s. will remain out of this amount the directors further recommend the payment of a bonus of 15s. per share, being at the rate of 2½ per cent. per annum on the capital, that £5,000 be transferred to the guarantee fund, and that the balance of £4,797. 13s. be carried forward to the current year."

The profit and loss account will then stand thus :—

<i>Dr.</i>					
Dividend paid to the shareholders for the half-year ending the					
30th of June, 1864	£7,500
Ditto, ending 31st of December, 1864	7,500

Thirdly, "That the directors be, and they are hereby authorised to increase the capital of the company by the issue of any new shares each to any amount not exceeding £1,000,000, and that such increase of capital be made, and issue of new shares take place, at such times and in such manner as the directors shall deem expedient."

There were not, owing to the inclemency of the weather, enough shareholders present to constitute a quorum, and those present having waited half an hour, the prescribed time, the meeting was, on the motion of Mr. Alderman Abbis, seconded by Captain Mangles, adjourned to the following Friday, at half-past twelve, at the office of the company.

The usual compliment to the chairman closed the proceedings.

ORIENTAL COMMERCIAL COMPANY.

A SPECIAL general meeting of proprietors was held on the 22nd February at the London Tavern, Admiral Burney in the chair, for the purpose of affirming by a specific resolution the minutes adopted at a preliminary meeting held on the 26th January, to the effect, "That the Oriental Commercial Company (Limited) should modify its constitution as expressed in that of the Oriental Commercial Bank (Limited). That the capital be increased to £3,000,000 nominal, £1,500,000 issued, and that the company should at once be created to deliver against transfer of the capital to any other body, or upon allotment otherwise up to such amount. That the actual shareholders of this company should receive one share of £20 each for every seven of their present shares as a bonus, and that the share should continue to be £20 each nominal, £7 paid as before. That the present accounts of the Oriental Commercial Company (Limited) should be kept entirely separate as to profit and loss, and be balanced in the next course for the benefit of this company. On the motion as to whether the capital of the Oriental Commercial Company (Limited) should be increased as proposed, and the name and powers of the Oriental Commercial Bank (Limited) should be adopted, it is unanimously resolved that the meeting hereby approves and recommends that these measures should be carried out, and that the directors should communicate the sense of the meeting to the whole proprietary body, and take such other steps as may be requisite to give effect to the propositions in question."

The Chairman explained that the object of the meeting was for the purpose of giving the necessary authority for carrying out the recommendations unanimously adopted at the private meeting of shareholders held on the 26th ult. A vast majority of the proprietors were thoroughly convinced with the directors of the desirability of extending the capital, thus enlarging the basis of the company's operations. It had been suggested, "Why don't you make a call?" But they started with the idea of not making a call, and now they had the opportunity of increasing the capital of the company without making a call, and without the difficulty of seeking for capital; in fact, the capital had sought them, and the question was whether they should accept the offer so made, and thus, by adding to the capital of the company, vastly enlarge the profits of the proprietors. The further capital was proved by the fact that they had frequently been compelled to refuse business from want of means. Some say, we have always divided 15 per cent., and we are satisfied with it; but in these times they could not afford to stand still.

It would be sure, sooner or later, to find other companies starting with them, and probably taking from their profits. He was satisfied that the step proposed was the best that they could take, and he was confirmed in his opinion by the managers of the best mercantile and banking companies, both in London and elsewhere, to whom he had consulted, and who assured him that if the company carried this company would very soon be one of the best in London. Some persons might doubt the propriety of changing the name of the Oriental Bank, but the name of Oriental Bank carried no weight with it, and hundreds of people were ignorant of the nature of the operations in which the company was engaged. At the same time he wished it to be distinctly understood that the proposition of giving up the old business, or to enter upon banking, was not the ordinary acceptance of the term; but if they had the opportunity they would be enabled to assist their friends abroad in obtaining for themselves large profits from transactions in which they were practically shut out. He concluded by proposing the formal adoption of the minutes.

The motion was seconded by several shareholders, and after several shareholders expressed themselves favourable to the passing of the resolution, it was adopted.

The chairman then returned to the chairman, and the business of the meeting

THE EAST OF ENGLAND BANK.

The shareholders in the above bank, held at Norwich, on the 15th of May, it was resolved to make a further call of £15 per share, which was estimated would raise £45,000. It was stated that the bank had brought in about £30,000. The liquidators also informed the shareholders of a proposition which had been made by the Rev. A. Cooper, M.P. (against whom proceedings in Chancery had been taken as actions brought by individual shareholders), to pay the bank a lease from his liability both to the liquidators and the shareholders. The liquidators having in view the expenses of the bank, and seeing that in this particular instance the director was not at fault than sinning, recommended the shareholders to accept of the proposal, which, it was explained, was exclusive of the liability of the director in respect to calls on his shares, which calls, it was estimated, would amount to very nearly £10,000 more. The shareholders, after the question was fully explained to them, adopted unanimously the proposal of the liquidators, and a consent was signed to the proposal alluded to. It was stated that the proceedings taken against the other director would be pushed on with as much vigour as possible, and that further relief to the shareholders might be obtained if possible. A second dividend of 5s. in the pound will be paid; to pay that dividend £140,000 will be required, and the bank has in hand £130,000, including the amount received on the

UNITY JOINT STOCK MUTUAL BANKING ASSOCIATION

AN extraordinary general meeting of the shareholders of this company was held on the 14th February, at the London Tavern, to consider whether the prosecution of Terry and Burch should be conducted at the expense of the shareholders, and also to consider the resolutions of the directors of the 19th of January, 1865, and the future conduct of the liquidators. Mr. Deputy Rowen, the deputy chairman of the board of directors, took the chair.—Mr. Procter moved the first resolution, to the effect that the prosecution should be continued by Messrs. Lewis and Lewis; that the expenses be paid out of the funds in the hands of the liquidators. Mr. Kench seconded the motion, which was put and carried almost unanimously.—Mr. Lewis said that the law costs in all the prosecutions would, he believed, not exceed £500, of which about £150 had already been received in fees from the directors, so that the costs provided for he did not expect would exceed £350.—Mr. Sutton moved a resolution censuring the three directors for the course they had pursued, and requesting the shareholder liquidators not to resign, but to hold themselves together as a committee of vigilance to watch the proceedings of the directors in winding up the affairs of the bank.—Mr. Procter moved an amendment as follows: "That the present directors be requested to resign, and that the liquidators be appointed directors in their place."—Mr. Newton seconded the amendment.—The Chairman said that the notice convening the meeting did not include the election of directors, and could not put it to the meeting.—Great dissatisfaction ensued, at which the mover put it to the meeting, and it was carried. The chairman and directors then abruptly left the chair, and the legal meeting continued amid expressions of great disapprobation.—Dr. Cooke was then voted into the chair, when Mr. Lewis entered into an explanation of their legal position, and suggested the following resolution:—"That if it be necessary, the winding-up of the bank, and the prosecution of Terry and Burch be referred to the Court of Chancery, the present body of liquidators have power to take such steps as they may be advised on behalf of the general meeting of shareholders."—Mr. Sherwood then formally moved, and Mr. Newton seconded the resolution, and it was carried unanimously.—A vote of thanks was given to the liquidators for their zealous services, and the proceedings terminated.

CONTINENTAL BANK CORPORATION.

THE report of the Continental Bank Corporation, submitted to the shareholders on the 27th of February, exhibits a considerable loss by the failure of the constituents during the late commercial crisis. Under these circumstances the directors deem it their duty to make the shareholders acquainted with the precise condition of affairs, to exhibit the whole loss incurred, and to offer their suggestions as to the best mode of dealing with it. After the most careful examination of the accounts at the head office and branches, the total loss is found to amount to £19,500, and after deducting from the net balance of profits, £5,090, and the reserved fund, £1,000, the remaining deficiency is £13,409. This sum the directors recommend

account. While regretting this result, the directors very hope to the future. An excellent business has been made of current profit, since the last year's accounts were increased; and a prospect has been opened up of a most profitable nature. The amalgamation, to be made in the last report, not having been carried out, for the requirements of the bank, to add to the paid-up shares:—viz., £5 on the original shares, on the 10th and £5 on 10th of December; and on the new shares, £5 on 2nd of January, 1865. These calls have been made, and there still remains £10 to call on the new shares to the first issue.

[Report of the meeting in our next number.]

OTTOMAN FINANCIAL ASSOCIATION.

The Ottoman Financial Association shows that the business was done on the 1st June. The Smyrna branch was opened in Constantinople branch in September. The directors propose that the year shall terminate on the 30th June in each year. They recommend that an interim dividend of 10s. per share be put to reserve fund, leaving a balance of £6,833. The directors feel that, notwithstanding the recent commercial affairs, and the opposition of competitive banks, they have good cause to congratulate the shareholders on what has been hitherto achieved by the association, and to express confidence in its future prosperity.

[Meeting will be given in our next.]

REASONS AGAINST THE BILL OF THE CHANCELLOR OF
EXCHEQUER "TO MAKE PROVISION FOR EMPOWERING
COUNTRY BANKS OF ISSUE TO OBTAIN RELIEF, &c."

THE Bank Act, 1844, while confirming former Acts which empowered joint-stock banks to issue notes, fixed the amount of the issues of the existing country banks, and prohibited the formation of any new banks of issue, but did not relax the restriction of the distance of 65 miles within which the existing joint-stock banks of issue might not carry on their banking business. The policy of Sir Robert Peel in framing this act was avowed to be to provide a practical security for the Bank of England circulation, and the gradual extinction of that of private establishments for which no security was given; thus power was given to the Bank to compete on a pound with such banks as were willing to relinquish their issues, and in the case of bankers ceasing to carry on their banking business, becoming bankrupt, the amount of their issues absolutely ceased. In the provision was further made for increasing the amount, the Bank of England was authorised to issue upon securities, which by this Act was fixed at £14,000,000, to an extent not exceeding two-thirds of the amount of private issues that had lapsed, the profit on such additional issue being paid by the Bank to the government; under this Act the amount of issues of the Bank has been increased by £6,000,000. The Bill of the Chancellor of the Exchequer proposes to modify the provisions of these Acts. 1. By removing the restrictions of six in the number of partners in banks of issue, and providing for the continuance of issues that would otherwise have lapsed. The policy of the Act of 1844 was gradually to extinguish the issues of private establishments, Parliament always retaining the power of determining such issues without compensation; that no banks of issue should have more than six partners could unite with others and retain their issues with an increase in the number of partners, nor transfer their issues to others. The operation of the present Bill is to defeat the intentions of the existing Act, and take from Parliament the power of determining the right of issue, should public policy require it, unless the payment of full compensation to the bank enjoying the right of issue. Under the existing law, the issue of any bank, becoming bankrupt, absolutely ceases, but this Bill proposes that compensation for the issue for the term of the right of issue shall be paid out of the public revenues, and the value of the present value of an annuity of one per cent. on the issues of the Bank; and although the Bill is silent as to the rate of interest after which such present value is to be computed, yet requires it to be at three per cent. (the rate yielded by the public funds), to be paid to the consolidated fund for every £100,000 of issue for a period of twenty-four years will be about £16,900. 2. The present Bill proposes to remove the restrictions upon banks having more than six partners in their notes within sixty-five miles from London. On the faith of the provision of the existing law, other banks were established, carrying on business mainly within the radius of sixty-five miles from London, and only the secured notes of the Bank of England. The proposed Bill, without offering to them any compensation, bring within the radius of operations a new class of competitors, having peculiar privileges; and it is submitted that neither public policy nor convenience requires that the

be violated to the extent proposed, viz.: new Joint-Stock Banks of issue by the issue, and the creation of branches of radius of 65 miles from London: The which by the cessation of business, or ing bank, would cease: Compensation apt banks for the loss of a privilege, ceases. The withdrawal for a fixed issue of country bank notes, and their arliament now possesses.

DOLESEX BANK, LIMITED, ADICATION.

en issued:—"54, Bishopsgate Street
—I am instructed by the directors of
nited, to inform you that they have
turn to their shareholders, in respect
e of £1 per share, and that you may
gistered in your name on application
the months of March or April next,
ee o'clock. It will be necessary that
tificates for examination a few days
ue upon them. The directors also
continuing their best endeavours to
bank with the view of distributing
early as possible.—I am, Sir, your
Accountant."

ALIAN LOAN.

ent. State Domain Loan of £8,000,000,
e 16th January. The principal and
n Government, with special hypothe-
of the law of the Italian Parliament
scriptions will be received in London
Company, and by the Italian Land
Générale, and in Lyons by the Credit
Italy will receive applications for the
des Pays Bas for Amsterdam, Messrs.
ort, and the Banque de Credit Géné-
the state domains are estimated at
o bear interest at 5 per cent. on their
£100 by fifteen equal drawings in fif-
and payable 1st of April, 1866. The
n a period spreading from the present
5 per cent. being made on the nominal
due 1st April, 1865, will be attached
rice of the bond to 75, and subscribers
stalments under discount, at the rate

of six per cent. per annum, on any of the days fixed for payment instalments. Each bond further carries with it a free coupon *de* representing its *pro rata* participation in 10 per cent. of any profit by the sale of the domains over their valuation, which, at the sale at which sales are now making, may be estimated at from £2 to £100 bond, receivable over the fifteen years. The net price of the bond is thus further reduced to about 74, at which rate the interest the advantage of the annual drawings, makes the investment equivalent to a rate of over 10 per cent. per annum. The brokers to the loan are Messrs. James Capel and Co., and Messrs. Mullens, Marshall & Co. The annexed statement with respect to the advantages connected with the operation has been circulated:—

“This loan presents the following advantages to the subscriber on issue at £74 net pays—

1. £5 a year interest on £74, equal to £6 15s. per cent.
2. If a subscriber take fifteen bonds, which cost (15 × £74) £1,110, he gets one bond drawn each year at £100, for which he gets £74—that is, he gets his capital back and £26 bonus each year.

Thus in the first year he has £1,110 invested, and gets

£75 interest,
Plus £26 bonus.

—

Or £101 in all, equal to 9 1-10 per cent.

In the last year he remains with one bond, or £74 invested, and gets

£5 interest
Plus £26 bonus

—

Making £31, equal to 42 per cent.

The average, as calculated by actuaries' tables, is 10 3-10 per cent. per annum on the whole fifteen years on the capital invested. That is, an investor gets his capital back intact by instalments over fifteen years, with £31 per cent. for its use, while he remains out of it. Though the return to the subscribers is so high, the operation is a very advantageous one to the Italian Government, as, instead of burdening its finances with a loan, it obtains this money by the sale of state lands, which besides improving the political position of the new kingdom and adds to the wealth of the country by placing a great mass of landed property in private hands. The following is the position of Italian finance. To start clearing up the Italian Government required £8,000,000 to meet the arrears left by their predecessors. They have realised £5,000,000 by a sale of a year's land tax, and £6,000,000 by this measure for the sale of the domains. For the future the national debt of Italy, of all sorts, is £200,000,000, and they have extraordinary resources in lands, mines, and state railways, &c., of the estimated value of £80,000,000. The present Ministry have already made large reductions—viz., £1,000,000 in the army and £500,000 in the navy, and further large economies in other departments. With a prudent foreign policy their finances will be cleared up in three or four years.”

RIO DE JANEIRO GAS COMPANY.

Gas Company comes out under satisfactory auspices. The capital is to be £600,000, in 30,000 shares of £20 each, a limited liability undertaking, and also a "*société*" in accordance with the laws of Brazil. The deposit is to be £1 on application and £4 on allotment, the remainder in instalments:—£5 on the 28th of April, £5 on the 30th of June. The company has been engaged in the process of acquiring two concessions granted by the Imperial Government of Brazil for lighting Rio de Janeiro with gas. These are the monopoly of supplying the city of Rio with gas for 25 years from the 25th of March, 1854. At the same time the success of the works has been highly satisfactory, and the Government have arranged that the privileges be transferred to a joint-stock company. The net profits for the year 1863 to 1864 were £64,500, and for the year 1864 to 1865, or 10 per cent. on the proposed purchase-money, viz., £65,000, on the terms of the concession the company will be required to introduce into Rio de Janeiro all machinery and raw materials for the manufacture of gas free of duty. The compensation of paying one-half of the purchase-money in instalments. The profits will accrue to the shareholders as from July next. It will thus be noticed that subscribers to the property and an existing business, the net profits being in addition to anticipated progressive increase, will yield a return exceeding 10 per cent. per annum.

THE VARNA RAILWAY.

The Varna Railway Company have announced that they have taken up 30,000 shares of the Varna Railway Company. The company is situated between Rustchuk to Varna, and possesses a concession of the Turkish Government. The share capital is £600,000, 30,000 shares to bearer of £20 each, bearing a minimum interest of 5 per cent. guaranteed by the Turkish Government. 15,000 shares have been taken, 9,000 of which are under offer in Turkey, on the terms of the concession. The price of issue of the shares is £20, with a deposit on application of £1, and a payment of £19 on the 1st of July. The railway was commenced last June, and has been made in all branches of the works. Fifty workmen are ready for laying the rails, and the contractors are engaged to open the entire line in the autumn. According to the price of issue, shareholders will receive a dividend of 5 per cent. per annum, and interest will be allowed

at the same rate on all payments, and shareholders stated, may pay up in full. The shares will be redeemed a sinking fund, guaranteed by the Turkish Government, drawings, to commence the year after the opening of the holder of each share drawn and paid off at £20 will receive a warrant, entitling him to participate in all profits earned by way in excess of the guaranteed interest during the remaining concession. The importance of the traffic is well known, and form the shortest and most convenient route to and from providing the cheapest and most direct means of communication between the Moldo-Wallachian Principalities and the country Upper Danube and the port of Varna. It is understood concession for the coast line from Varna to Constantinople arranged, and that immediate steps will be taken to carry out the undertaking, which will increase the traffic and improve the of the Varna Railway Company. The bay of Varna is one of the best natural harbours in the Black Sea, where there is a large quantity of grain and other merchandise at all seasons of the year. Improvements which are to be immediately carried out, the port of Varna will shortly become one of the finest in Europe.

THE WEST LONDON DOCKS AND WAREHOUSES CO.

THE promoters of the West London Docks and Warehouses (with the river frontage at Battersea) require capital to the amount of £500,000, in 25,000 shares of £20 each, of which one-third has been subscribed. The company has been formed for the purpose of constructing a canal basin, with wharves and warehouses along its length, in the immediate vicinity of the Victoria Railway at Battersea. The objects of the undertaking are two-fold—to supply good wharf and warehouse accommodation to the south-western district of the Thames; and secondly, to accommodate the traffic of the various railways which converge to the point at which the wharves will be situated. The construction of the Thames Embankment, which will sweep away not less than two and a half miles of wharves, and consequently, will almost entirely close up the water way to the warehouses lying along its course. The railway companies which will have access to the wharves are the following:—The Great Western, the London and North Western, the Great Northern, the London and South Western, the London Brighton and South Coast, the London and Dover, and the Metropolitan. The revenue will be derived from canal and dock dues, rental from wharves and warehouses, and charges for loading and unloading. Responsible contractors have agreed to pay 7 per cent. interest upon the paid-up capital during the construction, estimated at about two years, and further for 10 months after the entire completion of the works.

OF THE RATE OF DISCOUNT.

Discount now stands at 4 per cent. The Bank of England also 4 per cent. The Bank of France, 5 per cent. Both the accounts of the Bank of England are improving, and are even in a much stronger position than last year. The bullion has rapidly increased. The large withdrawal from this side, and the contracts have been open to take the Paris market. If this is true it will be a turning point in the rate. The Bank of England directors not having reduced the rate to the shippers for having the purchase of the arrivals, and the metallic reserve in the vaults of the Bank of England is however, the stock of bullion is not so low. The directors do not see any breakers in the rate to $4\frac{1}{2}$ per cent. Beyond this rate it will be natural to descend, because it will be natural in the produce market will not be a turning point in the rate. Altogether it has been a dull year the last two months, and if the information we should shortly expect most persons are hopeful respect to the rate and there is every anticipation that the joint-stock projects are not too high, and new loans will be supported in the months since, and it is satisfactory to find that we now avoid any but what may be

BANK OFFICIALS.

The Bank of England has granted a bonus of 5 per cent. to their clerks. The Bank of Scotland have granted a bonus of salary drawn for year ended 1860. Their employment at the head office

AMALGAMATION OF THE ALLIANCE AND CONSOLIDATED BANKS.

It appears that a basis of arrangement has been agreed upon for the amalgamation of the Alliance Bank with the Consolidated Bank. Of course, further negotiations will have to be carried out before any modification of capital effected, before the united establishment can be brought into full operation. The possession of the premises of the auction mart, the central situation for business, is altogether one object of the Consolidated Bank in seeking to enter into an arrangement with the Alliance.

At the last moment the negotiations have been broken off.

TENDERS FOR BILLS ON INDIA.

THE biddings for Rs. 30,00,000, in bills on India, took place at London on the 1st February. The proportions allotted were—Calcutta, Rs. 16,27,000; to Bombay, Rs. 12,00,000; and to Madras, Rs. 2,22,000. The minimum price was, as before, 1s. 11½d. on Calcutta, and 1s. 11¼d. on Bombay. Tenders on Calcutta and Bombay at 1s. 11¾d. will receive about 27 per cent., and on Bombay at about 41 per cent.; all above these prices in full. Further biddings for Rs. 30,00,000 took place on the 15th February. The proportions were—to Calcutta, Rs. 15,39,000; to Bombay, Rs. 12,00,000; and to Madras, Rs. 2,61,000. The minimum price was, as before, 1s. 11½d. on Calcutta and Madras, and 1s. 11¼d. on Bombay. Tenders on Bombay and Madras at 1s. 11¾d. will receive about 43 per cent.; and on Calcutta at 1s. 11¼d., about 92 per cent.; above these prices in full.

SERIOUS ACCIDENT TO MR. K. D. HODGSON, M.P.

GREAT sympathy has been expressed in all commercial circles in London within the last few days in consequence of an accident which has befallen Mr. K. D. Hodgson, M.P., who is now on his way to the Governor of the Bank of England. It appears that Mr. Hodgson was proceeding towards his residence in his carriage, when, through some accident, he sustained a fracture of one of his arms. Continuous medical treatment has since been made at the Bank, and the latest reports are that he is progressing favourably, and that he may be expected to leave his bed about a week.

NOTICE OF INTEREST ON EXCHEQUER BILLS.

the Exchequer has given notice that the interest on payable on and after the 11th of March next will be 5 per cent. per annum. "All holders of Exchequer bills dated 1st March, 1862, who intend to demand payment of the principal contained at the expiration of the third year of the bills must leave the said bills at the Bank of England for deposit not later than the 8th of March next, between the hours of 10 and 4. Payment of the said principal sums will be made at the Bank of England on the 11th day of March next.

Communications.

From the Editor of the "Bankers' Magazine."

Ballaarat, 24th Dec., 1864.

BANKING AT BALLAARAT.

I return you my thanks for your kindness in giving a copy of my letter of the 10th of October last to a previous letter of mine, wherein I stated that the system of banking in vogue among both English and Australian banks was directed to the banking institutions on the basis of the system of business in vogue among both English and Australian banks. Since my previous communication I have seen the competition for deposits therein referred to, instead of being increased, rendering the giving of extravagantly high rates of interest compulsory, if each institution seeks to maintain its position. A high rate of interest allowed, namely, from 5 to 7 per cent. per annum, brings to the banks a constantly increasing number of deposits, which are diverted from other fields of investment to deposits placed at call, on which no interest is paid. The system of allowing interest necessitates an equally extravagant rate of interest on really first-class bills to be charged, which presses heavily on the commercial classes, and acts most injuriously to the carrying on of large businesses. The rate of discount is 12 per cent. for bills at 3 months, and those having a longer term are discounted a shade less. It is only within the last few years that the branch banks on Ballaarat, have begun to afford facilities to customers on any large scale. The permanent goldfields in this locality, and the splendid farming land around the town, together with the various industries from which the population is supplied, are amply sufficient to justify the banks in doing a large business in the shape of discounting bills. In order to be able to do so to an extent the banks have granted assistance, we may say that the establishment with which we are connected, has more than doubled its funds over a large area of a very diversified business in the last three or four years. We scarcely think, dis-
regarding the banks on goldfields of uncertain duration, would be the men commencing business on new "rushes" are

generally a class of customers of an undesirable kind. The Ballaarat endeavour to obtain a share of every kind of business establishment does not direct its attention to a particular department as the London bankers are reported to do. It is well known that it is mainly supported by its golden resources. The quantity already obtained by the mines of the precious metal has acted a wonderful part in the spell of the golden magician. The banks purchase almost the whole quantity of gold obtained in the Colony. Mining companies are sought for, and those obtaining gold, offered the strongest inducements to the banks. It is notorious to what an extent the banks under the influence of other, and how disgraceful are the schemes adopted to get their mining account. Fair, manly, and honourable competition is desirable to exist among banks; but, the dealings prevalent here presume in other inland districts of the Colony, will, and in a distant day, bring ruin and confusion to more than one establishment. The account of a mining company yielding a considerable quantity of gold is of great value to a bank. The bank gets the gold raised in the mine, its notes are circulated in payment of wages among the shareholders, as a rule, transact their business with the bank on their dividends, or perchance obtaining assistance for further investment. It needs no great stretch of fancy to see the value of a mining company which puts one or two thousand notes into circulation every fortnight from one to three thousand ounces of gold in the same time, and deposits, or increases discounts to equally large amounts. Were the Colony of Ballaarat to become non-auriferous, the business now done by the banks would decrease to such a large extent as to compel six of them to close.

During our residence at Ballaarat, we have often wondered at the absence of a banker's association, as also the want of a banker's library. The young men employed in the banks are, perhaps, as well educated and as devoted to literary pursuits as any other classes in the Colony, but, we venture to say, there are not very many bank clerks who will read up in books treating of banking subjects, and, indeed, anxious they may be to acquire knowledge of such studies, it is impossible to obtain works treating upon these branches. We venture to throw out a hint to directors and shareholders in England the value of presenting their officers in the colonies with a small collection of books as could not fail to be of the utmost advantage to them in their daily avocations. Clerks here work well for the interest of depositors; banks have hitherto succeeded; dividends large and regular, and have many a time and oft been declared; we, therefore hope, that the intellectual capacities of our fellow officers will not be allowed to pass in want of a few good books. The bank managers in Ballaarat are renowned for their care of those under them; how sadly do we want such a man as the late Mr. Gilbert, whose chief pleasure consisted in opening up new regions of intellectual food for the banking community in London.

I am,

Yours sincerely,

BANK CLERK

Estates of Failed Firms.

ESTATE OF MESSRS. LUNHAM & CO.

Meeting of the creditors of Mr. James Lunham, trading as Lunham and Co., was held on the 31st January, when the result of their labours, showing a revised statement of liabilities being now placed at £165,000, and the assets at the position of 9s. 6d. in the pound was now offered, instead of 6s. 6d. on the last occasion, payable by instalments at one, three, five, and ten years. The estate is to be liquidated under the supervision of Messrs. Coleman, Turquand, and Co.'s, assisted by solicitors.

ESTATE OF MESSRS. HILL & WEGUELIN.

Meeting of the creditors of Messrs. Hill and Weguelin, who recently went into liquidation, took place on the 26th January, when a statement was presented by Messrs. Cooper Brothers, accountants, showing liabilities of £29,547, against assets of £22,520. There were 13,923 on the 13th March, 1864. The great loss had to do with St. Petersburg on joint account with Messrs. Hill, and of that city. The partnership drawings represented

MERCANTILE SUSPENSIONS.

Announced during the month of February were the

R. Baker & Co., Mincing Lane, colonial and drug brokers.
 R. & P. Cohen, Melbourne, merchants.
 R. & Co., Melbourne, merchants.
 S. H. and Co., Melbourne, merchants.
 W. & Co., Bolton, spinners.
 W. & Co., Blackburn, manufacturer.
 W. & Co., Darwin, manufacturer.
 W. & Taylor, Accrington, manufacturers.

MONTHLY CHRONOLOGY.

The Directors of the Bank of France reduced the rate of discount.
 R. Baker & Co., of Mincing Lane, drug brokers.
 R. & Co., of Melbourne, report the suspension of Messrs. S. H. and Co., of Melbourne, with £21,000 liabilities.
 R. & Co., of Melbourne, liabilities about £18,000.
 S. H. and Co., also of Melbourne, with £25,000

17.—The Directors of the Bank of Holland reduced the rate of from $4\frac{1}{2}$ to 4 per cent.

21.—A new Peruvian Consolidated Loan, brought forward by Thomson, Bonar & Co. The nominal amount is £10,000,000 stock interest at the rate of 5 per cent. per annum. The price of issue every £100 stock, the chief guarantee being upon guano, the p the Chinch Islands.

24.—Suspension announced of Messrs. P. Arrowsmith & Co., of Bolton, with liabilities extending to about £200,000.

24.—Failure of Mr. Thomas Carr, manufacturer of Blackburn, £9,000 liabilities.

24.—Stoppage of Mr. Garstang, manufacturer, of Darwen, with liabilities.

24.—Suspension of Messrs. Kenyon and Taylor, of Accrington, manufacturers, with £5,000 liabilities.

24.—The Chancellor of the Exchequer officially announced the rate of interest on Exchequer Bills, payable on and after the 11th next, from 4 to $3\frac{1}{2}$ per cent. per annum.

BANKING OBITUARY.

On the 11th February, at Percy Place, Clapham Road, Mr. J. Wight, of the Provincial Bank of Ireland; youngest son of Mr. Wight, late of the Colonial Bank.

On the 16th of February, Mr. George Charles Cox, many years at the Banking establishment of Messrs. Drummond, Charing Cross.

On the 19th February, at Bruntsfield Place, Edinburgh, Mr. Paul, late of the Commercial Bank of Scotland, Glasgow, in the 4th of his age.

BANK MOVEMENTS.

The South Eastern Banking Company opened a branch at No. 11 Street, Bristol, on the 1st February.

It is officially announced that Mr. John D. Carnegie, of the Bank, who has had 25 years' experience in that establishment, appointed general manager of the Metropolitan and Provincial Bank, is also further intimated that changes in the direction are likely to take place, which will bring names of influence and parties practically acquainted with banking into relationship with the board.

Monetary Intelligence.

REVIEW FOR THE MONTH OF FEBRUARY.

Financial and commercial affairs during the month just past have been unsatisfactory. Although at one period there was a slight pressure in the money market it has latterly been relieved, and the feeling is, if anything, in favour of lower rates. The Bank directors were to reduce the quotation there would be a disposition to encourage ephemeral enterprise, and the result would be a diversion of capital from its legitimate channels. New loan companies are all very well when the available surplus is not small, and the allow of money being thus employed. But when we come to demand for a restoration to trading activity, the absorption of funds is not received with full feelings of pleasure. The Bank has reduced their terms to 4 per cent. on the 9th of February, and the market has since gone to the same figure, so that the principal money markets are lower in their rates by 1 per cent. than we have. If the directors choose to sustain their quotation at 5 per cent. a rise will arise, because it will be imagined that the Court of Directors is pursuing a prudent policy. The rate for first-class paper out at 5 per cent.; six months' bills have been negotiated at 5 and 5½ per cent. Although there may be a pressure in the early days of next month, the consequence of the accumulation of resources, soon passed off without attended with the slightest difficulty. On the Stock Exchange the rates for short loans have varied from 4 to 2½ per cent.; the rate for long loans is about 3 per cent.

The Stock market has been dull throughout the month, and has been gradually declining, and close at a fall of about ¼ per cent. There have been occasionally slight improvements, but they have not been fully sustained. For some days past the Government has been purchasing New Three per Cent. Annuities, and has also been making an extensive purchase of Exchequer Bills; but the terms of the latter have not been accepted. The tone of English money has been, however, steady.

With few exceptions, the dealings in foreign stocks have not been very active. General prices showed an improvement, though not to a great extent. The Confederate Loan and Mexican have been the most fluctuating in the former being caused by the contraband trade in America; but, on the whole, the latest prices were satis-

factory. In Mexican the decline has been about $1\frac{1}{2}$ per cent. ; on the other hand, Peruvian have improved 3 per cent. through the consolidation of the debt. There has been some fluctuation in S

The market for railway shares has experienced severe fluctuations. In instance, a panic has taken place in Great Western and Metropolitan classes were too high, but, after receding 5 to 8 per cent. each, again rallied. The dividends may be considered over now, and retrogression in prices was to be expected.

Bank shares have also fluctuated considerably. The reports respecting some banks, and the amalgamation of others, have caused changes in prices. At the last moment the quotations were Finance and Credit shares have been altogether well supported, and a fair extent of business.

TRADE OF THE UNITED KINGDOM.

THE Board of Trade returns for the month, and twelve months ending 31st of December, were issued on the 23rd February, but as for the month, they do not contrast favourably with previous returns, the year the balance in favour of 1864 is very considerable. The balance on the year is to be attributed to the general satisfaction in trade in nearly all branches, but the falling off in the month may be put chiefly to the transactions in cotton yarn and cotton manufactures, and so long as the war in America continues these items may be subject to present unfavourable aspects. The total declared value of exports for the month of December last was £12,095,437, against £14,000,000 in December, 1863, and £10,807,033 in 1862, which is a decrease on the former period of £2,258,963, but on the latter an increase of £1,192,967. For the year last past the total was £160,436,302, against £150,000,000 in 1863, and £123,992,264 in 1862, which is an increase, as compared with the former period, of £13,833,960, and, as contrasted with the year 1862, of £36,444,038. As regards exports, there has been an increase in the value of the chief articles :—Alkali, arms and ammunition, coal and culm, machinery, wool ; but a decrease in beer and ale, cotton yarn, cotton manufactures, haberdashery and millinery, hardware and cutlery, linen yarn, linens, manufactures, metals, thrown silk, silk manufactures, spirits, and woollen manufactures. With respect to imports, there has been an increase in the value of the chief articles :—Flaxseed and linseed, tallow, cocoa, sugar, tea, and tobacco ; but a decrease in raw cotton, flax and hemp, hides, leather manufactures, salt, silk, wool, woollen manufactures, coffee, spirits, and wine. In cereals there has been an increase in the importation of oats and Indian corn, but a decrease in all other descriptions. In the case of provisions, an increase is shown in eggs and cheese, with a falling off in bacon and ham, and pork, butter and lard. The variations in the chief articles of trade will be found in the subjoined tables :—

EXPORTS.

THE GRAIN TRADE.

THE same inactivity which has for some time prevailed in the grain trade still continues. There appears but little disposition to operate, except to supply immediate wants, and as the supplies continue ample, particularly of home-grown samples, there is nothing to cause any improvement in prices. Wheat has been in quiet and steady demand. Barley has been taken rather less freely, and oats have been in moderate request. The latest official average prices were:—Wheat, 38s. 4d. per qr.; barley, 29s. 2d. per qr.; and oats, 19s. 1d. per qr.

The Gazette returns for England and Wales have been:—

Week ending, 1865.	Wheat. Qrs. sold.	Weekly Average.	Duty.	Corresponding Six Weeks Last Year.
		s. d.	s. d.	s. d.
Jan. 28	72,510	38 6	1 0	41 3
Feb. 4	83,620	38 4	1 0	40 8
" 11	66,918	38 4	1 0	40 4
" 18	67,929	38 4	1 0	40 8

The importations since the harvest of 1864 have been:—

	Wheat. Cwts.	Other Grain. Cwts.	Total. Cwts.
Twenty-seven weeks ended 21st Jan. ...	9,920,889	12,925,018	22,845,907
Four weeks ended 18th Feb. ...	636,732	1,605,584	2,242,316
	10,557,621	14,530,602	25,088,223

And the weekly averages have been:—

Twenty-seven weeks ended 21st Jan. ...	367,000	479,000	846,000
Four weeks ended 18th Feb. ..	159,000	401,000	560,000
Less	208,000	78,000	286,000

STATE OF TRADE.

THE state of trade has not greatly changed. Some of the cotton speculators at Bolton and in the neighbourhood of Lancashire have suspended through the late fall in the staple. Manufacturing industry, on the other hand, however, is improving, and there are prospects of an increased spring and summer demand. Business in most departments promises to revive.

SPECIAL NOTICE TO CORRESPONDENTS.

We have been compelled, much against our desire, to issue this month another double number, the crowd of meetings to be dealt with, and the interesting nature of the proceedings rendering it impossible to compress them in a single number. The value of the *Bankers' Magazine* as a work of reference must be an excuse for thus appealing to the indulgence of our readers and subscribers. From India, China, and Australia, we have received letters requesting that there may be no omission in this respect, the progress of banking and finance in this country being watched with great anxiety.

Several communications stand over for want of space.

Correspondents will please forward communications addressed to the Editor, No. 8, Birch Lane; subscriptions and orders as usual to Messrs. Groombridge and Sons, Paternoster Row, or Messrs. Waterlow and Sons, Carpenters' Hall, London Wall.

BANKING AND FINANCIAL ANECDOTES.—It will be perceived from notice elsewhere, that the Editor of the *Bankers' Magazine* is collecting and arranging a series of Banking and Financial Anecdotes. Any contributions from subscribers and readers of the *Magazine* will be thankfully received, particularly if the subject-matter shall not have previously appeared in print. Nothing personal or offensive will receive publicity.

The report of the Adelphi Bank was received too late for insertion: it will be published next month.

... of these Banks for
 4th :— ... £3,074,169
 ... 2,783,089
 ... of Private
 ending as ... £5,862,248
 ... above with the Returns
 ... last, it shows :—
 ... of Private ... £114,792
 ... Joint-Stock ... 50,649
 ... th ... £165,441

And as compared with the month ending
 February 6th, 1864, it shows :—
 A decrease in the notes of Private
 Banks, of £130,598
 A decrease in the notes of Joint-Stock
 Banks, of 110,427
 Total decrease, as compared with the
 same period of last year £241,025
 The following is the comparative state of the
 circulation as regards the fixed issues :—
 The Private Banks are below their
 fixed issues £1,138,627
 The Joint-Stock Banks are below their
 fixed issues 438,268
 Total below their fixed issues £1,576,895

IRISH & SCOTCH RETURNS TO FEBRUARY 4, 1865.

The fixed issues of the Irish and Scotch Banks at the present time are given in the <i>Banking Almanac</i> , as follows:—	
4 Banks in Ireland, allowed to issue...	£6,354,404
12 Banks in Scotland, allowed to issue	2,740,271
18 Banks in all, allowed to issue	£9,103,765
The following appears, therefore, to be the comparative state of the circulation:—	
Irish Banks are below their fixed issue	£640,786
Scotch Banks are above their fixed issue	1,408,305
Total above the fixed issue	£767,519
The amounts of Gold and Silver held at the head offices of the several banks, during the past month, have been as follows:—	
Gold and Silver held by the Irish Banks	£2,132,490
Gold and Silver held by the Scotch Banks	2,385,119
Total of Gold and Silver Coin	£4,517,609
Being a decrease of £83,923 on the part of the Irish Banks, and an increase of £7,000 on the part of the Scotch Banks, on the several amounts held by them during the preceding month.	

OF THE UNITED KINGDOM TO FEBRUARY 4, 1865.

State of the Note Circulation of the United Kingdom for the month ending

Month ending 4th February, as compared with the previous month:—				
ending Feb. 1)	Jan. 7.	Feb. 4.	Increase.	Decrease.
£19,321,117	£20,467,762	1,146,645	—	—

BANKERS' MAGAZINE,

AND

Journal of the Money Market.

APRIL, 1865.

THE THEORY OF BLIND TRADING.

is a colloquial phrase, which may be applied to practices, and to certain personal acts of business of which are positive, and some negative. It is in everyday use, especially in what are known as hard cases. A man who has just passed, is, we are told, going it strong; a man, we are told, does not know what he is doing. A man who is to know, is in deep waters; Andrew, messing; a man who is changing cheques, offering unknown names on his cheque, is giving and buying right and left. That it is a blind trade, taken in a literal sense is obvious, from the fact that successful men of business have in reality been told of such some curious things have been told. He who is blind to the sense of smell. He who is blind to the perfume of his clothes. The blind man of business accepting the perfume as the clue to the suitability of the applicant, proceeded to question him in a following manner: "Pray, young gentleman, how do you know anything of history? How often have you been on Hampstead Heath, and on the top of Shooter's Hill? Was it for the young gentleman if he had been on the top of Shooter's Hill, times without number on Hampstead Heath, and could recount the incidents of the Duke of Wellington. The blind man immediately concluded that he was a proper young man, in addition to bestowing care on his outward appearance, not unmindful of his health, nor of his intellectual improvement. Unfortunate was it for the young gentleman if he had not his only care. The blind man of business at last gave him the admonition that a fashionable young

gentleman is always a dangerous one, unless his mind is by pursuits calculated to maintain the ascendancy of his sense.

One of the most striking and, at the same time, most common forms of blind trading is that which presents to the mind, when we reflect on a practice scrupulously by all safe bankers, and seldom or ever thought of in the walks of commerce. The safe banker has his eyes open merely open, but they are upon the past and future, as well as the present. With most men of business there is no conception of the past, and the future does not trouble them. The retirement of acceptances which fall due on the 4th. With most men of business the present is the only care. "Eat, drink, and be merry," and "sufficient for the day is the evil thereof," are standard business maxims from the circumference of the six or twelve mile circle. The troubles are sufficiently trying without possible aggravation. Andrew's rule has been to leave his business to the counting-house, and enjoy himself at home with his family. John is at the Bay Tree at seven o'clock with his Scotch and pipe; Thompson at the opera with his cousin's acquaintances; and Brown at the Holborn or in the Haymarket with his young friends. So pass the weeks, months, and years. If the balance at the bank is small, there must be sales or work done, some one drawn on, and the amount must be paid. And should the balance at the bank be large, pressing bills are paid, personal tastes are gratified, and the surplus may be, are taken in some new enterprise. The mind soars above the present; the rainy day or the time of need as it is more often called, is put out of sight, or at least out of thought of and provided for in an intelligent and consistent manner, as a matter of duty, and as a matter of course.

Safe banking presents to blind trading an invaluable lesson from which, however, it does not profit. A banker with £10,000, £50,000, or £100,000 in excess of his demands which are likely to be made upon him, does not look to the supplement of the paper in hand to find out how much of the street of weekly-tenant tenements may be bought cheaply, how a coal mine may be secured for less than its real value, how money may be advanced on debentures or on mortgage deeds which would be highly profitable. He never looks at the supplement of the paper. He buys no tenements, secures no coal mine, and is proverbially indifferent to the seductive offers of high-rate debentures and mortgage deeds. His rule is

and on readily convertible securities, or to buy
ible securities. His rule is to subordinate the
uture ; to provide against all possible eventual-
words, he does not trade to the full extent of
ing so, he does not spread all the canvas that he
r weather gale, but holds his hand, but denies
continuously apprehensive of reefs, rocks, and
a word, he is a man of moderation, and his
ong and will long be rewarded by its satisfactory
results. The judicious banker extends his arm
can be readily drawn back again. He is a man
of fancies, and before his eyes are the whole-
the slights, distrusts, and miseries to which
ankrupts are long subject, even although they
and retrieve their character.

e right use of means, of goods, of credit, is less
tion of a boundless business appetite, and less in

disporting one's self in the sunshine, than in holding head, and in flourishing when others droop or become dy. The extent of a business man's dealings is of infinite importance to himself or to his creditors than the profit accrues from his transactions, whether those transactions be few or many.

But, it will be replied, a banker and a merchant can be expected to act on the same principles, and to be guided by the same rules. Why not? The one deals in money which belongs to other people, and the other deals in merchandise which belongs to other people. Call, therefore, the money merchant a banker, and there is no longer the pretence of a distinction between the two. Both, in truth, are traders, and the bankers are yet, the only systematic and prudent traders. They are the only class in whom blind trading is the exception, and safe trading is the rule. And it is remarkable that the exceptions in banking produce an amount and intensity of reputation when collapse occurs, which is unknown in the blackest times of every-day business failure, as if the one were more or less venial than the other.

That blind trading multiplies transactions, and safe trading restricts them, is quite true; but, as blind trading is universally deplored, its curtailment instead of being a loss, would be a sure economic gain. Brown, Thompson, and the others, convene meetings of their creditors, and, as they are not paid, Brown, Thompson, and the others, may be presumed to have no more than they ever had, while their creditors may receive a dividend, or none whatever, to whose hands, then, the spoil be traced? It can positively be traced to no man's hands, and it is only a convenient fiction to affirm that the community at large enjoy the advantage of buying cheaper. The community at large, indeed, cannot in the nature of things be benefited by the collapse incident to blind trading, or by the collapse of any kind. That safe trading would not be so detrimental to the great body of adventurers is also quite true, but it only proves the desirability of the change. Blind trading is disreputable to all concerned; to those who practise it, at the best it is a mere makeshift means of subsisting on the merchandise of others; and to those who sanction it, there is no excuse for the toleration of such trading. The presence of the fact that safe banking is not unprofitable, although an unemployed and available reserve is kept in hand, neither would safe general business prove in the least unprofitable, were the dead stock of the firm, the warehouse,

by certificates, or exchequer bills, in the
t-book, or in his strong room.

ex announced, in a message to Congress, that
the Treasury had directed the deposits of the
to be removed from the national bank, and
state banks designated by him. He then de-
national bank in terms of extreme severity,
h attempting to influence the election of the
y means of money, and, in violation of its
its funds by formal resolution at the disposal

of the President, to be employed in sustaining the power of the bank." He charged the directors with injuring trade by refusing to discount freely, though the unprecedented amount of bullion in their cellars. He accused them of bribing the newspapers to attack the bank. Finally, he declared that he would have "ordered a suspension of the charter of the bank, if it were not that the charter itself would expire as soon as a decision could probably be obtained from the court of last resort." It is evident that the design of the President was to ruin the credit of the bank; and it is not extraordinary that it could have sustained itself against his hostility. To reproach it with curtailing its discount, as the means of granting them were taken away, was a insult to injury: and the English reader, unacquainted with the under-currents of American politics, must be astonished at the conduct of the President, and excusable in suspecting that the story is misrepresented. But the difficulty is solved by supposing to be an axiom in the United States that the emoluments of office are regarded as the rightful spoils of the victorious party. The first Bank of the United States was called into existence by the Federalists; but when their power declined, that bank was re-chartered. The second bank, equally with the first, was a political and monetary organisation, and they who were influential at electioneering secured shares in the bank. Its real founders remained in power till 1829, when the democrats became dominant, and selected Andrew Jackson their chief. We have seen how he rewarded his adherents when installed President, conferring all offices with patronage on his adherents, in reward for their votes. He was compelling those who held them, though their conduct was irreproachable. Now the bank was the greatest obstacle to his policy. The friends of General Jackson were well aware of its utility. They had no real intention, when first excited by prejudice against it, to supersede such an institution by a national bank; they merely desired to destroy the existing bank, and replace it by another under the control of the Jackson party. They felt it prudent to conceal their designs from their opponents would triumphantly have replied, "It is wiser to continue an old and tried establishment, which has worked well, than venture on a fresh experiment, which may create a new list of stockholders. But the tortuous policy of the government defeated itself, for though it had been a matter to inflame the passions of the sovereign people, the bank, it was beyond the power of the agitators to destroy."

them into any channel which did not lead to activeness. Hence General Jackson ultimately against the entire banking system, as so radically to be tolerated under any modifications. *De-ago* became his creed.

of the bank were roused to resistance, and a resolution on the President was moved in the Senate on November, 1833, by Mr. Clay, which, after protracted discussion, was modified in the following terms, and adopted on March 10, 1834. "That the President, in the late execution of his authority in relation to the public revenue, has assumed authority and power not conferred by the constitutional laws, in derogation of both." This vote was carried by a majority of 20, against which the pugnacious President entered his protest on the 15th April, 1834. He then laid down the following principles:—

Executive power, subject to the qualified negative of the Senate, is vested in the Congress of the United States, the Senate and the House of Representatives. The power is vested in the President, except that in the making of treaties and in certain appointments to office he must have the advice and consent of the Senate. The power is vested exclusively in the supreme and other courts of the United States, except in cases of impeachment, for the executive power is vested in the House of Representatives, and that of hearing and determining in the Senate. Each of the three great departments is independent in its sphere of action."

His defence on these clearly constitutional distinctions Jackson contended that "the resolution of the House was unauthorized by the constitution. It assumes that a branch of the legislative department may, for the purpose of public censure, and without view to legislation or to the taking up, consider, and decide upon the official conduct of the Executive. The Senate can only decide upon the removal of the President when he is impeached, and he can only be removed by the House of Representatives." General Jackson complained that the resolution was vague in its terms, and that in the form of a defined and specific accusatory resolution moved by Mr. Clay were these:— "That the late Secretary of the Treasury had not, contrary to his own sense of his own duty, expended the money of the United States, in deposit with the United States and its branches, in conformity

with the President's opinion ; and appointing his successor effect such removal, which has been done." The language of the resolution designated " the executive proceeding in relation to the public revenue," for no other specification was substituted in the modified resolution which was carried. General Jackson maintained his right to dismiss the Secretary by virtue of his prerogative, on which point he argued thus:—"The President nominates, and by and with the advice and consent of the Senate, appoints all officers of the United States whose appointments are not in the constitution otherwise provided for, and the proviso that the appointment of inferior officers is vested in the President alone, in the courts of justice, and the heads of departments. The Senate neither nominates nor appoints, but merely checks the executive power of appointment. If the Senate refuse, the appointment cannot be made. As to the power of removing or dismissing a functional officer, subject was solemnly debated in the Congress of 1789 on the organisation of the administrative departments was under consideration, and it was decided that the President derived from the constitution the power of removal, so far as the department for whose acts he is responsible.

General Jackson then pointed out that Congress had never passed an Act imperatively directing that the money should be kept in any particular place or places. From the origin of the government to the year 1816, the statute book was silent on the subject. In 1789 a treasurer was appointed subordinate to the Secretary of the Treasury, through him to the President. From the origin of the government the Secretary of the Treasury, acting under the supervision of the President, designated the places in which the money should be kept, and specially directed all transfers from place to place. This practice was continued with the acquiescence of Congress from 1789 to 1816; and a number of many banks were selected and discharged, and although a portion of the money was first placed in the states banks, then in the first Bank of the United States, and upon its dissolution again transferred to the states banks, no legislation was deemed necessary by Congress, and all these several operations were commenced and completed by executive authority. The Act of 1816, establishing the second Bank of the United States, directed the deposits of public money to be made in that bank and its branches, unless the Secretary of the Treasury otherwise order and direct, in which he was to give his opinion to Congress. But this did not alter his relations to the

the latter from his constitutional obligation "to see the laws be faithfully executed." The archives of the Treasury department showed that the secretary was in communication with the President and obtaining his sanction to the original transfer of the public money to the Bank of the United States, and carried into effect in obedience to his decision. Had the Secretary been an officer of the Congress and the President, the same might be said of the War and of the navy, and the Postmaster-General; in short, the whole executive power would be concentrated. On these grounds the President justified the Secretary for disobeying his orders, accusing the bank and opposing his superior. He justified his withdrawal of the deposits, by stating that he had attempted to obtain the renewal of its charter by Congressional elections and the general action of the people, in the attempt using its corporate funds and manipulating the press, and thus violating its charter. He justified his protest by demanding its registration on the floor of the Senate, which the Senate refused.

Congress had been convened in 1834, in which government had a majority in the House of Representatives, but a minority in the Senate. On the 4th June, the President followed up his first success by moving the two following resolutions:—1st. That the reasons of the Secretary of the Treasury were unsatisfactory and insufficient. 2nd. That the public money ought to be made in the Bank of the United States. The former of these resolutions was carried in the Senate by 29 to 16; the latter by 28 to 16. In the House of Representatives they met with a very different fate. The first resolution was ordered to lie on the table by 114 to 101. Thus the two branches of the legislature came into direct conflict, and the House of Representatives, determined to support the President, passed the two following resolutions in violent opposition:—1st. That the Bank of the United States be rechartered; carried by 132 to 82. 2ndly. That the deposits ought not to be restored to the Bank of the United States; carried by 118 to 103.

Congressional contests were exasperating party contests. Deputations of merchants, mechanics, and farmers from the principal cities and towns, all suffering from the depression of the currency, entirely caused by the conduct of the President against the bank, waited on the President

asking measures of relief. They received the curt answer government could give none, that the bank was the sole cause of all the evils experienced, and that they who had traded with borrowed capital ought to break. This reply, and the determination of the House of Representatives to support the policy of General Jackson, showed that the battle was fought on both sides. It was no longer possible to act on the original scheme of substituting a new bank for an old one, and although a nominal victory remained with the administration, combatants were really defeated, neither securing the object which the contention arose. The exclusive privileges of the Bank of the United States were abolished with the expiration of its charter. There are, however, circumstances connected with this controversy which merit record among the warnings of history, as showing the paltry and malignant spirit in which it was conducted, and how governments may degrade themselves when they exert their power under the unrestrained influence of passion, vengeance, and party spirit.

The bank had a branch at Savannah. It was one of the smallest, having a note circulation of only 500,000 dollars. The officials of the Customs, who regularly received its notes for payment of the public dues, suddenly, and without any notice whatever, presented a mass of those notes to the amount of 380,000 dollars, demanding specie, in the hope that it might be forthcoming. The cashiers of the Bank of the United States had for some time entertained suspicions of foul play, observing that the notes of the Savannah branch had been extensively taken out of circulation, and they wisely remained a sufficiency of coin to meet any concerted run. The attack was made by the order of government, and defeated; and as a proof that coin was not wanted, it was immediately returned to the agents of the Customs as deposit. By such low means General Jackson sought to destroy the credit of the bank, though well aware that he would aggravate commercial distress if monetary confidence was destroyed. His guilt as President is the blacker because he knew perfectly well that the national institution held more coin at its disposal than all the other banks in the Union collectively.

In the matter of the French indemnity the directors of the bank acted without becoming dignity, though they did not exceed their legal rights; but in displaying their strength they were betrayed into a vengeful spirit, of which their most judicious friends could not fail to disapprove. These are the faults which France had made maritime aggressions on the commerce of

from 1800 to 1817, for which full compensation made; for though there had been an adjustment of Louisiana, the injuries since inflicted were an indemnity had been claimed. After very treaty was signed at Paris on the 14th of July, which France consented to pay 25 millions to the United States in six annual instalments of 4 millions and 66 centimes each, the first to expire on the expiration of one year next following the convention, and the others at successive intervals of one year after another, till the whole sum was paid. France also made reclamations on the United States. To settle the balance, it was agreed that the sum of 25 millions should be credited to the government of France in six equal annual instalments, to be paid by the instalments France had agreed to pay. This treaty was duly ratified, and the ratifications were duly exchanged at Washington, on the 2nd February, 1832.

The ratifications reached Paris prior to the 8th of February. The French Chambers, however, refused to vote the money for the indemnity. Never suspecting such a refusal, the government of the United States had negotiated a draft for the first instalment through the Bank of the United States. The government of France allowed to be protested. The Bank of the United States seized the dividends on the draft to cover the protested draft, also claiming interest and principal. Those dividends—or rather the drafts to liquidate them—constituted a portion of the current income on which the appropriations made by Congress were made. In this proceeding the bank had clear right, and its practice was sharp, and deemed by the public to be a withdrawal of the deposits. It served as a lesson to our enemies to declare that it sought to degrade the government by indulging in spitefulness; and the bank certainly have stood higher had it, in this matter, not provoked the provocation it had received. General Jackson, on the opportunity of expressing his indignation, said, "soon have been expected," he said, "that our government should have seized on the Customs, or the receivers of the duties on the monies arising from the sales of the lands under pretences of claims against the United States, and that the bank would have retained the dividends." He disputed their legal claim on the ground of its constitutional provision that "no money should be

drawn from the treasury but in consequence of an appropriation by law." In conformity with that rule it followed that the claim of the bank could only be discharged by an appropriation granted by act of Congress, for which the bank had never applied. In matter of form perhaps the President was right; but substantial justice was on the side of the bank.

Another circumstance must here be mentioned as illustrating the rancorous spirit of the disputants. By authority of Congress the bank was authorised to pay the pensions granted to the old surviving soldiers of the war of independence. The bank rendered that service gratuitously, and it was in a degree onerous. The annual sum received was considerable, and at the time when the collision took place the bank had 500,000 dollars of that specific appropriation in its treasury. This the government sought to remove from the custody of the bank, demanding all books and papers relating to the disbursement. The bank replied that it had been constituted depository in virtue of acts of Congress, and could not and would not surrender either cash or documents unless by the direct order of Congress. Here it clearly had law on its side. However, its adversaries denounced the directors for plundering the soldiers of their scanty means of subsistence; and the President, in an address to Congress indulged in similar declarations, as hypocritical as virulent. For who really prevented the veterans from receiving their pensions but the officers of the Government, who refused to draw cheques on the bank, which would have been honoured immediately on presentation.

When General Jackson removed the deposits, he affected to take the states banks under his special patronage, and to laud their conduct. In his message to Congress in December, 1834, he said, "The states banks are found to be adequate to the performance of all the services which were required of the Bank of the United States, quite as promptly and with the same cheapness. They maintained themselves as well as charged all those duties, while the Bank of the United States was still powerful, and in the field as an open enemy; it is impossible to conceive that they will find greater difficulties in their operations when that enemy shall cease to exist. The institutions have shown themselves competent to purchase and furnish domestic exchange for the convenience of trade at reasonable rates; and not a doubt is entertained but that in the short period all the wants of the country, in bank accommodation and in exchange, will be supplied as promptly and cheaply as they have heretofore been by the Bank of the United States."

PLY-LAND PLOT.

'Change Alley, was, on the morning of
engaged in business when a stranger
ed the broker to sell £16,000 Scrip.
address, though of somewhat effeminate

manners for a man. Mr. Martin, however much he might be troubled with the young man's manners, was telling him that an introduction was necessary, when, opportunely enough, Mr. Lyons, a member of the Exchange, happened to come in, apparently by the most accidental. "Oh!" said the young man, "here is Mr. Lyons, who knows me well." Mr. Lyons owned the soft impeachment, and added that he was only sorry that the young man did not come to see him. Mr. Martin, being satisfied with this, sold £10,000 out of a stock of £16,000. But, strangely enough, the seller did not come for his money, and, more strange still, he had left no address. The next day the young man called at Mr. Martin's private house, and, doubtless, much annoyed that the whole of the stock had not been sold, went away till the whole sale could be completed. The young man who left Mr. Martin's house in secret vexation was, in fact, not the young man at all. *She* was the sister of Lyons, and the meeting at Mr. Martin's office, apparently accidental, had been arranged. The whole transaction was a conspiracy—a forgery. The buyer of the Scrip having some suspicion of the genuineness of the document, Mr. Martin's attention was called to it, and the forgery was discovered, and application to the Bank of England. Lyons was arrested, and confessed his guilt. The sister, who had assumed male attire at her brother's solicitation, it is believed did so in ignorance of the fraud which he was perpetrating.

HOW TO PAY OFF THE NATIONAL DEBT.

There have been few topics which have called forth more croakings than the national debt. An extraordinary volume appeared on this subject in 1798. It was a goodly quarto volume. There was an elaborate essay on the evils of the debt, masses of figures and piles of calculations, and terrible prophecies as to the national ruin that was impending. And what was the end of all this—what the moral of the long tale? That one day in every week for a long period every body in the United Kingdom should save the cost of his living provision. This amount, with compound interest, it was calculated would soon pay off the national debt. The writer, however, foresaw three little things: first, that it would be necessary that all the inhabitants of the United Kingdom should be made acquainted with the scheme; secondly, that they should all agree with it; thirdly, that they should all act upon it.

A NOVEL FRAUD.

his “Chronicles of the Stock Exchange,” relates a
e time of its perpetration, 1806, was as novel as it
Joseph Elkin Daniels was well known on the Stock

Exchange as a dealer in the funds. His frequent transactions combined with the trust which his character had achieved, gave him a confidence in his proceedings of which he proved utterly unworthy. The time was an important one. The continent was struggling under the iron yoke of Buonaparte ; Austria was making that struggle with her enemy which ended at Austerlitz ; ruin was plentiful, and the price of stock varied greatly, when Daniels went to the broker and desired him to buy Omnium on account. The price was high, but his request was complied with. Daniels continued to advance, and Daniels continued to buy. When the price increased from 10 to 13 premium. When Daniels had completed his orders to the amount of £30,000, he was anxious for his money, and applied for payment. Daniels, however, quieted him by saying he was so sure the price would rise, that his friends would lend him money on the security of the stock, and he should hold the entire amount. The statement seemed a fair one, and he was believed to be honest, and the broker handed him his draft on Omnium, for which Daniels gave him his draft on Smith, Jones, and Smith. The first part of the fraudulent scheme was complete. Daniels knew the cheque would not be presented until the end of the month, and that he was therefore free from danger for a few days. He immediately took the reversion to other brokers, representing it as an urgent necessity for money, sold it, and having been paid for the amount, immediately presented them to the bank. The drafts were drawn, and received the amount in cash. He then went to all whom he knew or would trust him, borrowed money on the security of his own cheque—a common practice on the Stock Exchange—with remarkable boldness ; remained in London until the end of the month, when he knew his own draft would be presented and refused. He left, laden alike with gold and a guilty conscience. The extent of the fraud was estimated at £50,000. Telegraphic notices were issued to the principal ports of the United Kingdom, and the Mayor dispatched officers in all directions ; the chief suspicion was expressed to various places on the chance of detaining him. Every exertion was made to bring him to justice. £2,700, which he had strangely left at his banker's, were attached ; £200 was offered for his apprehension ; his lodgings were examined, and the property was seized by the officers of justice. The search was to

was discovered in the Isle of Man. Here the Manx laws protected the culprit, the law required to apprehend him ; and, when the island was peopled with men like him, the attempt to arrest him in open day, took the form of a raid. The proceeds of the trial, when his departure was known the islanders, in violation of a right on which the safety of the island depended. Great excitement was caused by his arrest. After a careful legal consultation it was decided that he was not convicted of any criminal charge, and that he was entitled to the legal penalty of that fraud which was inflicted on the members of the Stock Exchange.

NEW PERUVIAN LOAN.

The new Five per Cent. Loan has made its appearance through the agency of Messrs. Thomson, Bonar, and Co. £10,000,000 stock, bearing interest at the rate of 5 per cent. from the 1st day of January, 1865, in London and Paris. Although the nominal amount required is only about £3,250,000, this is for the consolidation of the old debt, and for the conversion and extinction of the old debt of the country. The price of issue is at par, and as security for this loan, besides the assets of the Government pertaining to existing bonds, the Government has, in addition to all its revenues and revenues from the Chincha Islands and elsewhere, pledged the value of the capital sum and interest, and has, at all times, either in Great Britain and elsewhere, a sufficient supply to ensure the punctual redemption of this loan for a period of 20 years, on the payment of each successive dividend interest. The agents and actual consignees of the loan at Britain and its dependencies declare in writing that the stocks of guano now deposited in this country represent the present market value, guarantee the punctual redemption and the redemption fund to the 1st day of January, 1865. The details of the advertisement show that subscriptions can be received either in cash or by instalments, and are very clearly defined, including the existing debt. It appears that subscribers

may at all times pay up all undue cash instalments on account of the respective maturities, at the rate of 5 per annum, and receive the bonds. The payments in deposits, in cash or bonds, will be taken by Messrs. Roberts, Lubbock & Co., the Consolidated Bank, and the Agra and Masterman. The brokers are Messrs. Mullens, Marshall, and Daniell, Lewis H. Haslewood.

SUSPENSION OF MESSRS. ATTWOODS, SPOONER AND CO. BANK AT BIRMINGHAM.

At a late hour on the evening of Friday, the 10th March, it was rumoured in Birmingham that the old-established bank of Attwoods, Spooner and Co. of that town had stopped payment. The fact was announced in London on the Saturday morning. The consternation and dismay caused by the announcement in Birmingham were indescribable, as persons of every class deposited their money at Attwoods', and it was generally believed that at least three-fourths of the neighbouring population kept their accounts there. In a great number of cases the deposits were the hard-earned savings of the most humble. Many of the deposits, too, had remained in the bank for a generation. Ladies and others of the sex in lower ranks of life were a very numerous class of depositors. Trust moneys, belonging to different friendly benefit societies, were also deposited with the bank to very large amounts. The accounts of many manufacturers, and others of that class, were not so numerous as they were a few years ago, many having been transferred to joint-stock banks; but still there was a sufficient number of such accounts with the firm to do an immense amount of mischief, and to cause inconvenience which has been felt since the stoppage has been effected. Notwithstanding that the most prompt assistance has been afforded by the local joint-stock and other banks to mitigate the evil.

The surprise caused by this stoppage is, perhaps, even greater than it otherwise would have been in consequence of its being known that active negotiations were on foot for an amalgamation of the Birmingham Joint Stock Bank, and had so far proceeded satisfactorily that the shareholders of the latter institution had been called together and their sanction obtained to the amalgamation, the state of the deposits and accounts at Messrs. Attwoods' justifying the belief that the union of the two banks would be highly beneficial to the shareholders of the joint-stock company; but when the state of the bank came to be investigated it was discovered that the old bank was only hopelessly insolvent, but that it had been so for some time. Under these circumstances the negotiations were immediately called off, and at an adjourned meeting of the shareholders of the

which a report will be found in another page) the previous meeting, sanctioning the amalgamation, rescinded.

Messrs. Attwoods and Co. was established as far back as the father of the late Mr. Richard Spooner, M.P.; but the latter gentleman in November last, and of Mr. Att-wood previously, left Mr. Henry Marshall the sole proprietor of the firm, and that gentleman, the moment the nego- tial amalgamation were finally broken off, decided upon the termination of business the same day, and at the termination of business the same day were finally closed, and shortly afterwards the following resolution thereto :—

"Feelings of the deepest concern and distress we are compelled to circumstances over which we have no control, to suspend payment.

"ATTWOODS, SPOONER, MARSHALL, AND CO.
1865."

An evening a petition in bankruptcy was filed on behalf of the firm, with a rough statement of the financial position of the firm; it appears from the annexed report of a meeting of the creditors on the 16th, that it is intended, if possible, to settle the matter under private arrangement.

The suspension was announced, the subjoined circular was issued by Mr. Marshall :—

"Feelings of the deepest concern and distress we are compelled to suspend payment, and this at the present time, after several months of negotiation, we had confidently expected should obtain such assistance as would enable us to carry out our part in the preliminary agreement for the formation of the Birmingham Joint-Stock Bank. In this hope we have been disappointed. Sums of money to a large amount were advanced to the bank some years since by the family of the late Mr. Attwood; this circumstance it can be clearly shown, at the present time, that the failure is to be attributed. For the last ten years we have been made to redeem the loss thus occasioned; but we have not been partially accomplished. The assets of the bank are still very considerable, and there are real estates of considerable value belonging to the bank, and but slightly encumbered. We are suspending payment we shall be considered as taking the first step to ensure a just and equal distribution of our assets to our creditors."

From the report that Mr. Whateley, solicitor to the creditors, and Mr. Laundy, the accountant, presented an account of the balance-sheet, showing a probable dividend of about 10 per cent.

The committee appointed at the meeting of creditors on the 17th, when it was determined to notify publicly that the committee prepared to negotiate for the sale of the property and assets of the bank, tenders will be received from any persons who may be desirous of purchasing. It is rumoured that more than one of the persons in the town is prepared to tender. The matter is, however, so far from means free from difficulty, because a certain amount of delay is inevitable.

A meeting of the creditors of the bank was held in the Assembly-room on the 16th March. There was a very crowded meeting, in fact, many of those interested were unable to obtain admission to the Town Hall being otherwise engaged, it could not be had for them.

Mr. J. W. Whateley and Mr. W. S. Allen, the solicitors for the bank, entered the room, accompanied by Mr. Laundry, their accountants. At the same time there were present the managers of the principal banks in the town, many bank directors, and most of the principal creditors of the bank. Mr. C. F. Kemp (Kemp, Canan, Ford and Co., accountants, 10, Abchurch-lane) represented some of the London creditors.

The Mayor (Mr. Henry Wiggin) was called upon to preside. Mr. Worship, who was received with much applause, said,—"I am honoured to be invited to preside over this meeting, and although I have no personal interest in the very painful business that has called me here, still if it is the wish of my fellow-townsmen that I should occupy the chair, I shall feel very great pleasure in doing so. (Hear.) Had this been one of an ordinary kind, merely affecting business men, I should not have declined to come here to-day; but unfortunately, the event which has taken place really amounts to a great public calamity. (Hear.) This is a blow the severity of which can hardly be expressed, and which will be felt upon the industry of this town and the neighbouring district of Wolverhampton like a withering blight. (Hear, hear.) The working classes are sufferers by it. The creditors include not only business men, but a vast number of other persons who are not nearly so able to protect their own interests; and I have learned with deep regret that many of the societies and other institutions connected with the working classes are heavy losers by this failure. Considering these circumstances, and the influence which such a disaster must indirectly exert upon the lives of persons who are not directly concerned, I believe I am only doing my duty, holding the office I do, by complying with the request that I should take the chair at this meeting, and I shall be exceedingly pleased if the little assistance I can render in this way should prove to be of any service to the painful circumstances in which so many of the persons concerned are unfortunately placed. (Hear, hear.) Before I sit down to the duties of the office, well, perhaps, were I to explain the order of business. (Hear.) I have been called together by the solicitors acting on behalf of Messrs. Attwoods, and they will, I understand, lay before you a full statement of the liabilities of the bank, and an estimate of the assets of the bank to meet those liabilities. When that has been done, I shall be glad to receive from any creditors any suggestions they may wish to offer as to the mode of dealing with the estate. It is, I believe, competent for the committee to decide, or, at all events, it is competent for the creditors to decide."

ate shall go through the Bankruptcy Court, or be wound
 arrangement. On this point it is not for me to express an
 a matter entirely for your own consideration. But I,
 e allowed to say, speaking from some experience as a busi-
 f I were directly concerned, I should prefer any reasonable
 ement rather than the Bankruptcy Court. Some of us,
 know that estates which look promising at the beginning
 y much reduced in their passage through bankruptcy, but
 long time in being wound up, and, in a case like this, in-
 ds of persons, it appears to me that everything depends
 de in realising the assets, and dividing them among the
 ight take that liberty, I should say that you would do
 an agreement as early as possible as to the manner in
 shall be dealt with; and if you can see any way in which the
 an be quickly and inexpensively divided, I think you will do
 it. It has been rumoured—and no doubt most of you
 hat offers will be made to take the management of the
 elieve the creditors of all further trouble and anxiety by
 uthout delay, a composition on the amount of the debts due
 r, hear.) If those offers should be made on what you con-
 ly liberal scale, then I must honestly say that I believe
 ell worth your most serious consideration. I merely throw
 on, without the least desire to dictate to you, or even to
 on you as an adviser. Before sitting down I cannot refrain
 anking the banks of the town, both public and private, for
 admirable manner in which they stepped forward to give
 odation to the creditors of Messrs. Spooner and Attwoods,
 ng so they greatly mitigated the severity of the blow, and
 ght otherwise have been a much more serious disaster.”

ateley, as solicitor to Attwoods and Co., in responding to
 ayor, said he must in the first instance crave their indul-
 rse of the observations he should have to make, because
 in most sincerely) he never felt more anxiety or more dis-
 he sufferers, than he did at the present moment. It had
 to be asked to make that statement because Mr. Marshall,
 ring partner of the firm of Messrs. Attwoods, Spooner,
 Co., was really so beaten down by the misfortune which had
 that it was totally impossible he could make any state-
 before them that day. He was confined to his own house,
 receiving every attention. He (Mr. Whateley) was com-
 in the strongest terms to express the great sympathy
 felt at the calamity that had fallen upon them, and he
 could assure them that nobody deplored the calamity more
 . Marshall did. (Hear, hear.) He thought the best thing
 he short statement he proposed to make was to show them
 state of the bank, and the arrangements at the time the
 ve come to an end commenced. The partnership of
 rshalls with Spooner and Attwoods began on the 1st of
 and was brought about in consequence of Mr. Richard
 it his duty very strongly to remonstrate—ay, to insist
 e Attwood putting things in a better state than they were.
 close investigation of the accounts of Mr. Attwood was
 was found the position in which he was placed. He suc-

ceeded his father, Mr. Matthias Attwood, who died on the November, 1836, and who by his will left George Attwood a legatee and devisee of all his estates, which were very considerable and very valuable. Mr. George Attwood at that time was on, as most manufacturers were aware, several concerns of considerable extent. There was a colliery at Haughan, rolling mills in Birmingham, a tube manufactory in Birmingham, also tube works in France, Rouen. Mr. Attwood had for some time been feeding these concerns with money from the bank. This, it was determined, should be stopped as far as possible that was done; but it was found that Mr. Attwood was very large, and as his health was breaking up, Mr. Spooner determined that he should make over the estates he held, in part liquidate the debt owing to the bank. He (Mr. Whateley) was sorry to see him in part liquidation only. He was there to tell them everything, and to conceal nothing, and he pledged himself to the accuracy of every statement he made. At the latter end of 1853 it was found that Mr. Attwood's debt amounted to £450,000. He was unable to pay that off; accordingly an arrangement was made that the bank should take the estates in valuation, and that the amount of the valuation should be applied in reduction of the debt. The estates were taken at £167,000, which was applied as he had stated. Those estates were now in possession of the bank, and they would be sold under the bankruptcy, unless, as he hoped, the anticipations of the Mayor might be realised—that he separated a resolution was passed to wind up the estate by private arrangement. (Hear.) That would be the best, and indeed the only way of getting a proper realisation. (Applause.) He had said that Mr. George Attwood became residuary legatee under his father's will; in that instrument his father, Matthias Attwood, made a declaration of his wish that his children should not be losers by any sums of money drawn out of the estates in London or Birmingham by his sons, and he directed that such sums should be paid off out of his private estate by his executor, Mr. George Attwood. That was done, and the transaction increased the debt now owing to the bank by Mr. George Attwood's estate. What the value of Mr. George Attwood's property was he was not in a position to say, for he had not examined the accounts, nor, he believed, anybody else. (Hear.) After the transaction to which he had referred, there remained a sum of £250,000 owing to George Attwood to the bank; that was in the month of March, 1854, when the bank took care to get hold of every acre of land belonging to George Attwood, also of all his stock; in fact, of everything he was possessed of, was stripped, in restitution, as far as possible, of the debt which he owed. He was made to give up all the share of the profits of the bank, and was to be allowed £1,500 a year. This took place early in 1854, when George Attwood lived only a week or ten days after the estate was vested in the bank. That being the state of affairs, the two Mr. Marshall were invited to join in the bank because of their knowledge, business habits, and long connection with the concern, in order that if possible, in conjunction with Mr. Spooner, they might bring matters straight. Messrs. Marshall took the modest sum of £750 a year each, Mr. Spooner £1,000; all the surplus went to reduce the debt. Mr. Marshall had been, as he had said, in the habit for years of drawing from the bank whatever sums of money he wanted for the purpose of carrying on his trades in which he was engaged. That was one way in which the debt had been created; another mode by which it was increased was the purchases of the tradesmen who had had engagements with those firms, but the firm

to close every one of those concerns, and to stop any more of the bank for carrying them on. From that time, all obtained from the different estates and other sources was liquidation of the debt. Mr. Laundry had prepared a statement, which he would read. He (Mr. Whateley) could not but have been to do the best for the creditors, and in which had taken place the conduct of the Joint-Stock was unexceptionable. (Applause.) The accountant, then read the following approximate statement, March 10:—

LIABILITIES.

Interest and interest	£718,973 19 0
Current accounts, £271,136; deduct bills held for	
advanced on, £50,090	221,136 0 0
on	19,370 0 0
to be paid in full	1,000 0 0
Total	£960,479 19 0

ASSETS.

£1,123. 12s. 2d.; balance at Barclay's, the	
land, and due from country bankers,	£76,388 3 10
in hand, £106,588. 4s. 4d.; less bills held	
advanced on, estimated £50,000 ...	56,588 4 4
considered good	234,825 0 0
considered doubtful, estimated to produce	46,069 11 1
companies	4,293 10 0
hold properties, valued at £218,248; deduct	
... ..	200,248 0 0
Total	£618,412 9 3

us shown was £342,000; the estimates and figures had, shown as near the mark as possible, and the rough figures, under both heads, showed 12s. in the pound.

in reference to the foregoing statement, said he was quite of his personal knowledge of the accounts, from having been as to them during the recent negotiation, the to them by Mr. Laundry was perfectly correct. The consideration was in what way the affairs of the bank should be should take the liberty of asking the Mayor as a friend of all, and had been a true one in the matter of this and have the kindness to move the resolution.

ented, and moved the following:—

opinion of this meeting the affairs of the bank ought to be under control of the Court of Bankruptcy, and to be wound up in arrangement; and that, accordingly, a committee be now certain and consider the position of the bank, with the view of the earliest possible distribution of the assets among the such committee have power to negotiate with any parties

who may be willing to provide funds for an immediate dividend, purchasers of the assets of the bank or otherwise; also, to select and amend suitable assignees, upon whom ultimately will devolve the management of the estate in any mode that may be determined upon, and to an adjourned meeting of the creditors, to be held this day week, the committee to consist of the Mayor, Mr. Jeremiah Mathews, Mr. Dixon, Mr. George Turner, Mr. John Gough, Mr. P. W. Bennett and John Hughes."

The Rev. Dr. Miller, in seconding the resolution, spoke of the manner in which the working-classes had behaved under the influence of this calamity, though they were very great sufferers. There could be no better guarantee that this estate would be wound up as well as possible for it to be than that their beloved and honoured friend Welshman Whateley was concerned in it. (Great applause.) Looking at the magnitude of the interests at stake, he rejoiced to see their friend present on that occasion; it was a guarantee that nothing of a hand or dishonourable would take place. (Applause.) Dr. Miller paid a tribute of respect to the memory of the late Mr. Spooner, who would, he felt sure, come out unsullied from the investigation and take place; and as for the two sons of that gentleman, he had no doubt for stating that they had not received one sixpence from their estate. (Hear.)

Mr. John Suckling supported the resolution, but declared that in his opinion, it was a grievous mistake that the bank had not been wound up years ago, when there was a deficiency discovered of nearly £100,000. He also complained of moneys having been received up to the time that though a petition in bankruptcy was filed by Mr. Marshall at five o'clock. Mr. Suckling suggested the addition of two other members to the committee—viz., Mr. J. R. Allen and Mr. John Shackel.

This was assented to, and the name of Dr. Miller having been added, the resolution was carried unanimously.

The Mayor next moved the following resolution:—

"That to secure the appointment of fit persons as trustees the Mayor recommends creditors to prove their debts, and to give powers of attorney to vote upon the trusteeship under such arrangements as the committee may sanction and announce by public advertisement."

Mr. Alderman Turner seconded the resolution, which was also carried.

Mr. Michael Maher asked the chairman what interpretation he put on the word "negotiate" in the resolution, and what power the committee conferred upon the committee. (Hear, hear.)

The Mayor said the committee would report any proposal that they thought fit to make, such proposal to be sanctioned or rejected at the next adjourned meeting of creditors.

Mr. Whateley moved a vote of thanks to the Mayor for his patience, and kindness displayed by him in presiding. In doing so, Whateley said he was quite sure they would never repent the unanimous resolution they had passed in reference to this important business.

The vote was carried by acclamation.

[On the 23rd March the adjourned meeting was held, the Mayor in the chair, when Dr. Miller briefly stated the course the committee were pursuing, but it was impossible in one week to get through the work they had in hand, and therefore proposed a further adjournment to the 30th March, which was at once agreed to, and the proceedings terminated.]

Legal Miscellany.

EDS BANKING COMPANY, EX PARTE BARRETT.

ight before Vice-Chancellor Kindersley in the Court of
5th March.

he court on adjourned summonses from chambers, the
ether Mr. Barrett was properly placed on the list of con-
ect of 22 new shares in the company. The capital of the
red, consisted of £1,000,000 in 10,000 shares of £100
50 were taken, and the remainder were reserved. In
tors determined to issue the remaining 2,650 shares at
only £15 a share was paid on the original shares, the
ares was practically at £15 premium. The new shares
a the proportion of one new share to every five old shares,
had 55 old shares he was consequently entitled to take
e applied for 25, but only 22 were allotted to him, and
them. On the 19th of September following the bank
and in October an order was made for winding it up,
d since been placed on the list of contributories, not
is 55 original shares, but in respect of the 22 new shares
to take. He, however, disputed his liability in re-
shares, on the ground that he had been induced to take
representation. In February, 1864, the directors pub-
which they stated that the profit on the preceding year
Mr. Barrett alleged that he was induced to take the
cit belief that the statements in the report were true,
false, inasmuch as debts to the amount of upwards of
returned as good which ought to have been returned as
t was false in other respects. Another ground on which
as that the contract, if any, to take the shares was a
e the shares that were to be in force at that time, but
come into force on the 1st of October following, until
s not to participate in profit in respect of them, and
t to be liable for loss.

Mr. Kekewich appeared for the official liquidator; Mr.
ckens for Mr. Barrett.

llor said he saw nothing in the circumstances to induce
conclusion that the contract was not *in presenti*, but
r did he think, according to the cases cited, that there
representation to Mr. Barrett, as, if it were misrepresent-
resentation from the company to Mr. Barrett as a mem-
y. He was of opinion that Mr. Barrett was rightly
f contributories, but as it was a proper question to bring
e must have his costs out of the estate.

the course of the argument that the decision in this case
t of a great many other shareholders who had taken
ar circumstances.

Reports of Joint-Stock Banks.

BANK OF ENGLAND.

A GENERAL court of the Governor and Company of the Bank of England was held on the 16th March at the board-room, to consider the report of Mr. Henry Lancelot Holland, the deputy-governor, in the chair.

The Deputy-Governor, after expressing regret at the absence of the governor, who had recently sustained a very severe accident, rendered his attendance impossible, added that although he could not be present to hear the verification of what he had addressed to the court on the last occasion, yet he was with them in heart and feeling for the interest of the bank. (Hear, hear). He begged to acquaint the court that that of the half-yearly meetings appointed by the bye-laws for the declaration of the dividend. The net profits for the half-year, ending on the 28th of February, were £807,317. 13s. 2d., making the amount of the dividend for the day £3,830,084. 7s. 10d.; and after providing for a dividend at the rate of 5½ per cent., the rest would be £3,029,669. 7s. 10d. The directors therefore proposed, if the shareholders approved of it, for this half-year a dividend of 5½ per cent., payable on the 6th of April, without any deduction on account of income-tax. That was the question they had brought to the court of proprietors.

The report was unanimously adopted, and the court were informed that the dividend warrants would be ready to be delivered and paid on the 6th of April.

Mr. Clarke proposed a vote of thanks to the governor, deputy-governor, and the directors.

Mr. Poole complained that a loan had been made to the Spanish government by some of the directors of the Bank of England, and that it was generally believed in Spain the advance had been made by the Bank of England itself.

Mr. Alderman Salomons objected to vague charges of this kind, saying that being made without notice being given. He bore testimony to the admirable way in which the governor and court of directors had managed the affairs of the Bank during the last half-year. If the Bank of England were well managed, as it had been, they never could have a crisis. The great safety of the commercial and monetary interests was the proof of the good management of the governors and directors of the Bank, and the example they gave in a recent crisis was highly beneficial. (Hear, hear.)

Mr. J. Higham objected to individual directors of the Bank of England advancing loans to a defaulting government. Such a course was condemned by the majority of the monetary and commercial world, and the directors ought not to remain connected with the Bank.

The Deputy-Chairman had no hesitation in saying that the Bank of England had nothing to do with the loan referred to.

Thanks were then voted to the governor and the court of directors, and the business concluded.

THE ADELPHI BANK, LIMITED.

Yearly meeting of the shareholders of the Adelphi Bank held at the Clarendon Rooms, South John Street, 4th January, Mr. W. R. Camidge in the chair; a large number of shareholders being present.

Mr. Camidge—"Gentlemen, we have generally commenced by reading the report of the manager; that I presume you will discuss in the next place, the manager has generally read the reports of the manager. It has been suggested to me that, inasmuch as every shareholder has the report in his possession, it is unnecessary to go over it. That is, of course, left with you; if you think the manager will read it as hitherto."

Mr. Samuel Brown, of London, seconded by Mr. Camidge, that the following report and statement of accounts

The directors much satisfaction that they are able to present to you a balance-sheet which so clearly evinces the continued prosperity of the bank. The accompanying balance-sheet has undergone a strict examination by a committee of three members of the board; and they are fully satisfied that every asset now upon the books may be taken as good. A dividend has been declared for the year at the rate of 10 per cent. per annum (clear of income tax) to be payable on and after the 25th January. The dividends at £46,500, having been increased by £15,000, the £15,000 on the new shares, and £1,500 from the profits of the year, in addition to which (and after writing off all known bad debts) £717. 18s. 1d. has been carried forward in favour of the year. In consequence of the new issue of shares, the number of shareholders has been more than doubled, and the directors are fully alive to the extraordinary risks that may be incurred by the high rates which ruled in the money market, and the classes of the community; and they would not be intransigent in their transactions of a merely speculative nature, which they are more than likely to result in embarrassment, if not ultimate failure.

Statement of Accounts, from June 30th to December 31st, 1864.

The Chairman—"I think you will agree with me that, commercial crisis through which we have passed during the last the report is a very favourable one. In looking over it you that it presents an increase in nearly every particular. There crease in the subscribed capital, a large increase in the paid-up large increase in the reserve fund; and during the last six mon ber of shareholders in the bank has been more than doubled. I think these particulars are grounds for mutual gratulation gratulate the shareholders on such a result. I do not think it this time to go through the report item by item, because precious. I may say a word or two, however, as to the repor how it has been got up. There have been remarks made, some persons, that a balance-sheet like this should be audited —some auditor or auditors independently of the board. Now for all, to say, on behalf of myself and the directors, that t the slightest objection to an auditor or auditors being appoint as they are not afraid of the strictest investigation into the ac bank; but the appointment of an auditor, as you very well k with the shareholders, and not with the board of directors. directors have done what the articles of association compel ti fact; that is, to appoint a committee of themselves to inv accounts and examine the securities. That committee has bec as you are informed in the address annexed to this report, a done their duty, I can say, to the utmost. It is, however, fo holders to take action in reference to the auditing of the accoun be thought advisable at this meeting to appoint an auditor the directors will not offer the slightest objection to that cou said this much about the audit, I will tell you really what ha

to committees appointed instead of one, as stated here. One very pleasant name, "the bad debt committee." (Laughter.) A member of both these committees, and can speak with authority about what they have done. The committee called the bad debt over the whole of the accounts one by one, calling over for information from the officials of the bank, and, after having had to say about each account, the committee declared it to be good or bad; and I can say, having gone over myself, that where any account appeared to be bad, it was written off as bad, and has not been taken as an asset of the bank. There are accounts which are somewhat dubious as to the value of them, some of these have been written off, and I believe that what are on the books are really good accounts, subject (as to the ordinary risks of business; and, of course, when a man is stock in his own affairs, when he takes a lot of debts as to himself, he may well say that there may be risks, and that some of them, by him, may turn out to be bad. We have written off, and considered bad as bad; and I believe every account entered in the report, is a good account at this time. That is what the bad debt committee did. (Hear, hear.) As to the other committee, called the 'audit committee'—they have examined the securities of the bank as well as the accounts, and the advantage of being on the former committee, I was preferred to—Mr. Glover and Mr. Fisk—to go into the securities, and we did so. Every bill that has been discounted has passed through our fingers, and every security deposited has been examined and compared with the books, so that when looking at the totals in the balance-sheet, and looking at the books, and looking at the bills which had been passed, that they all agreed with the results you find. We also looked at some bills that were called 'past due'—some of these were written off as bad, and have been, and, therefore, have not been taken as good in the books. Having done this, I can speak with confidence about the bank, and am convinced that if we had a dozen auditors, however many might have been, they would not have made a stricter examination of these committees have made into the affairs of the bank. One has gone so far that I scarcely know what particular thing has been said, and especially by the new committee, in reference to our not being quoted in the list of the Stock Exchange. Some it has been thought that there was something in our constitution. That, however, I am glad to say, is not the reason of our not being quoted on the Stock Exchange, but reducing the amount of our shares from £100 to £20. I am daily engaged in completing that arrangement, a new rule of the Stock Exchange affecting all new companies. We were not aware that we did not know what the Stock Exchange were doing. This, that in all new companies the Committee of the Stock Exchange requires that 10 per cent. of the nominal capital shall be paid up, and one-half of the shares shall be subscribed for. Now, if we had the amount of our shares from £100 to £20, there would be no difficulty whatever, because we should have fulfilled the reference to the amount of capital, and more than fulfilled the reference to the number of shares. I do not affect to say

that it is not an advantage to be quoted on the Stock Exchange if I said so, I should most probably be contradicted by one of the London Stock Exchange whom I see present. (Applause.) I do not affect to say that it is not impossible to say that the loss we have apparently sustained by being quoted on the Stock Exchange is more than counterbalanced by the limiting of the liability of every shareholder from £100 to £50 (I please.) I will say, moreover, that, in some respects, it has been fortunate for us that we have not been in the Stock Exchange for the last six months, for the fluctuations in the price of the shares of the banks has been very great, and that of course has been more than has affected in some degree the interests of those banks whose shares have not depreciated in their premiums in anything like the degree that those of some of the banks have done that have been quoted in the Stock Exchange. The shares, at present, are selling at a fair premium, and I have no doubt, after this report gets out into the mercantile world, the shares will be worth still more than at present. (Applause.) Having ventured to make these few statements, I will say no longer than to say that this bank has been progressing satisfactorily during the last six months. In current accounts we have had to court to have, and we should be glad if the shareholders would recommend their friends to bank with us—the number of current accounts has increased during the last six months from 375 to 452, being an increase in current accounts of 77. (Applause.) Of course it is impossible to picture accurately the future of the bank, but we may, I think, look back on the history in the past as an earnest of the future, and I firmly believe, if its affairs continue to be faithfully administered, that it will be one of prosperity and continued progress. (Applause.) I beg to move the adoption of the report.

Mr. Anthony Fisk, deputy-chairman, seconded the motion.

Mr. Samuel Brown said—"This is the first time I have had the opportunity of attending one of your meetings, and that it should be so, and full gives me great pleasure as it must do you. But having attended this meeting at some cost to myself, and having done so for the purpose, I do not think I should be doing my duty to the shareholders, even to yourself, if I were to let this report pass without some remarks. When this report reached me, I did not deem it to be a satisfactory one, and I have a few reasons for making that observation to you, and you have elaborated that remark in your speech to the shareholders, that the accompanying balance-sheet has undergone a thorough examination, and so on, and you have explained how the situation has taken place. Nevertheless I deem it my duty to say to you, holder, to ask the other shareholders if they do not think it desirable that independent auditors should be appointed to give the view of testing the figures of that balance-sheet. You have done very correctly before this meeting, that, with yourselves and the directors, the utmost care is taken that the results shall be fully depicted before they are stated to the shareholders; and with no fault, neither do I say, nor think, nor dream, that there is anything wrong. You vouch for it yourself, and the investigation made by yourselves, described it by yourselves, is of far greater value than an investigation by independent auditors; but I put this question to you, whether, to place us on a par with similar institutions, it is not desirable that we should after all this care which you have taken with respect to the

auditors independently of the Board? That is for the
 r. You have given your reasons why you think there
 this, and I will at once bow to their decision if the
 same opinion. All I say is, that it is not in accordance
 of similar institutions. I next come to what is far
 the figures themselves. You tell us that your reserve
 500; that it has been increased at this juncture by
 premiums on 5,000 shares at £3 per share; and that you
 o that large amount £1,500 of your earnings during
 ns, only carrying forward as the current balance for
 ings £700. Now, turning to the balance-sheet, I see
 dividend now due at 10 per cent. and the dividends un-
 500. I put your own figures together, and I find that
 spective of the £15,000 which has been naturally trans-
 ve fund as premium upon the shares issued, have been
 ou have adverted to the recent crisis, and I have no doubt
 mmercial world know that the crisis through which

 gard to the dividend of 10 per cent., it seems to me that
 interfere with that; because, according to our articles of
 shareholder can ask for a higher dividend than at the rate
 ou have chosen to give a dividend at that rate; but I
 r to make your own position more stable during the
 as, whether it would not be better that the shareholders
 this question, and hold over the £1,500 as a current
 ew to future advantage. There is only one other matter
 e to mention, though I do not want to do it at the cost of

There is a meeting now being held in London of a bank
 r own, the proprietors of which must have been wofully
 o have very much to call upon their directors to answer
 g is held to-day, and, while I do not wish to sit in con-

demation of those persons who may have done wrong, I ask holders here to be by all means guarded against such proceedings. (Hear, hear.) We have to thank you for the past. The past history of this banking institution is better known to you than perhaps to me. I have taken very considerable interest in its formation, and its progress with the greatest care; and I can vouch for the accuracy of the word that you have spoken. I say, then, keep on your guard as you have hitherto, and you will make yourselves a greater name than that of your kite and fall down. (Hear, hear.) Continue the same policy, and you will be a great success. (Cheers.) I say this because I feel that I must say something to undo what otherwise might be a reflection upon you. I do not want to reflect upon you; but I want you fairly to consider the suggestions I have made for your own benefit and the sake of your shareholders. I do not know whether it is correct for me to move any resolution on the subject.

The Chairman—We are very much obliged to Mr. Brown for any suggestions that he may make; and his coming all the way from London to attend this meeting evinces, I think, the interest he takes in the affairs of the bank. With regard to the first point he has mentioned with reference to the audit, I think I made our position sufficiently clear to you in what I stated about the auditors. If it is the will of the shareholders to appoint auditors for the future, it is in the hands of the shareholders, and the directors do not object to it. With reference to Mr. Brown's remarks as to the balance, it seems to me that he is almost mistaken in his distinction without a difference. The £2,200 has been divided into a reserve fund and the balance to be carried forward for the current year, but both the amounts, no matter whether it is the reserve fund or the balance carried forward, are available to meet any contingency. (Hear, hear.) This reminds me of a person being very particular in reference to the value of his cash-box, as to putting silver into one, gold in the other, and forgetting that all the chambers are equally available for the same purpose. (Laughter.) I imagine, too, that this amount, being placed to the credit of the fund, in reality puts us in a better position than if it stood in the hands of a balance carried forward. I think the managers and directors are no less careful, but perhaps more so, by having a small balance carried forward than if they had a large one. (Hear, hear.)

Mr. Fisk—I think that the amount added to the reserve fund is held decidedly more sacred.

The Chairman remarked, in further allusion to Mr. Brown's valuable suggestions from London very much, although all the suggestions from London were not very popular just now. (Hear, hear, and laughter.)

Mr. Brown said he had no wish to press the matter further, but thought the plan adopted in the accounts was the best.

The motion for the adoption of the report was then put and carried unanimously.

The Chairman—We now proceed, gentlemen, to elect four persons in place of those retiring.

The following were the names of candidates:—Mr. John Davidson; Mr. Joseph Hickey, boot and shoe maker; Mr. William Wright, wine and spirit merchant; Mr. William Pennington, cotton owner; Mr. William Litherland, china merchant; Mr. John Williams, cotton broker.

The voting papers were then collected, and Mr. Henry C. Brown and Mr. Samuel Brown appointed scrutineers.

retired to examine the papers, and in about half-an-hour the chairman announced the result as follows:—2,121 votes; W. Litherland, 2,118 votes; W. Pennington, 2,001 votes; J. Davies, 299 votes; J.

ms, Litherland, Pennington, and Wainwright, were then elected. (Cheers.)

—That will terminate the business of the meeting, gentlemen—nothing else remains to be said by any other shareholder. The large attendance which we see on this occasion I am sure will now be burned.

I think we have a duty to perform to the chairman in which the affairs of the bank have been brought

The large attendance which we see on this occasion I am sure will now be burned. I wish, sir, to express upon every shareholder the necessity of getting parties to the bank. (Hear, hear.) By that means we shall get not only a 10 per cent. dividend, but the same which other people enjoy. I beg to propose a vote of thanks to the chairman not only for his able conduct to-day, but also for the interest of the bank during the last year.

—It may be a liberty for me to take, but perchance you on future occasions, or at all events for some time, will therefore, to avail myself of the opportunity to second the motion. With no feeling but that which the hon. proprietor has expressed to me I make the remarks which I have offered to the mode in which our affairs have been conducted. I am sure of your immense interest in your success, and it gives me great pleasure that you should not only continue to devote your energies to the management of our affairs, but that you have been hitherto so successful that you will remain where you are, with equal and confidence. (Cheers.)

The manager, having put the resolution to the meeting, it was carried unanimously and with loud applause.

—Gentlemen, I feel very much obliged to you for the vote of thanks. I only feel that I have not done my duty in connection with this bank, and so long as I am in the position I do, I shall be unremitting in my attention to the future.

He then proposed a vote of thanks to the directors, remarking that they were not influenced by the small pecuniary remuneration of their duties were of a very onerous description. He then seconded the motion.

In putting the motion, said, I am glad that this proposition was carried, because I think it is due to my colleagues that they should have the thanks of the shareholders more than myself. I have now put the resolution.

It was carried unanimously,

and, on behalf of the directors, begged to express their thanks to the chairman in which their exertions had been acknowledged. He then said that he believed they had all assisted to the utmost of their power to carry out the business of the bank efficiently, and he trusted that the resolution which had that day been submitted and agreed to was

proof that they had not worked in vain. (Cheers.) On behalf and his co-directors, he begged to thank the meeting. (Hear, hear.)

Mr. J. B. Hughes—At the risk of being thought tedious, I would say that we are bound to pass a vote of thanks to our worthy manager in a very able manner in which he has conducted the affairs of the bank. (Loud applause.) I believe it is to him, and to his father and to him, that we owe the existence of this bank; and I think I am wrong in a meeting of shareholders if we were to pass over so important services as they have rendered. I therefore beg leave to propose a cordial vote of thanks to our manager for the way in which he has conducted our affairs.

Mr. Hill seconded the motion, and it was supported by Mr. Ellison.

The Chairman—No one can have a higher opinion of the manager than I have. I know how he has worked early and late for the interests of the bank. I know some bank managers who would not have devoted the time that he has done to the interests of this bank. I know times he has been at the bank until very near midnight during the last six months. (Hear, hear.) I may also say that he is assisted by very efficient officers, some of whom, I see, have wound their way into the room to have a look at the shareholders. Those who approve of the vote of thanks to the manager, please signify it.

The vote was then carried by acclamation.

Mr. Ellison, in reply, then said—I am much obliged to you, sir, for the expression of kindness and goodwill to which I have just given utterance with reference to myself. I take this expression of goodwill also, the staff with which I have been associated in carrying on the affairs of the bank up to this moment. I can assure the shareholders that there attendance here to-day in such numbers as being the greatest compliment that can be paid to myself and to the directors, and all immediately connected with the administration of the affairs of the bank. I hope that at our future meetings we shall have a similar interest and that the advice of Mr. Hughes to the shareholders, to bring their business to the bank, will be followed; and that we shall have many things to announce to you as each succeeding report is issued.

The meeting then separated.

BRITISH GUIANA BANK.

THE fifty-sixth half-yearly general meeting of the proprietors of the corporation was held at Georgetown, on the 26th January; Mr. Garnett in the chair.

The Chairman read the advertisement convening the meeting and giving notice of the retirement of five directors, whose places were to be filled by an election at this meeting:—"Pursuant to the provisions of the charter of incorporation, five directors of the bank, viz., Mr. Mackey, J. H. King, H. K. Davson, Alexander Garnett, and Wm. Ellison, go out of office by rotation at the ensuing general meeting of the bank on the 26th instant. These gentlemen are re-eligible. A list of the shareholders qualified to be elected directors can be seen at the bank, the branch in New Amsterdam."

The following report was then read:—

BIRMINGHAM BANKING COMPANY.

The annual general meeting was held at the Assembly Buildings, Birmingham, on the 15th February; Frederick one of the directors, in the chair.

Report was presented:—

The directors of the Birmingham Banking Company have the pleasure to present their thirty-fifth annual report, which they believe the shareholders will not but consider to be a satisfactory one, as they are again satisfied that the business returns of the bank have largely increased and the profits realised during the past twelve months very far in excess of any previous year. The net profits for the year ending the 30th June last, after writing off bad debts, allowing for the rebate of interest on not yet matured, and paying all current expenses, amounted to £1,702. 15s. 5d., which, with the balance of £1,702. 15s. 5d. brought forward from the previous year, makes an available total of £68,857. 2s. 10d. £20,000 were taken for the dividend and bonus paid in 1864 and £12,000 which your directors appropriated, on the liquidation of the Dudley bad-debt account, and you are requested to declare a dividend of 10s. and a bonus of 10s. per share on the 1st day of March, which will absorb £26,196, leaving a balance of £10,661. 2s. 10d. to the current year. It is expected that a largely increased amount will be required for the business during the current year, and having regard to the interests of investors, the directors feel sure that the proprietors will take a wiser course to carry forward a large amount than to realise the market value of the shares by paying an additional bonus. The result will then be as follows:—

Divided profits brought forward	£1,702	15	5
1864	67,154	7	5
	<hr/>		
	68,857	2	10
Balance Dudley branch on 30th June, £12,000; and bonus paid 1st September, £20,000; ditto on 1st March, 1865, £26,196	58,196	0	0
	<hr/>		
	£10,661	2	10
	<hr/>		

In consequence to the issue of new shares, your directors have to re-allocate of the 5,000 shares reserved for the proprietors were taken up, and that of the remaining 5,000 shares 1,894 have been previously placed, leaving 3,106 to be disposed of as occasion may require, authorised by the special meeting in June last. It is with pleasure that the directors announce the appointment of Mr. J. B. Hargreave as sub-manager at Birmingham, which they feel sure will be an advantage to the working of the concern; and they have to inform you that the branch at Wednesbury was opened on the 1st day of March, and the management of Mr. J. B. Hargreave, late cashier at the Birmingham Banking Company, they have reason to anticipate profitable results therefrom. It is a regret that the board announce the retirement, through age and failing health, of their esteemed colleague Joseph Joseph who was connected with the company from its commencement.

ment, and for the long period that he retained his seat at the board of its most zealous and useful members. The vacancy thus caused been filled up by the election of Ralph Heaton, Esq. The proprietors learn with satisfaction that Messrs. F. I. Welch, S. W. Lucas, J. B. Payn have been appointed a sub-committee, to attend at the bank and give the benefit of their valuable advice and assistance in the administration of its affairs. The number of shareholders on the register 643; the paid-up capital of the bank, £268,940; and the reserve fund £187,880."

In moving the adoption of the report, the Chairman said he viewed with great pleasure the increased business and profits of the bank; and considered it owing in a great measure to their judicious creation of shares in July last. The bank had not increased their capital for a quarter of a century, and having done so on the suggestion of their manager, the result had been most beneficial; it had brought them a large amount of business and new customers, and would continue to do still more, as, though the issue to the proprietary were all taken up by them, there was a considerable number of shares still retained to be used as they considered most conducive to the interest of the bank. The high rate of money, of course, had had much to do with their large profit, but the business was so materially increased over all other years by the personal exertions of the directors and manager to bring good accounts to their bank; and he said, if the shareholders, who were a large body, and the directors, who were a small one, would aid them in the same way, then their interests would be largely advanced, and a highly profitable future be in store for the bank, and he called on them to aid their own interests in these days of competition.

The resolution was seconded by H. Van Wart, Esq.

Mr. Broughall, of Wolverhampton, congratulated the directors and proprietors on the satisfactory result of the year's operations, and said much praise could not be given to the directors and managers. He hoped that, with so large a guarantee fund, a portion would have been capitalized, but he left the matter with great confidence in the hands of the board.

The second resolution, relating to the dividend, was moved by the chairman, and seconded by Mr. Lucas.

Mr. John Aston, in moving a vote of thanks to the directors, spoke of their good services rendered in a time of difficulty, and added, as a rider to his resolution, "That the sum of £2,000 be placed at the disposal of the directors for the future."

This was carried unanimously, after having been seconded by J. Woodhill, Esq.

Mr. James Watson, in moving "That the best thanks of this meeting be given to F. I. Welch, J. B. Payn, and S. W. Lucas, Esqrs., for their valuable services," spoke highly of the services rendered by those gentlemen, and in reverting to the fact of Mr. Gibbins's retirement from the board, stated that Mr. Gibbins's good wishes were with the bank, and he considered a most prosperous concern.

Mr. Payn, in responding as the junior member of the sub-committee, spoke of the necessity for such a committee in all large concerns, and especially in one where the manager, although of great ability and ample knowledge, was a young man. He detailed the result of a conversation he had had with Mr. Gibbins, in which that gentleman said that he intended to dispose of his interest in the bank, as his children were all infants.

o great was the public distrust, especially in London, that
onsiderable financial experience told me that the pressure
ng the month of October was more severe than at any
e crisis of 1857. I am quite sure of this, gentlemen, that
ndently managed, must prosper, and I see no reason why,
nding town like this, we should not present you with a
y report each succeeding year. (Applause.) Perhaps
s will allow me to state the satisfaction I personally feel
of a sub-manager has fallen on my excellent friend, Mr.

Shaw, and which, I am quite sure, will be of great advantage to the concern. Mr. Shaw's intimate knowledge of the whole of the accounts will enable him to keep a watchful eye on any accounts that may require examination and vigilance. In fact, the very day after his appointment I found him writing letters to some of our friends whose accounts required a little more putting into shape. A great deal has been said, gentlemen, with reference to the objectionable practice of bankers giving their acceptances for a commission, or, in other words, lending their names instead of their cash; the chairman of an important joint-stock bank in this town took so much credit to his bank for not adopting the system. I can also say that we do not do so, and have not a liability of a shilling on acceptance, and I say, on behalf of all the other banks here, that there is not one who would countenance such a pernicious system. I can easily understand that some banks must of necessity give their acceptances when drawn upon by their foreign correspondents; but that is a very different thing from the mode of raising the wind so much adopted during the past year. (Hear.) I am sure that if the banks in this town conduct themselves with the same honorable feeling that has characterised their business relations for so many years, and not bring banking to the level of huckstering—(hear)—that the great career of prosperity is in store for all of us, and that each succeeding year we shall show to our respective shareholders evidence of an increasing and prospective prosperity. (Much applause.)

A vote of thanks to the chairman of the day concluded the business of the meeting.

DEVON AND CORNWALL BANKING COMPANY.

The thirty-third annual meeting of this company was held at the B. Plymouth, on the 17th February; Joseph Collier Cookworthy, Esq., M.P., in the chair.

The following report was read:—

"The directors of the Devon and Cornwall Banking Company have much pleasure in meeting the shareholders on the return of the period appointed for making their annual report of the result of their transactions for the past year. The company at present consists of 317 shareholders holding 4,000 shares. The past year has been distinguished from several former years by a larger amount of profit than usual, arising chiefly from the high value of money. At the end of the first half-year the directors were enabled to add to the capital of the company the sum of £4,000 being at the rate of £1 per share, upon which sum it will be proposed to pay a dividend at the rate of $12\frac{1}{2}$ per cent. per annum shall be paid for the past half-year, in accordance with a resolution of the shareholders meeting held on the 12th day of February, 1858. The accumulating fund having reached the sum of £8,955. 11s. 1d., during the past half-year, the appropriation of profits at the close of the year, the sum of £3,000 will be further added, making an additional capital of £12,000 throughout the year, and which sum, at the rate of £3 per share, will hereafter participate in the usual annual dividend. The paid-up capital of the company therefore stand thus at the close of the year:—4,000 shares on which £12,000 per share has been paid, say £112,000; guarantee fund, £60,000; balance of accumulating fund for further appropriation, £955. 11s. 1d. The directors have visited and carefully examined the bank in all its branches.

The following resolution was passed :—" Resolved, that a dividend of £1. 12s. 6d. per share be paid to the proprietors, in addition to the dividend of £1. 11s. 3d. paid on the 1st of September last, being at the rate of 12½ per cent. per annum on the paid-up capital, as the proportion of the dividend to be divided, agreeably to the recommendation of the board of directors."

CONTINENTAL BANK CORPORATION.

THE third half-yearly ordinary meeting of shareholders was held on 27th February, at the London Tavern; Mr. W. W. Cargill, M.P., in the chair.

The following directors' report was taken as read :—

"The report and balance-sheet, which the directors now submit to the proprietors, for the half-year ending 31st December last, are not such as they would have wished to present on this occasion. Unlike the report for the first six months of 1864, which showed a most satisfactory result, the present accounts exhibit a considerable loss, by the failure of customers during the late commercial crisis. Under these circumstances, the directors deem it their duty to make the shareholders acquainted with the precise condition of affairs, to exhibit the whole loss incurred, and to lay their suggestions as to the best mode of dealing with it. After a careful examination of the accounts at the head office and branches, the total loss is found to amount to £19,500; and, after deducting therefrom the net balance of profits, £5,090. 1s. 6d., and the reserved fund, £1,000, the remaining deficiency is £13,409. 18s. 6d. This sum the directors recommend should be written off capital account. While regretting the result, the directors look forward with every hope to the future. A successful business has been obtained, the rate of current profits since the last year's accounts were closed has very much increased, and a profitable market has been opened up of extended connections of a most profitable nature. The amalgamation to which reference was made in the last report, having been carried out, it became necessary, for the requirements of the bank, to add to the paid-up capital by calls on the shares, viz.:—the original shares on 10th September, and £5 on 10th December on the new shares, £5 on 1st October, and £5 on 2nd January. These calls have been fairly met, and there still remains £10 to call on the new shares, to make them equal to the first issue. The directors are enabled to make a judicious purchase of a freehold site for a permanent office, in Clement's Lane, Lombard Street, and they have since commenced building suitable premises at a very moderate cost, which they will be ready for occupation in the course of the present year. The directors retire from office on this occasion, namely, Messrs. William Maxwell and Robert Alfred Routh, who, being eligible, offer themselves for re-election; and Messrs. Alexander Robertson and Edward Chalmers, the auditors, who retire in accordance with the articles of association, also intimated their readiness to offer themselves for re-appointment."

Balance-sheet, December 31st, 1864.

 nothing to say in extenuation, except that many other
 as young as themselves had been equally unfortunate, and
 establishments better able to bear them had experienced
 g to their greater means and stronger position, without
 ng their dividends. The position in which the Continental
 placed during the past six months was peculiar. Their busi-
 d to foreign transactions, carried on sometimes on their own
 netimes on joint account with correspondents in different
 The amount of money employed under the head of "current
 nts," was £147,989, and of "bills payable and domiciled,"
 the other side were bills receivable, £88,835, and current ac-
 l. Now, a very large amount of these items on both sides were
 hat was, entries made to show transactions which were not
 usactions. (A shareholder asked for explanation.) One

illustration would answer for the whole. Take the case of a bill. When the correspondent abroad wrote that he had domiciled a bill at the Continental Bank, it was placed to the debit of the bank. It was not an absolute liability, but a possible liability, and the bank had to put it down to the party on the one side, and to "bills done" on the other. Now, the difficulty which they, in common with other institutions, experienced in carrying on business with foreign correspondents, was this, that when anything occurred which shortened credit in London, it shook individual credit, correspondents abroad were very chary in their operations. Correspondence and drawings were limited, and transactions were carried on with banks such as theirs on the terms the market would allow. The consequence was that, in periods of extraordinary pressure, very few bills from correspondents were sent to London, and such bills as were sent had to be done at a rate which rather injured the position of the bank with the correspondents. The exposure of the case of the Messrs. Gladstone, a member of whose firm was for many years a member of the Continental Bank board, gave rise to an impression that the bank was so mixed up with that firm that serious losses would result from the connection; and this operated doubly to their prejudice, by injuring their credit on the one hand, and preventing business coming in on the other. During the months of September, October, November, and part of December, it was only by the personal exertions of the directors that they were enabled to stem the torrent. Last year an amalgamation with another bank was thought of, but the negotiations went on for some time, and the board was not unanimous in favour of it, and there was no doubt a great regret that it had not been carried out. But that was a reason which had been obliged to make a call at a time which must have injured the position of the bank. He was happy, however, to find that the shareholders had liberally responded to that call, thus evincing confidence in the concern and in the direction, and that notwithstanding the evil reports that were in circulation, their bankers—the London and County, and Messrs. Barclays—stood by them, and were their best friends. (Hear, hear.) He was happy to say that the operations of the bank in November and December had been upon a largely extended scale, and that foreign correspondences had been re-opened, and the profitable business they were now doing justified the directors in believing that a bright future was before them. In reply to letters received from shareholders offering various suggestions, he begged to say that if such suggestions for amalgamating with other banks were made, they would be considered and submitted to the shareholders; but it was not for him to go to other institutions and solicit them to take them over. In answer to a letter which complained of the purchase of a new set of offices of the bank, he added that the site acquired in Clements Street would afford them an opportunity of obtaining suitable offices at a lower rate than they could rent them, or if they did not choose to do so, the ground might be resold at a handsome profit. After some further remarks, he moved the adoption of the report.

A Shareholder—Do you expect that there will be any return on the estates of the defaulting debtors, reducing the amount of the losses?

The Chairman—Since we made up the accounts we have received communication from one of the branches, stating that the amount of the loss down in their case was excessive, and that some arrangements had been made which would reduce it from 25 to 30 per cent.

questions in reference to the loss sustained through Mr. other subjects,

replied that they had no direct transactions, he was happy Mr. Gladstone, the bills they held with that person's name of bills remitted from abroad, having upon them, as they called, excellent names in addition. One of the parties had a partner who had not, seemed inclined to litigate his liability on which amounted to half of the total loss the bank had sustained, against this they took possession of the shares which bore Mr. Gladstone's name. The calls in arrear were not large. The last was on the last call upon the old shares, which was only made up. The arrear on the second issue was only £2,285. The retirement of Mr. Wade (about which a question had arisen in whom a more valuable colleague he had never sat beside; and the only reason why he resigned was that he found the work too much for him. Mr. Maxwell, so far as he knew, intended to continue to give them his very efficient assistance. Mr. Wade had also retired from the direction, had rarely attended the meetings of the board, and had become disqualified.

On adopting the report was seconded by Mr. Maxwell, and unanimously.

The retiring directors were re-elected.

On returning thanks, intimated that as many shareholders of the Provincial had joined this concern in consequence of his name being on the direction, he should always consider it his best to promote the interests of the Continental. He mentioned the elements of success, and that a very different representation was presented at the meeting in July next.

Mr. Wade was also re-elected, and 20 guineas a year awarded to them for their services.

Mr. Wade seconded the motion, explained that he had retired from the direction with regret, but he had done so only because having much to attend to he found his duties as a director of the Continental were telling seriously upon his health.

A resolution was next passed, authorising the directors to reduce the value of the shares, the foreign correspondents urging that it was too high that £100 a share was too high an amount.

A resolution was then made special, and a resolution was proposed and carried for the board to extend the capital from £1,000,000 to £2,000,000 in order to enable them, if the offer should be made, to effect a union with some other banking company. It was stated that the kind was at present under consideration, and that the bank would certainly not be issued below par.

Thanks to the chairman and directors concluded the proceedings.

OTTOMAN FINANCIAL ASSOCIATION, LIMITED.

A general meeting of the members of this association, which was convened for the 15th, but was then adjourned in consequence of the illness of the chairman.

quence of the delay in the receipt of the accounts, was held on February, at the London Tavern; Mr. G. P. Kitson in the chair.

The Secretary (Mr. J. W. Lambert Smith) having read the minutes of the meeting, read the following report:—

"The directors have the pleasure to submit to the shareholders the balance-sheet and statement of accounts, duly audited, to the 31st December, 1864. The business of the association commenced in London on the 1st June. The Smyrna branch was opened in August, and the Constantinople branch in September. The directors propose that the financial year shall terminate on the 30th June in each year. They will furnish, for the information of the shareholders, accounts and balance-sheet to the 31st December last, and they recommend that a dividend of 10s. per share be paid, that £2,000 be put to reserve, leaving a balance of £6,833. 1s. 6d. to be carried forward. They feel that, notwithstanding the recent critical state of commerce and the opposition of competitive establishments, they have good reason to congratulate the shareholders upon the success which has been achieved by the association, and they have the fullest confidence in the future prosperity. Mr. Mavrogordato, director-general of the Constantinople administration, has arrived in England to represent the shareholders of Constantinople at the general meeting, to confer with the London board as to the organization of new branches and as to Turkey, and to devise measures for the future extension of the Association. The auditors appointed by the board, pursuant to the articles, Messrs. James Cooper (of the firm of Messrs. Johnstone, Cooper, W. Evans) and Mr. Edwin H. Galsworthy. These gentlemen are being eligible, offer themselves for re-election."

Balance-sheet, 31st December, 1864.

 a great deal of dissatisfaction should have been
 of the board, because he had been made aware of
 had been taken to excite distrust and anxiety
 olders, but the board really courted publicity
 had been said that they had behaved with great
 the capital in various channels, such as loans to
 s to contractors and others, as if there had been
 the directors to ruin the concern. Those were
 ld be substantiated, but as they were really very
 ue nothing but senseless clamour. They had
 the most respectable and responsible persons—
 red, and one which would prove highly remun-
 the last meeting that they were prohibited from
 the company anywhere than in the Ottoman

empire; but the articles of association really gave the business elsewhere, and finding that there were difficulties establishing branches in Turkey, which difficulties were not to the shareholders, they did not consider as men of business ought to let the shareholders' money lie idle if they could remunerative business in England pending the completion in Turkey. Those branches being now completed, the opinion that they ought to confine their operations to Turkey. Their capital at present was small, and their business was would absorb the whole of their means; therefore it was of the board, except in very special cases, to divert the purposes for which it was originally subscribed. (Cheers a very unpleasant duty to perform, namely, to comment on a member of the board, which he could only stigmatise and as having no parallel in the annals of public commerce where a director for his own private purposes has attended the association with which he was connected. ("Heard no," and interruption.)

Mr. Farley (the director referred to) rose in much excitement that he could not allow the chairman to make statements of character and honour without giving him the flattest contradiction.

The Chairman repeated that he knew of no parallel to a director had endeavoured to destroy the credit and reputation of the association, and to damage the property of the shareholders. ("No, no," "Yes, yes," cheers and counter cheers.) He was using strong language because Mr. Farley had in a pamphlet him and just published calumniated and defamed his colleagues, although he had signed a declaration of secrecy, he had violated the private correspondence of the association. (Gentlemen.) Any gentleman who could be guilty of such conduct did not sit at that board, and while he did, the scandal would stick to him and prevent them from being an association which could do anything. He concluded by moving the adoption of the report.

Mr. Holroyd seconded the motion. He thought it due to his colleagues to make a few remarks upon a circular addressed to the shareholders, but not to all. The pamphlet Mr. Farley displayed the basest ingratitude, as well as the grossest injustice, in which he had revealed the financial transactions of gentlemen who do business with the association, in a manner calculated to ruin them and cries of "No, no.") There was no man in the room who could justify the betrayal of the secrets of others who came to the association relying on their honour, for the purpose of entering into business transactions. (Cheers.) What people would do business with an association where private affairs were to be the subjects of public discussion, it was to be questioned in print, and that print circulated in every country? It would be the destruction of any financial system. He regarded the business the directors had done, they had given no attention to it; they were very large shareholders, and did the work he would sit at the board, having the large stake in the company, had, if such transactions were to be entered into as Mr. Farley had led them to believe had been? He considered the pamphlet a calumnious attack. (Cheers, and cries of "No, no," confusion and uproar.) He hoped the shareholders would support him and that Mr. Farley would be expelled from the directors' renewed uproar.)

etted to see discord reigning among the members minded them that a house divided against itself had looked through the articles of association, and do business elsewhere, and they had the word of the business they had done had been profitable, and that now the branches in Turkey were complete fine their operations to Turkish finance. (Hear,

ed the strong expressions that had been used by Holroyd. d that it would be more satisfactory if some of the rley's pamphlet were answered, and that as Mr. ctor-general of the Constantinopolitan administra- many of his letters had been published, he might s own part, he concurred in the opinion of those dered that the operation of this agreement ought to ottoman finance; and he must express his astonish- lluded to were opened according to the pamphlet,

at the time when letter after letter was being written by Mr. Mavrogordato asking for capital to be employed in Turkey. He urged that they were satisfied with the statements of Mr. Mavrogordato, the explanation of the chairman, to continue to repose confidence in him.

Mr. Farley asserted that every word of the letter he had written was true. He was not the only one who had protested against the executive committee; for his colleague, Mr. Neill, had also done so. He repeated that the branch at Smyrna was organised before the action of which he complained took place. The branch at Smyrna was based on a capital of £25,000, £10,000 of which was sent in the remainder was to be sent the following mail, but it was not yet locked up in the Continental Bank. (Hear, hear.) He proceeded to Constantinople to organise the branch there. The organisation was completed by the 5th of July. He telegraphed the fact on the 10th of July on the day after the credit was given to the Gellivara Company. (Hear, hear, cheers, and confusion)—and on the 13th of August, the £50,000 was given to the International Contract Company, and it was his duty to tell them that though that credit was due on the 1st of August, the acceptances remained unpaid. (Great uproar in the hall, in which the chairman rose and accused the hon. director of perjury.)

Mr. Farley could only tell them that Mr. Neill placed his protest in the books of the board. (Confusion.)

Mr. Holroyd—This comes of Mr. Farley's violating his declaration of secrecy.

Mr. Farley denied it entirely, and said that if his declaration of secrecy was to prevent him referring to such improper practices as that of the trustee for the shareholders—it was neither more nor less than a compact. He appealed to Mr. Neill.

Mr. Neill stated that he had disagreed with the majority of the board in reference to giving that particular credit, and had placed a protest in the books, but he did not think that, because he was out-voted, he was in violation of the declaration of secrecy. He thought with other shareholders that business ought to be confined as much as possible to Ottoman affairs. He believed the transaction in question a perfectly safe one, guaranteed by a very powerful company, and they had a commission before the bills reached maturity, to the effect that the arrangement was not quite mature for the railway concession for which the credit was given, and that the Austrian minister wished to hold the securities over for some time in the position they stood, without presenting the bills. It was their board that they would not be prejudiced, but have the same securities, and there was no ground whatever for insinuating that the acceptances were held over for their convenience. They were simply at the instance of the Austrian minister, because the commission was not yet been made.

The Chairman added that not a single shilling of the capital of the company had been locked up or diverted. True, they had given a commission, but it was a simple security lodged with the Austrian minister as a guarantee for a concession which had been signed by the Emperor, but it had not yet passed the Reichsrath. The acceptances were not a negotiable security, but a guarantee in the portfolio of the Austrian minister.

Mr. Mavrogordato then addressed the meeting in French, his speech being translated by Mr. Sarell. He expressed his astonishment that his private letters should have been published by Mr. Farley.

part, and spoke of the extracts printed in the arguments. He stated that Mr. Farley, being the one with whom he was acquainted, he naturally on being appointed director-general of the Constantinian Association. He pointed out to Mr. Farley that a very great difficulty was in establishing itself in Turkey, and that it was to maintain their influence, to enlarge their capital by the issue of shares in Turkey. The issue of those shares under unfavourable circumstances, at a time when the market in London. He was under the impression that they had done something to improve them, but notwithstanding the issue of the shares was on the point of being commenced, when a great depression took place, the shares were going on favourable went down 4 per cent., and 6 per cent. discount. He wrote to Mr. Farley and he received a statement that altogether presented a very different picture, that he felt bound to take care of the interests of the shareholders, whom the Constantinopolitan board had incurred responsibility. He regretted that as Mr. Farley had stated in his letters as to preserve and publish them, he had published the statement he made in his letter of the 10th of June, stating that the member of a board who revealed the secret of a society, deserved the greatest blame. (Cheers.) He had then addressed the subject at Constantinople, and his colleagues in London, and to inquire into the real cause of the depression received by the board most fraternally, the board had given to his inquiries, and he had thoroughly ascertained the state of danger in which he believed the company to be. (Cheers.) He was obliged, therefore, to state the evil, and he found it in the disunited state of the company in the carrying out of the business, he found it was to have a competent manager, well acquainted with the business of the Levant, and that, to remedy the evils occasioned by the disunion, it was necessary that the board should take place, it was necessary that the board should take place. In conclusion, he observed that it would be for the benefit of the society to divulge the arrangements now being made, £6,000 alluded to by Mr. Farley in his pamphlet, he was convinced that no loss, or at most a very trifling loss, would be the result of that transaction. (Cheers.)

The auditors of the company, next addressed the assembly at great length, in which he stated that the very best of the company in respect to the business they had conducted, and that the board were negotiating for such an amount of capital that it was probable that their shares would be in a position in a few months. He pointed out the necessity of raising the £4,000 which the articles of association required them to take, they had only taken £1,000. He stated that it was in contemplation at this moment to appoint a committee of managers to manage their affairs, and he had no doubt that the shareholders reposed a proper confidence in the directors, and that they would exhibit a very different state of things.

The resolution was unanimously adopted. He then enquired of Mr. Farley whether he intended to

resign, but he replied that he declined to go into that question and it was not pressed.

A dividend of 10s. per share, free of income-tax, was declared.
The auditors, Mr. James Cooper (of the firm of John Wintle and Evans) and Mr. E. H. Galsworthy, were severally

On the motion of Mr. Beyfus, seconded by Mr. Sarell, a resolution was passed to the chairman, who acknowledged the company's meeting separated after two hours' angry and acrimonious

LONDON, BIRMINGHAM, AND SOUTH STAFFORDSHIRE BANK.

THE third ordinary meeting of the shareholders of this company was held at the head office, 110, Cheapside, on the 28th of February 1864, and was occupied by Mr. John Bethell.

The following report and accounts were read by Mr. John Bethell, secretary:—

"In submitting their third half-yearly report to the shareholders, the directors regret that they are unable to declare a dividend, on account of the long and heavy pressure on the money market, during the close of the past year, although entailing comparative loss, having indirectly tended to the lessening of the profits of the company, as be seen on reference to the annexed accounts. The balance sheet has been examined with the utmost care by your auditors, who are professional accountants of known repute, shows that on the half-year amount to £13,146. 13s. 4d., which, added to the £4,206. 10s. 7d. brought forward from the last audit, makes a total of £17,353. 3s. 11d.; but, after payment of all expenses, wages, and making the most ample allowance for all doubtful debts, there is an actual deficit of £4,874. 10s. 8d. Although it is believed that the business of the bank is still profitable and increasing one during the current half-year, and that the business of the bank is still entertaining the same views as expressed at the last meeting, and having regard to the present most unjust position of the shares of the bank on the market, have concluded a provisional agreement for the transfer of the bank to the European Bank, Limited, on terms which they recommend to be advantageous to the shareholders, and which will be submitted to the shareholders at the extraordinary general meeting convened for this purpose. If the shareholders agree to this arrangement, it will be necessary to carry out this arrangement, it will be necessary to liquidate the bank voluntarily, and a resolution to this effect was passed at the said extraordinary meeting."

Balance-sheet, 31st December, 1864.

LIABILITIES.

Capital paid up on 5,000 shares at £22 each, £110,000; in advance of calls, £237; on 3,524 new shares, £10,572; less calls in arrears, £246—£10,326
Amount due on customers' balances, deposits, &c., £158,401. 14s. 8d.; liabilities on acceptances of the bank, £48,262. 5s. 7d.

an—There is one point I wish to draw your attention to, of saving time and obtaining regularity in our proceedings. ally, two meetings here to-day: the first is the ordinary shareholders of this company, and the second is an extra- ing, called for the purpose of considering whether it is not to amalgamate this bank with the European Bank, ink the meeting will excuse me for suggesting it; but it desirable that at this, which is only an ordinary meeting, old confine their observations merely to the matters of the ss, and let us postpone the question as to whether it is er into this amalgamation, till the extraordinary meeting. Well, gentlemen, in moving the resolution which I have ely, that the report of the directors, together with the f the company to the 31st of December, 1864, be received come before you with feelings of very deep regret that the cumstances of the last six months of 1864, which occasioned not only to this bank, but to other banks, have placed us on that, instead of being able to pay a dividend, we have to

But, gentlemen, I find, on looking at the accounts of other ave been published since Christmas, that our losses are great as some of them. I find that in the Metropolitan Bank they were £63,000, and these losses not only absorbed profits, but also £40,000 more out of the reserve fund. In ank they were £241,000, which absorbed all their profits, bout £61,900 out of the reserve fund. In the Mercantile and t the losses swallowed up all the profits, and £32,000 more. that our loss has left a deficit of £4,800 odd, and it is in that that the directors have considered the question of and have received various overtures from different quarters; ment and provisional agreement have been entered into, and

will be submitted to you at the extraordinary meeting which after this. As all the questions relative to that amalgamation reserved for this extraordinary meeting, I do not know anything further to add, except to say that I shall be happy to give an explanation upon any item which any shareholder may require.

Mr. Friedlander complained that the losses were really appeared by the balance-sheet, and said he considered the management of the bank had been very bad throughout. He could not understand how the directors could take their fees in the state the bank was in, and said that his own opinion was that the amalgamation was a waste of time and money, and that the bank was better than winding up. (No, no.) He should certainly like to see the directors had taken for fees.

The Chairman—During the past six months we have had no fees, nor had we anything during the first period of the amalgamation. During the first six months of 1864 we received £10,000, which is all we have ever had for our services. (Hear.)

Mr. Catterall said there was commission put down for the amalgamation, and he would ask the chairman to tell the shareholders exactly how much had been spent in the issue of these shares, and who placed them in the market.

The Chairman said he had no objection to tell the shareholders the transaction which had taken place. The great difficulty in the amalgamation had been its small capital, which rendered it almost impossible to make a profit which would cover the expenses, and also to increase the capital. The directors, therefore, thought it advisable to increase the capital as they could. There were 782 old shares which had not been taken up, and the directors also wished to issue some new shares. A gentleman offered to take the whole of the 782 old shares, and also to secure the bank should pay on 2,000 new shares, on condition that he should pay a brokerage of £2 per share. In olden times that brokerage had been thought a very high one, but in the present time it was not so. In such cases, been far exceeded. However, the result was that he had taken up the old shares, upon which he paid £17,204, and 2,000 new shares, which the directors disposed of 1,500 more, although the amount at which they were taken up upon these new shares amounted to only £10,326, the full value of the shares had been made. The premium received on the selling of the old shares was £3,573, and that formed part of the sum of £4,200 and odd which was due from last account. The result of these transactions was that the bank had to pay commission upon the shares taken up of £5,500, and received by premium £3,573; or, to take it in another form, the bank had paid for a subscribed capital of £94,431. With respect to the market, that was a thing the directors had always strenuously maintained, nor would they, under any circumstances, have lent themselves to any proceeding. (Hear, hear.)

The Rev. Mr. Middlemist said that whilst he regretted the result of the last meeting boldly stated the position of the bank, still he was referring to that subject now, and he recommended the shareholders to do the best thing they could do now, to adopt the report. He thought that if not all, of the directors had done their work to the best advantage, and certainly he should not be one to deny them fair remuneration. He would second the resolution for the adoption of the report of the directors, and the shareholders would, at the extraordinary meeting, endeavour to carry out the amalgamation. (Hear, hear.)

Mr. J. King spoke to the same effect, and recommended the

proposal for amalgamation, believing that was the best way of their present difficulties.

on for the adoption of the report was then put and carried. on of Mr. Rawlins, seconded by Mr. J. King, the retiring John Bethell and Mr. J. O. Mason, were re-elected.

on of Mr. Marsden, seconded by Mr. Catterall, the auditors, mp (of London), and Mr. E. Laundry (Birmingham), were

r. Middlemist said as this concluded the business of the ng, he should wish, before proceeding to the next business, ial vote of thanks to the manager, secretary, and other ank. (Hear, hear.) He himself had always received the y from all, and he had always found the manager cautious s; and he certainly thought they ought not to separate y those gentlemen a vote of thanks. (Cheers.)

ump seconded the motion, and said that as auditor he could mony to the excellent manner in which the officers had r duties.

n was carried unanimously.

was then made special for the purpose of considering and ovisional agreement entered into between this company and Bank, Limited, for the transfer to the latter company of this company, and for the purpose of passing a special resoinding-up of this company.

n, in introducing the subject, said that for the past two or the directors had experienced considerable difficulty in business, owing to the smallness of the capital. They very dered the subject, and as they did not see any great prosug the capital they thought it would be desirable to amalme other bank. Negotiations had been entered into with and after fully considering the subject the directors conamalgamation which they now recommended was the best of the shareholders. The agreement had been sealed and European Bank, and it only required the consent of that e it binding on both parties.

at with respect to the amalgamation was then read by the principal point was that the European Bank was to allot lers in this bank 5,440 shares of the capital of the Euroon which £15 had been credited as paid. It was also £6,000 should be left in the hands of the directors of the gham, and South Staffordshire Bank, in order to enable nsate the officers.

e shareholders objected to this £6,000 being so appropriated, an explained that some of the officers had been engaged for certain, and of course a fair compensation must be paid

der thought the best plan would be to wind up the affairs d not amalgamate. (Loud cries of "No, no.") He believed would not cost so much by 50 per cent. as the amalgama-

) sion ensued, of which we can merely give a summary.

Middlemist asked who would take the premises?

r replied that of course the liquidators would take the

Mr. Higgins suggested that two shareholders should be appointed as joint liquidators with Mr. Kemp.

Mr. Erskine expressed his opinion that it was illegal to reduce the shares. He did not see how they could convert, say £800 into

The Solicitor said that what the directors proposed to do was legal. This was not a conversion of shares—that would be to issue eight shares upon which £3 had been paid were put together, and the European Bank gave the shareholders of this bank £15 for each share. He also stated that as the meeting was for a special object no other business could be proposed; the resolution must either be carried as proposed or rejected.

Mr. Schlesinger could not see that the shareholders would benefit from the amalgamation, and agreed with Mr. Friedland that the shareholders would be better off if the company was wound up.

Mr. Kemp said that as he had had something to do with the management, perhaps he might be permitted to say a few words. (He rose.) When it was found that in consequence of the smallness of the operations of the bank had been restricted, efforts had been made about an amalgamation, but these had failed from the enormous expense of getting over little points. It was comparatively easy to lay down a broad principle of agreement, but when the details came to be considered they would be found excessively difficult to arrange. He himself was auditor in both banks, and possessing the confidence of both banks had been the means of arranging the terms of this proposal, and he thought it was the fairest which could be drawn up under the circumstances. Different clauses were most carefully considered and weighed.

A Shareholder—I will ask whether, if the assets of the bank are only £14 per share, have you any hesitation in pledging yourself that there is no risk to the Birmingham shareholders, or will they have to else to pay to the European Bank?

Mr. Kemp said there was no risk whatever, except the possibility of having to provide a small sum for his own remuneration. No other amount was not found quite sufficient. In joining the European Bank the shareholders must bear in mind that they were joining a bank which was in a good position—which had not only a large and a large subscribed capital, but also a reserve fund of between £20,000 and £30,000; and he would put it to any shareholder whether he thought that they should go in and participate in these advantages with some equivalent. By joining the European Bank the shareholders retained shares upon which they could realise at once. If the bank was wound up, as suggested by one or two shareholders, not only would there be a great expense, but all chance would be destroyed of retrieving their property, whereas in joining another successful bank the shareholders reasonably hope to see their property again become valuable. With reference to what had been suggested by a shareholder—namely, that two responsible persons should be selected to assist him in the liquidation, he had no objection whatever to such a course being adopted. He concluded by remarking that if the arrangement was carried out he believed the shareholders would have great reason hereafter to commend themselves upon the results which would ensue from the amalgamation. (Cheers.)

The Rev. Mr. Middlemist and Mr. John King also expressed their opinion that the best course for the meeting to adopt would be to carry the agreement.

then moved "That the provisional agreement which had been made with the European Bank be confirmed," which was carried, and upon being put to the meeting the resolution

—There is another resolution which is necessary for the completion of this transaction, and I will therefore move, "That the agreement with the European Bank, the London Birmingham and South Staffordshire Bank be confirmed, and that Mr. Charles F. Kemp is hereby appointed to be paid such proper professional charges as he is entitled to."

was carried by Mr. Rawlins, and carried unanimously. A discussion then ensued as to the desirability of appointing two assistants with Mr. Kemp; and eventually, at the request of the committee, Mr. Kemp selected two of the shareholders—Mr. Adams and the Rev. Mr. Smith—to assist. At the same time it was explained that Mr. Kemp was the sole responsible legal liquidator.

The resolution was then passed to the chairman, and the proceedings

ESTATES BANK.

At the second ordinary general meeting of the proprietors of the Estates Bank, Limited, was held on the 1st March, at the Free-Trade Hall, London, Thomas Hattersley, Esq., the chairman of the bank, presided.

There was a very crowded attendance. Mr. Horner, the general manager and secretary, read the following report:—

"The year has been one of severe financial stringency; nevertheless, we have much pleasure in recording that the whole of the capital of the bank, £100,000, was subscribed in a few months. In the resolutions adopted at two special meetings, the capital having been £500,000, a second issue of £100,000, and part of a third of £100,000 have been applied for. There are now upwards of 2,000 shareholders. It will be seen that although the bank is in its infancy, it has already received £2,318. 12s. 6d. on deposit, debenture, and current accounts. At the meeting of the directors, the consulting actuary, W. S. B. Woolley, Esq., made a careful valuation of the long-period mortgages of the bank, and he certifies the amount thereof at £43,707. The advances amount to £1,405. 14s. 5d., and have been made on the security of all securities. This department has only recently come into operation, and the gratifying fact that, whilst shares generally have been falling, the bank has received £1,389. 5s. 11d. in premiums, &c., shows that the public are not slow to appreciate its progress. The progress of the bank in Ireland has been of a remarkable character, such as to convince the board that the sister country affords a large field for operations. The business of the year shows (after payment on deposit, debenture, and current accounts) a balance to credit of £7,614. 13s. 11d., which the directors have appropriated in payment of current expenses, £20 per cent. on preliminary expenses, £15 per cent. of amount paid for Alliance Assurance Society, and a dividend at the rate of £7. 10s. per cent. per annum (after income-tax) on the paid-up capital, leaving £2,000 of pro-

fits to be placed to a reserve fund, and £78. 1s. 6d. to current account."

The Chairman moved the adoption of the report and dividend it must not be forgotten that, while they were a bank, they were a limited sense, but they were a building company on an extensive scale. As a building company they embraced all the practical and efficient features of a building society without its risks, and they differed from a building society in two important particulars. The first was, that they did not discount bills, and the second was, that they did not allow their customers to overdraw their accounts. So that while they did not discount bills, neither had they the profit arising from this of banking business, nor did they realise the large amount of profit on overdrawn accounts. The steady progress that was made in the first issue of 10,000 shares was very encouraging to the directors, and the rapidity with which the second issue was sold was truly amazing. The standing the premium that was placed upon them, and they had but the sale of the third 10,000, which was now in the course of issue, would be equally gratifying. There was another department of the business equally cheering, viz., the amount of current accounts, deposits, and debentures, making a total of over £32,000, whilst the paid-up capital was under £21,000. In this respect the business had only just begun to show matters of this kind it was useful to inquire how they stood in comparison with their neighbours. There was a bank of great respectability in London which had £260,000 on deposit and current accounts, and it had six branches, being an average of £10,000 for each branch. The Bank had £32,000 in hand, on deposit, debenture, and current accounts, which gave £16,000 for each of their offices, and was equal to higher than the other bank referred to. After showing that even in the case of a run the bank had nothing whatever to fear, the chairman proceeded to say on various paragraphs of the report. He proceeded to say in reference to the debit side, you will see that after the whole of the expenses have been paid, the interest on deposits and debentures there is a balance to profit and loss account of £7,614. 13s. 6d. Your directors intend to dispose of in the following manner:— preliminary expenses, £2,936. 12s. 5d.; to £20 per cent. of preliminary expenses, £1,500; to £15 per cent. of amount paid for Alliance Building Society, £500; to profits reserved, £2,000; to dividend at £7. 10s. 6d. £600; to balance to next account, £78. 1s. 6d. Through the sale of shares in the present year, at a premium, say of 10s. a share, a sum will be realised, which the directors hope will enable them to pay the remainder of the preliminary expenses in the next twelve months, which will then leave the profits on the business for this year to be appropriated to dividend and current expenses. We hope to be able to do this out during the present year; but in order to do it effectually the directors will require the hearty support of all the proprietors and tenants to take up shares and connect themselves with the bank. I have great pleasure in moving the adoption of the report." (Loud applause.)

Mr. Job Cauldwell, F.R.S.L., deputy-chairman, seconded the adoption of the report, and said that he felt sure that the whole of the proprietors would regard the progress of the bank with satisfaction.

The resolution having been carried, the Chairman stated that the dividend would be payable in London and Dublin to all shareholders in arrear of calls on and after the 14th of March.

an moved the re-election of Job Cauldwell, Esq., Hubert
 , and Geo. Henry Money, Esq., to seats on the board.
 having been put from the chair, was carried unanimously.
 an proposed the re-election of the auditors, Walter
 , and W. Wellen Smith, Esq., which was seconded by Wm.

EUROPEAN BANK.

inary general meeting of the shareholders of this bank was
 n March at the London Tavern; Mr. C. B. Colchester in

y having read the notice convening the meeting, the follow-
 taken as read :—

ors congratulate the shareholders on the prosperous condi-
 property, the European Bank having passed successfully
 e financial crisis. The directors regret that, owing to the
 d varied nature of the accounts, they have found it quite
 withstanding their utmost exertions, to prepare an exact
 e accounts in time for the present meeting. But they are
 le to add that the gross profits of the bank since the last
 £60,000. After deducting from that sum the current
 e on bills, making a full allowance for bad and doubtful
 ing off the proportion of preliminary expenses in accordance
 es of association, a net profit remains of more than £30,000.
 recommend that a dividend of 7s. 6d. per share be declared,
 te of 7 per cent. per annum on the mean capital, which will
 t. 17s. 6d.; out of the remainder the directors propose to

carry £10,000 to the reserve fund, and the balance to profit account. The directors have to report satisfactory progress of the bank. The various branches are gaining the support of the mercantile communities of the Continent, and have yielded profitable results, with the exception of that at Paris, which have been in the administration of that branch, and with a view to its improvement are under consideration. An arrangement has been entered into for the transfer of the London, Birmingham, and South Staffordshire Bank, and the directors consider advantageous terms, and further negoti- progress which will tend to strengthen the position and business of the bank. The directors do not contemplate the opening of new branches; their attention will be mainly directed to the improvement of those at present established. The rapid increase of the business at the head office has rendered an extension of the premises necessary. The directors have, therefore, the pleasure of informing the shareholders that they have secured on very reasonable terms the lease of the premises now in part occupied by the bank. The retiring directors, Mr. Phelps, Phillips, Wehner, and Schimmelpenninck, who are retiring by election; the first three offer themselves accordingly. Mr. Harding, of Bank Buildings, and Mr. Edward Hamilton, of Change Alley, who are duly qualified shareholders, have given notice that they intend to offer themselves as candidates for seats at the next meeting.

The Chairman, in moving the adoption of the report, observed that the last six months were months of trial, anxiety, and depression, rarely been known in this country, and that depression had manifested itself with great severity upon the mercantile community, but more especially upon young banks and monetary establishments. Indeed, precisely the institutions which had suffered most from the depression of credit for at least three, or perhaps four, months had been affected in England, France, Spain, Italy, and Holland. In every difficulty had combined to discourage and almost destroy banking and financial undertakings, but notwithstanding all this, and the various rumours which were set afloat upon all sides, to the credit of young banks, this institution had managed to pass the period of trial with perhaps the smallest loss of any establishment of the kind in London. (Cheers.) Under the circumstances it was not possible to avoid making some losses, but there was not on the part of the directors looked with anything like fear. They were confident that the losses must naturally have occurred in the regular course of business, and not caused by any operations of which the directors could be held responsible. He regretted that at the present meeting they were unable to present the detailed accounts of the half-year, which had been only received from their various correspondents, so that it was impossible to have all passed and audited in time for the present meeting. He was obliged to take the figures as it were in the rough, but at the same time those which had been given in the report might be relied upon with perfect confidence, and they would find that, taking them on the narrowest basis, a gross profit of £60,000 had been earned. (Cheers.) From items which reduced that gross profit to £30,000 consisted, in the first instance, of interest on deposits and loans, amounting to £6,000; bad debts in Paris, London, and the branches, amounting to £10,000; and the remaining £14,000 was made up of bills not yet due, the expenses of management, and 5

portion for the reduction of the preliminary expenses, and so. He thought that, inasmuch as they had no less than 100,000 shares, the shareholders would not consider those charges excessive. Some of the shareholders might think the directors too conservative in the proposal of a 7 per cent. dividend, and that a larger dividend might be very safely declared. That matter, however, was well considered. The directors had looked at the position of the bank, and they had found that those which held a high position in the estimation of the public, as proved by the large amount of deposit accounts, were precisely those which had set aside a large sum, and they had therefore come to the conclusion that until they had a fund of at least £50,000 they had no right to deal more liberally with the funds placed at their disposal. (Cheers.) He was sure that the directors who duly considered this matter would agree with the directors that it was of vital importance to new establishments of this kind to be too lavish in the division of its profits. (Cheers.) He had mentioned in the report to the somewhat unsatisfactory position of the bank. That branch certainly had not been so successful as it had made some profit. The bulk of their bad debts was not so large, but even after paying off all those bad debts there was still a balance to the good. It was intended to make some alterations in the management of that branch, and they confidently expected that at the next meeting they would have a much more satisfactory account to render of that branch. They also believe the arrangement which they had made with the directors of the London, Birmingham, and South Staffordshire Bank would increase the capital, but bring a considerable accession to the bank. The confined state of the premises had hitherto been a drawback to them, but he was happy to say that probably at the next meeting they would be in possession of premises which would enable them to transact with care and comfort the large additional business. The amalgamation with the South Staffordshire Bank would be a great advantage to the three gentlemen who retired from the direction of the bank, and they had offered themselves for re-election, and notice had been given of the retirement of two other qualified shareholders to offer themselves for election. The board considered it their duty to support gentlemen who, in their opinion, were well qualified to pilot the ship through the storm, and ought not now to be complaining that they were in comparatively smooth water. With respect to the directors who had offered themselves for that office, he could only say that there was really not any room for them, the board being at present composed of seven, if not too large. It had been already reduced from sixteen to fourteen, and they were at present engaged in some business, which, if they should be successful in carrying out (and he was confident they would), would necessitate the addition of two or three more on the board; and, if so, they would be most happy to have them. He would conclude by making the formal motion that the gentlemen now brought forward, or any others whom the shareholders thought would be able greatly to promote the interests of the bank. He would conclude by making the formal motion that the resolution be adopted, and a dividend of 7s. 6d. per share be declared, to be paid after the 15th March.

He then seconded the motion.

He then inquired whether the chairman could tell them when the accounts of the bank would be ready.

He then said that they would be placed in the hands of the directors in a fortnight or three weeks, and in reply to further questions that the addition now proposed, the reserve fund would amount

to £33,000. (Cheers.) Mr. Kemp, one of the auditors, had gone to audit the accounts, and those from other branches had been sent to the head office in London to be audited. In Holland they had a consultative council, which, among other duties, performed that of examining the Rotterdam and Amsterdam accounts before they were sent to be audited. The accounts have been all sent in, so that the results of the audit were not matters of guess, but were derived from figures. The reason they were not now in the hands of the shareholders was simply that the board had not as yet had time to put them into print.

A Shareholder inquired what proportion of the preliminary expenses remained unpaid; and what was the annual proportion of payment.

The Chairman stated in reply that the annual proportion of expenses fixed by the articles of association was 10 per cent., and that the amount remaining to be paid was £16,000.

The report was then unanimously adopted.

The Chairman next proposed the election of the three retiring directors.

Mr. Hodges objected to the proposition for the election of directors coming from the chair, and complained that the position of several gentlemen on the board was not so good for the interests of the company as that of some other gentlemen in the City, whose accession would add great strength to the company. He did not say a word against the present directors, but he thought that if, as the chairman had said, the board was too large already, they ought not to proceed to re-elect them.

The Chairman said that the directors placed themselves at the hands of the meeting; at the same time he thought he could not, on the present occasion, than propose from the chair the names of the gentlemen who had borne their fair share of trouble and anxiety, and who had contributed by their labours to establish the bank. He should therefore, propose their names from the chair, and at the same time leave it open to any shareholder to propose others.

Mr. Michell then proposed the name of Mr. R. T. Harding, seconded by Mr. Hodges, and loudly cheered by the meeting.

The Chairman then proceeded to put the question that the retiring directors be re-elected, when several of the shareholders excepted to the form in which the question was put, and a rapid discussion ensued as to the mode in which the election should take place, but eventually

Mr. Ferneux proposed as an amendment that upon the present occasion only one director be elected, which was carried unanimously.

The Chairman then put the names of the retiring directors separately. Mr. Harding seriatim, when the latter gentleman was elected by a large majority.

A special vote of thanks was then given to the retiring directors on the motion of the chairman, seconded by a director, a vote of thanks was given to Messrs. S. J. Jitta and Schroeder, the consultative directors of Holland, for the great services they had rendered to the company. A similar compliment was paid to Mr. Brightrooll, the manager, and to the chairman and directors, for their attention to the affairs of the company. The proceedings terminated.

MERCHANT BANKING COMPANY OF LONDON, LTD.

The second ordinary general meeting of the shareholders of this company was held on the 9th March at the London Tavern; Mr. J. Pater was in the chair.

report was read:—

In their first annual report, the directors congratulate the company on the favourable results of the operations of the company for the year ending December last. By the statement of accounts, made up to the 31st December, it is seen that the gross profits (including a sum of £10,000, the value of the company's premises over the cost thereof) amounted to £644. 7s. 3d., and that after the payment of current expenses of bills, and making provision for bad and doubtful debts, there remains an available balance of £44,556. 7s. 7d., which the directors intend to be appropriated as follows:—£4,666. 13s. 4d. to the dividend of 9s. 4d. per share paid to 30th June last; £10,000 to the purchase of £1 per share, being, together with the above interim dividend, a rate of about 12 per cent. per annum; £10,000 to the amalgamation account; £10,000 to reserve fund; £3,750 to the directors, for remuneration to directors and auditors, and payment of tax; £1,000 to the reduction of preliminary expenses; and the balance to be carried forward to new account. It is satisfactory to the directors to show that in the purchase of the premises from J. Johnston and Co., at £10,000, they have secured a very valuable property, for which they have since been offered the sum of £10,000 estimated profit thereon has been applied by them to the amalgamation account. As the steady progress of the Company indicates that an increase of capital can be beneficial, the directors have resolved upon the issue of 5,000 new shares, of which 1,800 shares will be appropriated to the late firm of J. Johnston and Co., in fulfilment of an agreement with them for the residue allotted at par to the present shareholders, in proportion to their existing interests. The directors regret much the death of M. de Castro, one of the original partners, Messrs. Crazer, Esq., John Paterson, Esq., and Edward Weston, Esq., in the direction at this meeting, but, being eligible for re-election, they have accepted of the office accordingly."

Current expenses, and provision for bad and doubtful debts ...
 Rebate on bills discounted and not yet due ...
 Amount (being increased value of premises) transferred to amalgamation account, £10,000; amount transferred to reserve fund, £10,000; amount transferred to preliminary expenses, 1,000; dividends, viz.:—Interim dividend on paid-up capital of £125,000, to 30th June last, £4,666 13s. 4d.; dividend of £1 per share, now recommended, £10,000—£14,666 13s. 4d.; amount carried to suspense account, for remuneration to directors, auditors, and for income-tax, £3,750; balance carried forward to new account, £5,139. 14s. 3d. ...

Cr.

Amount of profit brought down, viz.:—Gross profits, £54,644 7s. 3d.; increased value of premises, £10,000, ...

The Chairman, in moving the adoption of the report, expressed the results would be considered in all respects satisfactory. Since the meeting they had passed through ticklish and difficult times, when it was necessary to act with caution, and to curtail rather than to extend operations. They had in consequence felt compelled to decline many profitable business; and although they had not altogether eschewed for which full provision was made in the accounts—they were now to show a net profit at the rate of 30 per cent. on the average of the paid-up capital. At the previous meeting they had paid a dividend at the rate of 10 per cent.; and it would be recollected that the directors would not have made that interim dividend unless they had felt satisfied that they were making a profit at 10 per cent. It was gratifying to find that the performance in respect outran the expectation, and he was happy to add that other banking institutions had suffered in credit and character during the period of financial pressure, not the slightest breath of suspicion had been breathed against the Merchant Banking Company, whose position was as high as ever. (Hear, hear.) The directors had felt some anxiety as to the apportionment of the profits, but he thought they had reached the right conclusion in devoting £10,000 to a further dividend of 10s. (in addition to the 9s. 4d. per share paid in June last), being a dividend between 11 and 12 per cent.; carrying £10,000 to the reserve fund, so that the reserve £15,000; writing off, not one-tenth, as was usual, but nearly one-third of the preliminary expenses; placing the value of the premises in Cannon Street, purchased from Messrs. at the price they originally cost them, or less than half their present value, to the reduction of the amalgamation account; allotting, with the approbation of the shareholders, £3,750 to the suspense account for remuneration of the directors and auditors and payment of interest, and carrying forward to the credit of the new account £5,139. It might be supposed that where the profits were so large the apportionment would be proportionately great. But it was not so. The business of a bank consisted in affording facilities to merchants trading in all parts of the world, who, by applying to the bank, could receive a credit at

for any goods they might there purchase, thus avoiding the sending out gold, and the charge for freight, insurance, and interest. For this, of course, a commission was charged, and the bills of lading—a margin of 25 per cent. upon the full but very exceptional cases preserved, in order to secure the possibility of loss by depreciation of value. In addition of lading, the policy of insurance was also deposited with the bank to protect them in the event of the loss of the cargo by fire.

There was other business which came to them collaterally, such as operations, insurance, and brokerage, connected with these which produced a profit in the shape of commission. Likewise the bank in Manchester, sent out a large cargo of manufactured goods to any other port, the Merchant Banking Company took a lien upon the goods, allowing the merchant to draw at so many days' sight from the bank, which the consignment was likely to reach its destination, of which the bank's agents in all the great trading ports, they had the most complete information, as well as of the position and character of the consignment. The security, therefore, was of the best description, and really less risk than was associated with ordinary banking business. The deposits of the bank were increased at such a rate that the directors' capital might be safely and profitably employed, and it was explained in the report—proposed to issue 5,000 new shares which were, under the terms of the agreement, to be applied to the firm of Messrs. H. and J. Johnston and Co. in fulfilment of the agreement entered into with them, and the residue allotted at par to the present shareholders in approximate proportions to their existing interests, and expressing his readiness to afford any further information required.

The chairman, deputy chairman of the board, seconded the motion, and it was carried unanimously.

The dividend at the rate of 12 per cent. per annum, was then declared, and made in ten days, this being in addition to the interim dividend paid at the last meeting. £3,000 was voted to the suspension of remuneration to directors and auditors, as suggested in the report, the chairman explaining that this was equal to about £175 to each director. When it was considered that they had upon the board gentlemen who were well acquainted with trade and practically acquainted with the mercantile world, and the various parts of the world with which they had business, it was decided to give them their best attention to the operations of the bank, he thought it was too much.

The directors—Messrs. L. Fraser, J. Paterson, and E. Weston seconded, and votes of thanks to the chairman, board of directors, and the company for their services during the past year were carried.

A AND MASTERMAN'S BANK, LIMITED.

At the annual general meeting of the shareholders of this bank held at the London Tavern on the 11th March, Mr. George Gordon presided and occupied the chair.

The Chairman (Mr. Mackintosh Balfour) read the notice containing, and also the following report of the directors:—
In submitting to the proprietary the audited accounts

for the year ended 31st December last, beg to report that, after ample provision for bad and doubtful debts, the available £263,120. 8s. 6d. Out of this sum the directors have paid two dividends at the rate of 10 per cent. per annum each on the original capital of the bank, adding a bonus of £2 per share for the first six months per share for the second six months, thus making the total dividend for the year 20 per cent., free of income-tax, on the original capital of sterling. The directors have also paid a dividend at the rate of 10 per cent. per annum on the new capital of £500,000, adding a bonus of £2 per share, together equal to 20 per cent. per annum, free of income-tax, on the half-year just ended. The balance of £16,321. 11s. is carried to credit of profit and loss account for the current year. The directors have the pleasure to report that the amalgamation with the partnership of Messrs. Masterman, Peters, Mildred, & Co., has been successfully completed, and that the new capital authorised by the special resolution passed at the extraordinary general meetings of the company, on the 7th and 21st May last has been subscribed. Every arrangement necessary to the amalgamation has been made, and the Directors, after fulfilling all engagements into which they entered, have been able to maintain a reserved fund of the bank to £500,000, at which they propose to stand in future years. The sanction of the Board of Trade has been given to the present designation of the bank, and the directors have introduced a Bill in Parliament for an Act to enable the bank to divide their shares. At the last annual meeting the directors have opened a sub-branch of the bank at Melbourne. They have also arranged for the sale, on satisfaction of the premises, No. 27. Cannon Street, and of the building now occupied by the branch of the bank in Calcutta. The present auditors beg to report, in terms of the deed of settlement, offer themselves as auditors of the bank for the year ending 31st December 1864.

He said—"I rise to move the adoption of the report that has a copy of which has been in the hands of the proprietary but previously to doing so, I propose, as is usual on the present (when we have the pleasure of seeing so many shareholders assembled together), to enter into some matters referred to in the report, as well as to offer a few which I trust may prove interesting and acceptable to your administration of your affairs, which have been under our eye the past year. In the first place, I would remark that at the thirty-first annual general meeting of the Agra Bank, which has been held since it was amalgamated with another, under the present designation of the Agra and Masterman's Bank; that it cannot fail to be highly gratifying to you to be aware that the amalgamation has been completed in the most satisfactory manner. (hear.) There must be, as I dare say many of you are

aware, considerable difficulty, in bringing two large establishments together and into good working order, even where the accounts kept on the same principles; but in our case the difficulty increased, from the circumstance of the accounts of the two banks having been formerly conducted upon two different systems, which necessitated a fusion of time and of extraordinary labour on the part of our establishment. Some estimate may be formed of the value of extra labour that was thus imposed on our establishment, when you that it required for months the daily attendance of a large number of our staff many hours after the usual time of business before the difficulties were surmounted, and a correct and complete fusion of the accounts accomplished—a result most creditable to all concerned, and obtained in the midst of the late commercial crisis, which of itself was sufficient to tax the best energies of any banking or commercial establishment. It is now, therefore, a very pleasing part of my duty to express how much we owe to, and how highly the board of directors value the great ability, zeal, and perseverance displayed by our managers, and the combined staff under their supervision at a time of so much importance—(hear, hear)—and I feel very sure that you will be gratified to learn that the directors have recognised and appreciated the interests of the bank in a liberal and substantial manner. (hear.) Having made you acquainted with some of the difficulties to contend with in consequence of our amalgamation, I have the greater pleasure in referring to some of the advantages we have obtained and now enjoy. We have acquired a large increase to our business. (Hear, hear.) Secondly, we have become members of a clearing-house, a position which it was absolutely necessary for us to obtain to enable us to carry on our London business with ease and with satisfaction to ourselves and mercantile customers. (hear.) Thirdly, we have become the possessors of one of the most valuable freehold properties in the city of London. (Hear.) Fourthly, we have moreover the benefit of the advice and assistance of our new colleagues, the partners of the late firm of Messrs. J. & W. Peters, Mildred and Co., not only at our board, but daily in our board-room, which has greatly tended to keep their old and valuable connexion together, notwithstanding the numerous and various changes which have had recourse to in these days of hot banking competition (in the mildest phrase) to induce customers to take their accounts elsewhere. (hear.) You will, however, be glad to hear, managed to keep no less than we got, but we have gained an accession of valuable business, and our business continues to increase as it has done since the amalgamation. No reason why the Agra and Masterman's Bank should not, even in the oldest and greatest of its competitors in the field of public opinion. (Hear, hear.) Having now mentioned what may be considered as the practical results arising from the amalgamation, I must add that the liability incurred thereupon has been discharged, and the directors have been enabled to increase the reserve fund to £500,000 sterling, which, as stated in the report, they propose it shall stand. (Hear.) You will observe from the balance-sheet that we have taken the opportunity to classify our liabilities or engagements, so as to afford information to all, which the most eminent writers and authorities consider essential. We have given equally full particulars as to our assets. Amongst them you will see one, which I have no doubt will be of unusual annual inquiry from a shareholder (now present), and

anticipation. I allude to Government securities, which, the report, stand at £397,280. (Hear, hear.) This is largely the amount of the reserve fund, before the addition was made of the 1st January last purchases have been made which amount to £524,214. This I mention to show how keenly alive we are to the expediency of keeping at least the amount at reserve fund in Government securities. (Hear, hear.) The manner in which I would beg your attention, and upon which I think to congratulate our shareholders, is the manner in which we have been subscribed during a time when money has been dear, and when pressure has been so severe on all sides. The number of our shareholders was 725 last year, and the register is 908, a very satisfactory proof of the estimate of the bank is held by the public. You will appreciate this when I tell you that a majority of the new shareholders who are likely to benefit us as well as themselves by joining. (Hear, hear.) I shall now make a few observations on the bank during the past year, and, considering the difficulties alluded to, the large addition to our capital, and the restrictions which from the depressed state of trade it has to impose on business both at home and abroad, which has enabled us to pay dividends equal to 20 per cent on the whole capital of one million and a half sterling forward a handsome sum, cannot but be considered satisfactory. (Hear, hear.) Notwithstanding the restrictions I have in proof of them I may mention that our acceptances have been decreased by more than one million sterling) standing these restrictions, and all our caution and prudence, and station—nay, it would be untrue—if we attempted to disavow that we have suffered losses by the late failures, and heavier ere by any means pleasant; but it will be cheering to our knowledge that ample provision has been made out of the profits not only for all the bad, but also for the doubtful debts, thus positioning safe and comfortable, after the effects of a somewhat disastrous period in the commercial world. (Hear, hear.) I have learned from the public press that monetary difficulties in China, which from the very depressed state of trade we are met, and I have great pleasure in stating that at the present time we have no reason to anticipate any loss from our branches in (Hear, hear.) In Bombay there has been excessive speculation of credit, but latterly regular business appears to have been neglected, and public attention has been directed to reclamation of financial companies and new banks—a triad which was that the shares of all rose to a very high premium before they were reclaimed from the sea, or a single share allotted. I tell you that we have held entirely aloof from such business and quietly await results which a recent telegram leads us to expect not far distant. This state of things, as well as the uncertainty of cotton, led the directors some time since not only to limit business in Bombay, but to limit the shipments of gold for which purpose the sub-branch at Melbourne was established. I think I have now alluded to every point likely to be brought out should I have omitted anything, or failed in making my remarks clear on any of the subjects I have referred to, I shall

be happy to supply any deficiency that may be pointed out by my ability. I now beg to conclude by moving that the report and balance-sheet be received and adopted. (Hear, hear.)

Alderman Finnis (deputy-chairman) had great pleasure in the proposition. He felt that after the clear and lucid statement of the excellent chairman he (Alderman Finnis) need only refer to the fact and that was the very large increase of shareholders. He thought those would bring new customers to the bank, he thought they would say that next year, instead of a dividend of 20 per cent., they would receive 25 per cent. (Hear, hear.)

The resolution was put and carried unanimously.

Upon the proposition of Captain J. G. Johnston, seconded by Mr. Tulloh, the retiring directors (Major-General James Johnston, James Holland, Mr. G. Hay Donaldson, and Alderman Finnis) were unanimously re-elected.

Alderman Finnis, in acknowledging the vote, thanked the directors for their renewed mark of confidence, and assured them that the directors would do everything in their power to promote the interests of the bank. (Hear, hear.)

Upon the proposition of Colonel W. MacGeorge, seconded by Mr. Marshall, the retiring auditors (Mr. J. H. William Farr, D.C.L., F.R.S.) were unanimously re-elected.

Upon the proposition of General W. M. Ramsay, seconded by Mr. Fawcett, it was unanimously resolved that the thanks of the bank be given to the board of directors, to the general manager (Mr. John Balfour), to the London manager (Mr. W. Shipman), to the committee and managers of the branches, for their able management of the bank's affairs for the past year, and to the directors for their efficient supervision of the accounts.

The vote was appropriately acknowledged by Major Johnston. A vote of thanks to the chairman terminated the proceedings.

BANK OF AUSTRALASIA.

THE thirty-first annual general meeting of proprietors was held on the 13th March at the offices of the corporation in Threadneedle Street, London. Edward Hamilton in the chair.

The report and statement of accounts were as follows:—

“The directors have the pleasure of placing before the meeting the accompanying statements, showing the results of the operations of the bank for the financial year ending the 10th of October, 1864. It is to be observed that these results contrast favourably with those presented in the last year, considering that the business in New Zealand, where the new capital was employed, was of limited amount throughout the period to which the accounts refer, the directors hope that the statement will be accepted as highly satisfactory. The directors regret the retirement from the direction of two valued colleagues. Mr. [Name] has resigned his seat owing to long-continued illness, and Mr. [Name] in consequence of having accepted office under government. The directors will have to be filled up this day, in conformity with the provisions of the charter. The fourth series of new shares having been issued, the capital of the corporation is now augmented to £1,200,000, limited by the charter. The first instalment of £10 per

Digitized by Google

satisfaction to report that the charges in New Zealand had been by the profits, and that the out-turning of the year had not been affected by the temporary unproductiveness of a large portion of their capital. There was a difference between finding an old business new capital, and occupying new ground. In the one case the profit would be immediate, but in the other it must be the work of time, patience and severance. (Hear, hear.) It was probable that their progress in New Zealand would be gradual, but there were circumstances concerning their business in that colony which gave assurance that before long they would obtain a good and a safe position there. The resources of the colony were great, and the development of them by immigration and the introduction of capital promised an extensive and profitable sphere of operations. It was also to be remembered that they did not go to New Zealand as strangers, but that they carried with them a good and a high reputation, earned by the uniform career they had pursued for thirty years in the neighbouring settlements of Australia. The dividend for the year ending October, 1864, it would be seen, were £144,000, £126,650 for the year ending October, 1863, the difference being only a few pounds of £18,000, or equal to 2 per cent. upon the old capital of the bank, which was the only portion that could be said to have been in active employment, as during that time the proceeds of all the new capital, as they came in, had been immediately absorbed in the initiation of new business in New Zealand. The improvement in the business in Australia was highly satisfactory, and enabled the directors to declare a dividend of 16 per cent. upon the old capital next month, in October. This he thought was matter of encouragement for the future, and conclusive evidence that the increase of the capital was at a favourable moment, and not with the view of infusing life into a business which showed symptoms of exhaustion, but rather to carry on the business with energy which had characterised the old business into a new era of operations. Had the business in Australia been less favourable, the results than in former years there might have been some question of the prudence of increasing the capital, but in the fact of the enlarging and growing business of the old branches they had the best possible evidence of the wisdom of the course the directors had recommended, and, at the same time, the best possible guarantee of its probable success. (Hear, hear.) The improvement, however great, was not sufficient to enable the bank to meet the new claims which the additional capital had entailed upon the October dividend of this year, assuming it to be at the same rate as now declared, would be found to include the dividend paid on the instalment of the new capital in October last. The total amount of the instalments of the new capital would, by the end of the year, be £31,500, or equal to 3½ per cent. on the old capital, whereas the dividend had only increased by 2 per cent. But they were in possession of a large undisturbed balance of over £14,000, brought over from the accounts of the last year, which in former years had been reserved to meet contingencies of an exceptional character, and the directors did not hesitate in the present instance to making up the dividend. It was seen by the accounts before them that they were enabled to pay both the dividends in 1865 at the same rate of 16 per cent. and carry over a balance to the next year of £1,800. It was a very favourable statement. On the other hand, he was bound to say frankly to tell them that considerable losses had been sustained by the bank in two of the Australian colonies. A liberal estimate of

and ample provision was made for them in the reserve of the losses he might mention that the managers of two had, in direct contravention of orders, involved the establishments to customers of a class which Mr. Lowe, the other even-ee of Commons, very aptly described as "dishonest adven-class which recent experience in this country had proved was ntined to the soil or climate of the Australian colonies. owledge and circumspection which the making of advances indicated was wholly unjustifiable; at the same time, con-at extent of country over which the operations of the bank s difficult to secure that constant, close, and personal super-ne want of which these disasters were often incident. In to obviate or control such indiscretions on the part of the ture, the board had determined to organise a system of ilant inspection. This would entail some increase in the s, but which would be of no importance when compared sts it would protect, and the losses it would doubtless r, hear.) It was proposed to give Mr. M'Arthur, the spector of the branches, the assistance of two sub-inspectors, under the direct orders of the superintendent in carrying system of inspection. After referring with regret to the Mr. Childers, M.P., in consequence of his appointment to a nt office, but who, when, as it was possible he might be g, relieved from his ministerial duties—(a laugh)—he hoped ed again to join the board—and of Mr. Rasch, who left in ill-health, he said that the only two candidates to fill the occasioned were Mr. Cattley, a director of the London and ank, a gentleman well known in commercial circles, and dley Smith, of the firm of Smith, Payne, and Co., with tralasian Bank has been long favourably connected. In moved the adoption of the report.

Marquhar seconded the motion.

a question,

an added that the losses in Australia were amply provided balance was struck.

asked for some explanation of the charge for the bank ondon and Australia. He believed the City premises had d in value, though those in Australia might be depreciated. know what was the value of the premises, both in the n London, and whether the £7,000 a year which was now profits on account of premises would be likely to continue. an replied that the premises in the colonies were re-valued and that they were worth the full value put down for them. 00 at which the premises stood in the account, the colonial ented all but £5,000 which was the sum at which the City ood in the books, the rest having been written off; and no doubt, if they were now disposed of, they would produce least £35,000. The rent they received for the adjoining een increased during the past year, and was now between a year.

er inquired what was the amount of the losses sustained in

an thought it better not to state that, but to leave the ands of the directors, with the assurance that they were

amply provided for. When the whole amount was definitely and the whole question was settled, the directors might think to state the amount, but not at present. The question of directors, by whose indiscretion the losses had arisen, had been lost sight of, and one of them had already gone.

Mr. Serjeant Gaselee did not think 14 per cent. was a dividend.

The resolution adopting the report was put and carried unanimously.

The directors going out by rotation (the chairman and Mr. then re-elected, and Mr. Cattley and Mr. Martin R. Smith) to fill the vacancies at the board, as explained by the chairman.

A vote of thanks to the chairman and directors concluded the proceedings.

MADRID BANK.

A MEETING of the shareholders of the Madrid Bank, Limited, on the 13th March, at the London Tavern, in pursuance of a circular by the committee appointed by the shareholders to investigate the affairs of the bank. Mr. Freebody took the chair.

The Chairman read the report convening the meeting, and the resolutions passed at this meeting would be binding on the shareholders, not on the company. The report of the committee was read, and the result of the investigation of the accounts by Messrs. Hart was referred to. The liabilities of the bank appear to amount to £25,843, to meet which there is cash at bankers' £5,103. 10s., and furniture £398. 5s. 10d. The committee in their report condemned the conduct of the directors to the unanimous conclusion that the directors throughout had been reckless disregard of the interests of the shareholders, the want of negligence and want of ordinary prudence and foresight in the management of the company's affairs, and wilful concealment from the shareholders of the true but deplorable state of the company. The committee also recommended the shareholders to support the measures taken by Mr. Treherne, solicitor on behalf of Mr. Freeman, and for winding up the affairs of the company in the Court of Chancery.

The adoption of the report was moved by the Chairman, and carried by Mr. Nutting, and carried unanimously.

It was also resolved that the expenses of the committee in the preparation of the report should be paid out of the funds of the company.

Mr. Treherne stated that the petition to wind up the affairs of the company would probably be heard on Saturday next, and moved that in the event of a winding-up order being made, Mr. Hart should act as liquidator.

This motion was also seconded and carried unanimously.

It was also resolved that the committee should watch the proceedings of the shareholders in any legal or other proceedings that might be taken against the directors for the recovery and restitution to the company of the various sums that might have been improperly applied to the funds of the Madrid bank; and a vote of thanks having been passed to the chairman and committee of investigation, the proceedings were terminated.

BIRMINGHAM JOINT-STOCK BANK.

special extraordinary meeting of the shareholders of this bank at the Exchange Assembly Rooms on the 14th March; Mr. Turner took the chair.

Mr. Turner, convening the meeting having been read, said—"Gentlemen, since our last meeting circumstances of which you are aware that render it necessary to alter the proceedings to-day. The facts are simply these—an agreement with Messrs. Attwoods and Co. to amalgamate with the bank provided the assets should be furnished subject to the order of the directors of the Birmingham Joint-Stock Bank. A list of assets submitted by Messrs. Attwoods and Co., which was not accepted. The directors of course were, as they should be, anxious to enable Messrs. Attwoods to carry out the arrangement referred to the assets back to them. An amended list of assets was submitted, which I regret to say we could not accept, and the negotiations broken off. Before moving the resolution which I have to move, I will only remark that the rumours that have been current to the large amount which this bank was to pay to Messrs. Attwoods and Co. are entirely without foundation, the amount to be paid was based on a percentage of the amount of the deposits from the bank and the trade balances were to have been made up to the amount to be paid to Messrs. Attwoods and Co.: it was not so. The resolution I have to move is, 'that the resolutions of the extraordinary meeting held on the 6th of February last, concerning the liquidation of this company with the banking business of Messrs. Attwoods and Co., be rescinded.'"

Mr. Turner seconded the resolution. Mr. Turner wished to know what the amount would have come to at the meeting proposed.

Mr. Turner could only say that they were only to pay for what they had done, and the result would have been an increase in the dividend.

Mr. Turner thought it very indiscreet at this meeting to enter into a proposition of this bank as to their future steps with Attwoods' bank.

Mr. Turner explained no question had been asked on that point, and he proposed to go into it for the present.

Mr. Turner then proposed to adopt so much of the resolutions of the meeting as referred to the increase of capital, as owing to their business consequent on the failure of the Old Bank an increase of capital was necessary.

Mr. Turner and Mr. Tindal suggested that the proper course was to carry the resolutions altogether, and hold another meeting for the purpose of raising capital.

Mr. Turner said this difficulty had now, for the first time, presented itself, and he thought it better now to move that the whole of the resolutions be rescinded, and to call the proprietors together again to meet.

The resolutions were then rescinded.

Mr. Turner said he would take this opportunity of saying, since the agreement with Messrs. Attwoods and Co. had been broken off, they

had received the strongest expressions of satisfaction as to the had pursued from that firm itself.

Mr. Burnaby moved a vote of thanks to the directors and t (Mr. Beattie) for the care they had taken of the interests of t these negotiations.

Mr. Alderman Turner seconded the motion, and said that sagacity of their directors they would have been mulct in about

The meeting then terminated.

LONDON BANK OF MEXICO AND SOUTH AMERICA

THE adjourned first ordinary general meeting of proprietors w the 14th March at the London Tavern; Mr. John Paterson in

The following report of the directors was taken as read :—

"The directors, in presenting their first annual report, have t late the shareholders on the success which has attended the op the bank from its formation, as shown in the accompanying ba duly vouched for by the auditors. From the statement of acco be seen that the gross profits, up to the 31st December last, the sum of £27,315. 8s., and after payment of current expenses ing forward to profit and loss new account the sum of £5,842. rebate of interest on bills discounted, but not then due, there balance of net profit of £13,405. 10s. 2d., which, with £52 balance of unappropriated profit to 31st March, 1864, a £13,458. 10s. This sum the directors recommend should be ap as follows: To be written off preliminary expenses, £1,000; i ment of a dividend, at the rate of 10 per cent. per annum (7s. £6,994 8s.; reserve fund, £1,000; remuneration to the dire the formation of the two companies in March, 1863, to 31st 1864, £2,500; leaving a balance of £1,964. 2s. to be carried next year's account, less amount required to pay income-tax an fees. The accounts from the Bogota branch have only been r to the 30th November last, or within three weeks of its esta The directors have, therefore, been unable to include the pro branch in the balance-sheet. The directors have pleasure in more particularly to the operations of the several branches :—

"MEXICAN BRANCH.—This branch was opened on the 1st A under the superintendence of Wm. Newbold, Esq., whose en careful management has been productive of the best results directors are pleased to be able to state that the bank has taken of the first importance in Mexico, and has realised every expect had been led to anticipate.

"LIMA AND CALLAO BRANCHES.—The Lima Branch was ha by the London and South American Bank, on the amalgamati last, and has progressed satisfactorily. The branch at Callao v on the 21st November. With a view to the enlarged operati bank in Peru, the directors on 2nd November last appoint Wallace, Esq., to be their representative in that important cou reports and accounts from Mr. Wallace give the directors every believe that the bank there will continue to make improved pro

"UNITED STATES OF COLUMBIA BRANCH.—The directors h satisfaction in reminding the shareholders that in these States enjoys special privileges—having secured from the Government,

a very valuable concession, including, among other privileges, the right of issue of notes, to be received as legal tender in payment of taxes, &c."

General Balance-sheet, 31st December, 1864.

Mr. ... in moving its adoption, said that the directors had represented the whole of the accounts before this, but in con-

ted to as somewhat large, it must be borne in mind that tically two banks, the London and South American, whose penses stood at £4,697, and the Mexican, whose preliminary en £3,692, and in addition there had been £1,745 incurred the branches, representing passage money and other pay- y before they could make a start. After quoting the amount the Lima and Mexico branches up to the 28th of January, e of profit divided and carried forward, as shown in the edicating the satisfactory and rapid progress the bank was eluded by submitting the usual confirmatory resolution.

M.P. (director), seconded the motion.

er objected to the proposal in the report to vote £2,500 for emuneration.

n said that would be the subject of a separate resolution.

eholder asked for explanations as to the sixteen unissued 1,000 proposed to be set aside to reserve he thought too small, d debts being in foreign countries always very great. The eposits, and other liabilities were classified together, whereas the bills payable should be stated separately. He wished dudit or check there was on the accounts at the several

eholder inquired as to the principle on which the directors ermining what were preliminary expenses, and what were s. The directors' remuneration, which, as suggested, was nly £1,250 a year, he hoped soon to see increased. (Hear, he whole, he regarded the report as satisfactory, and was t the position in which the bank stood in the market.

ns were put, whether there was any check on the securities ? whether there was any intention of calling up more than er share on the capital, it having been stated in the o more than £12. 10s., or one fourth of the capital, would The shareholder who put this inquiry observed that if they up capital they would have very little prospect of main- dividend. The result of the last call was to reduce the value 5 per cent. While Mexico was in such an unsettled state it call up capital.

n, replying generally, stated that all the securities abroad le key, one being held by the manager, and the other by

It would be satisfactory to send over an official auditor the several branches, but that would be too expensive; it send out an inspector over all the branches, who would be munication with the directors. The security of the anies was required for all the offices. The board separated s from preliminary expenses. Safes, furniture, vaults, ed as property, and 10 per cent. was written off every year The expense of sending such things up the country was minary. The directors considered the sum set down for their ould by no means over pay them. They did not intend to work ut, and it was for the shareholders to say whether they were ed, and what remuneration they should have. During the ank had been in operation they had, he thought, done well. ould not object to add a little more to the reserve, and to end; but they thought it would be more agreeable to the ave in this the first year some return for their capital,

and though he did not anticipate it, it was necessary that there should be a small reduction in the dividend on a future occasion. The amount called up, he was himself individually against calling more than the £12. 10s. a share; but he could not give any pledge on the subject, or promise that, if the necessity should arise in the future, the business of the branches abroad, £15 a share would not be sufficient. But it would be that necessity alone that would induce them to make a further call.

A Shareholder inquired the reason that the calls had been made so rapidly, and especially what was the necessity for the last call.

The Chairman said the reason was the necessity of providing the branches with sufficient capital to work the business. The large institutions abroad, and £25,000 of working capital for each branch, no means too large. They could not have their branches abroad providing large establishments, and if they had not sufficient capital to work them the expense of those establishments would materially reduce the profits. With regard to the depreciation in the market value of the shares, there had been a depreciation in all property of the bank during the last few days.

Mr. Flux, the solicitor of the company, as a shareholder, remarked that the value of the shares in the market depended in a great measure on the confidence the shareholders themselves exhibited. They ought not to be influenced by the fluctuations in the market, but in making the recent call they had only shown that the bank was now progressing more rapidly than had been anticipated, and that more capital was needed to carry it on. For he had bought 100 additional shares recently, and although the market had fallen since, he meant to hold them as an investment. At the time the directors had been working for the Company for many years, £2,500 for their remuneration was not a farthing too much.

A Shareholder—Have you made any bad debts, and if so, what amount?

The Chairman—We have only one bill returned—the amount £500. It is accepted by one of the first houses in the City, and is rejected that there has been some irregularity in the drawing—it is a forgery. It is in the lawyer's hands, and he informs us that he shall recover the amount.

The report was then put and unanimously adopted.

A resolution, according £2,500 to the directors for their services at the end of last December, was also unanimously carried. The dividend of 7s. per share, or at the rate of 10 per cent., free of income tax, payable on and after the 29th March. The auditors were appointed, and £50 voted for their services, after which the meeting was made special, and the resolution passed at a previous meeting was confirmed. The second week in April as the latest date for holding meetings, and making the qualification of directors 50 shares. £20, the nominal value of the shares having been reduced from £50, was confirmed.

The usual compliment to the chairman and directors closed the proceedings.

ENGLISH AND SWEDISH BANK.

ary general meeting of the shareholders was held at the , on the 14th March. The chair was occupied by Mr. John

Convening the meeting was read by Mr. W. H. Clemow, the following report and accounts were taken as read:—

of the bank was commenced in temporary offices at Stockholm of February, and at Gothenburg on the 24th of March, until the 20th of June that the branch at Stockholm open its permanent premises and transact general banking at Gothenburg the permanent offices have only been the 17th of January of the present year. Their progress impeded by the legal restrictions in Sweden, prohibiting a interest than 6 per cent. That law has since been repealed, now free in Sweden: the new law did not come into operation last. The gross profits on the bank's operations 5,961. 13s. 5d., which, after paying current expenses and rate of interest on bills not due, leaves a balance available of £12,912. 11s. 3d. Of this sum the directors appropriate £1,685. 0s. 5d. in reduction of preliminary expenses to the payment of a dividend of 9s. per share free of carrying forward the sum of £2,224 to new account."

The Chairman—Gentlemen, it becomes my duty to move that the accounts now presented be received and adopted; and in this is the first occasion the directors have had the pleasure of their proprietary, I think it will not be unfitting to give a short summary of our proceedings since the establishment of the bank. It is in doing so, that I should be in any degree an apologist for the necessity of establishing such a bank; that point was gone into, you remember, in a prospectus which was written by a party very competent to do so, and which made out pretty clearly that the trade of the country was very much increased, especially with this country, whilst the accommodation had not increased in proportion. It was the inference that there was room for a new bank, if prudently conducted, if it comprised those improvements which, we think, the English system of banking has over similar institutions in Sweden. With this was the first object of the promoters of this bank to get the sanction of the gentlemen of standing in Sweden to form local committees, not only give a sort of sanction and confidence in the town of Stockholm and Gothenburg, but also be a committee of counsel and managers who, as Englishmen, would not only be unacquainted with the language, but also strangers to the commercial community. We have succeeded; the names of the gentlemen are stated in the prospectus, you are acquainted with them. The next thing which came before the directors was the appointment of managers. This, I may say, flattering ourselves, we took a great deal of pains about, as an important step. We advertised and made inquiries, and had interviews with candidates, and it ended in our selecting two gentlemen who had had great experience in the English system of banking, one in the Bank of England, and the other in the National Bank of Scotland. We also sent out experienced accountants, and the care and attention have been repaid with success. (Cheers.) There was a further important one—to find suitable premises at Stockholm and Gothenburg. This was no easy task, for there was no great choice, but we succeeded in selecting eligible premises; but we have to regret that the negotiations which took place before we could take possession, owing to the high rents, leases, and also to our having to adapt them to the requirements of the business. We had also to contend with the difficulty arising from the high interest, which was limited to 6 per cent., whilst money here, for a part of the year, was at 7, 8, and even 9 per cent. This was a difficulty which stood in the way of success at the beginning, but that has been got over by the repeal of the law. There is no consideration affecting our business—that every new institution will take time to make its way. It is some time before the benefits of the offers to the community will be appreciated, and before it develops, but notwithstanding all these difficulties, I think the directors, with confidence, congratulate their fellow-proprietors upon a very successful amount of success. (Cheers.) They propose to divide the profits at 5 per cent., or rather at the rate of 4½ per cent. on the money advanced. You will also remark that a very considerable sum has been set aside for preliminary expenses, whilst a still larger sum is placed in reserve account. I believe I have now stated all that the case requires. I would say, before sitting down, that it was the anxious desire of the directors (as no doubt it will be yours) that the bank should be established upon a firm and stable basis, and its business conducted upon principles which experience has shown to be safe; and that in this bank we should erect an institution of lasting and stable prosperity. (Cheers.)

if any proprietor wishes for any information, or asks any all be happy to answer him to the best of my ability. I that the report and accounts be adopted by this meeting.

drew attention to the paragraph in the report in which the they were happy to inform the shareholders they anticipated from the recent failures. He believed that the directors' policies, but at the same time he should like to ask whether were safe and tangible. There was an amount of between 50,000. Was that safe and secure?

Mr. J. Holm: It is a proper and important question which the proposed. I think we may answer generally that we are fully reference to one account, which perhaps the proprietor of Mr. J. Holm—we believe we shall have to return a 7. That is the report we got from Stockholm, and we are great extent, to see with their eyes.

quired whether the directors had any intention at present further call.

Mr. J. Holm replied that the directors had no immediate intention of but of course they would do so whenever the interest of the shareholders.

Mr. J. Holm said that he should have much pleasure in seconding the report.

Mr. J. Holm said that there should have been 20,000 shares issued, but actually disposed of was 19,519, and he would like to know what was the result.

Mr. J. Holm said that when the shares were originally allotted the boards of Gothenburg had not been formed, and the directors were to serve a certain number of shares to allot to the gentlemen appointed there. Some gentlemen had not taken up their shares of the shares reserved, and that was the reason why they were not allotted. The directors would have sold them, but they were not sold, and it was thought better to hold them over for the time supposed now the shares had better remain as they were held. (Hear, hear.)

Mr. J. Holm—I should advise their not being sold, except at par or

Mr. J. Holm said he was perfectly satisfied with the explanation, and he had no doubt that whenever the directors thought proper the shareholders would willingly meet it.

The motion was carried unanimously.

Mr. J. Holm—I now beg to move that a dividend of 9s. per share (tax) be paid to the shareholders out of the net profits of the 31st of December last, and that this dividend be payable on the 21st day of March.

The motion was seconded by Mr. Tottie, and carried unanimously.

The directors, Mr. J. A. Hankey, Mr. W. Tottie, and Mr. L. were then unanimously re-elected, the chairman speaking in recognition of the services which Mr. Tottie had rendered the bank.

Members of the chairman, the auditors, Messrs. Cooper Brothers (who had been elected by the directors), were now elected by the shareholders and their remuneration fixed at £100 per annum.

The motion of Mr. Hopkinson, seconded by Mr. Graves, a vote of thanks was accorded to the chairman and directors, and the meeting broke up.

BANK OF QUEENSLAND, LIMITED.

AN extraordinary general meeting of the shareholders of the bank held at the offices of the company, 26, Old Broad Street, on the 10th of June, 1864, the chairman, Sir Joshua Rowe, C.B., presiding, when a series of judicious special resolutions proposed by the directors, respecting objectionable clauses in the articles of association, were agreed to and passed. The changes are to the following effect, namely, to give the directors power of increasing the capital of the company from the directors to the shareholders; to determine an increased qualification of the directors; to reduce the maximum amount of directors' remuneration from £2,000 per annum, and to transfer the power of appointing and dismissing the directors to the shareholders.

The Chairman, in answer to an inquiry, stated that the business of the bank was making satisfactory progress, and he could give evidence of this than by stating that since last general meeting of about five months, the deposits had increased upwards of 50 per cent. and circulation of notes 78 per cent.

A vote of thanks was passed to the chairman, and the meeting terminated.

SYDNEY CITY BANK.

THE second half-yearly meeting of the City Bank (Sydney) was held at the banking house of the company, Sydney, on the 10th of June, 1864, J. L. Montefiore in the chair.

The following report was read :—

"The directors have much satisfaction in submitting to the shareholders the following report of the business of the bank for the half-year ending 31st December, 1864.

Gross profits, less interest and exchange paid	£
Current expenses, including fees to directors and auditors, salaries, rent, stationery, &c., £3,150. 13s. 1d.; 5 per cent. of cost of repairs and alterations to bank premises, £226. 4s. 2d.; rebate on bills discounted current at 31st December, 1864, £3,007. 2s. 4d.; interest accrued on fixed deposits not yet matured, £2,723. 8s. 2d.	
Total of net profits	
Balance of undivided profits at 30th June, 1864	
Showing a present balance at credit of profit and loss of	

Which sum the board recommend to be appropriated in the following manner, viz. :—Addition to reserve fund, being 1-10th of net profits, in terms of the deed of settlement, £912 3s. 6d.; dividend for half-year at the rate of 8 per cent. per annum, £8,000; leaving a balance of undivided profits to be carried forward to next half-year, £834. 14s.

"It will be perceived, on comparing the above statement with the previous half-year, that the progress of the bank in every

fully realised the most sanguine expectations. The number of current accounts has been 60 per cent., and in the year over 80 per cent. In acknowledging these gratifying results due in a great measure to the energy of the manager, the active support of a few of the shareholders, the directors and the hearty co-operation of all the proprietary in not only supporting themselves, but in using their influence with others, the continued prosperity of the bank will be secured. The balance payable at the banking house of the company, on and to, 11th January."

The following resolutions were then unanimously passed :—

“ That the report now read be received and adopted.

“ That the following five gentlemen be declared re-elected as directors of this bank, viz. : J. L. Montefiore, Esq., F. H. Dangar, Esq., W. Esq., A. Thomson, Esq., and S. A. Joseph, Esq.

“ That Henry T. Fox, Esq., be elected an auditor of the bank.

“ That the cordial thanks of the meeting be presented to the directors and directors for their valuable services to the bank during the year.

“ That the thanks of the meeting be given to the manager for his conduct in the management of the bank.”

BANK OF BRITISH COLUMBIA.

THE following is the report of the directors of the Bank of British Columbia, to be presented at the general meeting to be held at the Bank Tavern, on the 4th of April :—

“ The directors, in submitting their report, have to congratulate the shareholders on the success that has continued to attend the transaction of the bank. From the accompanying statement of accounts it will be seen that after paying current expenses and deducting rebate of interest due, the amount of undivided profit at the conclusion of the year ended 31st December last, was £18,680. 12s. 1d., which the directors propose to appropriate as follows, viz. :—£8,333. 6s. 8d. in payment of dividend at the rate of 10 per cent. per annum (being for six months on £125,000, and for four months on £62,500, paid 1st September 1864), £7,000 to be added to reserve fund, which will be thereby increased to £13,000; leaving £3,347. 5s. 5d. to be carried forward to the next year. The directors who retire by rotation are Mr. Mackenzie and Mr. Anderson, but, being eligible, they offer themselves for re-election. The proprietors will have to elect auditors for the ensuing year.”

**AUSTRALIAN MORTGAGE, LAND AND FINANCE
COMPANY, LIMITED.**

Meeting of the shareholders of this company was held on
the 14th, at the London Tavern; T. M. Mackay, Esq., in the
chair. J. Long, the secretary, read the notice convening the meet-
ing. The following report of the directors was taken as read:—
The directors feel much gratification at being able to submit a state-
ment of the affairs of the company at the expiration of the first year of
its existence, and to present prospects for the future which must be
satisfactory to the proprietors. The annexed statement of receipts and
payments shows an available balance for dividend of £3,631. 19s., which,
added to the interim dividend of £5 per cent. paid to the proprietors
on the 1st of October last, and writing off £5 per cent. from the preliminary expenses,
leaves a further payment, making up a dividend of £6 per cent. for
the 31st of December last. It is apparent that in the case
of this company whose field of operation is so distant as Australasia, a

lengthened period must necessarily be occupied in the establishment of efficient local machinery. On this account the result of a first working cannot be taken as a fair criterion of its ultimate profit. In addition to the special agency established in Queensland, the directors have made arrangements for investing capital in New Zealand, and are now negotiating for commencing business in other parts of the Australian colonies. They have thus given their attention to several distinct lines of operation, and have opened up ground for future business. The directors have also assisted in the formation of the Central and Northern Queensland Land Company, for the purchase and resale of land in that colony, which will be carried on in connection with this company. The directors have to report that they have concluded an agreement with the firm of Messrs. R. Gibbs and Co., of London, and Messrs. Gibbs, Smith and Co., of Melbourne and Geelong, for incorporating with this company the business hitherto carried on by those firms, consisting of advanced purchase of real and leasehold estate and stations in the colony of Victoria. This business has produced for years past a large and safe profit upon the capital employed; and the directors are satisfied that the arrangement now made will have the most important bearing upon the future interests of the company, and will be productive of the greatest advantages. Messrs. R. Gibbs and Co. receive payment for the transfer of their business in shares of the company, thus affording every earnest of their confidence in the union of interests thus effected. Mr. Richard Gibbs, their partner, has joined the board. A second issue of 20,000 shares has been made, of which 15,000, with £3 credited as paid, will be required for the purpose of this arrangement, and it is proposed that the remainder should be offered *pro rata* to the proprietors.

: The report, gentlemen, which is presented to
 shape of an outline, which I will endeavour to fill
 succinctly and briefly. In the first place, I
 congratulate you upon the Australian Mortgage,
 ny, and I state it not only from my own conviction
 of all, that it is not only a sound, a whole-
 prise, but it is one that, although launched at a
 excitement, will stand the test of time. (Hear,
 tant a sphere of operations as ours is we could
 ected to do much. It is just twelve months ago
 Clark, went to the colony. He did not arrive
 and it was summer before he began his opera-
 ve only a record of six months of his operations.
 o in Australasia there are none of those execu-
 ey, at all events of making imaginary wealth,
 d during the last year. I believe that there they
 ated condition that none of them know what a
 sition if any have seen a contractor's acceptance
 and I do not think they have enterprise enough
 the Feejee Islands. The securities that the com-
 be divided into three classes; first, the house
 d shop property in one or two of the principal
 e town. That class of security is in great favour,
 n upon other securities, and is much in favour
 selves. The second class of securities is of the
 streets, and although the interest upon them is
 still it is a class of security we should never
 nature of the property and the fugitive character
 mes the third class of security. That I consider
 colony—I mean the pastoral—the security upon
 old interests in the country. To that we
 attention very seriously when an opportune
 essrs. Gibbs, Ronald and Co., of London and
 en engaged in the business upwards of fifteen
 most successful in establishing a first-class

business, offering us, for a consideration, that we should take over this business. Now I confess at the first I had my misgivings about this, I was afraid there was too much of the commercial element in it; but after I had investigated the proposal thoroughly I was completely satisfied that the securities were of a first-class character. I think it is but fair to state the process by which I came to this conviction. It is simply this:—In this business there are runs situated 100, 200, or 300 miles from large towns. The supplies go up once a year—viz., everything that is wanted, with an agent in Melbourne purchases on the best terms he can, and simply pays a commission on the invoice. That gives a very considerable amount to Messrs. Gibbs, Ronald and Co. Then, again, the wool has to come to Melbourne again, and has to be sold in Melbourne or shipped to this country or to London here. Therefore, in going into this matter I saw, although not at first, by allying ourselves with a commercial undertaking, we were increasing our revenue from it to a large amount, and in the safest possible way. The security is and has been of the most ample kind; and just to show the value of it, during the fifteen years Messrs. Gibbs have been in the business they never made a single loss. (Cheers.) I therefore have more confidence in asking your support to-day to this arrangement. I am quite sure will be of the greatest value to us all. I am quite sure whoever has the honour of being situated in this place to-day, in six months will be able to declare a dividend twice as much as we have to-day, besides adding a very considerable sum to a sinking fund. (Cheers.) I am glad to say that Mr. Aitchison is to proceed to the colony to carry out this agreement. He himself is a successful squatter, and I am quite sure will ably represent our interests in ratifying this contract. With regard to New Zealand, we have only had one transaction, but that has been of a very satisfactory kind. But that will terminate at the end of the year, when we propose to appropriate the capital so employed in furthering this business in connection with Messrs. Gibbs. With regard to the Central and Northern Queensland Land Company, it was found although it might be highly profitable to invest in land with a view to its re-sale—buying in wholesale and selling in retail—it was not likely to give a good dividend to a company like this. Therefore, it was suggested, a small land company might with propriety be brought forward, and hence the formation of the Central and Northern Queensland Land Company, under the auspices of the Australian Mortgage Land and Finance Company. It is a very good thing, and has been in a great degree successful, and we are to be paid handsomely for its formation. I may mention, to give you some idea of the confidence Messrs. Gibbs have in their business, they were exceedingly anxious the whole of the purchase-money should be in shares; they were modest enough to be content with £15,000, so that at some future time they shall have £5,000 to divide. This we shall not offer at present, but at some time when the working of the contract will make them valuable shareholders. I do not know, gentlemen, that I have much more to say. I have sketched the outline of the report. All I can say is—and I say in no egotistical way—that my colleagues have been most devoted to this company; and I shall now, without further delay, move the first resolution:—“That the directors’ report of the profits of the year 1864, with the balance-sheet and statement of profit and loss account, be approved and adopted, and a dividend at the rate of 6 per centum be now declared for the year ending 31st December 1864.” Before I put this resolution I shall be glad to answer any question. (Cheers.)

on was seconded by Mr. Caird, M.P., and carried unanimously. A resolution was then made special, and a resolution adopted confirming the directors for taking over the business of Messrs.

auditor, Mr. Ball, was unanimously re-elected, and a reward of fifty guineas for his services during the past year. Thanks to the chairman and directors then terminated the proceedings.

THE UNITY BANK.

As a return just presented to Parliament of the correspondence of the Secretary of State for the Home Department and Messrs. Lewis and Lewis, on behalf of persons interested in the affairs of the Unity Bank, respecting the prosecution of Messrs. Terry and

Messrs. Lewis & Lewis to Sir George Grey, Bart., M.P.

10, Ely-place, Holborn, 19th January, 1865.
We are requested by the liquidators of the Unity Bank, who consider it their duty, in the interests of public justice, to institute proceedings against one Joseph Wakefield Terry and one Thomas Burch, and secretary of that Bank, for a series of frauds committed by them and its shareholders, to seek the aid of the Treasury in the prosecution of this case. The two defendants have both been appointed by the Lord Mayor of the City of London to take their trial at the Criminal Court; and inasmuch as the expense necessarily attending a lengthened inquiry like the present must be a great outlay, the liquidators have not funds at their command to meet the purpose. They have, however, not hesitated to incur such expenses as were within their power to bring to public justice the defendants, who, they conceive, have committed great and serious wrongs, by which they have laid themselves open to the charges now preferred against them; but they are unable to meet the expenses of the forthcoming trial. We have, therefore, on their behalf, to request you, sir, that some direction or order may be made to recoup the defendants the taxed costs to which they would then submit themselves, if further proceedings may be conducted at the expense of the Treasury. In aid of this application we may mention the case of the Royal Bazaar, which was a prosecution similar in every respect to the present, in which the taxed costs of the prosecution were paid by the Treasury on behalf of the defendants who conducted the same. We do not apprehend that the cost of the present prosecution will much exceed £1,000; but many of the shareholders of the Unity Bank having been ruined by their connection with it, and being now dead, they are unable to contribute such a sum of money, as would be of justice by the acquittal of the defendants were to follow. We are, sir, trespassing so long upon your time,

We have, &c.,

(Signed) LEWIS & LEWIS,

Solicitors for the prosecution and the liquidators.

Hon. Sir G. Grey, Bart.,
Secretary of State for the Home Department.

Mr. T. G. Baring, M.P., to Messrs. Lewis & Lewis
Whitehall, 24th January

GENTLEMEN,—I am directed by Secretary Sir George Grey to
ledge the receipt of your letter of the 19th instant, in which you
on behalf of the liquidators of the Unity Bank, for the assistance of
Government in the prosecution of the manager and secretary of the
Bank; and I am to inform you that Sir George Grey is not aware of any
peculiarity in this case to call for the special interference of the
Government.

I am, &c.

(Signed) T. G. Baring

Messrs. Lewis, 10, Ely Place,
Holborn.

Messrs. Lewis & Lewis to Sir George Grey, Bart., M.P.
10, Ely-place, Holborn, 27th January
The Queen against Terry and Burch.

SIR,—We beg to acknowledge the receipt of your letter of the
instant, in which you inform us that you are not aware of any
in this case to call for the special interference of the Government.
In reply, we beg to submit for your consideration the following facts:
the liquidators have not the funds to enable them to continue the
prosecution, and that if the Government fail to render assistance, the
defendants will not further be prosecuted, and public justice will thereby be
served. That the offence charged against the defendants is not one of
simple negligence, affecting one individual, but is a crime against the
public and commercial community of this country. We trust, for
special reasons, that our application of the 19th instant will be
favourably received. May we respectfully ask for a reply by Monday, as the
prosecutors to further prosecute must, upon that or the following
day be mentioned at the Central Criminal Court?

We have, &c.,

(Signed) LEWIS &

To the Right Hon. Sir George Grey, Bart., &c., &c., &c.

Mr. T. G. Baring, M.P., to Messrs. Lewis & Lewis.
Whitehall, 28th January

GENTLEMEN,—I am directed by Secretary Sir George Grey to
ledge the receipt of your letter of the 27th instant, and to inform you
that he sees no reason for departing from the opinion already expressed
in the case of *The Queen v. Terry and Burch*.

I am, &c.,

(Signed) G. T. Baring

Messrs. Lewis, 10, Ely Place,
Holborn.

Messrs. Lewis & Lewis to Sir George Grey, Bart., M.P.

10, Ely Place, Holborn, 7th March, 1865.

The Queen v. Terry and Burch.

I beg to inform you that this prosecution, which was originally the Unity Bank, will not further be prosecuted by the bank, there being no funds which, according to its charter, are applicable to the prosecution. We therefore respectfully call your attention to the fact that the defendants, charged with the serious misdemeanour already under your notice, will go unprosecuted unless you will give directions to the Treasury to appear on behalf of the Crown.

We have, &c.

(Signed)

LEWIS & LEWIS.

To Hon. Sir George Grey, Bart.

Messrs. T. G. Baring, M.P., to Messrs. Lewis & Lewis.

Whitchall, 9th March, 1865.

I am directed by Secretary Sir George Grey to acknowledge the receipt of your letter of the 7th instant, respecting the prosecution of The Queen v. Terry and Burch; and I am to inform you that the Government must decline to interfere in the matter.

I am, &c.

(Signed)

T. G. BARING.

Messrs. Lewis & Lewis, 80, Ely Place, Holborn.

TENDERS FOR BILLS ON INDIA.

Tenders for 30,00,000 rupees in bills on India took place on the 1st March at the Bank of England. The proportions allotted were:—To Calcutta, 10,00,000 rupees; to Bombay, 12,00,000 rupees; and to Madras, 8,00,000 rupees. The minimum price was, as before, 1s. 11½d. on Calcutta and 1s. 13½d. on Bombay. Tenders on Calcutta and Madras will receive about 17 per cent., and on Bombay at 1s. 11½d. per cent.; above these prices in full. Further biddings for tenders took place on the 15th March. The proportions allotted were:—To Calcutta, 17,26,000 rupees; to Bombay, 10,24,000 rupees; and to Madras, 2,50,000 rupees. The minimum price was, as before, 1s. 11½d. on Calcutta and Madras, and 1s. 13½d. on Bombay. Tenders on Bombay at 1s. 11½d. will receive about 13 per cent., and on Calcutta and Madras at 1s. 11½d. in full. Above these prices in full.

BANK AMALGAMATION.

On the 8th of March, the private banking business of Messrs. Call, Marten, and Co., of 10, Lombard Street, by Messrs. Herries, Farquhar, and Co., of St. James's Place, was announced on the 8th of March. The country business at present to be carried on by Mr. Marten with a new partner, Mr. John Smith, and the style of the firm will henceforth be Messrs. Call, Marten, and Co. Their London agents are Messrs. Smith, and Co., Lombard Street.

GRATUITIES TO BANK CLERKS.

MESSRS. Sparrow, Tufnell and Co., of the Bank, Chelmsford, have handsomely distributed to each of their *employes*, throughout their what large establishments over Essex, a bonus of 10 per cent each salary, and in some instances more.

Communications.

To the Editor of the "*Bankers' Magazine*."

"TOUTING FOR BUSINESS."

SIR,—In these days of joint-stock banking, we hear on all sides of great advantages the public derive from the new system, as compared with those afforded by the old private bankers; and, doubtless, the joint-stock banks have assisted and fostered the increasing trade of the country to an extent to which the resources of the private banks would have been inadequate.

Every system has its faults, and there is a practice unknown to the old times, but which has been engrafted on joint-stock banking, and is generally admitted to be an abuse, but which nevertheless is daily becoming more and more into vogue—I allude to the habit of "touting" for business. In the present day, any one who has, or is likely to have, a banking establishment is subjected to the solicitations of half a dozen rival managers, who fight over him like hungry dogs over a bone. Of late there have been amalgamations and transfers of business in the banking world, and the clients of the establishments so absorbed will testify to the truth of the statement. I fully expect, ere long, to see posters on the walls announcing that the "West Middlesex Bank, Limited," is prepared to give 10 per cent for deposits; and "sandwich" men competing with the theatrical advertisements in publishing to the world that the "North and South Poles Bank, Limited" is prepared to give their customers greater facilities than any other establishment. This, if not a particularly respectable, is at least a harmless mode of pushing, but it is not so with private bankers' solicitations for business. It is extremely important that a bank manager should be in an independent position, and able to treat with his customers on equal terms. This he cannot do with a person who has opened an account by request, and he is therefore unable to decide a question by his judgment alone, as he should do. The customer is to a certain extent the master, and can therefore tender bills of a doubtful character, or apply for a discount on an insufficient banking security, well knowing that if there is any doubt, the hint that a rival bank is more accommodating will have the desired effect. Then, again, the competition for business, and the fear of losing an account, frequently lead to the grant of credit where it is undeserved, and as the bank is supposed to have every opportunity of judging of the solvency of an individual, on the faith of credit advanced to him, the bank-trust is placed by the public, who often find when too late that they have been misled and victimised.

It is, I believe, a fact that in some joint-stock banks either a director or a seat at the board may be purchased by so many new accounts.

All this sort of thing must be extremely distasteful to gentlemen who are placed in the position of managers, reducing them, as it does, to the standing of commercial travellers. It is, moreover, very

business obtained by these practices is worth having, and I am sure that managers as a body would be very glad to get rid of such work, that I am induced to trouble you with these remarks in the question may be taken up, and some honourable arrangement be made between banks and bankers by which their respective clients may be protected and unmolested.

I am, Sir,
Your obedient servant,

J. D. F.

1st March, 1865.

BANKERS' GUARANTEE AND TRUST FUND.

I will no doubt have seen the prospectus of the "Bankers' Guarantee and Trust Fund." The object of the promoters is worthy of notice from all bank officials and their employers; but there are several points as to the constitution and practical working of the fund which appear to me (and may probably appear to others) to require attention. The prospectus gives the names of five gentlemen as trustees whenever the subscribed security shall amount to £100,000. In the meantime, I would ask, how is the association to be managed and by whom are the policies to be issued and signed? Is it to be registered as a public company, capable of suing and being sued in the name of its registered public office? These points, Sir, are of great importance. The guarantee fund of the Bankers' Association is managed, of course, within that establishment itself, and no claims as to liability can arise in case of demand upon it in the event of defalcations. But the relations of "The Bankers' Guarantee and Association" will be external to itself, and hence legal proceedings may arise that will require the intervention of a jury to settle. Claims have arisen occasionally between the guarantee societies and policy-holders, and have only been settled by legal proceedings. I think any bank would accept a guarantee policy unless it was clear that there was some person or legally constituted body to sue in the event of a claim. I beg to add that I heartily wish the association success, and I beg to state the foregoing points for information.

Yours faithfully,
Mr. Editor, to see a note from yourself on the subject,

I remain,

Your obedient servant,

A BANK MANAGER,

Who pays thirty pounds a year for his
guarantee premium.

1st March, 1865.

CHEQUE TO BEARER.

A man draws a cheque upon his bankers payable to C. D., or to the order of C. D., and endorses the cheque, and makes it payable to the order of C. D. When the cheque is presented for payment, and the bankers say they will pay it because it has not E. F.'s endorsement. Can the bankers make the cheque made payable to bearer make an endorsement payable to C. D.?

to order? And if he does so, are the bankers of the drawer of the cheque bound to pay the instructions of the payee?

February 8th, 1865.

[We apprehend that the cheque having been issued to "bearer" is not affected by any endorsement, but remains payable to "bearer."]

ENDORSEMENT OF CHEQUES.

SIR,—In your January number reference is made by one of your correspondents to your opinion, given in September last, on cheques endorsed by procuration. If I mistake not, you formerly considered it unnecessary to pay cheques so endorsed.

In this month's Magazine you do not reply distinctly to the question of a Banker's Clerk, viz.: "If cheques crossed to any particular person require to be endorsed by said bank?"

Your kind notice of the above will oblige,

Yours most respectfully,

A SUBSCRIBER.

[The question of endorsement of cheques "per procuration" was decided in the case of *Cuthbertson v. Bank of England*, tried in the Court of Exchequer, 29th June, 1860, and reported in the "Bankers' Magazine" for that year, page 550. The law respecting crossed cheques was settled by 21 and 22 Vict., c. 79, which enacts, inter alia, that "the banker upon whom such cheque or draft shall be drawn shall not pay such cheque or draft to any other than the banker with whose name such cheque or draft shall be so crossed." If the cheque be payable to "order" it will require to be endorsed by the payee, but such endorsement must not conflict with the special crossing.]

Estates of Failed Firms.

THE ESTATE OF MR. T. S. BEGBIE.

A MEETING of the creditors of Mr. Thomas Stirling Begbie, who succeeded to the estate of Mr. Thomas Stirling, was held on the 24th March, at the offices of Messrs. Quilter, Ball, and Co., under the presidency of Mr. Joseph Hoare, when a statement of his affairs was submitted, showing liabilities to the extent of about £350,000, by far the greater portion of which is secured or otherwise provided for. It is estimated that under the most unfavourable circumstances the unsecured creditors will receive a dividend of at least 10s. in the pound, and in certain contingencies the figures show a large surplus after payment of all creditors in full. It was unanimously resolved that the estate be wound up under the inspection of Mr. Joseph Hoare and Mr. Peter Denny.

NEW JOINT-STOCK BANK AT BIRMINGHAM.

and Co., of Birmingham, have resolved upon forming the joint-stock bank, limited. They will also absorb the other private bank of Messrs. S. L. Moilliet & Co. In consequence of this arrangement it is proposed to augment the nominal capital of the Company from £1,250,000 to £2,000,000, and to increase the shares from 25,000 to 40,000.

S. BARNED, MOZLEY & Co., OF LIVERPOOL.

the disappearance of Mr. Brandon Mozley, who has failed in his speculations on the Stock Exchanges of London and Liverpool, rumours were circulated with regard to this firm in the course of the last week. Assistance was speedily procured, and the house placed in a position of safety. Mr. B. Mozley was not a partner, and had no direct connection with the bank.

ALL FREEHOLD LAND AND DOCKS COMPANY.

The Foncier and Mobilier of England, and the Imperial Mercantile Association, Limited, have introduced the Millwall Freehold Land and Dock Company, with a capital of £510,000, in 25,500 shares of £20 each, with the usual debenture powers. The deposit on application is £4 on allotment, the calls not to exceed £2. 10s. per share, to be made at intervals of less than three months. The directors are all respectable, and include several first-class men of business. The company is incorporated for the purpose of supplying, under circumstances most advantageous to the shareholders, the great demand for land for manufactories, ship-building yards, and graving docks at the port of London, which the natural increase of trade, and the removal of existing water frontage by the formation of a new embankment and other metropolitan improvements, has rendered imperative. By a special Act of Parliament the company has obtained a large tract of land at Millwall, consisting of upwards of 198 acres of freehold land between the East and West India Docks. This land will be rendered available for the purposes above mentioned by the construction of a series of large docks or basins, with access for the largest vessels to the Millwall and Limehouse Reaches. The deep water frontage thus created will become immediately valuable in the highest degree for the construction of manufactories, ship-building yards, and similar purposes. The water being always kept at high level, the saving of time in all operations of lighterage, loading and unloading, which will be effected without respect to tides, will render this site far more valuable than any other on the Thames itself. The proposed works will include the construction of public graving-docks of the largest size, capable of receiving vessels of even greater size than her Majesty's ship the *Warrior*, and of accommodating her Majesty's ship the *Mermaid*, now building on the premises of the Millwall Dock. The main roads which traverse the site of the proposed works will be improved, but application is being made to Parliament for the present session by the Blackwall Railway Company for the extension of the Blackwall and North London Railway systems, by which communication will be afforded for the whole of the goods, wharves, and docks, with the entire railway system

THE REDUCTION IN THE BANK RATE OF DISCOUNT.
 The Bank of England rate of discount has been reduced to 3½ per cent.; the rate of discount by the Bank of France is 3½ per cent. It is quite evident that we are in a period of cheap money, but whether it will last is not to be seen.* There are symptoms, from the growing resources of the Banks of England and France, that the tremendous amount of engagements will leave us with a glut of money, while this is the case there will be no revival of the Bank of France was expected last week to go down to 3½ per cent., but it appears that the Council are waiting for the Bank of England directors to act before they move. The directors in Threadneedle Street are usually very vigilant, and there are no doubt, good grounds for maintaining the quotation at the present elevation. With this state of things in existence it is rather surprising that there is not more activity in the market. The explanation is to be found in the circumstance that the prices of produce, cotton, tea, sugar, and other staples, have fallen, and many of our mercantile firms that they have no money to meet them. The speculation also carried forward in the stock market and securities has more or less pinched the public, who have not suffered a direct sacrifice, have become locked up in the descriptions which they cannot realise, and are waiting for which will plague them sorely when they fall due. Through the depreciation in produce, there will be failures in London and Liverpool, and it is also impossible to say the cotton crisis is not far distant, through the nature of the crisis and the influence from America. We shall in all probability have as a consequence, a further season of depression; but, with a low rate of discount and a moderate demand for money, we shall be enabled to pass through our anticipated difficulties with more ease than we did in the autumn of last year. The terms for money accommodation will be a great improvement in every circle. A great number of people had fixed on the rate of the Bank for the present at 4 per cent., but they now think the terms will eventually go to 3½ per cent.

THE AMALGAMATION OF THE ALLIANCE AND ASSOCIATED BANKS.

The negotiations for amalgamating the Alliance and Associated Banks have been broken off. The reason is said to be the difficulties which have arisen irrespective of the business of the committee on both sides having, it is asserted, declared

* Whilst this sheet is passing through the press, the directors of the Bank of England have lowered the rate to 4 per cent.

led with their investigation as far as it had gone. It is proposed arrangement was not viewed as favourable to sections of the shareholders, and that if the directors had they would in all probability have been negatived at meetings when proposed for confirmation. It has all received that the large capital to be made profitable the way of bringing about a satisfactory agreement, at that body of the proprietors of the two institutions. The bank will, therefore, now continue in its own course; bank will have to do the same, and the directors will opportunity, if necessary, of introducing fresh blood into the order to promote its future prosperity.

BRITISH AND CALIFORNIAN BANK.

The British and Californian Banking Company, Limited, at the first annual meeting on the 3rd April, is as follows: The directors have the pleasure to submit to the shareholders the annual report of the bank to the 31st December, 1864, showing at profit and loss account the sum of £6,231. 17s. 3d., from which the current expenses, amounting to £2,362. 7s., leaves an amount of £3,869. 10s. 3d. In the report addressed to the shareholders on the 21st December last the directors gave an outline of their business to that date. They have now to state that the branch in London, commenced business in their own premises under the management of Henry S. Babcock, at the end of November, consequently the accounts only include the result of a few weeks' operation. The paid-up capital of the bank on the 31st December 1864, 100,000, since which time the first call of 50,000 has become well responded to. The advices from San Francisco, the development of local and general business, are satisfactory, and the relations concluded with banks and commercial firms of emigrant localities connected with the trade of California, of importance, and have already begun to bear profitable results. The directors now declare a dividend of 3s. per share, free of tax, equal to 6 per cent. per annum, payable to the proprietors on the 1st April, which will absorb £3,000, and leave £869. 10s. 3d. to be added to the credit of profit and loss new account."

THE COUNTRY BANKS ISSUE BILL.

The material clauses of Mr. Gladstone's Country Banks Bill as it has been amended in committee, the discussion of which took place in April. The modifications effected are of a substantial character, since they point to the extinction of all banks in England in 1875, and stipulate that on any bank being established its right of issue shall, as is the case under the present law, be absolutely forfeited. By this means the objection to the original form, that it would tend to perpetuate the number of privileged banks throughout the country, and thus facilitating the absorption of their issues by the Bank of England, is to be almost entirely removed:—

"There shall be repealed, so far as respects any bank of issue taking to pay such percentage on its issue of notes as is here mentioned, any provision of any Act whereby the number of in certain banks of issue is restricted to six, or whereby certain of issue are prohibited from having a house of business or establishment as bankers in London, or at any place not exceeding six miles from London, or whereby banks of issue are prohibited from issuing payable bank-notes in London, or at any place not exceeding a distance of sixty-five miles from London.

"Any bank of issue or any number of banks of issue may transfer to any other bank of issue the right of issue or rights of issue in it or them, or any part or parts thereof, on such last-mentioned bank undertaking to pay such percentage in respect of its own and of the issue or issues so transferred.

"Any bank issuing notes in respect of which such percentage payable may continue its issue until the 1st of January, 1875, shall no longer. In the event of Parliament putting an end to the issue authorised by this section at any time before the said 1st of January there shall be paid to any bank for the time being enjoying the right to such issue full compensation for any loss it may sustain by the determination of that right before such time as aforesaid.

"Every bank that has accepted the conditions of this Act in relation to the payment of a percentage on its issue of notes, shall pay to His Majesty's Exchequer a sum of £1. 5s. per cent. per annum on the average amount of notes circulated by that bank in every half-year.

"The percentage payable under this section shall be in lieu of licence duty and stamp duty or composition for stamp duty in respect of bank notes issued by a privileged bank, and no licence or stamp duty shall be required by any bank paying the same, and such bank shall be entitled to the same privileges in respect of the issue of bank notes as if it were duly licensed and had duly paid stamp duty and composition for stamp duty.

"If any privileged bank becomes bankrupt, its right of issue of notes shall absolutely determine.

"A privileged bank, notwithstanding it carries on business in London or within sixty-five miles thereof, may, on obtaining a licence as required by the 9th of George IV., cap. 23, as amended by the Bank Act, 1844, compound for the issue on unstamped of its promissory notes payable to order at any period not exceeding seven days after sight, and of such bills of exchange as are authorised by the said Act of the 9th of George IV. in that behalf mentioned, and they are drawn on and made payable at such bank, or a branch of it in London, Westminster, or the borough of Southwark, and such bank shall be entitled to all powers and privileges exercised or enjoyed by it previously to its becoming a privileged bank."

WESTERN BANK OF SCOTLAND.

the shareholders in the Western Bank of Scotland met on March, at St. Mary's Hall, Glasgow, when Mr. R. [unclear], appointed to wind up, voluntarily, the affairs of the bank, in which he stated that during the year ended 1890 deposits and letters of credit had been paid, and the bank's notes had been retired. Since the commencement of the year, the notes retired and burned by the committee amounted to £1,500,449. 5s., and the total amount of notes retired during that period was £6,098,601. The £50,000 set aside in former years to meet contingent liabilities, was retained, as the claims brought against the bank still formed a reserve. The money invested in Consols and lodged in the Bank of England amounted to £39,745; but of that amount there must be kept in reserve £27,119 for amount of unpaid returns on bank notes outstanding, and £28,127 for amount of [unclear]. To provide fully for these various liabilities required would be available for a return to the partners only 1s. per share. But the reporter was decidedly of opinion that the bank should be paid until the important litigations now pending are brought to a close, and the full extent of the liabilities ascertained. The assets of every kind, included in the report during the year, amounted to about £52,000; and the liabilities realised are valued at £102,721. The report was

ANGLO-EGYPTIAN BANK.

The Anglo-Egyptian Bank states that the provisional balance sheet received from Alexandria, shows an aggregate of transactions passing through the books of the bank without a loss; and the account of profit and loss, after making provision for expense accounts, shows that the directors are fully justified in declaring an interim dividend of 8s. per share (being 4s. 4d. per annum on the amounts paid-up), carrying the surplus to be brought into account when the first annual financial year's working are submitted to the shareholders in March or November next.

EAST OF ENGLAND BANK.

A dividend of 10s. in the pound, payable at Norwich, to the creditors of the East of England Bank, has been announced by Mr. James B. Henry Tillett, the liquidators. This bank stopped trading on July last, and a first dividend of 10s. in the pound

ALBION BANK.

At the first ordinary general meeting of the shareholders of the Bank, Limited, held on the 28th March, Mr. T. Cave in the report was presented and adopted. The accounts show a gross profit of £6,182, and, after deducting current expenses, interest on current accounts, and rebate on bills not due, left a net balance of £1,110. Of this a sum of £1,110 was appropriated to the payment of dividend for the half-year at the rate of 5 per cent. per annum, the balance being carried forward to the next account.

MERCANTILE SUSPENSIONS.

The following suspensions have been announced during the past February.—Messrs. Rizo, Son & Co., London, merchants.
 March.—Messrs. Attwoods, Spooner & Co., Birmingham, Mr. T. S. Begbie, London, shipowner and merchant.
 Messrs. I. W. Burstall & Co., Hull, merchants.
 Mr. David Leopold Lewis, London, contractor.
 Messrs. Andrew Fachiri & Son, London, merchants.
 Messrs. Smith, Douglas & Co., London, merchants.
 Messrs. James Smith & Co., Liverpool, merchants.

MONTHLY CHRONOLOGY.

February 25.—Failure of Messrs. Rizo, Son, & Co., London, merchants.

March 2.—The directors of the Bank of England reduced the discount from 5 to $4\frac{1}{2}$ per cent.

3.—Intelligence received of the capture of Charleston by the Federal Army.

9.—The directors of the Bank of France reduced their rate of discount from 4 to $3\frac{1}{2}$ per cent.

10.—Stoppage of the bank of Messrs. Attwoods, Spooner & Co., Birmingham, with liabilities stated to amount to £960,471 and £618,412.

16.—Suspension announced of Mr. T. S. Begbie, shipowner and merchant, of Mansion House Place, with liabilities amounting to £250,000. At a subsequent meeting of creditors it was agreed that the business should be wound-up under inspection. Failure of Messrs J. W. Burroughs & Co., merchants, of Hull, chiefly engaged in the East India trade, with liabilities estimated at between £250,000 and £300,000.

17.—Stoppage of Mr. David Leopold Lewis, of George Yard, Street, contractor.

22.—Suspension of Messrs. Fachiri & Son, of Cullum, with debts of about £100,000.

23. The directors of the Bank of Holland reduced their rate of discount from 4 to $3\frac{1}{2}$ per cent.

24.—Stoppage of Messrs. Smith, Douglas, & Co., of London, Smith & Co., of Liverpool, with debts amounting to about £400,000. Engaged in the East India trade.

30.—The directors of the Bank of England reduced the rate of discount to 4 per cent.

BANKING OBITUARY.

a McCullough, manager at the Newry Branch, Provincial Bank s been appointed manager of the Dublin Branch.

TRADE OF THE UNITED KINGDOM.

f Trade returns for the first month of the present year were 7th March; but they do not present any material change as h the month of January last year, though the results on the e regarded as favourable. The total declared value of ex-month last past was £10,489,339 against £10,413,586 in the 4, and £8,045,155 in 1863, which is an increase as contrasted ner period of only £75,753, but over the latter the increase is The chief alterations in exports have been an increase in the kali, arms and ammunition, beer and ale, cotton manufac- are and cutlery, linen manufactures, machinery, seed oil, wool, and woollen and worsted yarns. On the other hand, en a decrease in coals and culm, cotton yarn, haberdashery y, linen yarn, metals, silk manufactures, spirits, and woollen manufactures. With regard to imports, there has been an in raw cotton, raw silk, thrown silk, woollen manufactures, gar; but a falling off in flax and hemp, leather manufactures, t linseed, tallow, wool, coffee, spirits, and wine. As respects has been an increase in the importation of oats and Indian

corn; but a decrease in wheat, barley, peas, beans, and wheat-flour. In the case of provisions, there has been an increase in butter, and eggs; with a decline in bacon and hams, salt beef, and lard. The annexed table will exhibit the changes in the various enumerated:—

Monetary Intelligence.

MONETARY REVIEW FOR MARCH.

of financial and commercial affairs is not very satisfactory. There is an abundance of capital, with the expectation of especially after the payment of the dividends, no parent in trade, and we are looking for further failures. principally be in the India and China departments, and American firms will in all probability have to suspend. A general matter of complaint the last fortnight that discount have so gradually and permanently decreased. Before that time of Messrs. Attwoods, Spooner and Co. had caused a run for money, but it soon passed away. The state of the England account warrants a reduction from $4\frac{1}{2}$ to 4 per cent. Bank of France, though with a quotation now at $3\frac{1}{2}$ per cent., it is believed, shortly descend to 3 per cent.* It is believed that cheap money may last for a short period; but a war were settled, and a drain of gold was to set in to New York would be very soon apparent. The money markets on the continent are daily becoming more easy, and if the weather were to turn would speedily be a revival among the operators in stocks

for English securities has not exhibited much strength, and there is to be made to invest in other stocks and shares. The dividend on the new loans and new companies are so far in excess of 3 per cent. though there may be a little additional risk, the public take little notice of the change in the situation. The government broker in London this month has been purchasing Reduced and New 3 per Cents., and it is expected his transactions for the present quarter will be large. Bills and India Bonds have not varied to any extent; and interest rates still are comparatively low.

Stocks have not moved in any great degree. Speculation continues to take place in Spanish Passive and Spanish Certificates; and, in other things, the late advance has been fairly supported. Turkish shares are described as good; a fresh financial operation is contemplated, and this special class will be absorbed. The adjustment of the market strength to prices. Mexican is heavy, but it will recover, and the cotton business will increase in this description before the close of the year.

Shares have been very good. The tendency is in the right direction, and there is a greater disposition among the public to purchase. It is expected that increased activity will prevail in the course of the year. In this department, the bankers and jobbers having recovered themselves. Foreign and Indian shares are also rather

shares and Credit and Finance shares, after being steady, have advanced. The late extensive depression has brought in buyers, who are leading descriptions and hold them for higher prices, which may be obtained during the summer. We expect to see much more activity for the principal classes before June next.

Directors of the Bank of England have at the last moment lowered the discount rate.

V.

The produce markets manifest great depression. The till the spring is much further advanced of recovery, and considerable to place affairs in a satisfactory situation. Tea is extensive; tea, on the average, exhibits large losses, and adverse margin is considerable.

THE GRAIN TRADE.

THE markets for all descriptions of grain continue comparatively dull, farmers busy with field operations. Most of the samples brought to market in good condition, and the importations, particularly of wheat, have been at usual average. Within the last week or two wheat has been in some request, at full prices. Oats in steady demand, and prices show an advancing tendency. Good quality rather dearer. Beans and peas without material alteration. Official quotations were:—Wheat, 38s. 3d. per qr.; barley, 36s. 6d. per qr.; and oats, 21s. 4d. per qr.

The Gazette returns for England and Wales have been as follows:

Week ending, 1865.	Wheat. Qrs. sold.	Weekly Average. s. d.	Duty. s. d.
Feb. 25	79,804 ...	38 2 ...	1 0
March 4	87,168 ...	38 6 ...	1 0
" 11	69,297 ...	38 4 ...	1 0
" 18	70,688 ...	38 3 ...	1 0

The importations since the harvest of 1864 have been:—

	Wheat. Cwts.	Other Grains. Cwts.
Thirty-one weeks ended 18th Feb.	10,557,621	14,530,000
Four weeks ended 18th March ...	663,145	1,456,000
	11,220,766	15,986,000

And the weekly averages have been:—

Thirty-one weeks ended 18th Feb.	...	340,000	469,000
Four weeks ended 18th March	159,000	401,000
	Less	181,000	68,000

STATE OF TRADE.

BUSINESS has received a check in the provinces through the failure at Birmingham. The weather has also proved unfavorable, but however the Spring season were to prove fine, there would be a recovery.

NOTICES TO CORRESPONDENTS.

We have arranged in future to issue a double number in February and formerly in May and November. This has been rendered necessary by the Meetings of the Banks and Discount Companies, which will be always in the pages of the *Banker's Magazine*. We shall also give the proceedings of the Credit and Finance Companies as they are more or less associated with our subscribers and readers can refer to them without difficulty. We will please forward communications addressed to the Editor, No. 8, Finsbury Square, London, and orders as usual to Messrs. Groombridge and Sons, Messrs. Waterlow and Sons, Carpenters' Hall, London Wall.

BANKING AND FINANCIAL ANECDOTES.—It will be perceived from notices in the *Banker's Magazine* is collecting and arranging a series of financial Anecdotes. Any contributions from subscribers and readers of the *Banker's Magazine* will be thankfully received, particularly if the subject-matter shall not have been previously printed. Nothing personal or offensive will receive publicity.

Calculation of these Banks for
Feb. 4th:—

.....	£2,954,490
.....	2,738,006

Calculation of Private

Banks ending as	£5,693,098
-----------------	------------

the above with the Returns
Feb. 4th last, it shows:—

Notes of Private	£119,679
------------------	----------

of Joint-Stock	49,493
----------------	--------

month...	£160,182
----------	----------

And as compared with the month ending

March 5th, 1864, it shows:—

A decrease in the notes of Private

Banks, of £151,133

A decrease in the notes of Joint-Stock

Banks, of 124,156

Total decrease, as compared with the

same period of last year £275,289

The following is the comparative state of the

circulation as regards the fixed issues:—

The Private Banks are below their

fixed issues £1,259,306

The Joint-Stock Banks are below their

fixed issues 487,751

Total below their fixed issues ... £1,746,057

OF IRISH & SCOTCH RETURNS TO MARCH 4, 1865.

Calculation of the Irish and
Four weeks ending March

ther, give the following as
circulation of these Banks

, viz.:—

the Irish Banks £3,702,589

the Scotch Banks 4,069,154

Calculation of these banks

..... £9,771,743

Amounts with the Returns

with Feb. last, they show—

Calculation of Irish Banks £11,119

Calculation of Scotch Banks 89,422

month £99,541

with the month ending

show—

Calculation of Irish Banks £140,030

Calculation of Scotch Banks 72,411

year £212,441

The fixed issues of the Irish and Scotch Banks
at the present time are given in the *Banking*
Almanac, as follows:—

6 Banks in Ireland, allowed to issue... £6,354,494

12 Banks in Scotland, allowed to issue 2,749,271

18 Banks in all, allowed to issue £9,103,765

The following appears, therefore, to be the

comparative state of the circulation:—

Irish Banks are below their fixed issue £651,905

Scotch Banks are above their fixed issue 1,319,883

Total above the fixed issue £667,978

The amounts of Gold and Silver held at the

head offices of the several banks, during the past

month, have been as follows:—

Gold and Silver held by the Irish Banks £2,098,035

Gold and Silver held by the Scotch Banks 2,422,738

Total of Gold and Silver Coin..... £4,520,773

Being a decrease of £33,555 on the part of the

Irish Banks, and an increase of £37,619 on the

part of the Scotch Banks, on the several amounts

held by them during the preceding month.

OF THE UNITED KINGDOM TO MARCH 4, 1865.

The state of the Note Circulation of the United Kingdom for the month ending

for the Month ending 4th March, as compared with the previous month:—

	Feb. 4.	March. 4.	Increase.	Decrease.
Month ending Mar. 1)	£20,467,782	£19,951,941	—	515,841
.....	3,074,159	2,954,180	—	119,979
.....	2,788,089	2,738,606	—	49,483
.....	26,330,010	25,645,027	—	684,983
.....	4,157,576	4,069,154	—	88,422
.....	5,713,708	5,702,589	—	11,119
.....	£36,201,294	£35,416,770	—	£784,524

of the month ending March 5th, 1864, with the month ending March 4th, 1865,

the Bank of England circulation of £105,113, a decrease in Private Banks of

£124,156; being a total decrease in England of £380,402; there is an increase of £72,411; and in Ireland an increase of £140,030. Thus

with ending 5th March, as compared with the same period last year, presents a

decrease in England, and a decrease of £167,961 in the United Kingdom.

The circulation in the Bank of England, for the month ending March 1st, gives an

increase of £14,616,770. On a comparison of this with the Return for

Feb. 1st, there appears to be an increase of £355,756; and an increase of £359,395

on the same period last year.

The amounts of Gold and Silver held during the month ending 4th

March 1st, give an increase of £4,064 as compared with the Return of the previous

month of £223,594 as compared with the corresponding period last year.

BANKERS' MAGAZINE,

AND

Journal of the Money Market.

MAY, 1865.

MONEY AND PRODUCE.

we possess a comparative abundance of money and discount, there has been a continuous depreciation. The markets for the leading staples, cotton, tea, &c., were scarcely ever before in such a depressed state until within the last week no prospect of recovery is in sight. With heavy stocks and sinking prices, the money market has been most gloomy indeed, and the failure of several banks has been frequently announced, and it is highly probable that we have not yet got to the end of the catalogue. The depression of trade has been so general through the stringency of the winter and November, and the losses then and since have been so enormous, that it has terminated in the closing up of houses which it was supposed would be able to weather the storm and show a considerable surplus. Several firms that suspended in the autumn of last year, although of no great importance, were in the majority of cases indebted to those of Messrs. Halliday, Fox and Company, Messrs. Kelson, Tritton and Company, Messrs. C. Joyce and Company, and Messrs. Buchanan, Hamilton and Company, who have recently been placed in liquidation. Each of these firms has suffered through losses in produce, and notwithstanding since the early part of the year the value of money has been declining, they were too much involved to allow of an escape from difficulty. The panic in cotton, the forced sale of the large stock of sugar, the heavy drop in the price of the large stock of sugar, have severally and collectively interfered with the usual course of business, that the result is of the disturbance not having extended further than it has, and not a few other important firms. At the same time that

these establishments have been compelled to succumb on every hand of the enormous sacrifices encountered in Egypt, India, and China, from the state of the market in Mincing Lane, and the general indisposition to speculative activity.

It is true that while these failures are taking place the discount has become reduced ; but this reduction does not indicate a healthy position of affairs, because the change has been occasioned by the withdrawal of large amounts of paper currency in circulation, and the partial cessation of transactions in all parts of the globe. Notwithstanding at present there seems no probable recurrence of heavy disasters here, we should not look for them from the East, and likewise from America. Events that are occurring must affect those special interests and entail responsibilities of no ordinary character. It could see produce advance, a rise of 1 per cent. in the discount would make little difference, for once the turn is gained we should soon see all activity where now a sluggishness was formerly apparent. It was thought that intelligence received of the surrender of Lee's army and the prospect of peace would have speedily inaugurated a new era of things, and that in the space of two months we should have experienced a revival which would have furnished ground of hope for the future. Indeed, symptoms of the long-looked-for change were assumed to be visible. Cotton prices were better, special kinds of tea fit for the market were higher, and Scotch pig-iron and Barren become in greater request.

But a check has now been given to this improvement by the last advices from Washington, which record the assassination of President Lincoln, and the attempt upon the life of Secretary Seward. So extraordinary a development in the progress of the war feeling never could have been anticipated, and it has created a deep impression upon both sides of the Atlantic. If the strong irritation thus likely to be caused throughout the North can, however, be allayed, a peace may yet be achieved which will give, at least, temporary, if not permanent, satisfaction to the late contending parties. Meanwhile, trade will revive, the lust of war and glory will subside, and the current of commerce and action will once more be directed to the proper employment of the resources of the country, and the restoration of manufacturing and agricultural capabilities.

With a return to material prosperity in America, there will be greater activity in other countries ; British, French, and German productions will be more largely exported

competitor as it still must be for cotton, will in its share in the altered situation of affairs. The opinion is, that the recent tragic proceedings in the North may give birth to some revolutionary and thus plunge the country into deeper difficulties. If the result can be averted, there is little to fear concerning intended aggression against either France or England. The appointment of a peace Minister to succeed the unfortunate Mr. Lincoln, would do much to create confidence in London and it is fair to presume, from the stress placed upon the words of General Grant that the military expenditure will be largely reduced, that the authorities at Washington incline to a path of sound economy and retrenchment.

The expectation that the councils of the North will be wisely, with such heads as Grant and Stanton assisting the President, whose shortcomings are very much censured, may be, should any revolutionary element become prominent in the bright era before the next four years shall have elapsed. Four years of active hostilities have done much to the country, sacrifice its best blood and treasure, and on the shoulders of the taxpayers a debt cumbrous to the adjustment. It will take at least thrice that time before the North or South will be able to place their order, which will prove one of our best safeguards against demonstrative exhibitions either on the frontier or in the interior.

The best show of desire on the part of the North to lay down the sword and adopt the ploughshare instead will be supported by all Europe; and it is the feeling that this is the best and the wisest policy, which induces the belief that the Washington administration have so early intimations of their peace intentions and a wish to resume the occupations of a civilised life. With these aspirations, the new chief magistrate and his ministry may exceed beyond their expectations in achieving a popular and enduring peace. But only, on the other hand, let them endeavour to pursue a career of bloodshed and aggression, and the North will never again acquire power or consideration in the family of nations.

In the next fortnight we shall ascertain what will be the dominating tendency of the new Northern officials, and England and France will be in a position to shape their policy accordingly. As it is, already a better demand is made for capital for use in London and elsewhere, and

from the position of the Bank's accounts it is not likely will be any further alteration in the rate. The arrangement made by Mr. S. Laing on behalf of the General Credit for the concession and consolidation of the international Turkey, will be the next financial operation of moment since within the last few days about £500,000 was forwarded to Constantinople as a part payment of the advance, this and other drains upon the resources of the Bank will prevent any great increase in bullion, even should it be maintained at its existing elevation.

The tone, too, of Mincing Lane affairs, whilst was more encouraging, the public seeming to be imbued with the notion that the worst in America, with regard to the war, had passed, and that the death of President Lincoln, meeting at his end has been, will not occasion any further great fluctuations. It was to be expected there would be a panic in the securities; that, in reality, has occurred, and has been somewhat mounted. Subsequent fluctuations may take place, but they can scarcely be of a serious nature unless an era of depression is introduced. If we can survive this shock, and no dire results follow, we shall have good average terms of trade, greater buoyancy in the produce markets, and a legitimate enlargement of general business. With an increased revenue, improved revenue, and a reduction of our local expenses, England will still make progress, and be closely followed by France.

THE BUDGET FOR 1865-66.

THE Chancellor of the Exchequer has propounded his Budget in an address of two hours and a half, explained the manner in which he proposes to deal with his surplus of nearly £4,000,000. The chief recommendations in the committee of ways and means are a reduction in the income-tax, placing it at 4d. in the pound, a reduction of the tea duty, and a modification of the fire insurance duty to a uniform 1s. 6d. A variety of other small changes in connection with the parties for vessels, the fees paid by conveyancers, and mortgage arrangements, will also be effected: but these are of secondary importance. Mr. Gladstone went at great length into the question of the duty, and declined any further concession associated with it, but he will introduce a bill allowing inferior and middling goods to be sold by weight instead of measure, if it shall be considered expedient. The balance of about £250,000 which will remain on his estimate for the year, he hopes will be protected by the house against the invasion of those who may think they have "claims to consideration," since it is necessary to have something in hand in case any of his calculations are not fully borne out by results.

OUTLINES OF AMERICAN FINANCE.

No. XV.

The Bank were completely triumphant, and stood an undisputed victor before Congress in his journeys to his country seat in Tennessee. He paid all his travelling expenses in gold. His admirers imagined that inexhaustible wealth would flow over the whole American land, there detained in a variety of productive and partly despised that paper money which had to pay their debts, reclaim their waste lands, spread their sails on every sea, make commerce an industry, and reach a state of unexampled prosperity. The friendly representative of value which had been ally when struggling for political independence, the establishment, had poured among them a wealth at which Europe had been astonished, and was regarded. In 1836, of his own mere authority, by an act of Congress, General Jackson issued his Circular, by which he directed the collectors to reject all notes tendered in payment of anything but coin. The Distribution Act, which gave the public deposits, passed the Senate and the House of Representatives by 155 yeas, and that the money which might be in the Treasury on the 1st June, 1837, reserving the sum of five millions should be lodged with the several States banks, for their respective representation in Congress, should by law authorise its treasurer or other officer to receive such deposits. These were to be paid to the States banks in quarterly payments, commencing on the 1st of January, 1837; but the intention of General Jackson was that the banks should hold the public moneys as trustees, never using it for banking purposes. He gained the conviction that the trust would be abused, he was soon undeceived, and his friend Andrew Jackson Van Buren, had to bear the burden of his

Circular created very general dissatisfaction, for the mercantile world felt that it was a decree of prohibition against the manufacturing industry. As a protest against it, a Bill was introduced in the session of 1836-1837, designating

and limiting the funds receivable for the revenue of the United States, and allowing payment in the notes of the paying banks; but it did not become law, as General Jackson kept it in his desk till Congress was adjourned, and the measure by never affixing his signature.

In his eighth and last annual message, 6th December, 1835, the President was compelled to acknowledge that his anticipations had been disappointed. The States banks, in fidelity he had vauntingly guaranteed, proved untrue. They very soon abused the confidence reposed in them, appearing to sad disadvantage when contrasted with the national bank. When the transfer of the deposits was first made, for the evident though concealed purpose of making a new capital, they who had sufficient discernment to perceive the moral courage to avow it, declared their distrust that the public money would not be forthcoming as commanded; but the President resented such suspicions, affirming that the States banks would neither have the power to divert the public funds from the legitimate purposes of the government. He now admitted that they had misappropriated those funds to wild speculation, thus described their proceedings:—"They had previously made loans on this surplus, and thus converted it into a new capital." The States banks did not pay interest on the deposits, and cupidity would not suffer them to remain unproductive. The national domains furnished a wide field for speculation, and in the years 1834, 1835, and 1836, lands were sold from the government to the amount of 1,000,000 acres, valued at millions of dollars, being nearly one-half of the total amount which, up to that time, had been received from the sale of lands since the constitution was framed. Many of the Indian lands had been removed to the west of the Mississippi, not by agreement. When the Cherokees crossed that river, they received in perpetual guarantee 13,554,135 acres of land in exchange for 9,492,160 acres on the east side. In accordance with the United States stipulated to pay them 5,600,000 dollars for improvements on the lands relinquished, and 1,600,000 dollars for subsistence and other beneficent purposes. For the lands acquired since the 4th March, 1829, to the 1st of January, 1836, 116,349,897 acres, the United States paid 76,560,000 dollars in permanent annuities and other equivalents. Many of the Indians with whom these contracts were made had previously been in the hunter state and become agriculturists, the old mode of living by their industry. This emigration of the aborigines

large tracts of land for sale, and as it was fertile, cotton and flour were rising at the time, speculation was rife. These were the chief borrowers of the money, and were induced to make banking capital of the money of the national bank no longer restraining or regulating the money of the country, the several State legislatures issued numerous banks, many with very inadequate capital, to supply a supposed demand for banking facilities, and a plausible reason was assigned, as the public lands were to be bought on credit, but only for ready money. In this manner specie was diverted from the legitimate uses of trade. Hence the enormous efflux of paper, without sufficient security, in search of dividends. The government was not blameless for the consequences which ensued. It not only winked at irregularity, which diverted revenue from sales of land, but encouraged the issue of bills to justify General Jackson's opposition to the extinction of the national bank would be for the benefit. Loans, discounts, and the renewal of bills were easily negotiated. On the lands surrendered by the States, and even towns, sprang up as if by magic; the law of June, 1836, was passed, which ordered all the money in the treasury, less five millions of dollars, on January 1, 1837, to be distributed in four equal instalments to the several States, and had time to operate, it was found the deposit banks had in circulation some forty millions of dollars in notes redeemable in specie on demand. The banks had been selected by the favouritism of the President and the Treasury; but his powers ceased with the passage of the Distribution Law. Henceforward each State received its share of the public moneys in defined proportions. The chosen banks, therefore, had to refund, that the law of repartition might be obeyed; this they at first refused to do, but only by exerting a ruinous pressure on their customers, refusing to renew their bills at maturity. For a while they saved themselves by crushing their customers in the cities, which they were the monetary centres, and as their resources succumbed their own strength was debilitated, and they were not paying twenty shillings in the pound. They were obliged to raise gold in England on securities, through the houses in London, but those houses themselves failed. Bankruptcy stalked over the land from New Orleans; and the crowning monument of General Jackson's financial statesmanship was industrial desc-

lation. But President Van Buren had to reap the his predecessor had sown and cultivated, and the catastrophe belong to the succeeding administration.

It is proper, however, here to notice that General Jackson, on resigning office, published a "Farewell Address," in which he admitted that a wild spirit of speculation had "within the last year or two." Clearly this was not to the national bank, for it had been rendered powerless at that time. He also complained that credit had been abused, which the suppressed institution was equally guiltless of its judicious management, and that of its twenty-five years credit had been kept sound, trade had prospered, the country flourished, and the public debt been discharged to the last dollar. The contrast was most striking between the state of the country when General Jackson first became President and when he left office. Of the abuse of credit and the recklessness with which men engaged in business, he spoke in these terms: "We have seen its effects in the wild spirit of speculation in the purchase of lands and various kinds of stock, which, within the last two years, seized upon such a multitude of our citizens, and to pervade all classes of society, and to withdraw the country from the sober pursuits of honest industry." This was a condemnation of the system he had introduced and maintained by his patronage. He then objected to any large surplus in the treasury (not anticipating there would soon be a surplus) for he observed that a large surplus implied high taxes, diminishing the means of corruption while it impoverished the people. He also condemned high tariffs when imposed to protect special interests. As a rule, he advised that revenue should be the exact measure of taxation, neither more nor less. He denounced national banks and all moneyed corporations, and insisted on a purely metallic currency.

This review of General Jackson's financial administration ought not to terminate without some brief notice of the fate of the national bank. When the directors were informed that the renewal of its charter was hopeless, they applied to the State of Pennsylvania for an act of incorporation, which was granted, though at the heavy price of nearly six millions of dollars; but its privileges were extended to thirty years, during which long period it was hoped that the purchase would be remunerative. If the bank had not consented to those exacting terms, the act of incorporation would not have been conceded. The fact was that Pennsylvania had vast and immense internal works, as canalisation and railway

length was unequal to the outlay. Hence the State granted the charter. The act of incorporation was an Act for the suppression of taxes established on immovable property to defray the cost of public State, and for other objects." One of those other the charter of the bank.

cession, General Jackson and his partisans were rage. The newspapers in their interest even public to raze the bank buildings to their foundation, the site with salt ; but these were the ravings of folly. The bank was established, and borrowed a sum, with which it paid off the capital due to the Government. It established agencies in the provincial Union which were nearly as profitable as the old State notes, however, were no longer legal tender in the single State of Pennsylvania. In Virginia a riot occurred. After the 3rd March, 1836, when the Bank of the United States had expired through the forgery, some of its notes were forged. The jury pronounced the following curious verdict "there is a law to punish." The judge acquitted on the ground that there was no penal law applicable. This judicial decision was clearly dictated by the charter of the national bank allowed it to wind up its affairs, and therefore it was entitled to sue against forgery till 1838.

Van Buren succeeded General Jackson in the presidency. He had been Vice-President with his predecessor, and was strongly united by personal friendship and political and financial views. The truly illustrious era of the revolutionary era had now passed away, and the address of the 4th March, 1837, Mr. Van Buren styled himself as being the first President of a new government coming to the rich inheritance of a settled government of an ample and unincumbered revenue. At the end of the year 1836 not only was the national debt of the States liquidated, but there were 41,723,959 dollars in the Treasury ; but within two months after Mr. Van Buren took office at the White House, nearly all the banks suspended payment in specie. The enormous inflation in land have been noticed. The banks of New England made enormous advances to the cotton planters, and borrowed largely in Europe. They were also indebted to monetary houses in New York. The

American agency firms established in London had various securities large amounts of bullion, which transmitted to their correspondents in the several States. Nearly three consecutive years this drain had been on the Bank of England, when the alarmed directors suddenly refused to discount American paper. The consequence was that the American banks and merchants were called upon to reimburse the advances made them by the agency houses in England. It was contemporaneously with this suspension of credit that Congress passed the Distribution Act, which entirely changed the relations of debt and credit in America, acting directly on all financial operations, and of course indirectly on all foreign payments. The deposit banks, hitherto favoured by the policy of the Treasury, were warned that the preference shown them would cease on the 1st January, 1837. The price of cotton began to fall, and the Federal government had to declare that it would only receive specie or its own specie deposits from the deposit banks for customs, postage, and all other public taxation. Thus the policy of General Jackson was fully ripened, and we proceed to exhibit its fruits.

On the 13th of May, 1837, the banks of New York, to realise their claims on the South and West, came to a unanimous resolution to suspend specie payments. The banks of New Orleans, finding it impossible to recover what was advanced to the cotton planters, adopted the same course. There was no complicity of action between the two banks, but there was no common and imperious necessity compelling them to surrendering to a common and imperious necessity. Ruin hovered with blackening wings over the industrial centres of the Hudson and the Mississippi. Prudence had compelled them to succumb, all the banks in the United States followed their example, and public opinion favoured this universal declaration that engagements could not be immediately fulfilled. In fact, it was a necessity not to be evaded. The legislature of New York passed a law so far as to legalise suspension for one year, forbidding the banks, however, from declaring dividends till that term expired. Some other States acted on that precedent, but were not followed in all. Other legislatures excused or justified suspension as an inevitable result, but refused to give it any sanction. This desperate state of things compelled Van Buren to call a special session of Congress, which met on the 4th September, 1837, in which he had to announce the suspension of the banks, and even of those to which

been entrusted ; but, what was still more mortifying, declare that prosperity had so completely vanished, that the Treasury was empty, and, as a consequence, that money was borrowed to defray the public expenditure. The millions of dollars were gone, and the national debt had to be paid off to commence a new one. This was a rebuke on the vain-glorious boasting of General Jackson. His shallowness as a financier was demonstrated. The Secretary of the Treasury had been compelled to repudiate the banks for whose solvency General Jackson had stood. Nor could he discover others safe under the conditions of the Circular ; nay more, such was the utter prostration of the country at that time had to be given to the merchants to redeem the money they had given for customs duties. Such were the circumstances that President Van Buren was compelled to confess, when he was expected to provide a remedy. In the message of the 4th September, 1837, he thus explains the state of the country :—

At the commencement of the year 1834 the banking capital of the United States, including that of the national bank then chartered, amounted to about 200,000,000 of dollars, the bank circulation to about 95,000,000, and the loans and discounts of the banks to about 320,000,000. Between that time and the 1st of January, 1836, our banking capital was increased to about 251,000,000, our paper circulation to more than 100,000,000, and the loans and discounts to more than 350,000,000.

To this last increase are to be added the many millions of credit acquired by foreign loans contracted by the States institutions, and by the lavish accommodation afforded to foreign dealers to our merchants. The consequences of this redundancy of credit, and the spirit of reckless speculation engendered by it, were a foreign debt contracted by the Government estimated in March last at more than 30,000,000 of dollars, an extension to dealers in the interior of our country of supplies greatly beyond the wants of the people ; the sale of 39½ millions in unproductive public lands in 1835 and 1836, while in the preceding year the sales amounted to 4½ millions ; the creation of debts to an almost unlimited amount on real estate in existing or anticipated cities, and on equally unproductive, and at prices not seen to have been disproportionate to their real value ; the expenditure of large sums in improvements which in many cases proved to be ruinously unproductive ; the diversions of much of the labour that should have been

applied to agriculture, thereby contributing to the of large sums in the importation of grain from Europe, expenditure which, amounting in 1834 to above 250, was in the first two quarters of the present year more than two millions of dollars."

Such was the financial and commercial exposition President, nor was it in the least coloured, but ar true. It was a picture of desolation at which the bo have stood aghast, and the desolation so graphica was entirely owing to the insane folly of supposing th commodity could represent and circulate all other co It was ascertained that there had been upwards of dred failures in New York, involving many millions. In New Orleans the sums owing and demanded forme gate of twenty-seven millions of dollars in two days. there were one hundred and sixty-eight failures in A large deputation from New York of all classes of and distributors had waited on the President to p possession of the real facts of the case. They compu moderate limits, the depreciation in the value of estate at forty millions of dollars; affirmed that a c taken place in local stocks, as railroad and canal tions, of twenty millions; that merchandize in the had fallen at least thirty per cent.; that twenty thous had been discharged from employment; that par seized an active, enterprising, and prosperous co finally, that the errors of rulers had produced more than pestilences which depopulate cities or con which reduce them to ashes. The New York deput cluded that the Specie Circular of July, 1836, was th all the adversity experienced, on the very simple bu ground that the precious metal could not be obtain cient quantities to represent the enormous and an ereasing wealth products that industry created. The is that the theory of a metallic currency assumes th commodity—coined bullion—can represent the va other commodities, which is a mathematical absurdit is equivalent to affirming that part is equal to the wh

President Van Buren, however, thought differe considered that distribution might be unlimited with instrument of distribution—that industrial producti progress indefinitely with a restricted currency. A his intelligence must have been aware that the law and demand was universal in its action; that the rent

of ships, the wages of labour, and the price of corn, all with the scarcity or abundance of houses, ships, and commodities; but if we are to infer his mental from his legislation, he must have concluded that money was an exception to this law; or, that, if it was, wise and benevolent statesmanship was gratified by the necessities of a penniless population. It is evident that houses are insufficient, an additional number are needed, and the materials of construction are readily obtained where money is limited to the precious metals, the quantity of which is impossible, because the additional material cannot be obtained. When rent is excessive, the remedy is simple. More houses are built till the supply meets the demand, and then rent falls; but there is no remedy in regard to gold and silver coin; consequently, the people must have it, are compelled to give more and more of the products of their labour, for a constantly increasing quantity of coin. Such was the state of America when Van Buren became President. He held that the government was to take care of itself and secure the coin by metallic taxation, and that it could not be expected to refer to the monetary concerns of the people, but, however, that government did so legislate when it required the labour of the country converting all its products into silver coin before taxes could be paid; for that was the law imposed by the Specie Circular. Government could not import gold or silver bullion, nor could it detain it; all it did was to mint the bullion, fixing its value by putting on it a moneyed denomination, and when the market price rose above the mint price, the coin was exported as bullion metal. The Specie Circular, however, demanded that when government had offered a premium for its coin, how was it to be obtained? By no other means than by raising the price of commodities, and thus tempting the people to return the coin,—in other words, by ruining the people. In this manner the interests of the government were arrayed in bitterest antagonism against the interests of the people, of which truth the statement of the New York Tribune was the illustration and the commentary.

THE BANKERS' GUARANTEE AND TRUST FUND

IN another page will be found a letter from the secretary of the fund to which we would direct the attention of our readers. As most of them are doubtless already aware, the fund has been established for the purpose of enabling the clerks and others employed in the banks of Great Britain and Ireland, by the simple plan of guaranteeing one another, to reserve to themselves the profits that have been accumulated for the benefit of the guarantee societies. This is certainly feasible, and calculated to effect a considerable improvement while the auspices under which it is brought forward augur favour for its success. It would appear, indeed, that many of the private and joint-stock banks have already adopted it, and this is the case it can hardly fail to extend its operations to the other banking establishments in the kingdom.

The old plan of requiring private security seems to have fallen into disuse, and whatever virtue may in former days have been supposed to attach to it is now known not to exist, for it is a well ascertained fact that those banks which insisted upon having private security were not less subject to losses from the dishonesty of clerks than those with whom it was not compulsory. We believe that most of the more modern banks will not even accept private security. And the reason is, that if, as experience proves, it does not prevent fraud, it is not half so good a security to fall back upon in the event of dishonesty, to say nothing of the disagreeableness of enforcing an innocent and worthy man to make reparation for the dishonest acts of some scapegrace of a connection and the risk of ruining him for life. More than this, we believe that private security is often tantamount to no security at all, the person being frequently not worth as many hundreds as he is said to be for thousands. And even if he is worth the money, to require him to and to enforce payment would, in nearly every case, be fully distressing. The objection, too, on the ground of the disagreeableness of the obligation, even to the most honest, is not without its weight, and may be added to the other causes mentioned which have tended to abolish the practice.

We have heard instances of young men in no respect inferior in character and trustworthiness to those appointed in their declining situations which they were most anxious to obtain, because they could not find the required private security, but that they either would not put themselves under the obligation to their friends, or would not hazard the unpleasantness of being refused at this or that quarter. Youths who would so act are not likely to turn out the worse men, yet good openings in life have been closed against them, not because they were less deserving, but more pious and independent than others. It is unpleasant enough to grant a favour of this kind: it is ten times more disagreeable to

refuse it is a painful thing; and to be refused—there is a sting that which has a most enduring sting.

and the receiving of private sureties being alike objectionable for many reasons, and having been found alike ineffectual to provide against, fraud, recourse has been of late years to the guarantee societies. It is known that these societies have made large profits out of the business, as which we may mention that the shares of the Guarantee Society, which £3 have been paid, are now worth about £13 per share, so that this represents anything like the proportion of the business brought to them by bank clerks has been. The fact we believe to be that, although guaranteed at a less rate than other clerks, they have been paying largely for the benefit of classes less honest than their own. It is at least probable that considerable profits have accrued from their annual business, of which they might all along have kept to themselves the plan of organizing together for the purpose of guaranteeing themselves.

It seems to us that if this plan is generally adopted, there will be a saving of "profit," but very likely an actual diminution of the salary of every clerk who is a defaulter to his employer will like that of his fellow clerks, and these are they who have the best chance for preventing and detecting frauds. So that, upon all as upon economic grounds, we are disposed to look upon the plan with favour.

If banks have, we believe, subscription funds of their own, it is one of the objects of the provision of a guarantee fund. These funds necessarily require for their support compulsory contributions from the whole staff, and the accumulation is considerably in excess of what is required to make good the losses occurring among the clerks, by far the larger portion of the cost of the lot of those who spend a lifetime, or finish their career in the bank's service. There seems to us to be great force in the argument, that it is more desirable that there should be but one fund for the whole body of bankers' clerks, which would enable them to obtain their securities at the lowest possible cost, and to remain in the service of whatever bank they might be engaged. At present a clerk in a bank that has a subscription fund forfeits his subscription on leaving the bank, whereas a clerk in a bank which has no subscription (and a much smaller one) to a general fund, his interest in it would continue as long as he remained in banking service.

The Bankers' Guarantee and Trust Fund has our best wishes for the successful accomplishment of its very worthy purpose, and we hope to hear that it has been approved and adopted by the directors and staffs of all the banks in the kingdom.

THE CURRENCY SYSTEM.

To the Editor of the "Bankers' Magazine."

SIR,—Public attention has once more been attracted to our system by another monetary pressure, and it is probable that next year have a parliamentary inquiry into the whole. Expressions of dissatisfaction, loud and deep, resound from all quarters, and it is the general opinion that the difficulties which have inevitably arose from the sudden collapse in prices last autumn were materially increased by the high rates of interest. That the high rates, doubt, principally arose from a combination of causes over which the Bank had little or no control; but it is the opinion of many that the Bank's action was not justified in having recourse to the extreme rates, and so greatly to the commercial losses and embarrassment. It is, however, the opinion of many that the Bank was merely acting up to the money market adopted by the legislature in 1844, and the true course of action taken by those who object to the action is to examine the soundness of the policy, and if possible point out the errors which exist in that thick mass of reasoning on which it rests.

The advocates of the policy contend that the high rates of interest were produced by a heavy exceptional demand for capital, and that they were the means of protecting the country from a financial crisis. They have found an exponent of these views in Mr. Stirling of Glasgow. In a pamphlet recently published by him, that gentleman has furnished the world with the data on which these opinions are grounded, and I shall feel obliged by your permitting me to point out the utter incorrectness of his figures, and to call his attention to one or two other little errors into which he appears to have fallen.

This exceptional expenditure, we are informed, amounted in the last two years to £400,000,000 per annum, and we are told that we cannot reasonably expect a return to a normal state until some relaxation has taken place in the elements of pressure. Now, when I mention that the elements of pressure alluded to are—1, increased cost of cotton; 2, demand for limited companies; 3, increased ordinary expenditure in Europe and France; 4, European loans; 5, American war expenditure, I think it will appear pretty evident that Mr. Stirling's proposition has been completely falsified by facts. The pressure has not appeared before any material alteration has taken place in the elements, but the money market has entered upon a period of contraction, and instead of this being attributable to any such theoretical cause, it arises principally from the general inactivity of trade, and to a great extent by the check inflicted by the late stringency of the money market.

And an examination of the figures given by Mr. Stirling confirms the suspicion which this fact creates, that he has

rather reckless assertion, in the place of facts; and that, teachings of the school to which he has pinned his faith, erred creating figures to suit his thesis, to conducting a serious operation of extracting the truth from an extensive examination of facts.

in this estimate of £400,000,000 is the sum of £100,000,000 as the demand for limited liability companies. I may take the capital of the projected extension of old companies and the creation of new ones amounted in 1863 to £135,300,000, and in 1864 to £145,000,000. But even if the figures he gives had been correct, on what ground can they be said to have assisted in the operation of discount? Let Mr. Stirling make the experiment of a prospectus, demanding for some great scheme not £100,000,000 in the course of a year, but any conceivable multiple of that in a single day, and he will have his eyes opened to the fact that demands of this nature do not exactly operate in the same manner or to the same extent as an actual consumption of capital. The fact of the matter is, that of the £100,000,000 demanded, or rather proposed, in 1864, only £10,000,000 was really paid, and only a very small portion of this can with truth be said to have affected the money market. The largest portion of it merely consisted of the displacement of capital for joint-stock enterprises, and the development of new companies which would otherwise have been made as partnerships of individuals. £10,318,333 was added to the joint-stock capital of the country; £4,213,750 to financial and insurance companies' capital. The figures which Mr. Stirling has so often taken are the offspring of that principle of limited liability, which is actually consolidating the business operations of the country, and in my opinion more clearly indicates the nature of the problem which he has undertaken to defend, than his infatuation in attempting to persuade the public that £110,000,000 of capital was required for limited liability companies in each of the last two years. At an equal amount of reason, our new financier includes in his estimates, a sum of £50,000,000 as increased ordinary expenditure in England and France. Having made the discovery that the expenditure of these countries increased £50,000,000 per annum between 1852 and 1862, he has not hesitated to assign this as one of the causes of the doubling of the rate of discount throughout 1863-4. Need I say that he might with quite as much have included the heavy expenditure of this country in the early part of the present century, in his estimates. Does not the simple fact that the money market has been easy for lengthened periods, since the heavy expenditure arose, prove that the supply of capital had increased itself to the increased demand? But not only has the supply not been increased within or just prior to the rise in the rate of discount in question, but it has actually diminished.

He places £40,000,000 as the increased cost of cotton, the value of these figures will be appreciated when I point out that the amount merely constitutes the difference between the cost of cotton imported into this country alone, during the periods 1861-1865. No allowance whatever is made for the increased value of cotton in the article.

I do not contend that these things did not to some extent contribute to the cause of the rise in the rate, but I protest against such statements as those made by Mr. Stirling, being thrown into the public discussion. The subject is sufficiently difficult without any additional theory being added to the already cumbrous mass. The author examined the trade returns he might have noticed the discovery that the exportation of bullion to India and the increase from £10,000,000 in 1861 to £23,000,000 in 1865. He would probably have been very liable to add the £23,000,000 to his estimates, but a very slight knowledge of the subject would have given him the true explanation in the changes taken place in our trade since the commencement of the war. He might also have known that the commercial policy of this country do not object to such a change in the rate of interest as the state of the Exchange and of the Bank's reserve renders necessary; but when they find the Bank experimentalizing at the expense of and inflicting losses, and creating confusion for the purpose of turning the flow of a few hundred thousands of bullion, they take the liberty of questioning the soundness of the policy which has produced so significant an end entails losses on them to ten times the amount when they find that the screw is put on in obedience to a policy which is based on the assumption that drains of gold never arise. When there is an excess of money, they protest against being sacrificed to a policy which is on the face of it so palpably absurd; and denounce the assumption which is condemned by the most eminent thinkers of the subject, be at once fully examined before it has had time to produce another panic.

Lest, however, it should be supposed that Mr. Stirling is exhausted in this innocent piece of statistical romance, I will point out one or two other points of his production.

It would generally be supposed that before a man would undertake the responsibility of advising a great commercial nation on the application of a policy which has been condemned by some of the most eminent financiers and economists, he would at least give a full and free of his attention to the principal points of the question. Mr. Stirling, however, appears to consider this entirely unnecessary, and relying on the depth of his great statistical researches, he professes the most delightful absence of knowledge on the subject. Speaking of the rule formally adopted by the Court of Directors in 1827, of holding an invariable amount of securities, he says, "It is difficult to understand on what scientific or even

rule was founded." Now, the rule in question was the express object of carrying out the same principle as 1844 is intended to enforce. That Act did not introduce a principle or policy, but merely a different method of application. The fact it did not altogether do even this, as the Bank had carried out the division of departments since 1844. The object of the rule of 1827 and the Act of 1844 were intended to be that of making our mixed currency fluctuate as a purely metallic currency would do. The Bank had acted on this policy in 1827 and 1839, but it was contended that it had not been successful in those cases, and it was even admitted that its operation had produced the panics. "The first object of the Act," said Sir Robert Peel in the House, the 6th May, 1847, "which I admit it has failed, viz., to prevent by early and severe and sudden contraction, and the panic and controllable from it."

Want of knowledge on this important part of the question has been attributed Mr. Stirling's question—"How, indeed, could a law, passed but the other day, and applying to England, have caused convulsions, stretching far into other times, and affecting the commercial world in their extent?" It cannot be denied out that it is not the mere Act of 1844 which is at fault, but the principle on which that Act is based. The convulsions have all arisen either from political events, or from unsound monetary arrangements; and it has been the opinion of recent writers on this question that the great convulsions of the country were caused by the application of the same principle under the Act of 1844 and on the authority of the Bank. It produced the crises of 1847 and 1857. I now contend for the complete abandonment of this disastrous and unsound principle, and advance that it is not enough if a monetary system is constructed as to be able not only to weather storms, but to anticipate and prevent them, and that at least it should not take the course of creating or increasing them. The object of the system is to attain its end with as near an approach to perfection as possible. That end is to conduct the vast operations of commerce to the greatest degree of perfection. Instead of as at present, to expose commerce to an untenable theory, the system ought to be constructed to do the work it has to perform. Therefore prepare for all the demands for bullion to which an enormous commerce producing machinery for the absorption of a portion of the stock of bullion which is in the channels of circulation; and of sacrificing your commercial classes for the purpose of accumulating a stock of gold tacitly accumulated to meet the use of your reserve, tide over the demand, and by thus making the commercial or money-making machine in full working

order, depend upon it your stock of gold will be soon than by throwing the machine in confusion.

Mr. Stirling defines the support of public credit as the of rotten establishments. This is a rather common error. A system of credit is condemned because, like all other is liable and subject to abuse. On the contrary, public credit is the very keystone of our commercial greatness. It is the greatest banking and financial institutions in the world, which are silently but rapidly binding in one common whole human race, and enabling the human family to the greatest extent the inexhaustible productive forces of protection and perfection of the system, which collects to and directs it into this channel, becomes every day more the consequences of its derangement every day more disastrous. The useful as experience, consisted of destructions of public system Mr. Stirling has undertaken to defend has repeated those disasters.

Yours very respectfully

Liverpool, April, 1865.

THE BANK OF ENGLAND AS IT IS, AND AS IT OUGHT TO BE.

MR. EFFINGHAM WILSON has lately published a pamphlet, "The Bank of England as it is, and as it ought to be." John Sawyer, author of the "History of Banking," is a gentleman appears to be at issue with the Chancellor of the Exchequer in respect to his bill granting a lease to country bankers to continue the circulation of their notes for a finite period. Since Mr. Gladstone's first introduction of the bill he has made considerable alterations in it; for instance, he has reduced the period of the lease for issuing notes by the Bank from 25 years to 10, and he has altogether abandoned the plan relating to the compensation to be paid out of the consols to any banker to whom a lease is granted, and who is bankrupt, in respect to his right of issue. The author of this portion of the measure were evidently written before the Chancellor of the Exchequer consented to abandon the clause of compensation, he argues, "partakes of the grossest injustice less than this—a banker hopelessly insolvent has been

by virtue of a lease granted by and under the sanction of the Government, until he finds himself so deeply involved as to render it impossible to continue his banking operations. He is, therefore, a bankrupt. The Chancellor of the Exchequer pays the bankrupt a compensation for the loss of his business. The author further says: "It is impossible to predict how long the banks may fail between the time the measure becomes law and the time it does pass, and the expiration of the lease, but we are stating our belief that, in such events happening, the Government will be highly blamable, if not responsible, for the consequence." One remarkable incident in reference to this subject is, the failure of Messrs. Attwoods and Co., of Birmingham, not long after it did, it might have had a lease granted by Parliament for the issue of notes, being at the time "hopelessly insolvent." This undoubtedly caused the Chancellor of the Exchequer to make an inquiry into the circumstances of the banks to which the Government sold, for a consideration, the privilege of issuing notes for ten years. The author advocates the suppression of the country banks, and the substitution of the notes of the Bank of England in their place; but we think it would be inexpedient such a sweeping measure as that of merging all the profits of issue into that of the Bank of England. The law, as it now stands, does undoubtedly reserve to the Government the power to take the Bank of England twelve months' notice of the termination of its charter as a bank of issue, but it would hardly be prudent to exercise it. Mr. Lawson proposes that a similar notice be given to the country bankers, viz., that from and after such a day their right of issuing their own notes, or coining, as it were, their own money, should cease and determine; that there should be but one bank for the whole country, and that bank to be the Bank of England. The manner of carrying out his proposal is somewhat different from what will doubtless startle not only the authorities of the Bank, but those who are opposed to its present monopoly. He says: "The Government repay the Bank of England the £11,000,000 of its capital for that corporation. To do this would be a very simple operation. The Government could easily borrow the money and pay it to the Bank. Such an operation would be no increase of the national debt, but would simply be the transferring of the debt due to the Bank to the Government for the loan. The future capital of the Bank to be £20,000,000, divided into 500,000 shares of £200 each, of which 10,000,000, or £50,000,000, would be called up; this would be three times its present capital, and would leave as a security £15,000,000 of uncalled-for stock to provide against contingencies." Mr. Lawson also proposes that the Bank of England, and its branches in this country, should establish branches in Bombay, and Madras, which branches should be the depositories of all the Indian public revenue, the same as is practised in

this country, and that such branches should have the issuing Bank of England notes precisely on the same plan adopted in London and the several country branches of England ; that the amount of such notes be £25,000,000 at present a Government paper money in India, amounting to £7,000,000. This amount is far below the requirements of the country, and it might be largely extended without encumbering the currency.

Much importance is undoubtedly attached by the mercantile trading community to the extension of a sound system of currency throughout India ; but, as confidence is a plant of slow growth, it might be some time before so widely extended a paper currency could be habituated to the new order of things. Such an issue could undoubtedly break down the immense rates of interest charged by the shroffs, or money-lenders, who abound in almost all the cities and towns throughout India, and whose charge of 36 per cent. per month, equal to 36 per cent. per annum, is paid for bills on mercantile houses in Calcutta.

The Indian Government notes are issued through the post-offices in the three presidencies, and are looked upon simply as bank notes issued by the banks issuing them ; the world-wide fame of the Bank of England has extended to our Indian possessions, and the people regard it as a corporation of immense wealth. The notes therefore of the Bank of England, if introduced into India would, Mr. Lawson says, be looked upon with as much confidence as though issued by the Government, with which the generality of the people identify it, and consider it identified, and it would be difficult for any one to look upon them to the contrary.

Mr. Lawson recommends that, in addition to the advances to be rendered by the Bank to the commercial body, that the Bank might be empowered to issue a large amount of debentures to accommodate the landed interest with loans on the security of the landed estates, which security he considers far exceeds the value of the exchange. Objections have been made to the Bank issuing money on land, as such business is transacted by companies formed with that object ; but as such advances would be in the issue of debentures, they would not interfere with the banking business of the corporation ; in fact the Bank has already sent time occasionally lend money, not, however, to any extent on the security of mortgages. Mr. Lawson's work contains many details respecting the management of the Bank of England, and its dealings with the Government, all of which will be found of interest not only to the public generally, but even to those who are engaged in is to have daily transactions with the Bank of England.

BANKING AND FINANCIAL ANECDOTES.

No. V.

A FORTUNE MADE BY PICKING UP A PIN.

"Upon a day," in the year 1787, a boy hurried along the
 antin, and stopped before one of the handsomest houses
 in the street. The boy was Jacques Lafitte ; the hotel was
 the great banker Perregaux. The lad had not long
 his home in Bayonne, and had come to Paris to seek his
 fortune, hopeful and ardent, yet with very indefinite plans. The
 through the gate of the mansion ; he was in one of those
 which form so pleasant a characteristic of the best French
 courage began to fail him, and he would have gone
 if he had not the *concierge*, seeing his embarrassment,
 and kindly. The official guardian of the house having
 called him, "I want to see Monsieur Perregaux," said the lad,
 "I will go up stairs," said the porter ; and the country lad as-
 signed a magnificent flight of polished steps. The banker was stand-
 ing in the window of his room, reading a letter, and scarcely looked
 up in obedience to his "*Entrez*," the lad came in. The banker,
 only made aware of his presence by the lad's hurried
 entrance, Monsieur Perregaux looked up, and saw a boy standing
 before him very anxiously. The great banker courteously
 asked what he wanted.

And the lad, "I have neither name, fortune, nor station,
 no desire and the power to work. Can you give me a
 clerical office, if it is but the lowest ?"

"What is your name, young man ?" interested by the bright and
 countenance of the boy.

"Lafitte."

"Where are you ?"

"In the *monseigneur*."

"Are you a Parisian ?"

"No, *monseigneur* ; I was born in Bayonne."

"What is your father ?"

"A carpenter, *monseigneur* ; but he has ten children, and I have
 no money to try and help him to support them."

"You are a very praiseworthy, young man ; but I have no place just
 disposal. Another time, perhaps."

The lad retired, discouraged and sorrowful. He again traversed

that magnificent flight of stairs and passed the court downcast eyes, he saw a pin on the ground, and stooped up. The banker was watching him; the lad coughed, and looked at the window. The banker beckoned him to return, and hope lighted up the lad's face, and he was in a moment in the presence of the financier.

"The young man who would pick up a pin and care for his coat must have a mind trained to economy and order," he said.

"Monsieur," said the young man, "you will grant me that?"

"Why do you think so?"

"Because you have called me back."

"You have quick intellect, order, and economy; you are a good clerk," said the banker. "Go to the bank; I will employ you, and give you work."

Jacques Lafitte was installed as a junior clerk. Such a position could not long remain subordinate. He became book-keeper, cashier, then partner, then executor. He was appointed to the Bank of France in 1809, and in 1814 president. He had been made President of the Chamber of Commerce, judge of the Tribunal of Commerce for the department of the Seine, for which department he was chosen representative in the Chamber of Deputies. He had held high positions during two revolutions, and still maintained the respect of the commercial community, the esteem of his private friends, always cherishing with gratitude the memory of his early benefactor. On the 26th of March 1814, Jacques Lafitte, the great banker, whose career illustrated the saying, "What great events from little causes spring!" for his first business was turned on picking up a pin.

ROTHSCHILD AND JONES LOYD.

THE elder Rothschild, "the pillar of the Exchange," had been friendly to Mr. Jones Loyd, and carried this feeling so far as even, to wish to injure his commercial reputation. In 1825, when the failures were taking place, Rothschild, unsolicited, opened Jones Loyd's bank, and paid in notes to the amount of £1,000,000. Jones Loyd was only too pleased to have such an influential friend, and had no suspicion that the great financier had any arrière-pensée. The halcyon days were few, for a week or so afterwards

for the entire amount was presented, this cheque the heaviest that was ever drawn. Mr. Loyd's clerk was to know if it was to be paid. Mr. Loyd then at child's idea had been that, in the run that had taken place, some of this money would be used—that the demand would not be met, and that thus, at the least, confidence in the bank would receive a very heavy blow and sore discomfiture. Mr. Loyd was, however, prepared to meet it, and the offer was refused. Any ill-feeling that Mr. Rothschild was at once absorbed in his astonishment and could not parry of the attack, and he again offered his services. But the hand that parried one blow could not be so easily parried a second—Mr. Rothschild's offer was refused.

OPTIONAL NOTES.

The financial crisis of 1793 showed in glaring effects the effects of the legislation of that day, which, by the establishment of joint-stock banks, encouraged the class of small tradesmen in the country, passing off their notes as bank notes, but undeserving the title. One of the causes to be found in the reckless operations of many of the country bankers, particularly their unchecked issue of notes. There were about three hundred country bankers, who manufactured notes, some of them very liberally, and more than what were termed "optional notes," payable in London or in the country. These little bits of paper, in nearly all instances pictorial representations of the Bank of England, not only came floating up to London in great numbers, but were welcome in the shops, yet taken on the credit of the Bank of England. The Bank of England was resorted to on the part of the country bankers to convert their paper into the great circle.

MARK SPROT.

Mark Sprot was in London in 1780—if, indeed, anybody or anything had been settled in London at that time, when the banking business was in the arms of every one. He turned his attention to banking, but his means and his influence were alike small, and he

prospered ; government loans and government lotteries a him. Mr. Mark Sprot on one occasion received a visit from who owed him a large sum, and who told the great capitalist become so—that he, the visitor, was a ruined man. That a broker, and he informed Mr. Sprot that he had done to a large extent for a noble earl, who, being dissatisfied with the quotations had taken, had refused to pay his agent. Mr. Sprot urged the broker not to be uneasy ; that the claim was pressed ; but made an arrangement that the two should meet a nobleman. On business thoughts intent they accordingly met the earl, who, on application being formally made, merely in a cavalier style, that it was not convenient to settle just now. Mr. Sprot, however, was not to be put off thus, and firmly insisted unless the amount was paid before such and such an hour of the day, he would post his lordship on the Stock Exchange and the threat—for the carrying out of which, Mr. Sprot's credit was a guarantee—was effectual, and the debt was paid before the named.

FRAUD BY A MEMBER OF PARLIAMENT.

FEW trials, which were not for life (says Mr. Francis*), have much interest in the City as that in which Benjamin Plomer, a member of the Senate, a member of the Stock Exchange, a confessed felon—stood at the bar of the Old Bailey on the charge of defrauding Sir Thomas Plomer. The bench was crowded, the rank and respectability of the City ; and the melancholy aspect of the prisoner, his grave bearing and dejected countenance, the interest of the spectators and bespoke the remorse of the prisoner.

In 1811, Sir Thomas Plomer informed his broker, Mr. Walsh, M.P., that having bought an estate it would be better to sell out a large amount of stock to complete the purchase. He advised Sir Thomas not to sell directly, as there was a prospect of the funds rising ; and the title of the estate not being settled. This advice was complied with. About the middle of the year, however, Mr. Walsh changed his opinion, and repeated his advice to Sir Thomas to sell his stock, alleging his belief that the price would rise. Again the broker's suggestion was complied with ; but before the money was required for the estate it was rec-

* *Chronicles of the Stock Exchange.*

at, to prevent it from lying idle, exchequer bills should
with the proceeds. Sir Thomas again consented, and
amounting to £22,000 to Mr. Walsh, who promised to
at Goslings', the bankers to Sir Thomas, and hand
receipt. In the evening, however, he presented their
for only £6,000, and making some excuse for not
the remaining exchequer bills, promised to deliver
following day, adding that, as he had not settled for
paid the difference to the account of Sir Thomas. The
y home called at his bankers, and found that, though
exchequer bills had been deposited, the cheque of Mr.
£16,000 had not been received in time for presentation.
as, however, attached to the transaction until next day,
he was refused payment. Sir Thomas was immediately
inquiry instituted. It was soon found that the money
ly gained had been disposed of in paying his brother
chasing £11,000 American stock, and in investing
guineas doubloons. The prisoner was found guilty; but
reserved for the judges, being interpreted favourably,
ged from Newgate, and expelled from the House of

fortunately, he was not a creditor, he yesterday sent in his
he had since received from Mr. Allen a letter requesting
nt at this meeting, lest there might be an impression that
ur in what the committee had done. As that impression
he had great pleasure in consenting to be present, and,
ng an adjourned meeting, he was inclined to believe that in
e on that occasion he was in his proper place. (Hear, hear.)
had so ably presided over the meetings of the committee,
what the committee had done.

Miller, the chairman of the committee, read the following
Seldom, if ever, has a graver duty, or one involving deeper
ischarge, been laid by a Birmingham meeting upon any body
ownsmen than the duty intrusted to this committee by the

first meeting of the creditors of Attwoods, Spooner, Marshall & Co. The stoppage of that firm will form an epoch of prominent importance in the commercial history of the midland metropolis, baffling, and but too probably in some cases ruinous, effect work themselves out, and must be felt for years to come. Your committee believe that they will not be censured as having neglected the terms of their appointment, if they do not present to you a full and complete history of the bank from the day on which its doors were shut on 1791. Questions may arise in order to a final winding up of the bank which may oblige the assignees to go back beyond the date on which your committee propose to start—questions of the liabilities of the joint estates, affecting the liabilities of successive and varying partners of the firm to successive creditors. Those questions may be referred to a competent tribunal, inasmuch as not only all the original partners are deceased, but successive and varying partners who have been members of the bank since that date only, and he of comparatively recent date, survives. They should they arise, must be dealt with by the assignees under the guidance of legal advice. In their hands your committee leave them. Your committee will start from the 1st of January, 1854. But in starting from that date, selected as being the date from which the last combination of the bank commences, your committee must premise that the bank was in existence on condition as far back at least as 1836, the year in which Matthew Attwood, the father, died. He died largely indebted to the bank, and the assignees are of opinion that his estates should be sold to pay his debts, and that the same should be made to his sons by the bank should be charged to his account. As regards the sale of the estates the directions of the will were to be followed. Instead of this the debt to the bank was largely paid by mortgages to the bank to a large amount. In 1853 Richard Attwood insisted upon the transfer of the estates to the bank as a condition for largely increased sums then owing by the Attwoods. Your committee think it right to premise, further, that the account of the bank for 1853, one of the partners, who died in 1840, does not appear to be overdrawn. He had for some years a capital of £22,000 which he left to his executors. This gentleman had taken steps to relieve the Attwood family the necessity of paying off the large family debts when his agent was stayed from further proceedings by the death of Mr. Isaac Spooner's sudden death. In January 1854 the firm stood as follows:—George Attwood, Richard Spooner, Richard Attwood, George Marshall, Henry Marshall, Thomas Attwood, &c. By none of these partners was capital brought into the bank. Your committee have been more than startled by the discovery that there was no capital at this date, but a deficiency of about £20,000. This deficiency, the main cause of the ultimate ruin, arose from the fact that £235,000 of this sum being the balance of the money drawn by the Attwood family, after giving credit for the value of the estates of Thomas Attwood and Richard Spooner appear to have joined with the Brickfields estate with bank money in 1813. This estate was transferred in 1825 to Richard Spooner, at the sum of £20,000, and charged to him in the bank books. By the accumulation of interest beyond profits, and a payment of £4,000 for enfranchisement, the sum increased to £27,074. 17s. 10d. in January, 1854. Against this sum the bank held as securities the deeds of the estate and certain policies. Mr. Spooner paid interest at 4 per cent., and was debited with premiums on the policies. The estate was subsequently conveyed to W. Whateley upon trust for sale to secure the bank, and is now

ned at £20,220. Of this estate Mr. Richard Spooner received the creditors will clearly understand the position of each of the members of the firm of 1854, in reference to the bank, from the statement:—Mr. George Attwood died in May, 1854, having, by the agency of Mr. Spooner, made over all his real and personal estate to the bank. His debt, after deducting the value of his estates, was £235,000. Mr. George Marshall died in February, 1855, having brought in no capital, and leaving no deficiency on his account. Mr. Thomas Attwood died March 6, 1856; he left the bank £12,286. 10s. 3d. Against this there are no securities. Mr. Thomas Aurelius Attwood died April 8, 1864, having beyond the proportion assigned to him as a partner £7d. Against this there are no securities or assets. Mr. Thomas died November 24, 1864. The balance against him was £2d., reduced by estimated value of estates conveyed in trust to the bank, for the bank, as already stated, and by a sum on his account, to £3,448. Mr. Spooner had regularly applied his annual salary to him as a partner, to the liquidation of principal in the Brickfields estate account. Mr. Henry Marshall brought no capital into the bank. He appears in the bank books to the amount of £1,545, but for this there is a sufficient credit, which, had the bank remained open but two or three days, would have stood to his credit and left him clear. Your committee are of opinion that the Messrs. Marshall cannot be regarded as having occupied the position of chief clerk to that of partner, at a remuneration exceeding the salaries of their former position, from any selfish consideration. Ever strongly this step must be condemned on other grounds, as self-aggrandizement can be imputed to them; nor did they avail themselves of their partnership in any way which calls for the sanction of the committee. The arrangement between the six partners was that George Attwood should have an annuity of £1,500; Mr. Marshall, £1,000; the two Marshalls, £750 each; and Thomas Attwood, £500. On the death of George Marshall the sum assigned to Aurelius Attwood was increased to £750. Since Midsummer, 1854, the living partners have each taken credit for £1,000 per annum. In the foregoing figures and facts that in 1854 the bank was in deficit to the amount of £270,000. At the time of the stoppage this deficit had increased to £340,000. To the growth of this alarming and increasing deficiency your committee have naturally directed their close attention, and a point foremost among those on which the suffering creditors should be made aware of, and deserve full information. The causes are patent—1. The want of interest to the bank by the Attwood withdrawals, inasmuch as the estates of George Attwood yielded but a small interest, even at the rate at which they were taken to. Richard Spooner's debt, as has been stated, bore interest at £4 per cent., and was regularly paid out of the share of the supposed profits. No bank could contend successfully against such family overdrawings as has been brought to light in the foregoing investigation. At the risk of repetition on so grave a point the committee submit the following recapitulation:—

George Attwood	£235,000
Richard Spooner, deducting value of estates, life annuity, and credit on private account	3,448
Thomas Attwood	12,286
Thomas Aurelius Attwood	6,759
	<hr/>
	£257,493

"2. The system of overdrawing by customers seems to have been in this bank to too large an extent. 3. While it has been held that the profits of the bank ranged from £15,000 to £20,000, and that thus every year the formidable deficit with which 1854 was being reduced, the figures and the fact are far otherwise. The profits of the bank for the eleven years from January, 1854, to January, 1865, without any provision for bad debts, was only £49,019. The average of little more than £4,000 a year; of this £32,687. 10s. has been the credit of the partners and drawn out, £1,400 has been the depreciation of bank premises, leaving a balance of only £11,287. 10s. to meet the large amount of bad debts. These bad debts, together with the above small amount of profit, swell the deficiency to upwards of £100,000. Your committee feel it to be due to Mr. Edwards, the cashier, that they have been in the bank for nearly thirty years), to say that they have reached the conclusion that he was entirely ignorant of the true state of the affairs until recent negotiations brought it to light. Your committee were requested by Mr. Whateley, the solicitor who carried out the arrangement for the partnership of 1854, and the sale of the bank, that he was entirely ignorant of the amount of the debts of the bank, George Attwood and his family, and that he was never informed of the state of the bank until after the death of Mr. Aurelius Attwood, in April last, 1865, at which time negotiations were commenced and carried on, until the bank stopped payment, for amalgamating it with the Birmingham and Ham Joint-Stock Bank, Limited. Your committee, looking at the resolution under which they were appointed, gladly perceive that a part of their duty to bring in a verdict, nicely apportioning blame and moral guilt which attaches, respectively or collectively, to the several parties, this bank has been thus brought to ruin. They dare not, however, shirk their solemn duty to bring before those who are their fellow-citizens and who have so largely, so patiently, and so generously contributed to their unwelcome task, the naked figures and facts herein embodied, which cannot but anticipate that their report will produce a deep and painful impression, not in Birmingham only, but throughout the whole of the commercial world. Nor can they hide from themselves that the anticipation for continuing the bank after January, 1854, has wholly failed. There was no accumulation of profits to justify the hope of the bank's diminishing the overwhelming deficiency; while neither the success of the estates turning out to be very valuable, nor that of the family coming to the rescue, was sufficient to encourage the continuance of the business. They record this with the deepest sorrow, and cannot tamper with the first principles of commercial morality, in disregard of which goes far to annihilate confidence, and so entails ruin upon innocent thousands. For many years the bank has attracted to itself a generation of depositors, who, in its stability has been all but unbounded—a confidence which was increasing than waning at Christmas last. The researches of the committee enable them to affirm that for 11 years, at any rate, the recovery was hopeless. Thus much the committee has been unable to hold, lest reticence should be regarded as acquiescence or approval. They turn gladly from this most painful branch of their duty to the efforts which they have made to secure the main end of their mission, as large and as prompt a dividend as possible for themselves and their fellow-sufferers, believing as they do, that this is pre-eminently the object which an early, though small, dividend is preferable to the

tage. Your committee address themselves without a day's investigation of the statement presented to the creditors on surviving partner. The pressure upon the accountant and for the proof of debts and other duties which could not be precluded such a minute and exhaustive scrutiny as would them to pledge themselves for every item, but they report giving that the statement is substantially correct. With regard to the estates they have great pleasure in reporting that the valuation of the estate, made especially with reference to the probabilities of the future, confirms the figure presented in the balance-sheet. Your committee, at a deputation, consisting of the chairman, Mr. John Gough, and Mr. Hughes, to London, to seek an interview with Mr. Wolverley in order to place before that gentleman the strong claim which, in the case of the creditors had upon him. They grounded their claim mainly upon the facts that this gentleman is the son of Mr. Attwood, the younger, and consequently grandson of Matthias Attwood; and that each had in turn been executor of his father's estate, the present disaster being mainly brought about by Mr. Attwood, the elder, and Mr. George Attwood especially, as hereinbefore stated. Mr. Wolverley received with great courtesy and listened to with great patience the views of the committee in a letter, of which the following is a copy, left it with those gentlemen:—

“London, March 21, 1865.

At the first meeting of the committee appointed by the creditors of Attwoods, Spooner, and Marshall, with the view of getting the firm out of bankruptcy and securing as large and as early a dividend as possible for the sufferers, the committee were unanimously of opinion that they could not discharge their responsible and anxious duties to their own consciences or to their constituents without the opportunity of representing to yourself, as an eminent member of the family, the strong moral claim which, as they respectfully request, you have upon your favourable consideration. The statement with which Mr. Henry Marshall made the startling announcement at which has spread panic and, in many cases, probable ruin, in Birmingham and a widespread adjacent district, distinctly and unequivocally insolvency to the withdrawal of very large sums by certain members of the Attwood family—those sums not their own capital, but the property of their richer and poorer customers.

George Attwood upwards of £400,000 were gradually drawn out of the family by Mr. Thomas Attwood £10,000.

The fruits of these proceedings, struggling tradesmen, hard-pressed mechanics, provident farmers, necessitous widows, a long catalogue of distressed institutions, and of societies which attest the poverty of the poor,—to say nothing of sufferers in easier circumstances, but who were for the most part the rewards of laborious industry,—many instances much, in not a few cases, their all.

It is the sanguine hope that an English merchant bearing an honoured name and endowed with wealth will not think our application inequitable. We solicit, in no spirit of dictation, still less of menace, appealing to compassion only, such a contribution towards the relief of the assets as may help to mitigate the loss which presses so heavily upon so very many.

We are well assured that should you allow us to announce to our friends on Thursday next your compliance with our request, your

act will be hailed with grateful acclamation, not only by those who have raised a statue to one bearing the name of Attwood, but by the entire mercantile community, as an act worthy of the name of a British merchant; and if any other reward be wanted, it will be found in the blessings of many an one who is yet anxiously awaiting the issue of this catastrophe as an issue involving the comfort of himself and family.

"I am unwilling to trespass further upon your patience, to anticipate your reluctance by an importunity which I have good reason to believe wholly needless.

"The tone of the proceedings of the meeting on Thursday is of an inconsiderable extent in your hands.

"Believe me, sir, to remain, with much respect,

"Your obedient servant,

"JOHN C. MILLER, D.D.,

"M. Wolverley Attwood, Esq."

"The reply of Mr. Attwood was received by the chairman on Wednesday morning, and is as follows:—

"London, Tuesday

"Rev. Sir,—I have to acknowledge your letter of the 21st inst. to me on that day by yourself, Mr. John Gough, and Mr. Marshall, stating that you came as a deputation from the committee of the creditors of the late firm of Attwoods, Spooner, and Marshall, on this letter, and the explanations given by the deputation, that the main object was to learn whether I would now consent to purchase that portion of the estates belonging to the bank which was then in progress between the late firm and the Joint-Stock Bank, offered to purchase at a price about £20,000 beyond the value of the other object was to inquire whether I would make a contribution towards mitigating the losses which would be felt so severely by many of the smaller creditors, and you particularly called my attention to the fact that I was represented in the letter as a moral claim upon me, on account of my belonging to the Attwood family. I can by no means admit the justice or reasonableness of any such claim on me, entirely unconnected with the fact that I have always been, both with the late firm of Attwoods, Spooner, and Marshall, and the former firm of Attwoods, Spooner, and Marshall, in any question of joint interest was concerned. Mr. Gough mentioned the assistance which I had offered in order to facilitate the negotiations as affording a ground for this appeal to me, but I cannot consider as a sufficient reason for asking me to contribute towards the debts of others with which I have had nothing whatever to do. I was somewhat surprised at such request being made. In regard to that appeal as altogether unfounded, I fully concur. In expressions of sympathy for the sufferers by this disastrous failure. It appears, however, that in the actual position of affairs relating to the sale of the estates can be taken otherwise than by the sale. It may be scarcely necessary for me to add that if they think it necessary, any communication to me it will receive my best attention.

"I am, reverend sir, with much respect,

"Your obedient servant,

"M. WOLVERLEY

"The Rev. Dr. Miller, D.D., Chairman of the Committee of the late firm of Attwoods, Spooner, and Marshall."

 committee,

“JOHN C. MILLER, D.D., Chairman.”

cluded by moving that the report he had just read be
 epted.
 econded the resolution, which was carried unanimously.
 , in rising to move the next resolution, remarked that he
 y words would be necessary from him, because he perceived
 of the meeting that the resolution was one which would
 to the depositors generally. The resolution which he had
 s follows :—

meeting, having heard the report of the committee, is of
 tender of the Birmingham Joint-Stock Bank to purchase the

property and assets of the late bank on the terms of paying of 11s. 3d. in the pound, and to take upon themselves (the costs and expenses, should be accepted by the creditors." (He went on to say that after the able and elaborate statement situation of the bank and its state of hopeless insolvency, they agreed with him in saying that the tender of 11s. 3d. was as much reasonably expected. (Hear, hear.) It was certainly more than he thought he held the same opinion as the mass of creditors and he had no doubt, thankfully accept the offer.

Mr. J. R. Allen seconded the resolution, which was carried and amid applause.

Alderman Turner observed that he had been appointed and it was thought desirable by the committee that one should move the next resolution. He might add that they were unanimously in favour of the resolution, which was as follows:

"That this meeting having been given to understand, from the committee, that the continued assistance of the committee, connecting link between the great body of creditors and the bank, be acceptable to the latter, respectfully requests and empowers the committee to continue in office until they find that their further office would not be productive of good to the estate."

Mr. J. Gough briefly seconded the resolution, which was carried unanimously.

Mr. J. Suckling said he was perfectly gratified that such an offer as that of the Birmingham Joint-Stock Bank had been made; it had not been stated when the dividend was proposed that he would be still more gratified to learn that the whole dividend would be paid at an early period. He begged to inquire if the dividend was proposed to be paid.

Dr. Miller said he was most happy to be able to answer the question as satisfactorily as at present could be done. Of course it was not that the bank had not yet got possession, and before the transaction was completed it was necessary that they should bring the matter before the shareholders, and it was also necessary that the estate should be conveyed to them, when the bargain was ratified. He believed that he was correct in stating that at the earliest moment possible the legal ratification of the bargain would be made; and, further, that no unnecessary delay, so far as the creditors were concerned, would take place. Although he was not connected with the company, he felt bound to say that their offer was a very good one, and he believed they had every right to make it for their own comfort and honour, they would carry out the offer as speedily as possible.

Mr. A. Bird said he had been privately informed with reference to the immature bills of exchange upon which money had not been paid; they would be returned to the creditors. It would be satisfactory for the creditors generally to hear an explanation on the point.

Dr. Miller, in reply, said that he was instructed on the basis of this was a question of law of a somewhat nice kind, and it was desirable to go into legal discussions on that occasion. They had a committee of their own choice, and also able legal advisers, and he would suggest to Mr. Bird that those questions should be left to their hands.

, in proposing a vote of thanks to the mayor for his kind-
ing the chair at their various meetings, mentioned one or two
ers in reference to the part he had taken in these proceed-
-which he spoke in highly complimentary terms of the services
en rendered by the mayor in the matter, and concluded by

of the shareholders of the bank was held on the 4th April,
s Hotel, Portsea, to receive a statement relative to the posi-
-bank.

n Starling Blake, a large shareholder, was voted to the

man entered into a full and lucid explanation respecting his
with the bank, and how the winding-up of the concern was
t. It was proposed to close the bank when it was found that
ely insolvent; but he insisted that Messrs. Williams, Deacon,
uld be consulted, in common courtesy, seeing they were in-
at firm £50,000. The result of that interview was their
He stated that the depositors would receive every halfpenny
y in time, and congratulated the meeting that they were now
s—Messrs. Quilter and Ball being most eminent and hon-

The Provincial Banking Corporation had purchased the
e bank for £1,500, and had not the concern been closed as it

was, double or treble that sum would have been given. That day was to confirm the nomination of Mr. Ball (Quilter's official liquidator). He asked them to avoid litigation, and make the best of a bad job. He would be one of the principal yet he rejoiced that he had the money to pay, and that he would not suffer.

Mr. Hoskins, of Gosport, asked if a statement of the bank was not forthcoming.

Mr. Quilter (of the firm of Quilter, Ball, and Co., accountants in whose hands the matter had been placed) said that they closed on Friday, and on that day they were exceedingly anxious to dispose of the goodwill of the bank in the best possible way, until twelve o'clock that they succeeded in making such an arrangement (with the Provincial Banking Corporation) as might produce £3,000. At the present moment he was not in a position to give a full and complete report on the various matters connected with the bank, but he would, as far as he was able, answer any questions put to him. From the best information that had been given, he was afraid the loss which would have to be made good by the bank would amount to a very considerable sum, but whether it would be £60,000, or even £70,000, he was not at present in a position to say. Much would depend upon the realisation of a very large deposit in the bank, which they hoped might be realised almost in full; or, at least, certainly to the extent of many shillings in the pound.

Mr. Maroin asked what was the amount of that account?

Mr. Quilter said about £40,000.

Mr. S. S. Long—If you are successful in getting in this account, the liabilities of the bank still be £50,000?

Mr. Quilter—Yes; and if not, those liabilities will be increased to something like £20,000. That is the best approximate estimate I can give you.

A Shareholder asked if there had been any auditor appointed?

Mr. Quilter said he understood that there had been. He had seen the balance-sheets from 1861 to 1864, and he did not observe any signature during that period; but up to 1861, the accounts had been regularly audited by Mr. Lacey, of Petersfield.

Mr. Biddle remarked that 12 per cent. was the last dividend paid to shareholders, even though the bank was then hopelessly insolvent.

Mr. White, one of the directors, said that he had done his best to be satisfied that the half-year's earnings warranted them in paying a dividend of 12 per cent.; and £700 had been put aside for bad debts.

From a conversation that ensued, it appeared that the bank had failed when the last issue of new shares took place.

Mr. R. W. Ford, solicitor, inquired whether Mr. Quilter intended to lay before the meeting a statement of the assets and liabilities of the shareholders at the last half-yearly meeting, February last.

Mr. Quilter said he had seen a paper which he supposed to be, a copy of the balance-sheet submitted to that meeting. He was sorry to say there were names entered as being indebted to the bank, and certain fictitious debits had been placed there—(cries of "No!") that he believed that this balance-sheet did not speak the truth.

The Chairman, in a short speech, vindicated the conduct of Mr. Smithers, and Mr. Loney, who were directors, and who

of the affairs of the bank as he himself was, the managing Mr. Reeves and Mr. White; but with regard to the man thought that if he had sinned at all he had sinned

Gosport, a director, said he had a copy of the balance-sheet meeting in February last, from which it appeared that £724. 14s. 8d. He had no more power to look at the gentlemen who had overdrawn than any shareholder, nor know of the extraordinary overdraw until Christmas, and that there were not less than £15,000 of notes and at the time of the failure of Roy, Spencer and Co. Mr. (or, since dead) induced those gentlemen to draw cross but those bills were never properly dated, and they were cancelled and locked up, and were now lost by the statute of

remarked that they had been entered as assets, asked as to the amount of Mr. Reeves' deficiency.

and there was some difficulty in extracting the truth from (A laugh.) They had put him into the crucible on several best information they could get from him was that he had no bank money, but "he (Mr. Reeves) was bound to say down to any director except himself." They had succeeded, getting from him some securities, which would diminish the loss, although he believed that the loss sustained through the amount to £14,000. (Expressions of surprise.)

He remarked that he knew nothing of the matter until the previous day. It did not appear in Mr. Reeves' current account, or he would have known it. He was petrified when he heard of it.

He said there appeared to have been an account book kept by the bank, who was never able to understand it. He could not get the accounts tally, and after being there a few years he began to think something was wrong. He was told to do things in this and he did so; but "when I got married (said the man) I began to care for my family and character more than before, and I began to care for my character was tarnished. I knew that there were things wrong, but I had no power to interfere." He (the chairman) asked, "you allow this thing to go on?" He replied that the books were by Mr. White, and those books were so kept that nobody could get at them but Mr. Reeves.

London, solicitor to the Provincial Banking Corporation, asked the shareholders as to the nature of their liability,

Gosport, moved—"That it is desirable that the provisional liquidator should be appointed the official liquidator of the

business having been disposed of, the proceedings closed.

THE UNITY BANK FRAUDS.

At the Central Criminal Court, on the 17th April, Mr. J. Terry, the late manager of the Unity Joint-Stock Bank, Burch, the secretary of that association, surrendered to before Mr. Justice Smith, upon a charge of having unlawfully made a certain false balance-sheet of the affairs of the Unity Bank, with intent to deceive the shareholders and the public. The trial lasted four days.

Mr. Giffard, Q.C. (specially retained), Mr. F. H. Montague Williams conducted the prosecution; Serjeant Giffard, specially retained, with Mr. Sleight and Mr. Nicholson, to defend the defendants, and Serjeant Ballantine, also specially retained, and Mr. Giffard, Q.C. for the other defendant, Burch.

Serjeant Parry, when the defendants were called upon to plead, made a technical objection, which was overruled.

The defendants, by the advice of their counsel, refused to plead, and under the statute, a plea of not guilty was entered for them, and the trial proceeded.

Mr. Giffard, Q.C., said the investigation on which the charge was founded to enter was one of considerable public importance. Strictly speaking, the charge in substance amounted to this—the defendants were guilty of fraudulently manufacturing a balance-sheet purported to represent the affairs of the bank of which they were to be in a prosperous condition, whereas, in fact, the bank was at the time hopelessly insolvent, and the defendants knew it. The growth of joint-stock undertakings toward public companies and joint-stock undertakings of late years taken had rendered private enterprise more difficult, and the association of capital and labour, which was a feature of the time, made the conduct of banking associations and other joint-stock companies a subject of great public interest. In proportion, however, as the number of such undertakings increased in number and importance, so in proportion would expect to find that frauds which could but arise in the management of private capital would be likely to arise out of those of joint-stock companies, and it was of great importance that the persons who were induced to invest their money in them should be able to rely on the integrity of those charged with the conduct of such associations. Where the persons intrusted with the management of such undertakings failed through misfortune, an ordinary civil remedy might be obtained; but if it should be found that the persons so intrusted were guilty of a fraudulent attempt to conceal the truth, and to carry on an undertaking which they knew to be hopelessly insolvent, it would constitute a monstrous fraud upon the public. That was the case against the prisoners. The Unity Bank was incorporated on the 1st of January, 1856. Its staff at least was appointed at that time, with reference to the grant of a charter, it was not until the 1st of May in that year that the bank commenced business. At that time a manager, but no person filling exactly the position of secretary, was appointed by the prisoner Burch. The manager at that time was Mr. Terry, and for some time the affairs of the bank were conducted in a very unsatisfactory way. Large debts were incurred, and the returns were not satisfactory, and in so serious a state

the bank, think its affairs to be that, on the 26th of August, a letter pointing out its condition, and the necessity for the management, to save it from failure. That letter, Mr. Alderman Mechi, the chairman of the bank, was as

Sir,—Since our last court-day I have taken into consideration the Unity Bank, and my own responsibilities and duties in rewith. After what has passed, and the small share of support from the chair, I do not feel personally inclined, nor do I imagine that would arise from my again attending the court may imperatively require me. I desire, however, to put on my views as to our present position, and as to the course to be pursued. You are aware that I have for some time past position of the bank with apprehension. That apprehension has been increased by the recent revelations. The committee by its instance has brought to light larger losses and a far more want of management than we were, any of us, previously aware of. It has also elicited facts connected with our losses, of a very serious character. I have ventured to submit to your colleagues what appears to me to be our only remedy. But my colleagues generally concurring with me as to the seriousness of the transactions, I do not find them prepared to take the only course as it seems to me, the property is likely to be saved from such circumstances the grave question which I have to consider, that course of proceeding I can divest myself of any portion of responsibility which devolves upon me, and how far I can do my duty, not only to those who at my instance have invested money in the bank, but to all proprietors at large who have placed their confidence as a director. There is no ordinary emergency until the month of January. The circumstances, however serious that I think it ought to be deliberately considered, I do not await that period, or give the proprietary an opportunity of considering the position of the bank. In the balance-sheet of the 31st of April, 1857, our losses were stated to have been £1,100. According to the statement at the court in July, they are now upwards of £10,000, and nearly £9,000 in three months. The customers' deposits have not increased; at the present time they would be less than at the same time last year, since had not several thousand pounds been paid in on the call of the Unity Fire Company. Our paid-up capital has been so dealt with that we have no more than £15,000—of the whole—available at the present time for banking purposes, of the value of £50 each, are at the present time not in the share market. Without reference to the many other grave facts which are known to us, it appears to me that the foretold calamities alone are sufficient to indicate the propriety of calling the proprietors together. I accordingly request that you will have the honour to submit this communication to the court, and take its decision as to the propriety of calling a special meeting of the proprietors to consider the position of the bank. In the event of any such meeting being prepared to state unreservedly my views of the present position of the property, and at the same time to resign my seat as a director, in the contrary event, I shall, at any rate, feel that I have done my duty, and on record my protest against the present system of management, and my opinion as to the course which ought to be taken in justice to the shareholders."

Burch was afterwards appointed as a kind of agent of the directors, and he acted as a check on the manager. Mr. Eyre was, besides, very satisfied with the then manager, Mr. Chambers, and the late manager, Mr. Terry, who was appointed in his stead, afterwards performed the duties of manager, and Burch those of secretary. So the bank went on, and yearly balance-sheets were prepared from time to time. But losses had been incurred, and those were explained to the shareholders at a general meeting; £38,000 appeared as a loss arising from various transactions, and in 1860 it was considered that they should write off that sum as lost and irrecoverable capital. The directors were entirely of that opinion, and from that time that £38,000 was out of the accounts. That sum up to that time appeared in the balance-sheet as a bad debt. On the 30th of June, 1862, a balance-sheet was prepared, though not circulated until September, and that balance-sheet formed the subject of the present inquiry, and was as follows:—

*Balance-sheet of the Unity Joint-Stock Mutual Banking Association,
June 30, 1862.*

Dr.

Capital account
Amount due on current and other accounts
Balance of interest account, after payment of interest to customers	£3,937	16	0
Balance of profit and loss account, as per last report	£4,079	15	6		
Less dividend of 12s. 6d. per share paid last half-year	1,824	7	6		
						2,255	8 0

Cr.

Preliminary expenses, as per last report
Investments in bank premises, including the Brighton freehold
Current expenses from 31st of December, 1861, to 30th of June, 1862
Bills discounted, loans to customers, &c.
Cash in hand

The original capital of the bank was £300,000, of which £179,195 had been subscribed. There had been some further calls, and of which he was now speaking £179,195 had been paid up. In the balance-sheet which would be the principal subject of the inquiry, were the "amount due on current and other accounts," "bills discounted, loans to customers, &c., £207,668;" and "profit, £38,715." A profit of £959 during the period to which the balance-sheet related was shown, but that did not appear on the balance-sheet, and those four matters constituted the charges in respect of which an indictment had been preferred against the prisoners. The inquiry had to say whether the three items to which he had just

use to the knowledge of the prisoners. The balance-sheet was that of June, 1862. In October, 1863, the business of the bank was transferred to the London and Middlesex Banking Company. So it went on, until it was discovered on investigation that so far from the balance-sheet representing the true state of the bank, upwards of £159,392, was in fact the amount due on current and outstanding bills. The indebtedness of the bank was misrepresented to the directors. The cash in hand, which was put down at £38,715, was only £29,000 odd; and, what was the most serious representation, the amount of bills discounted, loans to customers, &c, which constituted the floating capital of the bank, and which was put down at £16,000, was, in fact, only about £16,000. That £16,000, in truth, was only available assets of the bank; the £207,668 was made up of bills to a considerable extent of bills dishonoured in 1860 and 1861, and in some of which the persons giving them had afterwards become bankrupt, and others had been prosecuted for forging the very bills they had given, and so far from the bank making a profit from its trading, it had from its commencement steadily lost out of its capital. In one case, where a man named Frasi was convicted in 1861 for forging bills which the bank afterwards discounted believing them genuine, the prisoner Terry actually gave evidence on the trial, that a debt of nearly £1,600, or the amount of which the bank had been defrauded by the forgery of Frasi, was actually entered as a debt in the books of the bank, and formed part of the £207,668. Again, a man named Ward executed an assignment to his creditors. He had at that time in the bank between £5,000 and £6,000 of dishonoured bills, most of which had been dishonoured in 1861. On the 31st of December, 1861, Terry, without the knowledge or authority of the directors, released the man on the part of the bank. Of that release there was no entry in the books of the bank. On the very day on which that man executed a loan for £966 was granted to Bunyard by the bank, a promissory note in the handwriting of Burch was given. Of that there was no entry in the books of the bank, nor of £735 which Bunyard had in the previous October. The learned counsel pointed out to various other parties who had accounts at the bank, the bills by whom were hopelessly irrecoverable, and yet these were carried to the good assets of the establishment. In transferring the amount of £73 from the head office to the west-end branch, a sum of £73 either stolen or lost, and yet this £73 figured in the good assets. In point of fact the item of £207,000 set down in the balance-sheet of the 30th of June, 1862, under the head of "Bills discounted to customers, &c." was the most illusory thing in the history of the bank. If the truth were told it ought to have been inserted in the bad assets. The *et cetera* placed after it failed to alter its aspect, for it did all doubt an absolutely false entry. On one occasion there was a sum of £50 gone out of the till, and that also figured in the same way in every part of the balance-sheet there was falsehood—falsehood to be well calculated to deceive the shareholders. Who was to be responsible for it? If it were true that the directors were parties to it, there would be no answer for the defendants. If the defendants said, "We will prosecute the directors, and not us?" that would be no answer to their own fraud. Then, if it was said that if the directors were accomplices they were grossly negligent, with what face could his accusers have the effrontery to state that their clients were rogues

and the directors fools, or the latter would have found this. Such reasoning as this would be no reply whatever to the proceedings which were criminal. The real question for the jury was this—who were the persons guilty of dishonesty? And here, asked, what motive could the defendants have to commit this? This, however, was not a cogent inquiry, for, if the fact were that they committed it, it was not material to find out the motive, there no motive? Mr. Chambers had been compelled to resign, as the bank was not progressing satisfactorily. Terry, having the highest character, came in as manager in his room, and in time, with the assurance, that he would relieve the concern from the elements which had clouded its career from its earliest date. His motive, then, of maintaining the bank, and of securing to himself the continuance of his position. He was selected for that position from a number of candidates, and he had exhibited the utmost anxiety for the appointment. Besides, it was a well-known fact that the bank possessed great facilities for obtaining money over its salary. Terry had constantly been in the habit of advancing to people who were hopelessly insolvent, and some of the money was made without the knowledge of the directors—a fact which itself afforded somewhat of a reasonable surmise of the advantage which he reaped from the situation. So far as Mr. Alderman Mechi was concerned, he had been a loser by the bank to the large amount of £18,000, and he remained firmly by the establishment from first to last. The same applied more or less to Mr. Eyre and all the other directors—they had been heavy losers. It was not a cardinal point to inquire whether the directors had not found out the fraud which was being committed, it was not unimportant to remember that Mr. Eyre had recommended some agent should be appointed to act as a check upon the manager, who was appointed as that agent, and at that time he also bore a good character. It was explained to him then that he was to have to watch Terry, and now the charge against him was, that instead of watching Terry he had lulled the directors into security by leading them to believe that he was doing so, when in point of fact he was fraudulent. It was matters to go on without exercising any check or making any inquiry. If this were so, and if Burch knew what Terry was doing, then both were guilty of conspiring together to commit the fraud. When asked before the committee of liquidators whether the book-keeping accounts was done with the knowledge or by the connivance of the directors, they distinctly stated that it was not. The learned counsel said, saying that the questions for the jury to determine were most material, those questions being, whether a balance-sheet could be produced by the shareholders with the intention wilfully to deceive them, the directors having no means of investigating the truth or falsehood of it, and whether this mode of fraud was to be submitted to with impunity in a commercial city like the metropolis.

Mr. Oswald Thomas Howell was called and examined by the learned counsel for the prosecution. He said he was a partner in the firm of Walker and Lewis. He produced the books and referred to the various items of the balance-sheet by the learned counsel for the prosecution. His evidence was purely of a technical character, and it will be unnecessary to go into detail. The effect of it was to show that some of the bills of exchange on the balance-sheet to represent assets were utterly worthless, that

alised by the bank, and that in one or two cases where bills that counted turned out to be forgeries, and the parties to them executed, these bills were still brought forward, and appeared in sheet that was the subject of inquiry as assets of the bank; the guilty knowledge of the defendants, it was proved that entries in the books of the bank relating to these instruments handwriting of one or other of the defendants. It may be the final result of the transactions of this unfortunate bank be that about £170,000 was called up out of a nominal capital and that the whole of this amount was lost with the exception per share, the amount paid by the shareholders being £60 per witness, in the course of his evidence, produced two balance-manuscript, which he stated were in the handwriting of the defend- One of the manuscripts was an exact copy of the balance- above, and the other gave the same totals, but set forth the and the items by which these totals were made, and it mentioned bills and loans, which did not appear in the condensed balance- said the past-due bills did not appear in the balance-sheets 1862. Witness also produced a balance-sheet of the west- the bank, in which there was an item of £7,900 as past-due 201 as loans to customers, both of which were included in the general balance-sheet of £207,000. In addition to this d in the western branch accounts an entry of £50, being a and there also appeared to have been a remittance lost in its r, after recovering several of the cheques, left a loss of £73 s entered in the books, and that those amounts, the witness d included in the £207,000 in June, 1862. Witness produced a lls dishonoured prior to the 30th of June, 1862, and dis- s to the amount of £50,000, which he stated were included ssets.

was further examined and cross-examined at very great egard to the various items mentioned in the learned counsel's also as to the state of the overdrawn accounts of various d the result showed that gross mismanagement was the of the whole affair.

ination, the witness said he only knew what books were kept from inquiries he had made. Terry continued manager of nd Middlesex Bank as long as it lasted.

Judge asked what had become of the London and Middlesex

s said it was being wound up.

Allantine objected to any evidence being given in connection adon and Middlesex Bank. If it was at all material, they tion to show how the bank became knocked up. Alderman e of the directors.

Smith said he thought they had quite enough to do to the affairs of the Unity without discussing those of the Middlesex. The word "sundries" referred to dishonoured y could not have been ascertained without examination. One was cash £4,414. It would take a long time to count that signs.

: Much longer than it would take to get rid of it, I am ough.)

Mechi was then called as a witness. He said: I was governor

of the Unity Bank from 1856. I remember the defendant bank. Mr. Terry came in as the chief accountant, and cashier, and Mr. Chambers was manager. I knew nothing they entered the bank. We took them as being the best of a hundred and fifty candidates. When Mr. Chambers and I had a conversation with Mr. Terry about becoming the recommended him for the appointment, believing him to be able. At this time the bank had sustained a variety of losses, and was unable to pay its depositors. It was not in a position to pay through the losses that had been sustained under the management of Mr. Chambers. According to the practice the secretary was at the board meetings. I had given directions to both the secretary and the board reference to the preparation of the balance-sheets. I required them to make a true and faithful report of the state of affairs of the bank, the duty of the manager and the secretary to prepare the balance-sheets from the books, which the directors never interfered with. When the balance-sheets were made out they were presented to the board, and the directors made no alteration in them, or interfered with them in any manner. They ordered them to be printed. The directors examined them, and ordered them to be printed. We took no steps to verify the balance-sheets, but relied entirely on the manager and the secretary and the board. The whole of the books were submitted to the auditors prior to the balance-sheet coming to the directors. As a fact, we never tested the balance-sheets in any way by the books. We relied upon the auditors, who were paid by the shareholders, and it was their business to verify the balance-sheets. The whole of the books were placed at their entire disposal, and the directors did not interfere with them in any way. They considered the auditors represented the shareholders, and the shareholders themselves. One of the auditors, Mr. Gould, was a merchant, and the other, Mr. Hopwood, was an accountant. They were paid, I think, five and twenty guineas each for auditing the balance-sheets. We, of course, relied upon them to see that the balance-sheets were correct.

Mr. Justice Smith observed that it was rather remarkable in the circumstances, that the alleged fraud was not discovered.

Mr. Giffard—Our case is that the auditors were deceived.

The learned Judge intimated his opinion that upon the facts of the case the jury could hardly be expected to convict the defendant, who was charged with publishing a false balance-sheet with intent to defraud. It was clear that the auditors' duty was to have detected a balance-sheet irregular, and that they had every facility for so doing, and that the books and papers were within their control.

Mr. Giffard said he felt the force of his Lordship's observation. If, on the part of the Crown, he should readily attend to any instructions, he would make as to the course he thought should be taken.

Mr. Justice Smith said he should not withdraw the case from the jury, but it appeared to him that at all events the auditors ought to have given some explanation.

Mr. Giffard said that one of these gentlemen was dead, and the other was in this dilemma, that he must either have been deceived or acted fraudulently.

The learned Judge said that it was a question for the jury to decide whether they would state whether they desired the case to proceed.

The Jury accordingly conferred together for a short time, and then they were divided in opinion.

Judge said that if they pleased the case should go on, but to him that unless the auditors were examined and gave some evidence they could hardly convict the defendants of having conspired to deceive the public. If they had, they must have intended to deceive the auditors as well. It might have been a very improper proceeding to make up such a balance-sheet, but it appeared that ever since the bank had been established the balance-sheets had been made up in the same manner according to the evidence the irregularity might easily have been detected. His Lordship added "that the saddle ought to be put upon the auditors."

When again conferred together for a short time, when they said they were still divided in opinion.

His Lordship upon this said they had better hear the case out.

Alderman Mechi was further examined at considerable length with reference to the various accounts. He admitted that he had lost £18,000 by the bank's losses were £3,000 a year.

On examination, the Alderman said—

"In business you must rely upon your confidential servants. We have some clerks ourselves. I told the shareholders that I had some books, and I considered that I had by the reports of the officers; but perhaps I ought to have said that I had looked into the accounts. We were informed every week of all the applications made for discount, the amount of the discount, the amount of the interest, and, as we considered, everything connected with the business of the bank. Mr. Bazin, my partner, had a private account with the bank. He may have used that account for my own private purposes. It was not a portion of the money was drawn from the west-end branch in Mr. Bazin's account to be paid in to the principal branch, to make it look as if it had a respectable balance. The same thing may have been done by Mr. Bazin, so as to make both accounts look respectable. My partner admitted all this, and although I did not sanction the proceeding, I did not object to it."

His Lordship—Then the result was that you would both appear to be in a balance, when, in point of fact, both your accounts would be overdrawn.

Alderman Mechi—It would make the accounts look a little better.

His Lordship—Was it not for the purpose of falsely representing the bank to be in a balance, when, in point of fact, you were overdrawn?

Alderman Mechi—It had that effect. It was a very innocent transaction. On examination Alderman Mechi said that the directors could not do anything at all if they had not examined the particulars contained in the accounts. It was the only means they had of ascertaining the position of the bank.

They, of course, relied upon their officers reading the items. The directors were generally occupied from two to four hours every day. The directors would not in any way interfere with the auditors, and stated them to be correct, they would be at once issued to the shareholders.

He made a good many speeches to the shareholders, and at last made them believe that everything he said was true.

In answer to questions put by the jury, Alderman Mechi said that he had the best idea that the item of £207,688 comprised forged and disallowed bills.

Mr. Eyre, another of the directors, a partner in the firm of Eyre and Co., solicitors, of John Street, Bedford Row, deposed that he was present from the commencement of the bank. After Mr. Terry was

appointed manager of the bank witness had some conversations relating to his duties, and Mr. Terry pointed out an irregularity which had been committed by Mr. Chambers in placing a loan of £1,000, named Gregory in the cash article book, when that person was not of the country. Some time after he wrote the letter that had been referred to, he took his seat at the board again. He remembered the item in question, and he was not aware that the item of £207,000 was for overdue bills, forgeries, and bills that were of no value. On the 9th of March, he considered that it truly represented the value of the assets of the bank. Witness was present from time to time when the cash account was read out by Mr. Burch, but he was certain that it was not correct, and then stood, and that a great deal must have been omitted, and that was occupied in reading it. The witness then expressed his opinion that none of the names that had been referred to were correct, or any reference made to the condition of their accounts. He said he remembered being present on the 9th of March, when the defendant Burch was asked for some explanation of the names of the names and Lowenthal appearing in the list of debtors to the bank, and that he should prefer that Mr. Terry should answer the question. He was sent for, and stated that the debts had not been named to him, but he had been working Lowenthal's account with the London and Lancashire Bank, and was to reduce the debt at the Unity. The witness was not aware that he knew nothing of the composition deed in Bunyard, and that the defendant Terry had signed it on behalf of the bank. He said Mr. Terry had acted with reference to other creditors in the same way, without the knowledge of the directors. The witness was then asked at considerable length upon other matters, the effect of his testimony was to show that he was ignorant of the transactions referred to, and that the sheet that was the subject of inquiry, and he also stated that it was published he believed the balance-sheet to be a true and correct statement of the affairs of the bank. Witness had some loans from the bank on his own account, but the principal one was a loan of £1,000. The witness's firm with the bank was over £100,000 a year, and he had a large balance. He could have obtained the accommodation required at other banks on better terms than he obtained it, and the bank had ample security for all the money that was lent to him.

By Serjeant Parry—Witness was aware that the item of £207,000 represented the past due and dishonoured bills.

Serjeant Parry—And with that knowledge you still issued the balance-sheet to the shareholders.

The witness, in answer to further questions by Mr. Serjeant Parry, he would not deny that he had told Mr. Chambers, the fact that he expected a bonus of £1,000 as a promoter of the Unity Bank.

Serjeant Parry—What earthly ground had you for asking the shareholders of this bank for £1,000?

Witness—We had paid down £1,000 to start the bank, and if it had been prosperous we considered we were entitled to it. I did not want anything in the shape of bonus.

Four of the other directors having been examined,

This closed the case for the prosecution.

Mr. Serjeant Parry and Mr. Serjeant Ballantine then addressed the jury on behalf of their respective clients, and contended that the defendants had failed to substantiate the offence with which they were charged.

A number of gentlemen were then called to speak to the

and it was proved that Mr. Terry had been for a great time the bank of Jones, Lloyd and Co., and left with high testimony to the Unity. Mr. Burch, it appeared, had also previously been the London and Westminster Bank, and left that establishment with high character.

The learned judge then proceeded to sum up the case to the jury, and, on the charge, he said that they must remember that the defendants were jointly charged with conspiring, and that they must convict both, and that fraud was the very essence of the offence, and that if it was not established, the defendants ought to be acquitted. They must be satisfied that the defendants conspired to falsify this balance-sheet—that it was a false balance-sheet, and that the intention of the defendants was to defraud; and if either of these things was not established the defendants were entitled to an acquittal. He then proceeded to give a short outline of the circumstances connected with the management of the bank, and he said it was clear that at the time the defendants entered the service of the bank a very considerable sum of money had been lost, and he thought it was a very important fact that the balance-sheet had been made to have always been kept in the manner they appeared in the balance-sheet. It was obvious, as it appeared to him, that overdue bills had been put in, that there were of no value whatever, ought not to have appeared on the balance-sheet as available assets; and almost the only satisfactory circumstance that appeared to be that the depositors of the bank had not lost the whole of their money; and it was due to the defendants that the balance-sheet appeared to have entered all the accounts correctly. It appeared that all the directors had borrowed large sums of money from the bank, and that the bank was obliged to re-discount bills at a higher interest than they received from the directors, and that the directors, as it appeared to him, were also entitled to a share of the profits of the bank, as it appeared to him, were also entitled to a share of the profits of the bank. His observation—that they did not appear to have obtained any advantage by the publication of this balance-sheet, and, that there was undoubtedly no answer to a criminal charge like the charge against the defendants, was a fact that was well worthy of consideration by the jury. It appeared also that the object of this balance-sheet was to make the bank appear able to pay a large dividend, or anything of that kind, and that at the time it was made the bank was about to be amalgamated with the London and Middlesex Bank, and therefore there was no such thing as a dividend as he had referred to. The learned judge then repeated the fact that the whole of the accounts appeared to have been examined by the auditors, who could easily have detected the mis-statement made in the balance-sheet, and, he said, it appeared to him that the conduct of these gentlemen was very important upon the question of the charge, and who was to be held responsible for the publication of the balance-sheet, and whether the defendants when they prepared the balance-sheet intended to deceive. The learned judge then referred to the evidence, and expressed his opinion that the manner in which this balance-sheet was made out was a most improper and vicious one; but this was not a charge against Mr. Terry, because it seemed to be admitted that the balance-sheet was adopted from the time of Mr. Chambers, the former manager of the bank, and the directors were also well aware of it, and it would be wrong to make him criminally responsible for having conspired in the system. The learned judge next proceeded to state that he must remember that they were not trying either of the defendants for having acted imprudently, but that the question was whether the

evidence satisfied them that they had wilfully published sheet with an intention to defraud. Was the act complained of by Mr. Terry, or was it merely part of a system? And it appeared to him, was very material when they considered the intent of Mr. Terry when he prepared this balance-sheet, then proceeded to state that it appeared to him to be a most important thing that none of the directors appeared to have made any use of so vital an ingredient in connection with the bank as the verification of the past-due bills, or with reference to the statements made to them weekly of the condition of the establishment and the debts due to them. It was admitted that they were aware of the bills, good, bad and indifferent, forgeries and all, were covered up in the statement, and this being so, how could it be said that they were acting criminally in making an account which, after all, was not the account of the directors? The directors, undoubtedly, had formed the balance-sheet, and it was their interest to give as good an account as they were able, but the mouths of the defendants were closed, and had no opportunity to give any explanation. The learned judge said that it appeared to him that there was no evidence that the defendant Burch had anything to do with the preparation of the balance-sheet, and that it was clear that he was a subordinate officer and was bound to obey his directions. The learned judge said he believed he had directed the attention of the jury to the important points of the case, and he should now leave the case to the hands of the jury.

The jury retired at ten minutes past two o'clock to deliberate, and at ten minutes past three they returned into court, and the following verdict:—

"We acquit the defendants of conspiracy, but at the same time we express our opinion that the accounts of the bank were kept on a vicious principle, and in our opinion the directors ought to have investigated the accounts, and particularly the weekly statements, which were submitted to them."

Mr. Sleight asked what was proposed to be done with the twenty-three counts of the indictment, which applied to Mr. Terry only.

Mr. M. Williams said that after the full inquiry that had been made, he should, in the absence of his learned leader, take upon himself to say that there was any evidence in support of the other counts in the indictment.

A verdict of Not Guilty was accordingly formally taken on the other counts, and the defendants were at once discharged.

Legal Miscellany.

THE LONDON AND EASTERN BANKING CORPORATION.—IN THE COURT OF COMMONS.
W. PETRIE WAUGH.

THIS long-litigated case was again brought before Mr. Justice Goulburn, in the Court of Bankruptcy, on the 29th March 1884.

It was the sitting for certificate in the case of the well-known William Petrie Waugh, whose failure some eight years ago created a sensation in those comparatively tranquil times, his liabilities

a quarter of a million. Since his surrender last year the repeatedly before the court; and it now came forward as the last time. The interest originally felt in the case on the wane, the more so since the announcement at that it was not the intention either of the assignees or of the London and Eastern Banking Corporation to petition to the bankrupt having his certificate (the bankruptcy old act).

appeared for the assignees, and Mr. Sargood for the

said he had a great difficulty in this case. How was he to man who had absconded from the adjudication and stayed s had fully conformed to the law of bankruptcy?

said he would briefly call the attention of the court to the errating the circumstances under which the bankruptcy suggested that, as the court had allowed the bankrupt to d given him a *locus standi* to ask for his certificate. The elined to prosecute him at the expense of the estate, the tern Bank being the parties most affected by his defalcadebts on the balance-sheet were £318,000; the assets given nd the property held as security, valued at £85,000, had y the secured creditors; for Branksea Island, valued by at one time at a million of money, had produced less than the first mortgage upon it, £30,000. His furniture at l and Hyde Park, which was said to have cost £39,000, articles of *virtu*, had only realised £8,000. His personal r four and a half years had been at the rate of £10,000 a ot surprising that the London and Eastern Bank had not proceedings against the bankrupt, for the way in which en conducted would naturally prevent them from doing so. £217,000 against the bankrupt had been compromised for the question now was, how the case should be dealt

said he was always of opinion that the bankrupt had been with in being imprisoned for twelve months on a demand worth the paper it was written on. An imprisonment of was the limit of punishment under the Act of 1861.

r said that, coinciding in the view of the court, the ot offer any opposition. He was informed by Mr. Lewis, d the liquidators of the Eastern Bank, that it was not to offer any opposition.

tioner: Does any other creditor oppose?

ered.

tioner: Then let him take his certificate. So ended the of Colonel Waugh.

that there was £5,000 in hand applicable to dividend on £150,000.

DULENT REPRESENTATION.—THE BIRMINGHAM AND SOUTH ORDSHIRE BANKING COMPANY.—GRAY v. COLLINS.

ried before the Lord Chief Baron and a special jury, at the s, on the 3rd April.

It was an action against a director of a joint-stock bank for false representations, by which the plaintiff complained that he was induced to purchase shares in a losing concern. The defendant that "the defendant was a director of the Birmingham and South Staffordshire Banking Company, and falsely and fraudulently represented to the plaintiff that the company was in a flourishing and prosperous state, and that the shares were a good and profitable investment, whereas in fact the company was not in a flourishing and prosperous state, and the shares were not a good or profitable investment, but the shares as were for sale belonged to the defendant, by means of the false representations the plaintiff was induced to and did purchase shares in the company, and so became liable to pay large sums of money, and lost the same," &c. The defendant pleaded "Not Guilty."

Mr. Lush, Q.C., Mr. C. Pollock, the Hon. A. Thesiger, and Mr. B. Williams were for the plaintiff; Mr. Bovill, Q.C., Mr. Hawkins, Q.C., and Mr. J. F. Stephen were for the defendant.

The material facts of the case, as they appeared in evidence, were as follows:—The company was formed in 1862, and among its directors were Sir Edwin Pearson, Mr. John Bethell, &c. The defendant was a director of the London Bank of Scotland, was not engaged in the management of the company, but had been associated with the plaintiff in some of its transactions. The capital of the company now in question was £1,000,000, divided into shares of £100, of which the first issue was 5,000. Of this first issue, in 1862, about 780 shares remained untaken, and on the 5th of April 1862, in consequence of some arrangement entered into between the defendant and the other directors, he became a director. On the 5th of April a meeting of the directors was held, at which a proposition was made on the part of the defendant that the 782 shares should be allotted to him, and that he should become a director, and that 2,000 out of the 5,000 shares of the first issue should also be allotted to him; and this proposal was carried, and resolutions were passed that he be elected a director, and that the remaining shares of the first issue of 5,000 shares—that is, the 2,220 shares—should forthwith be allotted to Mr. Collins, the defendant, or his nominee, on the subject to a commission of 2 per cent., and that the second issue of shares be made, and offered rateably to the shareholders at the time £22 a share on the shares allotted had been paid up. £80,000 of the capital was thus paid up. But, in point of fact, on the 5th of April the shares were at a discount of 2 per cent. On the 5th and 12th of April the defendant bought about 750 shares of the first fifty at par, the rest at premiums of from £1 to £2. On the 14th of April the defendant, who had become a director, conversed with the plaintiff in connection with some other company, and the plaintiff in these terms:—"I had thought of directing you to buy the London Bank of Scotland shares, knowing that they would improve, but I neglected doing so, and they have gone beyond £12 a share within the month. I promised to let you have any expected investments, but they have gone too fast for me. There are two matters on which I believe money will be made. One is the London and Birmingham and South Staffordshire Banking Company. If you buy in it you must take up, and it will pay you to hold it. It does not, however, promise quite as well as the London Bank of Scotland. The other I shall be able to mention in a few days. I want my friends to be in the 'good things' with myself, and I will give

of my friends have cleared £15,000 in the London Bank the last account." Upon this the plaintiff made application and accordingly obtained them at a premium—100 at a and 50 at 6½. It appeared that the defendant, who was a London Bank of Scotland, became a director of the Birmingham and South Staffordshire Bank, with a view to their amalgamation. Pearson said it was with that view he assented to the purchase of the shares, and that the shares about the 11th of April were at a premium, and he had bought some at £4 premium, of course at that time a favourable opinion of the company, and they were likely to rise higher in the market. It was also said by Sir Edwin that "during the whole of April, 1864, the company was in a flourishing and prosperous condition, and that on the purchase of shares would have been, in his judgment, a profitable investment." (A question which was objected to, and was ruled against the defendant.) And Sir Edwin Pearson declared his opinion on the 14th of April. He further stated that it was highly probable that the shares would continue to rise, and that it would have been prudent and profitable to hold them. It was further elicited on re-examination that the shares of the defendant came in, and Sir Edwin being asked if he bought to reserve that he meant to reserve the right to part with them did not care to hold." The only want, Sir Edwin Pearson said, was of capital." There were proposals by the banking company for amalgamation, and the directors were anxious for amalgamation. 782 shares allotted to the defendant were, in fact, allotted to him, and were all allotted in April, and they were all paid in 2,000 shares of the next issue, and then the defendant was asked to give a share commission, which came to above £5,500 upon the shares. However, that on the 2,000 shares of the second issue was paid by the defendant on the 10th of May, and he still held a share in them. He had paid all that had been called up on those shares, and thus paid £6,000 upon them. The secretary stated that in April he had given the defendant private intimation that of amalgamation, and he, in the full belief that this was the price of the shares, offered to purchase those of the witness at £7 per share. The highest price which the shares had reached in the 18th of April, after which they declined to rise. On the 5th and the 25th of April the defendant sold nearly the same quantity of shares as follows:—On the 5th of April (the day he entered the bank), at £20, i.e. (as £22 were paid up), at a discount of £2 per share; 11th, 50, at a premium of £2 per share; 100 at 2½; 2½; 30, at 2; and 50, at 2½; and 100 (for the 14th April), at 2½; 29th of April, at 2½, and 50, at 2½. On the 12th of April, 100 at 3½, and 50, at 2½. On the 18th, 200, at 5½, 6, 6½, 25th, 40, at 5½, and 100, at 5½. On that day, the 25th, the broker wrote to him in these terms:—"I have sold on the shares in the Birmingham and South Staffordshire Banking Company, and am sorry that I cannot do anything more." Thus, from the 18th day on which the defendant entered the bank, to the 25th of April, he sold 782 shares of the first issue allotted to him, and some 200 of the others. Some of the shares of the defendant were among those purchased by the plaintiff at a premium of 100 per cent. On the other hand, between the 10th and the

29th of April the defendant had purchased about 700 shares—that is, of the old shares of the first issue. The second issue was not made until the 19th of April. On the 14th, it will be observed, the defendant had written to the plaintiff, as above stated. Almost immediately after the plaintiff's purchase of the shares he found that they began to fall, and they fell gradually to discount. Towards the end of April the defendant wrote to the plaintiff, who said he could not make it out, and told him to "hold on." They continued to go down, and in June a meeting took place of the directors, at which the defendant was present. At that time it should suggest that the shares be not parted with, but that they should be purchased by the present holders, in proportion to the shares they held. The plaintiff was not then aware, he said, that the defendant had sold shares, and said that he put himself down for about 460 shares. It fell to the plaintiff upon this plan to purchase more shares, which he accordingly did, at a premium of 10 per cent. This scheme, however, did not succeed, and the shares continued to fall lower and lower until they reached 8 or 10 per cent. discount. The shares could scarcely then be sold at all, and in the course of the year 1892 an amalgamation took place with the European Banking Company. The plaintiff lost, as he alleged, £1,500, and brought his action for compensation for this loss.

Mr. Lush, in stating the case for the plaintiff, relied chiefly upon the arrangement entered into by the defendant on the 5th of April with the directors. At that time, he observed, the shares were at a discount of 10 per cent., and the effect of the arrangement was that the 782 shares which had not been disposed of, and were then a drag on the company, were allotted to him at par, with a discount or commission of 2 per cent. It was of course his interest to get them up to a premium, and he endeavored to do so; and accordingly, by a process which was not altogether successful, but was so no longer, the shares suddenly rose from a discount of 10 per cent. to par, from par to premium, and from a premium of 1 or 2 per cent. to above 6 per cent.; and when the plaintiff was induced by the defendant's letter of the 14th of April to purchase shares, he got them at a premium of above 6 per cent. No sooner, however, had the shares been disposed of than they began to fall, and they fell to a discount in the course of the month, although the defendant had distinctly represented that they might safely be held for a month. The consequence, of course, was that the plaintiff lost his money, but the defendant had largely gained. He, of course, had parted with his shares at a premium and had cleared a large sum. That being so, it was right in the eyes of the law that he should, out of the large profits he had made, compensate the plaintiff the large loss he had sustained in consequence of the defendant's representations.

Sir Edwin Pearson was called and examined, and stated that the arrangement entered into on the 5th of April with the directors was that the shares were then at a discount of 2 per cent., and the word in the resolution was "commission," it really meant a discount, and was in substance the same. It was elicited both from Sir Edwin Pearson, and also from Mr. Tucker, the secretary of the company, that previous to the 5th of April, ideas were entertained by the directors of an amalgamation with the London Bank of Scotland, whose shares were then at 9 per cent. premium, and Mr. Tucker said he had no conversation with the defendant, prior to the 5th of April, some intimation of the

defendant offered to purchase his shares at $7\frac{1}{2}$ per cent. premium. That the plaintiff, after receiving the letter of the defendant, the secretary, on the subject.

raised an objection at the outset, founded upon "Lord Tenby" by which it is enacted "that no action shall be brought against any person upon any representation made concerning the credit of any other person, to the intent that such other person obtain credit, money, or goods, unless such representation be signed by the party to be charged therewith," upon which, it has been held that a representation partly written and partly oral, if the written part form a material part of the representation, the learned counsel contended that under this act the representation upon must be in writing, and that the letter of the 14th of May, written by the plaintiff's counsel—did not support the allegations alleged in the declaration.

He insisted that in fact it did so; as in substance it came to the same thing, the shares were a safe investment, and that it would be a good investment for a month. But he doubted if the statute applied to

Chief Baron said its object was to do away with actions upon oral representations as to the credit of other parties upon which goods or moneys were obtained. However, he would leave it to the jury as it should turn out to be upon the evidence, and amend the declaration as might be required, and reserve the point of law.

At the close of the evidence on behalf of the plaintiff, it appeared that there was no case.

Chief Baron, however, said he should not stop the case, and let the jury decide.

He submitted that as in point of fact there was no representation in the letter, the declaration must correspond with it, but it

Chief Baron thereupon amended the declaration in accordance with the letter.

He then addressed the jury on behalf of the defendant, urging them to find for the case as it now stood, upon the evidence of the plaintiff's representations alleged to have been false and fraudulently confirmed; for Sir Edwin Pearson distinctly at the time in question he considered that the company was in a good condition, and that the shares were a good investment; that he had such confidence in the prospects of the company, and the probability of amalgamation, that he offered to give $\text{£}7\frac{1}{2}$ per share for some of the shares, and he had continued to hold many shares.

The case for the plaintiff was founded upon a complete statement that the defendant had thrown his 780 shares on the market and got the plaintiff to purchase. But in point of fact the defendant had sold nearly all his 780 shares before his letter to the plaintiff, he had sold 750 before the 12th of April, and the letter was written on the 14th. On the other hand, the defendant had purchased more shares after the letter to the plaintiff, and the shares had risen after that letter. The defendant was of the amalgamation which was anticipated. The defendant was not to speculate in shares if he pleased, and he had simply followed the plaintiff's advice, in which there was nothing which was false.

The defendant, with other witnesses, was called to supply the facts thus narrated, and he stated that he had purchased some shares at premiums after the letter, and that he still held nearly the company, and he positively swore that at the time he was really believed that the company was in a prosperous condition with reference to its prospects of amalgamation, its shares were "valuable and profitable" investments for purchase.

In cross-examination he was pressed as to the number of shares employed in his sales and purchases of the shares, and he admitted he had employed four, and would not swear that it might not be more.

Other witnesses confirmed the defendant's evidence.

Mr. Lush, in reply, pressed these sales and purchases by the defendant as the very means by which the market was influenced.

The Lord Chief Baron, in summing up the case to the jury, with reference to the time which the trial of the case had been in charge of fraud required very careful consideration, and, so aware, this was the first time that an action quite of this kind had been brought. Lord Tenterden's Act, he observed, had put an end to such actions by word of mouth in ordinary cases. If such a case had been found, he said, by experience, that the plaintiffs in such a case succeeded, which could scarcely be supposed to have been allowed to go on with justice. Hence the act known by his name, which had put an end to such actions. Under that act he had, of course, expected that some representation produced in writing, and accordingly the declaration, to bring it into accordance with the terms of the act. That letter clearly imported a purchase for the purpose of the act, that is, while the shares were on the rise, with a view to the rise; and the question would, in his opinion, be whether the letter was written *bonâ fide*. Now he found great difficulty in pointing out a piece of evidence distinctly tending to show that it was not a false statement. No reliance had been placed upon the number of brokers employed, nor did he think there was much in that. Need he go further?

One of the jury observed that it was very unusual for a person to employ four or five brokers.

Thereupon the jury conferred together, and the foreman expressed some difference of opinion among them.

The Lord Chief Baron thereupon said that he really thought there was not sufficient evidence to convict the defendant upon a case of this kind. It ought not to be left to mere suspicion, suggestion, or conjecture. The jury, however, would form their own judgment on the case, and he formed it, no doubt, in the result, according to truth and justice.

The jury retired to consider their verdict, and in the result returned a verdict for the defendant, adding that they disapproved of the defendant in dealing with the shares as he did, he being

VARYING THE OBJECTS FOR WHICH A COMPANY WAS ESTABLISHED. THE SCOTTISH AND UNIVERSAL FINANCE BANK, LIMITED.

THIS case was heard before the Lords Justices of Appeal, on the 19th April.

It was an appeal motion from an order of Vice-Chancellor. On the 16th of February last a motion was made before his honor

ing that his name might be struck out from the above-named company. The objects of the Finance Bank, Limited, as stated in the prospectus of May, 1863, by Mr. Eve, one of the directors, were the purchase, importation, and exportation of goods. On the 28th May, 1864, Mr. Ship signed articles in the form annexed to the prospectus, and his name being inserted in the register for 50 shares. Incorporated on the 1st of June, 1864, under articles of objects differing and materially extending the objects stated, on the faith of which Mr. Ship had taken his shares of the company, as stated in these articles, for the construction of railways and other works or working such undertakings, and (clause 10) "any business of bankers, bullion and exchange agent, contractor, and capitalist, as principal or agent in the world which may not, in the articles of association of the company be prohibited." The company on the 1st of June, "with capital £1,000,000, with £100,000," fell into difficulties in last December, winding-up. Mr. Ship, who stated that the articles by which he was incorporated had never been sent to him, and his name removed from the register, on the ground that the company was entirely different from that in which he was incorporated. The application was opposed by the official liquidator, who submitted that Ship was, at all times, a shareholder of the company, having applied for shares in the register for six months without inquiry, thus holding the world as a shareholder, and inducing persons to take shares on the faith of his name. The objects of the company did not differ from those stated in the prospectus, and, in fact, and, at any rate, there was sufficient to have carried on the business. After hearing counsel for Mr. Ship and for the official liquidator, the court, without calling for a reply, held that Mr. Ship's name should be removed from the register. Being invited by the official liquidator in a company about to be incorporated for banking business, he set up an authority for himself. His name was registered as a member of the company, and his shares as totally different from those stated in the prospectus, of which he took his shares, as if, having intended to be a shareholder of the company, he had found himself a member in a company. It was quite true that banking operations were not stated in the prospectus, but at the terms of clause 10 of the articles of association, if anything of the kind in the prospectus, it was not stated how any persons having characters to lose themselves authorised in taking such a course as the company had taken. With respect to the company, the court held that Mr. Ship's name upon the register was not to be removed, but that as regarded the creditors who were official liquidators the case was different, and that the company was not to be an authority for the allotment of shares in the company. As to the consequences, the court held that the company ought to bear the consequences. The court was taken to be cognizant of the circumstances.

Mr. Ship had not signed his name as a subscriber to whatever that the directors might choose to establish, but to a bank with a given field of operation. The creditors held that this breach of confidence had been committed, and that the authority given by Ship had been totally exceeded, was wrong with the proprietors, and could not insist upon registration upon the register. The name must therefore be struck off and paid by the company.

The official liquidator appealed from this order, and mentioned on the 17th April, Mr. W. W. Mackeson of their lordships to intervene on the part of the directors represented in the case, the only parties before the official liquidator and Mr. Ship.

Mr. G. M. Giffard and Mr. W. Morris were heard for the liquidator for the appeal.

Mr. Daniel and Mr. W. W. Mackeson, for Mr. Daniel and the directors, also supported the appeal, contending that the name must not go beyond the objects intended, for that the *credit* was the intention of the parties.

Mr. Rolt and Mr. Locock Webb, for Mr. Ship, were not heard. Their lordships held that the decision of the Vice-Chancellor was correct, and dismissed the appeal with costs.

THE BIRMINGHAM BANK FAILURE.—IN RE ATTWOODS, SPENCER AND CO.

THIS case came before Mr. Registrar Hill, in the Bankruptcy Court, on the 10th April.

It was a meeting to confirm a resolution passed at a meeting on the 1st March, to take the estate out of the Bankruptcy Court and wound up by assignees chosen by the creditors.

Mr. W. S. Allen, who, with Messrs. Whateley, appeared for the directors, stated the purpose of the meeting, and explained the steps taken to inform all the creditors of the intention to carry out the resolution. Notices had been given in all cases where practicable, and in the bank of issue, the noteholder could not be specially served, as far as possible, that omission, advertisements had been published in the *London Gazette* and *Daily News*, and a great many other papers, setting forth precisely what it was proposed to do at this time. There was put in a mass of proofs concurrent to this step to the amount of £100,000 and there were, he said, proofs by more than three-fourths of the creditors. The resolution he proposed was to the effect that all proceedings in the bankruptcy be suspended; the estate to be wound up by the directors at their discretion, with full powers to make all needful arrangements.

Mr. John Suckling (who represented creditors to the amount of £150,000 and £200,000) concurred generally with the proposal of Mr. Allen, but suggested that there should be an addendum to the effect that the offer of the Birmingham Joint Stock Bank to pay the creditors 11s. 3d. in the pound was to be free of all charges which might arise, or be incident to the winding up. He wished, he said, to guard against any mistake in the offer of the Birmingham Joint Stock Bank should

been accepted by the creditors—a clear 11s. 3d. in the
 ected to the addendum proposed. They had been ad-
 on the best legal authority, that it was undesirable to
 on with any such speciality as Mr. Suckling had sug-
 would be unduly tying up the hands of the assignees.
 (Hilton, Burton, Yeates, and Hart) took a similar view,
 Lawrance (Lawrance, Plews, and Boyer) who appeared
 l. The addition suggested by Mr. Suckling might, he
 nvenient, as in the case for instance of a better offer being
 at of the Joint Stock Bank. He hoped that the resolu-
 Mr. Allen would be adopted in its integrity, it being
 in its terms for anything.
 resolution was carried in the terms moved by Mr. Allen,
 ly was fixed for the “order of discharge” meeting, and
 agreed to hand over his proofs to the solicitors to the
 Suckling to have access to the books after the accounts are
 ers of the Joint Stock Bank have yet to meet to sanction
 y their board.

ANGLO-EGYPTIAN BANK, LIMITED.

inary general meeting of the shareholders of this company
the 29th March, at the London Tavern; Samuel Laing, Esq.,

convening the meeting was taken as read, and also the following of the directors :—

"The bank began operations on the 1st September, and the year in Egypt closes on the 30th June, the accounts received in February are necessarily provisional. In future it will hold the annual general meetings of the company in October so as to have time to have the full accounts of the financial year from Egypt and fully examined before the declaration of dividend; and although it has been necessary to call the preliminary meeting in the month of March on account of the statutes, the directors of the first regular annual meeting shall be held accordingly in the month of the present year, for which purpose they will call a special meeting to alter the statutes. In the meantime, however, they are satisfied that the results of the working of the bank for the first year have been most satisfactory. Although the critical state of business in Egypt, the money pressure in England, and the state of the cotton market in Egypt, prescribed great caution, so that little was done for the first months after the bank was established, a large and profitable business has already been transacted, and extensive operations have been successfully entered into. The provisional balance-sheet for the year from Alexandria shows an aggregate of transactions amounting to £9,000,000 passing through the books of the bank without any loss or debt; and the account of profit and loss, after allowing for suspense accounts, shows that the directors have recommended in recommending an interim dividend of 8s. per share, at the rate of 10 per cent. per annum on the amounts paid up, and in forwarding a handsome surplus to be brought into account at the first complete accounts of a financial year's working, that the shareholders in October or November next."

The Chairman then said he had taken the chair at the meeting for his friends and the meeting, principally because Mr. Pastré, the managing director of the company, was not in the habit of addressing a meeting. He should observe that the report stated that this meeting was entirely and entirely a provisional one; the articles of association should be called within the month of March, and the year's business terminated only in June. The operations of the bank had therefore, been entirely provisional. The directors were satisfied with the report in the hands of the shareholders on this account because of the delay in the arrival of the mail from Egypt, and the boisterous weather in the Mediterranean. Mr. Pastré, the managing director of Alexandria only arrived just in time to enable them to complete the report within the time prescribed by the articles of association. Under those circumstances the directors had the alternative of holding the meeting postponed until the month of October or November, but the shareholders together to give them generally the state of affairs the directors had received of the state of their affairs, in order to save them waiting the whole twelve months for any return. Therefore, they must take upon the credit of the board what was simply this; that their accounts were perfectly satisfactory, and that to the amount of profit and the condition of the assets, and the amount of business transacted, the directors saw their duty to recommend the dividend mentioned in the report of 8s. per share, income-tax, being at the rate of 10 per cent. on the capital paid-up under the different calls. They might be certain that they would not recommend an interim dividend unless they were of the every probability that the rate would be kept up in the future.

The directors would be enabled to declare a larger dividend, for they had been but a short time in existence, and a good many of the accounts were necessarily suspense accounts, and were not finally settled until the close of the Egyptian year. The directors had thought it prudent to recommend this dividend on account, and wait the end of twelve months before they paid any larger dividend. Therefore, they remained on the present occasion but to ask them, if they would adopt the report of the directors and confirm the dividend. They found the proper time to hold the annual meeting about the month of October, as in Egypt practically the year closed with the month of June or July. That was the time the harvests were all gathered in, and when the dry season set in, the inundation of the Nile restored activity there was a period of two or three months, and that was the period in which the transactions were wound up. Those accounts would be ready in August, and that would give the month of September to run fully, and the month of October they might look forward to the next meeting. Two special meetings would have to be called for articles of association, to substitute the period of October for that of March or April for holding the general meeting. He merely mentioned this that gentlemen might know what would be the effect of the notice they would receive, that they might not be under any unnecessary inconvenience. For the present he would confine himself to moving that the report of the directors be adopted, and that a dividend of 8s. per share free of income-tax declared by them be confirmed.

Macpherson seconded the resolution, and it was carried unanimously.

Thanks were then passed to the chairman for his able conduct.

The chairman said he was very much obliged to them, and hoped when they next met them on the next occasion the accounts would be equally satisfactory to both parties.

The proceedings then terminated.

EUROPEAN AND AMERICAN FINANCE CORPORATION, LIMITED.

At an ordinary general meeting of the shareholders in this company held on the 30th March; Edward Rudston Read, Esq., in the chair.

The chairman having read the notice convening the meeting, stated that there was a slight inaccuracy in the report as regards the available balance for liquidation, which should be £880. 1s. 11d. instead of £880. 1s. 11d., but that the accounts attached were correct, and were not affected by the figures in the body of the report.

The chairman then read the amended report submitted to the meeting, the accounts having been taken as read. The chairman, in moving the adoption of the report and accounts, said that although in the first instant two or three dissentients to the arrangement of the Public Works Credit Company, Limited, had presented objections, all objections had been since withdrawn, and the agreement

was now unanimously approved, and the object of the present meeting merely to submit the report and accounts, and formally declare a dividend as recommended at the late extraordinary general meeting. The shareholders held on the 1st and 20th ultimo.

It was then proposed by the Chairman, seconded by John Hoole, Esq., and unanimously resolved:—"That the report and accounts to the 23d March now submitted be received and approved."

It was moved by the Chairman, seconded by George Rawlings, Esq., and unanimously resolved:—"That a dividend of two shillings (less of income-tax) upon the 10,000 shares, be hereby declared payable on and after the 20th April."

Joseph Hoole, Esq., proposed, and George Rawlings, Esq., seconded, and unanimously resolved:—"That as the business of this company is to be transferred to another company, the shareholders feel it incumbent upon them to vote some remuneration to the directors for their past services, and beg their acceptance of £300 out of the available funds." The resolution was carried unanimously.

It was moved by Henry John Bale, Esq., seconded by John Hoole, Esq., and unanimously resolved:—"That the best thanks of the shareholders be given to the chairman and directors for their zeal and ability in the management of the company's interests of the company."

BRITISH AND CALIFORNIAN BANKING COMPANY LIMITED.

THE first annual meeting of the shareholders of this company was held on the 2nd April, at the London Tavern; W. Nicol, Esq., in the chair.

Mr. Samuel Magnus (the secretary) read the notice of the meeting, and also the following report of the directors:—

"The directors have the pleasure to submit to the shareholders the audited balance-sheet of the bank to 31st December, 1881. The credit of profit and loss account the sum of £6,231. 17s. 6d. less the deduction of the current expenses, amounting to £2,361. 10s. 6d. available balance of £3,869. 10s. 3d. In the report addressed to the shareholders on the 12th December last, the directors gave an account of their proceedings up to that date. They have now to state that the bank in San Francisco commenced business in their own premises under the management of Mr. Henry S. Babcock, at the end of November. Subsequently the accounts only include the results of a few weeks' business in California. The paid-up capital of the bank on the 31st December amounted to £100,000; since which time the first call of £10,000 has come due, and has been well responded to. The directors have been busy respecting the development of local and general business in California, and the arrangements concluded with banks and commercial houses of eminence in the different localities connected with the trade of the country. The promise to be of importance, and have already begun to bear fruit. The directors now declare a dividend of three shillings free of income-tax, payable to the proprietors on and after the 20th April, which will absorb £3,000, and leave £869. 10s. 3d. to be added to the credit of profit and loss new account."

Chairman said it would be in the recollection of those who were shareholders that this undertaking was introduced to the London and the London Financial Association. That association invited afterwards got shares to take a part in the undertaking, they agreed to pay the preliminary expenses up to a certain point. They undertook to pay the clerks, printing, advertising, and all the expenses up to the allotment in the Stock Exchange, and the amount given by the committee of the Stock Exchange to the company. They were to receive a stipulated sum for their services, and it was due to them to say also, in case the undertaking did not succeed, they undertook to be at the risk of the preliminary expenses. The undertaking did succeed up to the allotment of the shares by the Stock Exchange, and that association received the stipulated amount of £6,000. It was necessary to mention this, as the preliminary expenses might appear large. While the matter was in course of arrangement, it might be advisable to form a connection with one of the leading banks in California, by which arrangement they would have a resident manager and their managing director. Another partner in the same concern was to sit at his seat at their board, and a stipulated sum was named that was to be given. This had so far been carried out that the partner sat at his seat at the board, and the company had made preparations for commencing business at San Francisco. They had sent out an agent and an accountant. As he had stated, it was arranged that in the house was to undertake the duties of managing director, and when they came to look more narrowly into the matter it was found impossible to separate the banking from the commercial business. There had been a failure of their crops, and business was rather at a standstill. It ended in their mutually agreeing to abandon the junction which was arranged for. That was at the end of June, and since then they had obtained the services of Mr. Henry S. Babcock as manager, and they had every reason to be satisfied with his management. In the case of these delays it was nearly the end of November before they commenced active business in San Francisco, so that the profits, as San Francisco was concerned, were merely of a nominal kind. In the meantime, however, the times had been favourable to their employing the services of the shareholders profitably in this country, and the bulk of the profits, in fact, had been earned in the ordinary channels of business. The company had made an arrangement with Messrs. Brown and Co. of New York, for which house Brown, Shipley and Co. were the agents in this country, and they had every reason to believe that the arrangement would prove a highly satisfactory one. Arrangements had been made with nearly all the Indian banks, some portions of which had been carried into effect by joint shipments of precious metals, and they had a little more time to get the metals into San Francisco, and they doubt they would be able to carry on a profitable business. The capital in London was £5,000, and during the short time they had been in operation in San Francisco they had realised about £1,200—that was in six weeks—the directors had seen no reason to have a worse opinion of the undertaking than they had at the commencement; and their manager, Mr. Childers, spoke most encouragingly of their prospects. On the board they had men who had had long experience in San Francisco, whose aid was most valuable. They had had the misfortune to lose the services of Mr. Childers; but to show his opinion of the concern, he had sold his shares, and intended to do so. Although the undertaking had

been slow in the commencement, perhaps they would give the for taking their ground carefully and cautiously. Of the formed the board, including himself, ten were engaged in business and two were gentlemen of eminence in San Francisco. To see the board held of the undertaking, he might say the directors held more than 15 per cent of the capital, or 3,000 shares. Although the progress had been slow, they must hope that it was like the British oak, which, though slow of growth, has always been a favourite in this country. Before moving the adoption of the report, he would be glad to receive inquiries of any shareholder.

A Shareholder said that no doubt many were disappointed at the report. He thought the preliminary expenses, £9,000, were a very large sum. In addition to that there was the cost on the Stock Exchange which might have had the effect of reducing the number of shares allotted to them. He believed they had not used the 3,000 shares to the London Financial Association at par, as they were used for a particular manipulation known as "rigging" the market. The shares were sold to unfortunate shareholders like himself at a premium.

The Chairman replied, as far as the directors were concerned, far from lending their sanction to any dealings of that kind on the Stock Exchange. It was quite true the London Financial Association had a number of shares allotted to them. He believed they had not sold them since, but he did not think they had "rigged" the market.

A Shareholder thought the directors' remuneration very high, a year, and £500 for every one above 6 per cent.

The Chairman said that was what was stipulated in the articles of association, but he might state the directors had not taken that into consideration, not taken more than half of it.

A Shareholder said the item for freehold premises in San Francisco, Lombard Street was very large.

The Chairman said they had purchased the freehold in San Francisco for £8,000, and he had a photograph that they might judge of the value of the building. About £600 had been expended in completing the bank. The lease of the premises in Lombard Street was for £2,500. He might add that the rent derived from the premises in San Francisco gave a return of 12 per cent. on the outlay.

Mr. McEwen, a shareholder, said he could not see what the directors had to do with any other company. They must bear in mind that the year was a year of considerable speculation in companies, and a great number of the shares of this company were applied for. In view of their being re-sold at a considerable premium. As to the view of the new companies, steps were taken to give the appearance of considerable business being done in order that the shares might be sold at a premium. He had never taken shares in any company except this, and he thought if shareholders came into a bank such as this altogether a delusion for them to expect rapidly to acquire wealth. His own opinion was that the directors of this company were to be the thanks of the shareholders for the care they had taken of the business—for they had resisted the temptation of rushing into a business which might have resulted in a loss. They had laid the foundation of a sound and profitable business. (Hear, hear.) He could not see any argument with respect to the preliminary expenses and the directors. His own experience was that if their business was carried

San Francisco, at no very distant date it would pay a large portion of the capital. There would be no large amount of customers' balances long time. The capital on which they would trade must be paid up, for not until they had done business for a long time would they have deposits to a large amount. He had seen in other companies shares go to a discount on the very same grounds as this, where speculation had been exercised, and the business had been made sound, and profitable. Having at their head gentlemen of practical banking with a knowledge of banking on the other side of the world, they ought to be a great success. He would only repeat, as far as concerned he thought they owed very much to the directors that resisted the temptation of rushing into business, and laid the foundation for the business for which the institution was originally founded.

The chairman then moved the adoption of the report, and Mr. Wade seconded the motion.

Mr. Alder contended that it was quite premature to declare a dividend, and moved an amendment that it was inexpedient to carry out the recommendation of the directors to declare a dividend. There did not seem to be anyone willing to second it, and the hon. proprietor said he would not press his amendment, and accordingly withdrew it. The question for the adoption of the report was then put and carried.

The resolutions of the meeting were then voted to James Begbie, Esq., and John Spratt, Esq., for their efficient audit of the accounts, and they were unanimously re-elected auditors for the ensuing year.

A resolution was then made special for the purpose of making the following alterations in the articles of association. In the clause 97, to substitute the words "four months" for the words "two months," and in the clause 98, section O, to insert the words "except the shares of the company," after the word "foreign."

The motion was then passed to the chairman and directors, and the meeting terminated.

NATIONAL FINANCIAL COMPANY.

A general meeting of this company was held at the Chamberlain's, on the 3rd April, for the purpose of considering an agreement proposed by the directors of the company and the Oriental Commercial Bank, for the combination of the two undertakings. The chairman was Mr. M. C. Seton.

The chairman read the notice convening the meeting.

The chairman—Gentlemen, the circular letter which has been sent to you has informed you generally of the object of this meeting. I have generally expressed opinion at the last public meeting (the first meeting), and from the letters which we have had from the shareholders, and from the conversation we have had, particularly I myself, of the shareholders, I believe the desire then expressed has been generally carried out in this proposed amalgamation—that desire should rather seek to obtain regular and steady dividends of a permanent character than extraordinary and fitful dividends which were

of a more doubtful character, and might not continue so long as we have had in view, and we believe that we have obtained a goodly amalgamation. The business of the Oriental Commercial Bank has been carefully examined, and we find that from the commencement they have paid a dividend of 15 per cent., with which, I think, they may be well contented; but there is no reason why it should not be increased, and I hope it may be increased. But, at any rate, we have satisfied ourselves—namely, that it is a genuine, solid business, not likely to be subject to fluctuations, nor incur any great risk; and therefore we hope we have fulfilled your wishes. I will give your approval of this step which we have undertaken, and be happy to answer any questions before moving any resolution. Perhaps you would like to hear the agreement which has been proposed. I will therefore call upon the solicitor to read it.

The Solicitor here read the agreement, the terms of which were that the shareholders of the National Financial Company were to contribute £5 to the Oriental Bank £100,000, and £5 contribution to the National Financial Company for which they would be credited with £4 shares paid-up, but £1 would be taken to make the £4 shares up to £5, and the balance would go to the joint reserve.

A Shareholder—What is the reserve fund of the Oriental Bank?

Mr. Pepper—It will be about £45,000, including £5,000 contributed by this company.

The Shareholder—What was the reserve fund of the National Financial Company which amalgamated with the Oriental Bank?

Mr. Pepper—£19,500.

Mr. Gosset said that the Oriental Commercial Bank shareholders had agreed to contribute £5 to the National Financial Company. Did he understand that the shares of the National Financial Company would be £4 paid up?

The Chairman—At first.

Mr. Gosset said he should like to know whether there was any intention of calling up the £3 as to when the other £3 was to be called up, as that was a point to the shareholders. He also thought some balance had been furnished to the shareholders, so that they might be in a position they were in at the present moment. At the last meeting a sum of money had been put down as profits not then realised. He thought more information should now have been given. There was no doubt that the thanks of the shareholders were due to the directors for endeavouring to carry out this amalgamation, and the result would be that the shares of the company would be £4 paid up.

Mr. Clench said that, with regard to the arrangements for the amalgamation, the shareholders would be credited with £4 paid up, and the intention of the Oriental Bank hereafter to endeavour to have the shares remain at £5 paid up; and a great many, if not all, the shareholders in the Oriental Commercial Bank, had agreed to contribute £5 to the National Financial Company. The agreement was that the assets would realise a still greater amount, and would be to the credit of the shareholders. It was not the intention of the directors to make a further call, as they believed that the united capital would be sufficient for all practical purposes. He believed the amalgamation would improve the value of the property in the market, and the interest of the shareholders in every way. With respect to the balance alluded to as having been realised, the balance, after providing for the

go to the reserve fund of the amalgamated companies to various disbursements—such as expenses of management, fees and dividend, and other expenses incidental to the working of

att, M.P.—Then we are to be credited with £1 per share paid fund.

man—Yes.

itor—I will explain. The effect of the arrangement is this : re, on 25,000 shares, is £100,000, and £5,000 contribution to fund is £105,000, then after having handed over to the n £105,000 the shareholders of the National Financial t of £1 per share (making, with £4, £5 per share), will take make up that, and any surplus will go to the joint reserve. att said he should like to know further about the profits stated d at the last meeting.

ch stated that it was right the directors should answer this ankly. £21,000 was carried to the suspense account, which earned by the company, but not realised as set forth in the of that there was £9,000 upon which some dispute arose, n was commenced by the company to recover it, but in the the parties failed, and the directors had proved against the hat amount. The remaining £12,000 was conditional upon racts being realised. At present it was premature to say how ould turn out to be, but whatever it was would go to the e company.

Burney (Chairman of the Oriental Commercial Bank) re- n the benefits likely to result from the amalgamation, and at for £90,000 cash paid the National Financial would receive £100,000. He also remarked that if possible the directors ould do without a call.

or two further remarks from Mr. De Pass, Mr. King, and

man moved a formal resolution approving of the agreement, econded by Mr. King, and carried unanimously.

man then announced that in consequence of the amalgamation irectors had been obliged to retire, and he thought the thanks holders were due to those gentlemen for having thus given r to promote the welfare of the company.

older expressed his opinion that something more than thanks o them, and moved that the sum of £300 each be awarded as seconded by another shareholder.

ttlemen dissented from the proposition, but on the motion the meeting it was carried.

thanks was then passed to the chairman, and the proceedings

BANK OF BRITISH COLUMBIA.

ry general meeting of the shareholders of the bank was held pril at the London Tavern, Bishopsgate Street, Mr. T. W. L. the chair.

The following report was taken as read:—

BANK OF QUEENSLAND, LIMITED.

General meeting of the shareholders of this bank was e the company, 26, Old Broad Street, on the 5th of e of confirming certain special resolutions amending ation, agreed to at an extraordinary meeting held on airman, Sir Joshua Rowe, C.B., presided.

The Secretary (Mr. Muir) read the resolutions, which were:—to transfer the power of increasing the capital of the company to the directors; to determine an increased number of directors; to reduce the maximum amount of directors from £4,000 to £2,000 per annum; and to transfer the power of appointing auditors from the directors to the shareholders.

The Chairman said the meeting was merely a matter of being to confirm the special resolutions which had been previous extraordinary meeting. He then put the resolu to the meeting, which, having been seconded by Mr. Co mously confirmed.

The proceedings then terminated.

DISCOUNT CORPORATION, LIMITED

THE second ordinary general meeting of the shareholders was held on the 11th April, at the London Tavern; Mr. in the chair. The following report was presented :—

"The Directors have the pleasure to submit to the shareholders the annual and closing Report was presented. The statement of the affairs of the corporation for the half-year ending 1865, showing a gross profit, including £648. 1s. 1d. brought in last account, of £31,224. 1s. 10d., from which, after deduction of bills not due, and current expenses, there remains £16,111. 7s. 6d. The directors recommend the sum of £5,000 appropriated to the payment of a dividend of 10s. a share, being rather more than 5½ per cent. per annum on the paid-up capital; they have set aside the sum of £9,000 to meet bad and doubtful debts, leaving a balance of £2,111. 7s. 6d. to be carried to the profit and loss account. Since the last meeting of shareholders, the company has passed through a very severe and prolonged monetary crisis, and the directors are satisfied that, considering the large number of companies that have taken place, the amount, £9,000, which they have set aside from the half-year's profits as the maximum amount of loss, will be considered by the shareholders as moderate, and that they have been led to anticipate. They have, further, much to recommend the position of the corporation as regards its convertible securities. The directors can report most favourable views of the company's business, but, as its profits depend greatly upon the amount of deposits, they would urge shareholders that, by bringing and influencing these, they will contribute to its success.

whether the securities were readily convertible or

The Chairman replied that they were in a favourable position, every one of their securities being easily convertible.

The motion for the adoption of the report was then put and passed unanimously, and a dividend at the rate of 5½ per cent. was declared accordingly.

The Chairman took occasion to remark that the company had passed through a very exceptional period, notwithstanding the results shown, he thought, might be looked upon as satisfactory. He thought, however, they might consider that they had seen the effects of the late monetary crisis, and good times were before them.

A Shareholder complained that some time since, when he had asked the secretary for information as to what probable losses the company were likely to suffer through the effects of the late monetary affairs at that time, the secretary gave indefinite answers, whereby he (the shareholder) was led to infer that some losses had been sustained, and he was therefore dissuaded from inquiring further, which at the time he had at his disposal. If that question had been fairly answered—if it was admitted by the secretary that some losses, but that, considering the commercial crisis at that time, they were not considerable—he maintained that it would have been a fair answer for the company. He thought every shareholder was entitled to an answer from the secretary.

A Director thought it would have been very unwise for the company to give the information required in this instance, because the shareholders, by getting the information would know more than the general body of shareholders, and would therefore possess an undue advantage over the other shareholders. He hoped the shareholders would support the directors in not giving any one shareholder information which the others had not heard of.

In a short discussion which ensued, the conduct of the secretary in giving the information was declared to be only right and proper. The general feeling seemed to be, that if the secretary had given the information sought to be obtained, he would have been guilty of a dereliction of duty.

The Chairman, in reply to a question, said that according to the prospectus, they had made as many calls as they could. At present there was no occasion for any further call. It was very desirable, however, to raise more capital, and if it was found necessary to make a further call, it was possible that they would take steps to do so.

A Shareholder remarked that the directors had carried the company through a period of unparalleled trials. When last the shareholders met, it was said that they would not meet again till they met in triumph. That they would be wound up and done up—(a laugh)—but they had met that day under more favourable circumstances than they could have expected, and for this result the directors were thanked. He begged, therefore, to move the cordial thanks of the shareholders to the directors, believing, as he did, that the shareholders would be able to handle the company with hands, and the probability was that when next they met it would be under even more favourable auspices than the present.

The motion was unanimously agreed to, and a vote of thanks to the chairman concluded the business.

FINANCIAL CORPORATION, LIMITED.

ordinary meeting of the shareholders of the Financial Corporation, was held on the 12th April, at the London Tavern, for the purporting into effect the amalgamation of this company with the Commercial Bank, Limited, pursuant to the terms and conditions preliminary agreement for the purpose entered into between the Oriental Commercial Bank, Limited, and the Financial Corporation, Limited, and, in order thereto, of passing a resolution of the company voluntarily, and taking such other steps as might be necessary; Mr. James Goodson in the chair.

According to a circular published by the directors, the terms of the amalgamation were that the amalgamated company will embrace the business of the Oriental Commercial Company, the National Financial Company, the Financial Corporation, and will be carried on under the title of the Oriental Commercial Bank, Limited." The capital of the amalgamated company will be £3,000,000, of which the first issue will be £1,750,000, in 75,000 shares of £20 each, £5 paid, the whole of the first issue being already subscribed. The shareholders of the Financial Corporation are to be entitled to one share in the new company for each share now held in the corporation, £2 paid; and each of the shareholders will receive in the new company will be credited, in the new company, with £4 paid. The remaining £1 is to be credited as the value of the assets of the Financial Corporation are realised; or, if these assets are deficient, by a call to the extent of the deficiency, whatever it may be, not exceeding 6s. 8d. per present share. It is not contemplated to call on the shares of the Oriental Commercial Bank, Limited, for £5 per share at present paid. The new company will commence business with a reserve fund of £45,000, being at the rate of 12s. 6d. in which the holders of Financial Corporation shares will participate equally with the other shareholders. A dividend at the rate of 10s. per annum will be paid upon the shares of the Financial Corporation from the 31st December last to the 31st March ult. No dividends are to be paid, or new shares exchanged, for any Financial Corporation shares until all any calls shall remain unpaid, but all such shares will in due time be forfeited. The Oriental Commercial Bank, Limited, will enter into possession of the assets and securities, and take upon itself all the liabilities and engagements of the Financial Corporation immediately on the completion of the preliminary agreement, by a more formal legal deed, in the course of preparation.

The chairman said, although the articles of association would have enabled the directors to have carried out this arrangement without the shareholders to come to a meeting that day, yet a sense of duty induced them to assemble the proprietors for the purpose of discussing the proposition. The proposition to be submitted was the amalgamation of this company with the Oriental Commercial Bank; and he could understand of the prevailing views of the proprietors, and the general satisfaction. With this company the National Commercial Bank could be incorporated, and he believed with those three companies combined they would have an institution deserving the support of the public, by whom he had no doubt it would be admirably received. Companies with small paid-up shares generally laboured, as they had opportunities of observing, under great difficulties from having

sums of money locked up which they were unable to utilise in their companies. With a more extended sphere they would have the advantages they were entitled to expect. The directors had, therefore, it was their duty to encourage an amalgamation with another company if an opportunity had arisen, and it would be for the meeting to consider the proposition submitted to them. He and his colleagues were of the opinion that it would be greatly to the interests of this company if such a move had been necessary very shortly to have made a call of £25,000 looking to the depressed state of the financial element, the directors had gone down to their present price under the influence of the late market. The directors thought it unadvisable to continue with those conditions, especially as they all knew, from what was stated at the meeting, a sum of £60,000 was locked up, and would be locked up for a considerable period. He and his colleagues were anxious to get anything from the proprietors, but would give all the information they might be desirable. The solicitor was present, and he was shown a memorandum of agreement *in extenso*, and from that they were in the exact position in which they were placed. He could assure them that everything had been done to protect the interests of the company, as he believed, would give their general support to the arrangement. The solicitor would now read the agreement referred to.

The solicitor then read an outline of the basis of the agreement between this company and the Oriental Commercial Bank.

The Chairman said he would move the following resolution: "That the Financial Corporation, Limited, shall be amalgamated with the Oriental Commercial Bank, Limited, pursuant to the terms and conditions of the memorandum of agreement dated the 24th of March, 1896, by certain directors on the side of the bank, and of the shareholders of this company." (Cheers.)

Mr. Bevan said, perhaps the solicitor would state whether the agreement he had read was the same as that mentioned in the circular to the shareholders. He did not remark any reference to the limit of the call.

The solicitor said that that was the construction put upon the agreement. There were no words in the agreement to show that that was the case.

Mr. Bevan thought it of vital importance that they should be clear as to what they were about in making themselves over to the Oriental Commercial Bank. They should know that under no circumstances could the 6s. 8d. per share be called up. It might turn out that the call would be called up. The document ought to set forth clearly the construction intended. He did not come there at all to oppose the amalgamation. On the contrary, if carried out in a business-like way, he approved of it. (Cheers.) He must leave the management of the affairs of the company by the directors. There seemed to have been two businesses going on at the bank. One was the business of the company, the other the business of the directors. He was rather pleased to hear the chairman invite discussion. He would avail himself of the invitation, and ask whether a consideration had been given to Mr. Thomas Goodson for the loan of £25,000 for Eastern debentures for six months. The £25,000 was given to the Eastern debentures were deposited with the National Discount Company, and an advance of £20,000 was obtained. If the directors were doing business in this sort of way, it was obvious their business was of the most risky possible character. He would further ask

ing director was upon a very large number of bills of company, and whether £31,000 worth of securities had been lent to the managing director and another director in

must say he was rather surprised to hear there was a further call of an indefinite amount. He was not opposed to the amalgamation, but he believed the utmost that could be expected to pay was 6s. 8d. per share.

He stated that the object of the meeting was to adopt or reject the amalgamation, and not to go into an inquiry as to the state of the company. He was prepared to approve of the amalgamation if the directors could give them an assurance that there would be no further call of more than 6s. 8d. per share.

He thought it desirable that the amount of the call should be clearly understood.

Mr. Alfred (the managing director) said he would try to do what was best for the company that had been put. With respect to the personal matter of Mr. Thomas Goodson, some few months since, when Mr. Goodson, to whom they had advanced £50,000, became the chairman and told him he was afraid they had to go without going about begging and endangering their position as chairman for his assistance. At that time money was scarce, and there was a great difficulty in getting large amounts of money. Mr. Goodson asked Mr. Goodson if he could help them, and his brother had a large sum invested in Great Eastern and he would lend those securities that we might use to meet our bills. The whole of the £2,000 commission on the advance and discount, was paid by the Rolling-Stock Company to the Financial Corporation. (Cheers.) It was paid by the company in a bill, which was not met, because they had no engagements, but it did not follow that there was any loss in the transaction. (Hear, hear.) With respect to the guarantee, he had such abundant faith in the Financial Corporation that he had given his personal guarantee of £31,000. (Cheers.) He believed that to be a sufficient guarantee. He had only one motive, and that was to prevent the necessity of calling the money from the pockets. He had never received from the corporation (loud cheers)—nor had he any claim upon them, except in having done this. (Cheers.)

He said if Mr. Bevan had been a director.

He would rather let bygones be bygones, as he did not believe in coming here for the purpose of damaging the character of the directors would not shrink from any question he was asked. With regard to the agreement, he must say that the negotiations with them, and after many meetings, in the end this company showed the greatest anxiety to do the best for their shareholders, the terms were reduced to what was altered from time to time as discussions arose, and which was submitted to them in the circular. There was no doubt. It might happen that 6s. 8d. would be the call, or that it would be 13s. 4d. He did not see how it could be otherwise, as had been mentioned. The directors were under the impression that the securities would realise 20s. in the pound, and if they

did, that would cover all possible deficiency. He should, sorry to deceive them; there might possibly be 3s. 4d., 6s. 13s. 4d. (Cheers.) No man living can possibly tell what may happen in twelve months. (Cheers and laughter.)

After some further remarks by shareholders, the resolution was carried unanimously.

Resolutions were also passed to wind up the Financial Committee voluntarily, and to authorise the directors to take all the necessary steps for the purpose of carrying the amalgamation into effect.

A vote of thanks was passed to the chairman and directors, and the proceedings then terminated.

CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA

THE eleventh ordinary general meeting of the proprietors was held on the 12th April, at the London Tavern, Bishopsgate, A. Mitchell, M.P., in the chair.

The report of the directors, which was taken as read, was as follows:—
 "The general balance-sheet for the year ended 31st December 1900 presented to the shareholders, exhibits a net profit of £104,820, which has to be added the sum of £13,061. 14s. 4d. carried over from the previous year. After deducting the half-yearly interim dividend declared on 5th October last, amounting to £54,540, there remains a possible balance now of £63,349. 12s. 9d. The directors regret to feel under the necessity of setting aside a sum of £22,000 to provide for doubtful debts, chiefly attributable to the recent depreciation of the produce held as collateral security. Out of the sum of £41,349. 12s. 9d. remaining, they recommend the shareholders to declare a dividend for the half-year ended 31st December last, at the rate of 10 per cent. free of income tax; and which, with the previous half-year's dividend, will amount to 12½ per cent. for the whole year. £1,349. 12s. 9d. will then remain to be carried over to the new year. At the last annual meeting, the directors reported that the previous issue of 7,800 new shares had been received; and they have to state that all the calls in furtherance of this increase of the bank, amounting to £800,000, were duly paid up—the reserve fund now stands at £105,000. The directors consider it extremely desirable for the bank to obtain for the shareholders the right, which many banks and all companies incorporated by act of parliament are entitled to, of re-electing immediately all the directors duly qualified, who retire annually by rotation; the existing charter of this bank restricts the shareholders' choice to the re-election of only one of the outgoing directors. The opportunity of this application to the Treasury would also be to solicit that the directors may make provisional appointments to fill vacancies in their number during the year—such occasional appointments being subject to confirmation by the shareholders at the next ensuing general meeting. They propose, accordingly to apply to Her Majesty's Treasury for those privileges; and in terms of the deed of settlement, extraordinary general meetings of the shareholders must be called on the application. After dispatch, therefore, of the business of the bank on this day, it will be constituted an extraordinary one for the objects indicated. Under clause 84 of the deed of settlement, the directors who now retire by rotation are but two—Mr. W. S. Lindsay

Macnaughten—and, only one being immediately re-eligible, Macnaughten offers himself to the choice of the shareholders. Mr. Macnaughten and Mr. Joseph R. Morrison, who went out of office last year, were the candidates for the direction. The auditors, Mr. Alderman Mr. Jonathan Thorpe, now complete their annual term of office, and offer themselves for re-election."

1864.

Dec. 31—By balance brought down

1865.

March 22—By balance

The Chairman, in moving the adoption of the report, observed that the result of the half-year ending had not answered the expectations which had been held at the meeting. The crisis in England had then only commenced, and had resulted in enormous failure in the east, and, in what affected more, in the depreciation of East Indian produce—tea, sugar, and opium—on which the bank held security, it being its business to hypothecate on such produce, and it had suffered accordingly from the failure of houses by whom bills were drawn, and by the fall in the price of the produce. The loss of £22,000 mentioned in the report was estimated, after careful examination by three of the directors, to be with the trade of the east, not down to the 31st December, but to the 15th March—(hear, hear)—and he believed that it was a complete loss down to that time. What further losses might be incurred he could not say, for the crisis was not over; houses connected with the bank were still falling, but he could say positively what the loss was to the 15th March. He would not specially and by name mention any house by which there had been a loss; but he desired to mention the case of Mr. John Gladstone, who had been one of the directors of the bank, there had not been a loss of a shilling by him. (Hear, hear.) In the case of a house from which the bank had bills to the amount of £20,000 secured on produce, the debt had been reduced to £10,000, and when some loss on the produce realised, that had been met by the directors of the bills, who had paid the difference, and eventually the loss would be sustained. Another serious drawback to the profits of the bank in the last six months was the high value of money, which had made a difference to the bank of £20,000, which must be deducted from the profits, and thus had tended to reduce the dividend. Nevertheless, the state of the times, when the bank was enabled to pay on the 31st December 5 per cent., it was not so very bad. (Hear.) The government securities taken over by the bank, amounting to £280,000, had been taken over at their actual market value, but other securities on land, buildings, and ships, taken over at their cost, although they could be realised at double their cost. There was property which had been acquired at Kurrachee and Rangoon, which could be realised at a handsome profit. With reference to the future, the directors had inculcated caution on their agents, and were especially on cotton. Speaking his personal opinion, he thought that any week might bring a statement of the close of the American cotton crop, which would be followed by a reduction in the price of cotton; but from his personal experience in the case of linseed and other Russian oils during the Crimean war, he believed that a trade like that which had now been established in India, would continue to supply. As regarded the position of the branches of the bank, he was glad to say they had not suffered. There was an increase in their deposits, and a good credit; so that looking to the affairs of the bank he was very satisfied and nothing but prosperity. (Hear, hear.)

Mr. Bell, a director, seconded the motion.

ns from shareholders,

distribution, out of which it is now proposed to pay
of 5 per cent., and a bonus of 3 per cent., making,
ment, a distribution of profit for the year 1864 equal
capital of the corporation. The present dividend
to £2 per share, will be paid, free of income-tax,
proximo, at the office of the corporation ; and after
been provided for, there will remain a balance of
carried to the credit of the next account. The com-
missioners of her Majesty's Treasury having been
e of capital, a further issue of £25 shares was made

on the 20th May last, and the same were allotted to then registered on the books of the corporation in the p in six. These shares were issued at a premium of a premium was carried to the credit of reserved fund; and have the satisfaction to report that the entire amount has up, making the capital of the corporation £1,500,000, and £144,000. The operations of the past year have not res ably as those of 1863; nevertheless, having regard to the commercial and monetary affairs during the period und directors have good reason to congratulate the shareholders precaution in restricting credits and limiting business, reducing the dividend, has prevented much actual loss which wise have arisen, and has diminished the prospective attaching to current transactions in times of difficulty. Those retire by rotation are—Mr. Gordon, Mr. Mackenzie, and Mr. being eligible for re-election, offer themselves accordingly with pleasure recommend the proprietors to re-elect them. the duty of the meeting to appoint two gentlemen to be year 1865."

The Chairman, after declaring a dividend in accordance payable on the 1st of May, said: Gentlemen,—When v October last we were passing through the first stage of tunately turned out to be one of the most severe and di that has occurred for many years in commercial and m and I am very much afraid that the crisis is not over, be counteracted by the extension of business and th given to the general tone of commercial interest mination of the civil war in America, of which now to be some prospect. Be that as it may, we that mischief was coming, and we took every pre power to restrict our credits, and to limit the busin poration both here and abroad. Like our neighbours, v experience some losses, but I am happy to think that owing precautions that were taken we have suffered much less wise should have done. As a proof that these are not me mention, with regard to four of the largest failures wh place, with liabilities amounting in the aggregate to ab that although some eighteen months ago we held a very l the paper I do not think we are likely to lose a thousand p immense failures; and notwithstanding that all the losses h provided for we declare a dividend which is I consider satis rate of 16 per cent. per annum. In addition to the direct have had to provide for I cannot overlook the indirect e upon our profits by the very serious competition which experiencing at the most important seats of our busin readily believe this when I tell you, for instance, that v presidency of Bombay alone there were some two or t only one bank, and some four or five bank agenc at the present moment no less than twenty-three ban ing agencies, besides ten or twelve financial establish are all competing with us. People say the business has it has; but with such competition as we have to conta holders may easily imagine that the margin of profit is cor tailed. However, there is nothing to dishearten us in these t

connection which we possess, with our large means and commercial credit, we shall be able to maintain our business on all corners. In the circular which you have in your hands made to the issue of shares which took place in 1864, and our reserve fund are now respectively £1,500,000 and £1,200,000. The distribution of the new shares at the rate of one new share for every three old shares absorbs 8,400 shares, leaving a balance of £1,200,000 appropriated at the discretion of the court. I am now of opinion that the 1,200 shares have been appropriated, and I confidently approve of the course which has been pursued. We have also created a fidelity or guarantee fund, which was made up of contributions of the officers. The primary object of this fund was to be used with the usual mode of guarantee, and to make good the claims of our guarantors; and a second object was to complement the fidelity fund with an allowance or pension fund. The staff serving in all climates; sickness and death at any time must come when in such an establishment as this, and the claims arising from such contingencies. We have divided those two funds in such a manner as, without making any sacrifice, to make the provision which we think is deservedly made by our establishment. Occasionally, at our meetings, the directors have been urged by shareholders to take advantage of the services of the staff; and although I think it is not wise to do so with the executive (who are alone responsible) for the economy of the establishment, we have given every attention in our power, and what I am proud to say is a proof of our regard for the welfare of our clerks. The amount amounts to a considerable sum, but it is still inadequate to the purpose of a guarantee and an allowance. We have, however, by availing ourselves of the issue of the shares to make good any great sacrifice on your part; for had we not done so, we should have given new shares for every old share, which at the present time would have cost 2s. per share. The court have, therefore, allotted the guarantee fund 1,200 shares at the same price at which the shareholders, namely, £45 per share. The amount amounts to upwards of £54,000, and after the payment of the same, the sum will remain at its credit. Apart from the effect of this measure, from every point of view, I am quite certain it is likely to have a beneficial effect. It associates our staff indirectly with the shareholders, and it will induce them to increase their interest in the general welfare of the corporation. One of the objects which you have in your hands. Let me first of all mention the cash deposits bearing interest. Notwithstanding the low rate of interest which has prevailed during the last twelve or fifteen years, we have never altered our rates of interest, always at a low figure—the cash deposits show a slight increase. There is a considerable falling-off in the amount of deposits due to the corporation—a falling-off of upwards of £1,000,000 from the precautionary measures taken by the shareholders in case of our risks. I do not think there is any other measure presented which requires any comment from me. I have only to mention in terms of merited eulogy the conduct of the management. All of you who are conversant with what is going

on in India and China must be aware of the extraordinary have recently taken place in those countries. The manager requested permission to go there in order that he might see the changes which had taken place, and introduce such in the arrangements as circumstances required. He left home of November; he visited Bombay, Ceylon, Singapore, Hong Kong, Shanghai, and on his way back he had an opportunity of consulting the managers of some of the branches which he could not visit to the Peninsular and Oriental Company, he returned home bringing a good report from the land, and I doubt not to the benefit by the valuable and important journey which he made. I have nothing to add beyond moving the adoption of the accounts, and declaring my readiness to answer any questions. (cheers.)

A Shareholder wished to know what amount of money had been lost through defaulting clerks.

The Chairman said they sustained a loss of £1,200 by the default of a clerk in Ceylon, but nothing beyond that.

The report was then put and carried unanimously.

The retiring directors were afterwards severally re-elected, and after some other routine business a vote of thanks to the chairman closed the proceedings.

STANDARD BANK OF BRITISH SOUTH AFRICA

THE third ordinary meeting of the proprietors of this bank was held on the 21st of April, at the London Tavern; Mr. John Pater was in the chair.

The report for the half-year ending the 31st of December 1891 was read.

"The experience of the past year has satisfied the directors that those institutions will at all times command public confidence, and that their prosperity reserve a considerable portion from their profits whereby speedily to produce such accumulated fund as shall afford ample guarantee of safety, as well to constituents as to the bank. Although, therefore, the net profits from the business amounted to the rate of £12 per cent. per annum, the directors recommended that more than about two-thirds thereof, or at the rate of 8 per cent. per annum, be divided; the balance to be carried to reserve fund. In the annexed statement of accounts it will be seen that the total gross income of the company for the half-year, including £30,640. 10s. received from the sale of new shares, and £2,647. 7s. 6d. brought forward from previous year, amounted to £77,417. 16s. 5d., and after payment of expenses and making provision for all bad and doubtful debts, and allowance for interest on all bills discounted but not due, there remained an available balance of £58,079. 4s. 1d. for disposal. This sum the directors recommend should be applied as follows, viz.:—To divide among the proprietors at the rate of £8 per cent. per annum on the value of their respective shares, £17,862. 13s. 4d.; to proportionate part to amalgamation and preliminary expenses account, £2,000; to reserve fund, £36,000.; to balance carried forward to profit and loss account, subject to payment of income-tax, and remuneration of auditors, £2,009. 6s. 8d.; total, £58,079 4s. 1d. In accordance with the articles of association two of the directors, viz., Alfred

Esq., retire from office at this meeting, and, being themselves for re-election. The auditors George Harvey and Thurburn, Esq., also retire from office at this meeting, eligible for re-election, they offer themselves

moving the adoption of the report, said that the statement given in so detailed a form that there was very little to be said from him. The directors had carefully separated the bank post bills. The issue of notes had been something like the issue of bank post bills £27,800. On the issue of bank post tax, and all the rest was profit, so that taking it at the rate from that source a profit of £8,000 per annum. On bank bills the profit must be made through the management dependent upon the skill of the manager. No doubt a manager might make a considerable sum of money for himself through the means of bank post bills. The board had facilities upon deposits and current accounts from the bank amounted to £472,602, and the latter to £320,054. The profits increased during the last half-year so much as could not be readily understood that it was not likely they would be allowed for them was only 6 per cent., and when the rate was at the rate of 8 per cent. at call. It was gratifying to find that they had kept up as they had done. One or two of the bills had been withdrawn in order to realise a larger profit, but there was no doubt that, considering the small amount of money, the deposits would from this time begin to show the profits of the past half-year had been rather small. The circumstance that the charges made for printing and stationery, &c., were paid on the Cape colony account at Christmas, and, therefore, the proportion of the charges had fallen upon the previous half-year was charged in the sum of £2,600, set aside at the last half-year to meet the end of the year was amply sufficient. During the year they had earned as nearly as possible 12 per cent. on the capital, which was thought a very fair return. (Hear, hear.) He thought that the Cape of Good Hope was much safer than it was in any other part of the world. The institution which they took the Bank of Port Elizabeth, during the 15 years of its existence, had bad debts exceeding £1,000, and nothing but the management of the part of the manager at the Cape could lead to such a loss. The fact was that in the small towns of the Cape the circumstances of each individual were very well known to a great extent, that if a bill were presented to the bank for discount, the manager could tell at a glance whether it was a good bill or a real bona fide acceptance. The manager, therefore, could bring any paper brought to him with the greatest certainty, without the possibility of loss to any great extent. It had been the opinion of the Standard Bank was risky on account of the number of branches, in his opinion it was a safe bank for the very reason that it was in small towns, where the circumstances of the business and the accommodation were well known. The danger which was in large towns, where parties were able to conceal their transactions, the manager could not form a correct judgment re-

specting them. In small towns, however, nothing but the incompetency on the part of the manager could lead to a heavy loss in two or three large towns of the colony that they were anything like risk, and then the risks were not greater than in second and third rate towns in this country. He wished to stand distinctly that the class of business which the bank transacted was a perfectly safe and sound class of business, not speculative in its character than any banking business with which he was acquainted, and if with such a class of business they could get equal to 12 per cent. he thought he might congratulate both himself and himself upon the value of the property which they possessed. (hear.) On the credit side of the account they would perceive that there was an item of £9,009 on account of unpaid calls not received at the end of the year, which arose from the fact that the call was made in the month of December, and very little time elapsed before the accounts were closed. The whole of that amount was now paid with the exception of one or two cases, and in which interest at the rate of 12 per cent. was charged on the unpaid call. He explained that the unpaid call was due from a large shareholder, and the board had decided that it was their duty to forfeit the shares, although it was in their power to waive it. He did not know that the accounts required further explanation, but they did he should be happy to afford it in reply to questions from the shareholders. The legislature of the Cape of Good Hope had passed what in his opinion was a foolish law, by which a tax was imposed upon foreign capital. That might be wrong in principle, but they actually taxed, not the nominal capital of institutions of this kind, but the real capital. He thought it was right. Now, the nominal capital of this company was £1,000,000, and there was no necessity for its being so large, and the directors were of opinion that it should be reduced to the extent of reducing the nominal value of the £25 share, of which £10 should be paid up, or in other words the nominal value of the share should be reduced to £15, and the liabilities of the company should be reduced to £10. There were two great objects to be secured by this reduction. The first place it would be a saving to the institution, and avoid the necessity of government upon it to something like the amount of £750,000. The second place it would relieve the shareholders from any responsibility to the public. It would be a fair responsibility. It would readily be perceived that the shares having only £25 paid up was practically to place the shareholders in the position of shareholders in an unlimited liability company. The position now proposed was to limit the liability of each shareholder to £10, which would give still greater security to the public than was the case when the company was called the chartered companies, which simply rendered the shareholders responsible to the extent of double the nominal value of the capital; whereas it was proposed that the shareholders should be responsible to the extent of three-fifths of the nominal value of the shares. Instead of half, as in the other case; besides which, the nominal value of the shares they would probably largely exceed, and thus prevent the fluctuation of the number of their shareholders, and thus prevent the fluctuation of the value of shares, which was always a matter of complaint, and which was very undesirable to prevent. In order to carry the measure it was necessary to re-register the company, because, unfortunately, there was an omission in the statute, which no doubt would be remedied, but permission was given to increase the nominal value of any company, but no permission was given to reduce it, which could only be done by making a special application to the legislature.

re-registering it. The alteration in this case was very
ed to re-register the company under the title of the
ish Africa, to pay off all liabilities, to absorb this
y, to take back the present shares, handing the share-
es, with £10 paid up for every single share they now
. He trusted that these views would commend them-

holders, and an opportunity would be given to submit question at that meeting.

In reply to Mr. Webster,

The Chairman stated that the preliminary expenses, which originally, had been reduced to £1,700, and that although given as the time for paying it off in annual instalments, tended paying it off in less time.

The report was then put, and carried unanimously.

The Chairman, in moving the adoption of the dividend, alluded to the fact that the profits realized in the Cape year had not been so large as usual, from the simple fact in every other part of the world money had been extremely cheap, it had been extremely cheap, and, consequently, the Cape it had been extremely cheap, and, consequently, the Cape earned from 3 to 4 per cent. less than previous years.

The motion having been adopted,

Mr. Bale moved, and Mr. Sprague seconded, the re-election of Mr. Paterson and Mr. Jarvis, the retiring directors, who were elected.

After a short discussion, the sum of £2,000 a year was agreed for the remuneration of the directors.

The auditors were then re-elected, and £50 each awarded for their remuneration.

On the motion of Mr. Whitford, seconded by Mr. M'Ror, a resolution was carried unanimously:—"That the directors be authorized to take the necessary steps to register the new company and title of the Standard Bank of British Africa, Limited, of £1,000,000, in 40,000 shares, of £25 each, and to take such steps for the passing of this company into such new company."

Cordial votes of thanks to the managers and directors in connection with the London board, were accorded by the meeting, and the Chairman concluded the proceedings.

SOUTH EASTERN BANKING COMPANY, LIMITED.

AN extraordinary general meeting of the shareholders of the South Eastern Banking Company, Limited, was held on the 21st April, at the offices, 60, Gracechurch Street, London, for the purpose of considering the following resolution:—"That the company be changed, and that in lieu of South Eastern Banking Company, Limited, the name of this company shall be English Joint-Stock Bank, Limited."—Mr. Lawrie in the chair.

The Chairman said he was sorry to trouble the shareholders to attend the business before them was a formal matter; but it was necessary that they should attend, and not the fault of the directors. The directors were sanctioning the change of name to that of the Counties Joint-Stock Bank there had been a correspondence with the Bank of England, whose sanction was required, on the subject.

Mr. W. Walter, the secretary, read the correspondence which it appeared that the London and County Bank objected to the change of the name as previously sanctioned by the shareholders, of the Counties Joint-Stock Banking Company, on the ground that the name was similar, and that their bank was known in the Bank of England clearing-house as the Counties Bank, and on other grounds.

the various objections, but the Board of Trade regretted that it could not sanction the change of name as proposed, stating that it was a question of law, but one of discretion, which rested with their

chairman observed that under those circumstances they could do nothing. The next course was to select some other name for consideration and discussion. Before submitting the name now proposed the chairman had stated that they would sanction the name if approved by the shareholders. He then moved a resolution that the name of the bank be changed to that of the English Joint-Stock Bank, Limited.

The resolution was seconded, which was unanimously adopted. The chairman, Sir William Russell, Bart., M.P., had just been elected director of the bank.

Thanks were passed to the chairman, and the meeting adjourned.

CREDIT FONCIER AND MOBILIER OF ENGLAND, LIMITED.

The annual meeting of this company was held on the 20th of April, 1865, at the Tavern; the Right Hon. J. S. Wortley in the chair.

The Chairman (Mr. J. Lowe) having read the advertisement calling the shareholders to meet, the following report was taken as read:—

Balance sheet, from 30th September, 1864, to 8th April, 1865. Dr.: Capital authorised, £4,000,000 in 200,000 shares, £20 each; to capital paid up, £2,000,000, in 100,000 shares, £20 each; to capital paid up, 56,033 shares, £5 each, £280,165; on 56,033 shares, £3. 10s. 15d. (together £415,950. 10s.); received in advance, on instalment due 10th April, on 56,033 shares, £8,802; less previous instalments, £158; to bills payable and sundry credits, £3. 10s. 7d.; to depositors, loans, &c., £554,476. 7s. 2d.; to balance—balance at credit of this account, carried down (which includes £100,000, amount of old "Credit Mobilier" and "Credit Foncier" shares, and £160,296 received for premiums on carrying out amalgamations of those companies, £394,024. 16s. 4d.; to guarantees—City of London, &c., and sundry liabilities, per contra, £812,075—£1,479. 4s. 1d.

Cash at bankers, £43,345. 4s. 7d.; by cash on deposit of call bills receivable, securities, loans on securities, and sundry bills, £25,492. 15s. 6d.; by building, office furniture and fittings account, £7. 7s. 3d.; by preliminary expenses, £7,183. 16s. 9d.; by City of London, debentures, and sundry debits, per contra, £1,609,479. 4s. 1d.

Profit and Loss Account from September 30th, 1864, to April 8th, 1865. To amount set aside for reserve fund, carried forward below, £100; to building, office furniture and fittings account, amount £8,457. 7s. 3d.; to preliminary expenses, amount written off, £9d.; to dividend of 10s. per share, and bonus of 10s. per share, on 43,967 shares, £5 paid (equal to 40 per cent. per share), £3,967; to dividend of 5s. per share, and bonus of 5s. per share, on 56,033 shares, £3. 10s. paid (equal to 40 per cent. per share), £3,016. 10s. (making together £71,983. 10s.); to income-tax on

above dividend and bonus, £1,799. 11s. 9d.; to balance un-
 forward below, £34,600. 10s. 7d.—total, £394,024. 16s.
 amount brought down, being net balance to credit of
 account (which includes £40,000, amount of old "Credit
 "Credit Foncier" reserve funds, and £160,296 received
 on carrying out amalgamation of these companies), after
 current expenses, advertising, salaries, and all expenses
 printing, stationery, directors' allowances, &c., &c., £394,

 £200,000.

"Dividend Reserve Fund.—Cr.: By amount set aside this
 fund, £70,000.

"Profit and Loss New Account.—Cr.: By amount
 brought down, £34,600. 10s. 7d.

"In handing to the shareholders a balance-sheet, showing
 of the company's affairs, the directors have to congratulate
 results of the half-year's operations. By the figures shown
 ment annexed, it will be seen that the great exertions made
 past half-year have not been without commensurate results
 of profit and loss account showing a net sum available, after
 charges and expenses during the past half-year, of £394,024.
 will be seen, however, that in this large amount is included
 £40,000 received from the old Credit Mobilier and
 companies (being their reserve funds), and the sum of £160,
 of premiums received on the issue of the new shares of
 making together a sum of £200,296, leaving, therefore, £193,
 as the net sum earned by this company during the six months.
 The directors have had under their careful consideration
 of dealing with the amount at their disposal, and in the decision
 they have arrived they have especially directed their attention
 the company on a firm basis. While meeting the just expectations
 shareholders in the amount of the dividend which the directors
 should be declared at the ensuing meeting, they have prominently
 in mind that there is no way so sure of maintaining and increasing
 scale of profits as that of commanding public confidence, by the
 of a large reserve fund; they, therefore, have decided to set aside
 £200,000 to that purpose. In fixing the dividend at 10s. per
 £5, and 5s. per share on the £3. 10s. paid, equal to 20 per cent.
 annum, the directors believe they have placed it at such a level
 fairly be counted upon as a minimum dividend; they further
 that in every half-year, when the profits will admit of a large
 such increase should be made in the shape of a bonus, which
 instance, is fixed at the same amount as the dividend. In the
 a distribution equal to 40 per cent. per annum on the
 capital paid up. To further show their great desire to secure
 the results of the minimum dividend of 20 per cent. per annum
 being always maintained, they have decided to form a fund to
 be called the dividend reserve fund, such fund to be maintained
 at the amount necessary to pay one year's dividend on the
 per annum on the capital for the time being paid up; this is
 the paid-up capital of £500,000, viz., the sum of £100,000
 the directors have, out of the profits of the present half-year,
 sum of £70,000, and they propose to complete the fund to the
 earnings; the effect of this will be practically to make

per cent. stock, and the action of the fund will be as follows, any half-year after the sum necessary for one year's dividend is paid up is reached, the profits exceed 20 per cent. per annum, provision for reserves, a bonus will be paid, at such a rate as we think it prudent to recommend; but should, from any excuse, the amount of profit not reach a sum sufficient to pay of 20 per cent. per annum, then the dividend reserve fund may supply any deficiency, and thus increased stability will be given to the fund, alike from its ample reserved resources, as well as from the reserve set aside beforehand by the shareholders of their minimum dividend. The fund, therefore, be used to ensure the dividend, whilst the reserve fund is available for any extraordinary occasions of loss or otherwise, without interrupting the revenue of the investor. The payment of the dividend and bonus, as mentioned in the balance-sheet (equal to 40 per cent. per annum), will absorb £71,983. 10s. The directors have decided to discharge the whole of the amount of the expenses incurred by this company, viz., £7,183. 16s. 9d.; they will also write off the items standing to the debit of building, repairs and fittings account, £8,457. 7s. 3d, and there will still remain of £34,600. 10s. 7d. to be carried forward to the next half-year.

During the past half-year there have been no special events to direct your attention beyond the remarkable change in the rate of exchange from the rate ruling when we last addressed you, nor does it seem at all to have reached its lowest point. A general depression to pervade the commercial classes, which in a great measure may be attributed to the apprehended contingencies likely to ensue from a sudden outbreak of the lamentable American war, the effect of which, it is thought, will derange the monetary basis of the whole world. It is upon what ground such reasoners argue, except upon that ground, that the requirement of gold for shipment, in exchange for goods, will be so large as completely to disorganise the money market; but, however, dispel much of what must be called the instinctive apprehension of the commercial public, and particularly that portion of it having a special branch, of any 'change' in the current order of things, though the state of affairs be chronically bad, and, both at home and commercially, unsound. In the event of a cessation of hostilities between the North and South, the natural conclusion must be that the United States will become enormous customers to this country and Europe for almost every description of manufactured articles. The country is relieved to be comparatively bare of supply, from the high rate of duty on the customs tariff, as well as the rate of exchange, which, coming to the United States, disturbs the equilibrium of calculations of merchants and manufacturers. As to the South, it is a known fact, though not always admitted by its partizans, that it is completely destitute of what may be called the necessaries of life. It is quite an open question, notwithstanding the undoubtedly great sums will be drawn for on this country from other causes, whether the balance will not be equalized by exports of goods from this side, even if a total sum in favour of the United States is not actually reached. That the feeling of doubt and want of confidence in trade exists, is proved by the large amount of goods floating on the market, but which are unable to find employment; that, however, the trade of the country is generally sound, is shown by various results, such as the Board of Trade returns, the general revenue of the country, and, in a certain sense,

by the sums the public, as such, have available for investment there is every reason to believe arise from surplus income. The *Credit Foncier and Mobilier of England* has within its sphere of operation, in fact, having introduced several new undertakings to the public, every case have been very successfully subscribed, and every reason to believe will give satisfactory results to the directors have been very solicitous, whilst bearing in mind the results necessary, to extend the influence of the company. It is happy in stating their efforts have not been made in vain. As shareholders and supporters many amongst the *élite* of the financial public, the result being daily offers of value, an extent much greater than the capital and present acceptance. The directors have no doubt, therefore, that profitable business will not be wanting."

The Chairman, in moving the adoption of the report, the last half-year's working fully bore out the statement. Although they had only arrived at the end of the first operation of the company in its amalgamated form, the Chairman attended it he thought might be fairly said to have put in a position which, as a commercial institution, was second to none. In the first place, congratulate them upon the result of the amalgamation between the *Credit Foncier* and the *Credit Mobilier*. The companies were kept separate. Strictly speaking, their distinctions in their operation, but when they came to the country it became the opinion of the directors, which was frequently sanctioned by that of the shareholders, that it should be carried on with equal facility if they were amalgamated. It has been found to be the effect of the amalgamation, for the distinctive character in each company, their operations were carried on by getting rid of shadowy distinctions, and they had been greater unity and vigour in the character of an amalgamated company. This company, like other financial companies, had not encountered difficulties—not so much from the nature of the business as from the want of information by the public of these companies. The commercial world was not with any more than any other classes of society. They were old enough to remember the prejudices which at first existed against joint-stock companies at all, and what alarm was created when the principle was first introduced into banking, and the still greater alarm when the principle of limited liability was introduced into the commercial world. Men would now refuse to admit that the principle of limited liability would not afford a greater security to creditors than the system of unlimited liability. On what ground, then, was there to be a prejudice against any financial companies? It was not that they were new in this country, but they had existed in other countries, and especially in Paris, for many years with great success. They had now had two or three years' experience in this country, and their progress and results had undoubtedly been encouraging, and there was every reason to suppose that they had been conducted cautiously, and with vigour and discretion, taking the most valuable institutions of the commercial world. That being the case, why should financial companies be regarded with suspicion? The great commercial houses in Europe were nominally private, but were essentially companies formed either by the junction

identity of feelings, or arising out of family connections, reaches in every capital of Europe. If they investigated the great private capitalists, who conducted financial operations, they would find that those firms consisted of small limited in number, but not as regarded liability. There was, nothing in the nature of companies like the present calculated to distrust. From those general topics he came to the results of his inquiries, and it was curious enough that in some minds—not very much in his opinion—the ability of such a company to pay a large dividend was in itself a cause of distrust. If, however, they had the opportunity of inquiring into the dividends of the large houses to which he belonged, he thought they would find that the dividends of this company were moderate, if not small, in comparison with the profits derived by other houses, therefore there was nothing to excite surprise in the commercial world if a great financial company like this was able to make large profits. At all events, it was a matter of common-sense on the face of the balance-sheet that they were able to give the shareholders a handsome dividend. (Cheers.) True it was that they had not given them more, but he thought they would agree with him that they had given as much as they ought in prudence and discretion to do so. (Hear, hear.) For although the prejudices of people against companies as this were unfounded and absurd, yet, if they were not met with discretion as well as firmness and vigour, undoubtedly they were dangerous, and therefore he thought that the very strongest recommendation which a society like this could stand was to lay by such a strong reserve as would give the public every confidence in the stability of the company. (Hear, hear.) With that view, having nearly £400,000 to deal with, he considered that the soundest policy it could adopt was to set aside £200,000, and that amount they would perceive had been carried to a reserve fund. There was, however, another mode of proceeding which he had adopted, not so much for the purpose of increasing the reserve fund, but to secure, as it were, something like a regular minimum dividend for the shareholders. That was a mode which had commended itself to them, and they believed that it was new to the commercial world, and it not only formed the basis of the reserve fund, but, as far as possible, protected the shareholders against any falling off in the dividend. They had intended to forward a sum of £70,000 to a fund to be called the dividend reserve fund, the operation of which was to increase the solidity of the company, and to protect the shareholders from any sudden falling off of dividend in consequence of any unexpected difficulty. In fact it would tend to limit the dividend to a minimum of 5 per cent. as an investment, and whatever excess there might be, was to be used to divide it in the shape of an additional bonus, as was done upon the present occasion. Without pledging themselves to any particular amount, which must of course depend upon circumstances, he trusted that the shareholders, if their business was conducted as well (without paying particular compliment to the board or to their very able managing director), the shareholders would be protected from any material diminution of their receipts for each half-year. He did not propose to enter into any details with respect to the various items in the balance-sheet, but if there were any points upon which the shareholders required explanation, or if his colleagues would be most happy to answer such questions as might be put. The board invited inquiry, but at the same time it was that they should not press their inquiries too far. Secrecy, it

had been said, was the very essence of success in finance. At that length it was manifest that it would be impossible for a house, or partnership, or company, to gain the great profit expected from the directors of this company if they showed the whole world. If they let everybody with whom they dealt exactly how they dealt, they would soon be able to realise it. The shareholders must have a certain amount of confidence. Of course if shareholders were not satisfied they had two remedies: they might either sell their shares or displace the directors. If they had confidence in the management of the company by the directors, they treated them not to push their inquiries too far. They were satisfied with the affairs of a company like this on which inquiries might be made, and on such points the fullest information would be given. They would perceive by the report that they had made great profits, and hoped would not in their minds excite alarm or prejudice. Those profits, however, must to some extent be considered as derived in great part from what might be deemed by some to be an unusual source. They did not disguise that a large portion of their profits came from commissions on operations of rather an exceptional character. They meant bringing out companies for the purpose of effecting great results. That was no doubt a class of profits which formed the bulk of the profits earned in the course of the half-year, and some persons thought that this source of profit could not continue. He could not say that to that conclusion himself, being inclined to think that the joint-stock operation had not yet extended itself to anything like the extent, notwithstanding the present apathy which prevailed, that there would be many wholesome legitimate and useful operations brought out by their nurture. There was one thing, namely, that they nursed none but strong babies, whom they hoped would grow up to be bodied men. (A laugh.) He must, however, say that he looked forward to the time when in addition to that class of business they would have more regular everyday business; but they might depend upon it that they would do no business whatever upon which they did not have confidence. He saw no reason why they could not combine that business with the more exceptional operations, perhaps, but on which they made their profits. He could not let this subject pass without saying that the directors on the right and left (the deputy governors) as well as the managing director, have distinguished themselves by their talents and the talent which they had manifested in conducting the affairs of the company. No doubt they would have detractors, whatever motives which animated them, but he felt bound to bear witness to the debt of gratitude which this association owed to the ability, energy, and integrity of their managing director. He was personally, from daily attendance at the office, of the unwearied and untiring energy of that gentleman. With respect to the operations of the company, all he could say was that there was every prospect that they would be able to carry on their business on the same magnanimity which they had commenced. He hoped that shareholders would get away with the idea that the prices of shares, as quoted in the market, were anything commensurate with their real value. In conclusion, he said that the board had been devoted to the business of the company, in attendance, and energetic and industrious in conducting the affairs. He begged to move that the balance-sheet and report be affirmed, and adopted.

and the motion. He was perfectly convinced that in a
find this company one of the greatest commercial
country.

For an explanation of the capital account.

He replied, stated that the authorised capital was
£2,000,000 only had been subscribed for; but that
the action empowered the directors to issue the remaining
portion of their business required it.

He asked upon what principle the assets were calculated?
He said it was impossible to state the principle upon which
the assets were calculated without disclosing transactions of a confi-
dential nature, the business of other people, which they were

He hoped, therefore, the meeting would be con-
fident in the assurance of the board, that the securities had been
carefully selected, they were of a most unexceptionable character, and
were taken in every instance under the market price.

He thought the directors might have given them more infor-
mation. He often asked whether the Credit Foncier and Mobilier
had made investment, and without knowing more of the
business of the company, it was impossible to answer the
question. He said in the balance-sheet the item of £812,075 in the
securities, city offices, debentures, &c. That was not an
asset, but rather a liability. With respect to the item bills
payable, none of them were overdue. [Mr. Grant—None.]
He said so large an item as £1,325,492 being put down as
debts, loans on securities, and sundry debtors, and
he could not be expected that shareholders should ask for an
account more than three times the amount of the paid-up capital.
He said the disastrous investments made by another com-
pany, the shares. It was true that the item might be all
debts, but the securities consisted in great part of shares in
which a loss arose, such a state of affairs would not be
satisfactory though it was true they had uncalled capital of
£1,000,000 back on. The shareholders ought to have
known, even when a large dividend was being put into
the hands of the chairman had himself told them that much of the
dividend had been made from exceptional sources, and he
thought shareholders would do well in placing a portion of the dividend
on capital. He could not shut his eyes to the fact that
the company might have been successful in their operations in
other companies, the time might arise when by means of
the company might sustain great loss. They were like share-
holders, and it was incumbent upon them every now and
then to advocate publishing all their affairs at a
public meeting, but he thought that a committee of shareholders
on whom the general body had entire confidence, to
be able to see that they were really sound. He pointed out
that they were paying interest upon at least £600,000,
in some way or other. He complained that the share-
holders were not treated with fairness by the managing director,
in the allotment of shares in companies they had
taken, while the Milan Company's shares, which were at a

premium, could not be obtained by anyone but the friends of the and managers, the Millwall Dock shares, which were at a discount freely allotted to applicants. He was well informed that the Exchange consistently refused to deal in the shares brought out by the company, because they had been caught in this way. (No, no.) concluded by asking the managing director, merely as he said for information, whether he had not changed his name.

This led to a most acrimonious personal discussion, in which Mr. Grant and the two deputy-governors defend Mr. Grant from being stigmatised as a disgraceful personal attack by an enemy and a man who held a stake in the concern of £25 only, and they bore the blame of the money to the integrity and personal character of the managing director.

Mr. Grant, in warm terms, defended himself against the attack. He had been made upon him, and defied the whole world to point out a spot or blemish upon his character. The real fact was that some time he did out of caprice change his name, but it was done from no bad motive whatever, or because he was mixed up in any transaction of a doubtful character. The fact was, that as manager of this company, acting in the interests of the company, he had made enemies, and it would not be worth his salt if he had not, because the moment any man, or class of men, began to speak well of him, the suspicion of the shareholders might well be aroused. He believed he had made enemies because he had consistently opposed, and certainly should continue to oppose, the allotment of shares to persons known as "stock market." He held his office of manager so cheap that the shareholders found it was the wish of the shareholders he should retire, he would bow to them immediately. With respect to the questions asked of a person who had attacked him, he characterised them as frivolous. That had that gentleman held a thousand instead of five shares, he would never have asked the board to divulge their business in this way, which it must be if such questions, asked with a motive, were evident to every one, should be answered. ("Hear, hear,") For the satisfaction of other shareholders who might desire to see the accounts, he would, however, say that they could not give it without necessarily exposing the manner in which they made their profits, while their doing it would in fact give very little more information to the shareholders, their rivals in business would at once know how the profits were made, and the result would be that in a very short time they would be able to make no profits at all. He appealed to the shareholders to support the directors in not answering such questions. (Hear, hear.)

Mr. Cave, as the holder of 200 shares, wished to make a motion which, if carried into effect, he believed would prove very beneficial to the company. Whenever the Bank of England board wanted a new governor, they looked about for a man of ability, and made a large fortune for himself, as the proper person to be made a large fortune for others, and he believed if this plan, it would turn out to be greatly to its advantage, and that the most entire confidence in the soundness of the institution was that in a few years it would be second only to the Bank of England. (Hear, hear.)

A Shareholder complained that the directors' remuneration was placed in the accounts as a separate item, and also of the interest on which the shares in companies brought out by this institution.

When a good popular undertaking was brought out a large number of the shares were kept back, and there were positive refusals in some instances to shareholders of the Company, while some of those companies which were not favourably received by the market, the whole amount of shares were allotted on application. He mentioned his own case with respect to the Milan Company and the Freehold Land and Docks Company, and inquired why it was that £10 paid-up shares of the one were at a discount, and the £5 shares of the other at a premium.

The chairman said that he was quite willing to state the amount of the directors' remuneration if it was desired. (Cries of "No, no.") He explained that it was not usual to put the amount in the balance-sheet under the remuneration item, but it was included in the general account; but he thought it was better to mention it at the meeting than to leave it to the directors of other companies of a similar character to receive. With respect to the allotment in the Milan Improvement Company, he was bound to answer the question, because he happened to be one of the directors of that company.

He must say he never regretted anything more in his life than the manner in which these shares were issued, but the fact was it was a mistake and not a fault. There were 20,000 shares to issue, and the company had more than 120,000, and they were further embarrassed by a reserve of 5,000 being kept for issue among the Credit Foncier shareholders. They were obliged to deal with them as they could. Every share applied was treated in the same way, and they were allotted on the average which was struck.

The chairman said that the one principal thing they adopted in allotting shares was not to sell them for investment, and not to such persons as they knew would throw them upon the market the moment they were at a sale. (Hear.)

He complained that in the call letter there was a statement that the shares which had been called would be liable to be forfeited, whereas the articles of association it was provided that they should only be liable for interest.

Other shareholders tried to speak, but they were all met by cries from the chairman that the meeting having become very impatient.

He then turned to Mr. Davis,

The chairman stated that the directors did not charge £10 per cent. interest on the shares as represented by share premium.

Mr. Davis made some observations on the accounts, contending that they were not sufficiently explanatory, and pointing out that, as they paid £100 per year for premises as rent, they ought not to be charged with the depreciation of building offices and furniture account. He also complained that preliminary expenses were far too heavy, and that the amalgamation had not been carried out unanimously. He also pointed out that the share premium paid on the new issue of shares had been paid by the shareholders to the company itself, the dividend, instead of being 40, was in fact only 30 per cent.

The chairman said that the observations of the hon. proprietor went to show that they ought to have divided more, but as what was proposed to do seemed to meet with the acquiescence of the shareholders, he did not enter into any discussion of the point. They had been obliged to make extensive alterations in their premises in Cornhill, solely on account of the increase of their business, which was the reason why the item in

question was charged. As to the remuneration of the directors £350 a year each, and the 10 per cent. commission did not after 10 per cent. had been paid to the shareholders.

The report was then put and carried unanimously.

Mr. Maynard and Mr. Ford were unanimously re-elected a company, and on the motion of a shareholder, seconded by 1 special vote of thanks was given to the managing director, for energy, and integrity he had displayed in conducting the company.

A vote of thanks was also given to the secretary, Mr. similar compliment to the chairman and directors terminating proceedings.

LAND MORTGAGE BANK OF INDIA, LIMITED

The second ordinary general meeting of the shareholders of the *Crédit Foncier Indien, Limited*, was held on the 19th April, 1901, at the *Tavern*; Mr. S. Laing in the chair.

The advertisement convening the meeting having been read.

The following report was taken as read:—

"The accounts submitted, made up to the 31st December, 1900, show actual operations over eight months only, which show a profit of £12,288. 7s. 8d., to which is added the interest earned in March, £10,651, showing a sum of £22,939. 7s. 8d., dividend, &c. The directors therefore recommend that a dividend of 4s. per share (free of income-tax) being 5 per cent. on the capital, be now declared, payable on and after the 1st March. The capital in India on 31st March amounted to £611,930, of which £404,407 was invested on mortgages of real property, on government securities, at an average rate of 9 per cent. applications for mortgage loans amounted, by last advices, to £1,000,000, of which £404,407 has been granted, and of the remainder under consideration a large amount will probably be accepted. Great care has been used in making these advances, and the appraised value of the properties mortgaged to the company is double the amount actually advanced upon them. Every title undergoes the rigid scrutiny of the bank and standing counsel at the presidency cities. Each property is fully valued by inspector, sub-agent, or other competent person, and the chief agents only grant the loan on the recommendation of the satisfactory result of the investigation. The Registration Act, now in force in India, also affords an additional security to the mortgage company is now firmly established, and its investments are such that the directors feel themselves justified in anticipating a safe and profitable business, with annually increasing profits, has been the future. The directors have, in accordance with the provisions of the articles of association, filled up the vacancy caused by the death of Mr. M. Worms by the election of his brother and partner, Mr. H. Worms. The directors recommend the payment to the auditors of £1,000 a year for their services in auditing the accounts. The auditors, Messrs. J. Hill William & Co., at the last ordinary general meeting, Messrs. J. Hill William & Co., offer themselves for re-election."

The Chairman, in moving the adoption of the report, told the shareholders that the company was now fairly afloat. Commercial enterprises, and they naturally looked for their profit of as much debenture capital as they could raise on the share capital. The profit of the system was beginning to show. The Crédit Foncier of France had produced very success during the first two or three years after it was established in a little way, nor, indeed, did it make anything like the progress the company had made. The situation of the company, as stated, was very simple and very short. They had £400,000 share capital, and debentures issued up to December 31st amounting to £611,000, of which £404,000 were invested in mortgages on property, and 197,000 in government securities. The two elements in a company of this kind were the investment of money in the power of raising debenture capital, and those two things were not currently, because until they saw that they could raise money in the country upon debentures, they could not authorise the company in India to extend their loans. The state of the money market and the rate of interest ruling so excessively high as it had been during the last few weeks were a great obstacle in the way of the company's progress, and they were obliged to proceed very cautiously. The applications to them exceeded £1,300,000 in amount, and only £404,000 had been granted. The delay, however, which was caused by the state of the money market was so far useful that it was a danger of their going too fast and lending money without sufficient security of securities. Their agents in India were most successful in respect, and he believed the directors might state with confidence that the money invested in mortgages in India was secure, the securities being more than ample, and of unexceptionable character. The Registration Act, which had lately passed, would add also to the security of similar transactions in future. The high rate of the rate of interest ruling so high here they had been obliged to make a corresponding rise in India, and they lent nothing now upon a minimum rate of ten per cent.; but they had plenty of applications for advances at that rate. So far as the system of lending money was concerned, the problem was solved, and there would be no difficulty in extending their operations, the only question being how far they could extend the system of raising money on debentures in this country. The state was this. In round numbers they had raised about £400,000 of debentures, only £200,000 of which had reached India up to the accounts, and the remaining £200,000 had since reached India and been invested. With the £200,000 which reached India first and the share capital of £400,000 paid up they had earned, after deducting about six per cent. per annum, and the £200,000 additional capital would return them at least 1 per cent. extra dividend for the year. They had a share capital of £400,000 and debenture capital at the rate of 8 per cent., and if they had £1,000,000 of share capital, they would be earning 10 per cent. The large amount of debentures they could place the more they would be able to afford sound security afforded in the class of investments in which they were engaged afforded a most satisfactory prospect for the future. In showing the rapid progress they had made, he might mention

amounted during the first eight months of their operation £0, but during the next three months they earned £10,000, and now six months they were earning £14,000. (Hear, hear.) It was simply a matter of placing debentures, and if they could only do so, they would meet the anticipations that might have been formed of the success of the company. If money continued at the present low rate, and it seemed to do so, there was a prospect from the manner in which debentures were being taken up of placing a very large amount. The shareholders would serve that the operation of placing debentures was a progressive one, and took some time to acquire public confidence, but once they had done so, and placed their debentures, connections grew up, and it became very easy to place additional capital than it was at first. As far as to judge the company was now fairly afloat, with every prospect of success. (Hear, hear.) The dividend which it was proposed to pay was, 3 per cent. up to the close of the year, and 2 per cent. on account for the three months ending March 31, which amounted to £5 per cent. per annum. The only question was whether they should declare a dividend of 3 per cent. and wait till next year before they declared the dividend, or whether they should give it at once. They thought, however, that considering the time the shareholders had been out of their money, and the large amount placed in their hands for the purposes of the bank, it would be better to give it at once. (Hear, hear.) He explained the item in the accounts of sundry debtors, £7,916, was simply interest on mortgages, and not debts in the ordinary sense of the term, but only the pro rata of accruing payments not yet fallen due. The sundry accounts were fully explained in the balance-sheet, and consisted of nominal balances, which accountants found it necessary to put on both sides of the account in order to balance it properly. Their position was that they owed no one anything except the debenture interest, and were not owed anything except what was due, as he explained, the interest.

A shareholder inquired whether the item of £41,000 put down as an addition to balance the capital paid short of £257,000 on the debtor side of the account.

The chairman said that was so, and explained that the item of £11,000 was the discount sinking fund account practically accumulated at 4 per cent. interest, the debt being discharged in annual instalments.

The report was then unanimously adopted, and Messrs. J. Hill Williams and Messrs. J. Hill Williams were re-elected auditors, the sum of £50 each being voted as remuneration.

The chairman then proposed that £1,000 per annum should be devoted to remunerate the services of Mr. W. F. Fitzwilliam as managing director. He explained that when the company was started, that gentleman undertook a long and arduous journey to India, and had been of the greatest service to the company. The board could not ask a gentleman who had filled so important a position in the Supreme Council of India to become a manager, but if they engaged him as director his services would be most valuable to the company. (Hear, hear.) Of course it was obvious that if Mr. Fitzwilliam did not accept the office of managing director, it would be necessary to appoint a person to fill the place, and probably the salary required by a competent gentleman would considerably exceed the amount now proposed to be voted. The proposition was unanimously agreed to, and Mr. Fitzwilliam returned to the chair, and stated that he should not only use his influence, but make

every personal exertion to promote the interest of a country which felt confident would be one of the greatest commercial successes. (Cheers).

A special vote of thanks was given to Mr. Fitzwilliam for his exertions, and a similar compliment to the chairman concluded the proceedings.

NATAL BANK.

THE following is the report for the year ending 31st December the Natal Bank, read and approved at the annual meeting held on 30th January last; J. Henderson, Esq., in the chair.

"The directors have pleasure in laying before the proprietors of the bank for the past year, which, it will be seen, affords proof of the continued increase of its business during the year. The net disposable profits show a very considerable increase over the last year, and amount to £16,857. 7s. 10d., after deduction of interest and commission to other banks, and payment of interest on bills, setting aside £5,034. 8s. as reserved rebate on bills matured, this rebate being £1,834. 8s. in excess of that at the end of the previous year. Out of these profits the rate of 16 per cent. per annum was paid for the year ending 30th June last; and the directors now declare a dividend for the half-year ending 31st December, leaving surplus profits, to be carried to the credit of profit and loss for the current year of £4,894. 6s. 6d. The directors thought it expedient to explain that they have deemed it prudent (rather than to give a bonus on the present occasion) to carry forward the whole of the profits in this manner, as a precautionary measure, rendered necessary by the state of the money market in England, and the consequent high rates of interest in England have not prevented the increase of the deposits of the bank, which now amount to £155,529. 15s. 8d. held at the close of 1863. Mr. M. and Ferreira retire at this time from the directorship, in accordance with the law of incorporation; and Messrs. Turnbull and Symonds as auditors; but all are eligible for re-election."

Annual General Account of the Natal Bank, to 31st December 1863.

NATIONAL BANK OF INDIA, LIMITED.

The report of the directors of this bank for the second
 1st December, 1864:—

The annexed accounts for the half-year ending the 31st
 ur directors have pleasure in congratulating the share-
 and solid progress made by the bank during that
 bed state of the monetary and commercial atmosphere,
 ring the last six months, rendered it desirable rather to
 end the bank's operations, and although, therefore, the
 reasonably be expected to be reaped from the branches,
 rived only to a limited extent, it is satisfactory on the
 r directors are able to state that the bank has enjoyed
 y from bad debts. The accounts now submitted, show
 all current charges, and allowing for rebate on bills
 unted, and for interest due to the public, &c., the net
 Rs. 84,889 9 6, including Rs. 1,260 11 0 brought for-
 f-year's account. Your directors recommend that
 a dividend at the rate of six per cent. per annum,

or Rs. 7 4 per share, be paid, free of income-tax, on the bank, as from time to time received during the half-year, lacs from 30th June to 15th July, and on twenty-five lacs to 31st December, 1864. This will absorb Rs. 72,500, leaving as to the disposal of which your directors recommend the carried to reserve fund, and Rs. 2,389 9 6 to next half. The reserve fund will then stand at Rs. 25,000, being the whole paid-up capital of the bank. During the half-branches have been opened at Bombay and London. On the death of the agent at Bombay, before the branch had been the agency has been transferred, as a temporary measure, to Bombay. The agency will shortly, however, be put on a footing under the management of Mr. Windram, at present in Calcutta. The London Agency was opened on the 12th of gratifying to state that all advices from London mentioned have been well received. The influential and well-known name of the London board will, it is believed, be highly acceptable to the and will be of great service in advancing the interests in England. Your directors have received a requisition submitted by the representatives of the important tea planting interests of Cachar, asking that the bank should establish a branch at Cachar; to this request your directors are prepared to make certain concessions, now under the consideration of government. The board take this opportunity to impress on the holders the necessity for giving the bank the benefit of the and influence—a hearty and active individual interest on the part of shareholders being essentially necessary in the present day of competition in banking."

General Statement and Balance-sheet for the Half-year ended December, 1864.

DINNER TO THOMAS BARNEY, ESQ.

A sumptuous dinner was recently given to Thomas Barney, Esq., on the 15th of July, 1864, at the Stamford, Spalding, and Boston Bank. The place in the newly-erected room at the Peacock Hotel, of which establishment placed on the table a profusion of flowers as is seldom witnessed in that part of the country.

The gentlemen sat down. The chair was occupied by J. C. P., of Fishtoft; and amongst those present were—The Rev. H. Watson, rector of Langton; Dr. Walker, Messrs. E. Walker, Clifton; J. Rainey, Spilsby; H. Mackinder, Langton; W. E. Grantham, Burgh; H. C. Parby; J. T. Kirkby, Partney; H. J. Seels, Wainfleet; J. Hagnaby; J. Jessop Bagg, Swineshead; W. Paethorpe, Riggall, Dexthorpe; S. Dawson, Skirbeck; Thomas Smith, Denkarn, Leake; N. Webb, T. Wright, J. H. Small, R. H. E. Ridlington, W. H. Bailes, Harris, Dingwall, S. Storr, &c., Boston.

After loyal toasts having been observed, the Chairman, in brief but complimentary terms, proposed "the health of Barney," which was enthusiastically received.

Then, in a highly eulogistic speech, presented Mr. Barney, in the name of the subscribers, with a magnificent silver Epergne, with a magnificent dessert stands. The gift was accompanied with an address, furnished by Messrs. Waterlow, of London. With the address, which is subjoined, were beautifully executed coats of arms,

Thomas Barney, Esq., Manager of the Stamford, Spalding, and Boston Banking Company, branches at Boston, Spilsby, Alford, Burgh, &c.

The severance of your connection with this town and neighbourhood amongst us of sixteen years, has been thought a great loss to the community, by many of your friends and neighbours, of testifying, in the most sincere and permanent manner, their sincere regard both for your

official character and your private worth, and for this procured the accompanying Epergne, with candelabra and which they now have the gratification of offering for you the hope that while it serves as a memorial of the past it be a bond of union for the future, perpetuating both in you and those of the presenters the friendships and sympathies awakened here.

"Among the list of names appended to this address will be the names of the principal towns and villages of the neighbourhood, and of the representatives of almost every kind of profession and occupation. All are alike anxious to bear testimony to your unflinching and unswerving rectitude in every transaction in which they have been connected with you, and to express their regret that so lengthened a service to one so satisfactory to all concerned, should now be brought to a close.

"With every good wish for the future welfare of you and your family; and with the sincere hope that the gracious Providence may attend you, we remain your attached friends and associates."

"Boston, April, 1865."

Mr. Barney, who on rising was loudly cheered, in a high compliment, spoke as follows:—I can never sufficiently express my appreciation of the high position I this day occupy. The testimonial mine will be adequate to convey the deep feeling of my gratitude. I am sure you will take the will for the deed. I have done but such spontaneous kindness at your hands. I have merely discharged my duty in a straightforward, honourable, and consistent manner. That it has met with your approval, your presence here to receive these splendid trophies, very abundantly testify. I am satisfied with me that for business to be satisfactory it should be profitable, and I am happy to tell you that I have been able to give an account of my stewardship towards the bank, as facts and figures will prove. I have kept the profit and loss right by zeal and industry, keeping tolerably free from bad debts. And here you will see that I much regret the loss of health which has occurred since I became director of this bank, Mr. O. Edmunds, sen., and I wish to say that, coming here as a young man, it was to his sound advice and counsel that I am indebted for many a business thought which has improved my character. You, my friends, will all be pleased to know that to this elegant testimonial I am to-day receiving at your hands. I have received from the bank a most satisfactory written testimonial in language that leaves nothing for me to wish or desire in the future. I never may engage my time in (and I think you know me well enough to suppose I could be happy long idle), and wherever I may go, in my tent, these documents, including the splendid book of honours and names, will be ever prized most highly, and handed down to my heirs and heirlooms, proving beyond doubt that the county of Lincoln has generous hearts ever ready to acknowledge a man's worth and his path of duty. When I came here, more than 16 years ago, the shares of the bank were standing at about par, or say five pounds. They are now selling for upwards of £200. (Applause.) I do not like to take to myself a credit I do not deserve; but I think I am justified in saying that I have done my share in adding to the prosperity of the bank. When I tell you that when I first came here there was but one fourth of the business I am now leaving my successor. (Applause.) I leave these most valuable gifts at your hands with pride and de-

ly on account of their intrinsic value (which is great), but
 out of the pleasurable associations they will serve to awaken.
 made of this noble parish church, and in this ancient borough,
 life commenced. Here my children have been born and my
 has been endeared to me by many blessings as well as sad recol-
 is most gratifying to me to find that I can count so many sin-
 and well-wishers. My study has been to conduct this business
 le rivalry with my opponents, only asking, what every English-
 deserves, a fair field and no favour. (Hear, hear, hear.) I see
 ate friends around me, and many from a distance come over
 me honour. I desire to thank them for their presence here this
 a conclusion, gentlemen, in the name of Mrs. Barney, my
 myself, I desire to offer you our warmest thanks for these
 rks of art, and the good wishes contained in the address. To
 the chairman, the vice-chairman, the committee, and the hon.
 y warmest thanks are especially due for the valuable time they
 d to this matter. Permit me, before I sit down, to take up the
 the address, and to wish that the same kind hand of Providence
 blessed my labours, may shower down His choicest gifts upon
 r families, and in saying this I can fill a bumper and drink
 happiness to you all. (Loud cheers.)

ing is a copy of inscription or testimonial :—
 mas Barney, Esquire, late manager at Boston of the Stamford,
 and Boston Banking Company, on his retirement from his
 other friends in Boston, Spilsby, Alford, Burgh, Wainfleet,
 urhood, in testimony of their esteem and appreciation of his
 racter as a man of business, and his uniform urbanity and
 all classes during the sixteen years of his residence among

LONDON AND BRAZILIAN BANK.

Important announcement has been made with respect to the London and Brazilian Bank, Limited, and will not be without considerable rise in the price of shares:—

“London and Brazilian Bank, Limited,

“2, Old Broad-street, E.C.,

“London, 17th April, 1865.

“The directors have much satisfaction in informing their shareholders, subject to their approval, concluded a provisional amalgamation with Messrs. Mauá and Co., for an amalgamation of the large business, including the privilege of issue of bank notes at Rio de Janeiro, carried on by that firm in Brazil and the River Plate business hitherto carried on by this bank. The amalgamation will be effected by means of the incorporation of a new joint-stock company, having a nominal capital of £5,000,000 sterling, £20 each, one-half of which is to be paid up. Of the £2,500,000, with £10 per share paid up, will be allotted to the old shareholders, in exchange for cash or approved securities to that value. The remaining 100,000 shares will be placed at the disposal of the proposed amalgamation will take effect as from the 1st of January, 1865, on which date neither of the two banks will carry on business on their own account. The management of the new bank will be vested in a new board of directors of the London and Brazilian Bank, consisting of Baron de Mauá, the senior partner in the firm of Mauá & Co. The directors propose to call together their shareholders, on the 1st of May, for the purpose of considering the mode of raising the capital, which will form the contribution of this bank to the amalgamation.—I am, Sir, your obedient servant,

“JOHN BEATON, Secretary.”

LIQUIDATION OF THE OTTOMAN BANK.

“The following notice has been issued with regard to the liquidation of

“The Ottoman Bank (in liquidation), London,

“4, Bank Buildings, Lothbury, E.C.,

“April 13.

“On the occasion of the distribution in January, 1864, of the dividends on the paid-up capital of this bank out of its surplus, the directors intimated that there were still some few further assets of the bank, which they expected would enable them to make a further distribution. They regret that, notwithstanding their best efforts, these matters are still unsettled, and they have, therefore, decided on making a further payment on account, of £13,750, on the old shares, 1s. per share on those of the second issue, and 2s. per share on those of the first issue. I am, Sir, your obedient servant,

“WILLIAM W. LANDER, Assistant Secretary.”

COMMERCIAL BANK CORPORATION OF INDIA EAST.

THE following is from the report of the directors of the Commercial Bank Corporation of India and the East, to be presented at the meeting :—

“The amount received up to the 31st of December last in new capital was £355,590, and of the premiums on shares in England £91,282. 10s. On the 1st January, 1865, the business of the Commercial Bank of India was transferred, at all the branches, to the Commercial Bank Corporation; and the former bank now exists for the purpose of liquidation. The assets and liabilities of the Commercial Bank of India have been taken over exactly as they stood on the 31st December last. The capital of that bank was £500,000; the new capital paid up, will be £500,000; making the total capital of the Commercial Bank Corporation £1,000,000. The net profits of the year 1864, after writing off bad debts up to the 31st December, were £154,426. 11s. 4d. and bonus for the first half of the year were paid to the shareholders of the Commercial Bank of India in Bombay, amounting to £154,426. 11s. 4d. and a dividend has since been paid in London at the rate of 5 per cent annuum on the whole paid-up capital as it stood on the 31st December for the second half of the year, amounting to 39,925; leaving a balance of £69,501. 11s. 4d. The directors regret to report that some losses have taken place since the commencement of the present year, but they have deemed it prudent to estimate accurately; but they have deemed it prudent to leave the entire balance, after paying the above dividends, as a reserve fund for the Commercial Bank of India. The reserve fund of the Commercial Bank of India on the 1st of January amounted to £73,301; and the premium on the shares allotted in London already stated, £91,282. 10s.; amounting to £164,583. 10s. on the 31st December, £4,717, 10s.; making the reserve fund of the Commercial Bank Corporation, £169,301. In addition to which a sum of £16,700 has been transferred to the corporation by the Commercial Bank of India, being the balance standing to the credit of the insurance account.

ASIATIC BANKING CORPORATION.

THE directors of the Asiatic Banking Corporation have at their first report, to be presented at the meeting on the 4th of March, that, “The court of directors, in presenting the first report of the bank, have great pleasure in congratulating their co-proprietors on the position attained by the bank during the brief period that has elapsed since the commencement of its operations. The half-yearly accounts are now rendered, and during which period a portion of the existing branches of the bank have been working, representing the least favourable season of the year in India, but has also been affected by a severe monetary crisis in this country, which has necessitated the exercise of the utmost caution in conducting the business of the bank, and a consequent restriction of its operations. Notwithstanding these drawbacks, the net profits, after deducting all charges upon the capital and expenses of the bank, and fully providing for all bad and doubtful

To the Editor of the "Bankers' Magazi

THE BANKERS' GUARANTEE AND TRUST COMPANY

3. Abchurch

SIR,—In replying to the letter of "A Bank Manager," who offers to pay me £100 a year for his guarantee premium," which appears in your number, you will, perhaps, be so good as to allow me to answer the particular questions raised therein, but generally to discuss the circumstances which led to the establishment of the Bank of Commerce and Trust Fund, and the plan on which it is conducted. It is possible within the limits of a prospectus to enter fully into the details, and as your magazine is the recognised organ of the banking community, pages seem to be the fit place wherein to discuss the subject. Bankers and their officials are so much interested.

The circumstances which led to the establishment of All bank officials are, with few exceptions, required their fidelity to their employers. This security had obtainable, either by the bond of private sureties or the partnership society. In some banks the former, and in others the latter security was required, but in most cases the kind of security with the clerk so long as, of its kind, it was satisfactory. Of late years the custom of giving private security has been giving way to the more approved and popular mode of the guarantee society, and there are now very few banks in which it is compulsory for clerks to put themselves under an indebtedness for suretyship to relations or friends.

The impression with some bankers used to be that a recommendation or friend was a certificate of character such as the company could never be. It was said that it implied upon the part of the bondsman in the honesty of the man was bond. On the other hand, it was thought that a recommendation to commit an act of dishonesty that would entail loss from which he would not be deterred if a guarantee so judiciously by his acts.

But these were theories, however, and are disproved. It is well known that one of the largest private banking houses, which still requires private sureties, has had more defaults since the plan of accepting the policy of a company than most other houses, than, it is believed, any other private bank has had.

Besides, since the establishment of the guarantee society has been practically inoperative. The custom of guaranteees does away with any validity private surety, possess, and A. B. may readily enough become surety. C. D. can give A. B. the policy of a guarantee society, him harmless in respect of his private bond. Nay, it is likely that the policy of a guarantee society may be more to counter-guarantee than to guarantee direct, and, if it

ate sureties has even greater facilities for obtaining his which either requires or will accept a policy. But, be, it is unquestionable that the practice of requiring rapidly going out of use. The largest joint-stock bank previously adhered to this practice has done away with it ment of the Bankers' Guarantee and Trust Fund.

majority of bankers' clerks, then, have of late years been urity from a guarantee society, and the premiums they paying have been upon the average at the rate of £3 ery £1,000 guaranteed. Formerly the premiums were upon the reduced rates only I will make my calculations. aid for 10, 20, and 30 years, amounts of course to £30,

will effect a life assurance for £100 at the age of 18, pay- the age of 45 or 46, or at death, if that should previously

amounts in 30 years, with compound interest at 5 per than two hundred pounds.

OUNDS, that is the sum which a guarantee society would, realise from a bank clerk who continues faithful to his to 35 years, while from those who spend a lifetime in ny hundreds do), the society would have the satisfaction or quite double that amount.

erk not yet 40 years of age has paid in hard cash £60, 0).

bly eight or ten thousand clerks employed in the bank- of Great Britain and Ireland. If they were all guran- and if one in every hundred were a defaulter, and every the full amount of his policy, the premiums would at the in three years even that amount of loss.

own that bankers' clerks are, as a body, a non-defaulting his arises from the care exercised in selecting young men tments, or from their prospects of promotion, and the provided for life if they conduct themselves properly, or osed in them, and the sense of responsibility tending to racter, or from the system of check and counter-check to counts are so properly subject, or, as is most probable, matances combined, the fact is indisputable that bankers' shed for themselves an exceptionally high character.

ocieties themselves recognise this to a certain extent by ir fidelity at lower rates than they charge to clerks ther branches of commerce.

own that bankers' clerks seldom change their calling, positions in the banking-houses throughout the country men who have been in the same service from their youth. of a banking appointment, even more than its emolu- sh makes it so desirable to obtain, and is so conducive discharge of its particular duties, and to general recti-

not given to change, and also numerous, it would not ng if bankers' clerks had been the first to co-operate ntary general association, at least for the purpose of another's fidelity, and so of saving, or keeping to them- accruing from their guarantee premiums; but it is

positively marvellous that with the example before them for years of the successful operation of mutual guarantee funds and small sections of their own community, and in certain government departments, such as the Excise and Customs, they should not until now have organised a general co-operative association, extending the benefits of a system of mutual guarantee to all the members of their class.

Twenty-four years ago the directors of the Bank of England footed a mutual guarantee fund for the benefit of their clerks. It was required to subscribe £5, and the sum so subscribed was to be used to guarantee their fidelity as long as they remained in the bank; the fund was not exhausted. Practically, the subscription of £5 was found to be much more than sufficient for the purposes of the fund, and not only have the subscribers never been called upon for further contributions, but the greater portion of the fund arising from the single original subscription has been dealt with from time to time for the benefit of the contributors as a class.

If during these twenty-four years the clerks in the Bank had been guaranteed by a guarantee society, their premiums would have amounted to, in excess of the defalcations, at least £45,000; interest added, to at least £70,000, the whole of which would have gone into the pockets of the guaranteeing society.

Such, then, are the circumstances which at the instance of the Bank have been brought about for the benefit of themselves, and in no small degree through the exertions of the man whose name appears upon the prospectus as auditor, led to the establishment of the Bankers' Guarantee and Trust Fund. By the general co-operation among the managers and clerks engaged in the various banking establishments throughout Great Britain and Ireland, it is hoped to extend to all bank officials the advantages hitherto exclusively enjoyed by the staff of the Bank of England.

I say exclusively enjoyed, for though it is true that one or two banks have guarantee funds of their own, the rates charged are higher than are necessary for the purposes of guarantee, they do not take more of the nature of "annuity" or "benevolent" than "guarantee" funds.

The one object of the Bankers' Guarantee and Trust Fund is to enable the bankers' clerks to provide the required security at the lowest possible rate without reference either to any other prudential or to any other purpose. Whatever surplus may arise from the single subscription is not required for the purposes of the guarantee fund, will be held in trust by the managers of the fund (the trustees), for the benefit of the subscribers as a class, and will be so employed by them as they may see fit. (Various suggestions have been offered for the employment of such a surplus, but no decision can be arrived at until it is known with what amount the trustees will have to deal.)

Bank clerks, as I have said, seldom change their calling, but occasionally transfer their services from one bank to another, and therefore, manifestly to their interest to be members of a guarantee fund in the benefits of which they will participate as long as they are in the banking service, rather than of one that is limited to the use of a single bank, and in which all their interest would cease when they leave that establishment. A clerk on leaving a bank that has its own guarantee fund forfeits the whole amount of his contributions to their fund, whereas in the members of the Bankers' Guarantee and Trust Fund may, under certain circumstances, go from one banking house to another, and in

the same relation to this fund as if he continued during his whole life in the same bank.

It only seems evident that it is to the interest of all sections of the country of bankers' clerks, to have but one guarantee fund in which they will be permanently guaranteed let them go into what banking service they will, especially when the rate they must pay for being in a particular bank, as long as they remain in the service of that bank, is necessarily higher than the rate they would pay to a fund that, supported by the subscriptions of the large majority of the bank officials and the public, would guarantee their fidelity as long as they remained in the service of any bank.

Subscribers to a particular fund limited to the use of a particular bank, at higher rates and have fewer privileges than the subscribers to a fund open to the use of all banks.

Presenting these facts before them, it may be hoped that the directors of the two banks in which guarantee funds are in operation for the use of their own staffs, will, anticipating the wishes of their clerks, take initiative steps to enable their staffs to avail themselves of the advantages open to them by the Bankers' Guarantee and Trust

Since the establishment of this fund the clerks in those banks stood at the head of the parade, as compared with the clerks in other banks, in respect to guarantees; but now the clerks in all other banks will have an advantage over them if they, too, do not act in concert with the general movement of their detachments and make one rank together. They who were in the front of the van must now fall into the rear unless they march with the main body which has overtaken them.

I dwelt upon the causes that gave rise to and the objects and purposes of our general guarantee fund, I will now briefly allude to the manner in which it is conducted, and in so doing reply to the question raised by "A Bank Manager."

The fund is under the exclusive management and control of the directors and the policies are issued and signed by them. They are responsible in law for the due fulfilment of the obligations they undertake. Should disputes arise that might require the intervention of a court to settle, they might be sued; but of course their liability to pay would not extend beyond the moneys of the fund of which they are the trustees or trustees.

It is not thought likely, however, that any such disputes will arise. If the fund is managed by a committee of bankers, who as it were, pledge their honor for fair and impartial dealing, the fund will no doubt be managed in such a manner as to give no cause for complaint in any direction. As bankers themselves they will naturally be disposed to act promptly and promptly in the settlement of claims, and they can have no difficulty in resisting payment of ascertained losses, or of requiring evidence to prove them than would be sufficient testimony of the misconduct. The practical working of the fund will, I have no doubt, be as simple as its principle, and equally admirable.

A question was discussed whether an arbitrator should be appointed, and a decision made absolutely binding upon all parties in any case of dispute or dispute that might arise. The name of Mr. Tidd Pratt was suggested, as it might be supposed, from the great and enlightened character of that gentleman takes in all co-operative associations of bankers, that he would not object to undertake the office. But

application to him on this subject was deferred, as it was thought that no differences or disputes will arise, and consequently no arbitrator was appointed. If, however, experience should contradict this, it should be found convenient to have an arbitrator appointed. There could be no objection to the appointment being hereafter made.

With regard to registration, I saw Mr. Tidd Pratt and Mr. General upon the subject some time ago, and their opinion was that none of the Acts of Parliament with which they have registered was registration needful, and our solicitors also advised it was not necessary.

I may add that the prospectus from which "A Bank Manager" was a preliminary and incomplete document. The trustees of the office, and the duties attaching to it, as soon as they were appointed, the bankers' clerks generally were ready to co-operate for the purpose of guaranteeing one another; and in order to show their confidence in the success of the scheme, as well as to mark their sense of the importance for integrity which bank clerks generally have established, several banking houses in London and elsewhere have subscribed by way of reserve, in order to make the security absolutely safe, until 5,000 policies shall be taken up.

If they had not commenced business until this number of policies had been actually taken up and paid upon, an indefinite delay would have occurred, for there is nothing like that number of premium policies in any one quarter. But as nothing more was needed for the purposes than to be satisfied that bankers' clerks were ready to co-operate in the co-operative association for the purpose of guaranteeing one another, fidelity, and being convinced of this by a considerable number of testimonials for policies already in hand, the operations of the fund were commenced after the publication of the prospectus, and many whose policies were taken up the Lady-day quarter were thus enabled to save a whole year's premium.

The thanks of the clerks are due to bankers generally for their assistance in which they have come forward to assist them in abolishing a system that has been a grievance to them so long—a grievance of which the imputations which the amount it was computed at was less than from the amount itself—for without their interest and assistance it would not have attained its present secure and satisfactory position. It was intended to introduce anything new into the conditions of the bond, nor to narrow the limits of its obligations, nor to increase the cost to them, but simply to reduce the cost; therefore, bankers were requested to approve an institution by which their clerks would be benefited, and their own interests in no way interfered with.

I trust that the importance of the subject, and the interest which it has in it, will be a sufficient excuse for the length to which I have extended my remarks. I thank "A Bank Manager" for his inquiries no less than for his cordial good wishes for our institution. I thank you, Sir, for having opened the pages of your magazine to the free discussion of this guarantee question, and that the principle of the new institution, and the views which I have expressed in my letter, will receive the support of your powerful and influential voice.

I am, Sir,

Your obedient servant

" Ten Pounds. Thos. Twentyman.

gn here.....Geo. Gold.....Signature."

If you would give this suggestion a place in your paper, bankers who were inclined to adopt it would not mind signifying their acquiescence to you; and if the alteration of a few of the leading firms and companies I feel very little doubt would so thoroughly recommend itself by the trouble it would shortly become general.

I am, Sir,
Yours

TOUTING FOR BUSINESS.

SIR,—As a branch manager of a recently-established bank, I can quite endorse all that has been written by you in your "J. D. F." condemnatory of the practice of "touting" and unfortunately, so prevalent amongst banks. I have myself experienced the great inconvenience of having to deal with persons who have been previously solicited by me to open a bank account, and have sometimes been compelled to yield a point which, if I had voluntarily become my customer, I should not have yielded. "great want felt," as the prospectuses used to say, but not a great deal of business for the banks which were said to be so much in want of it.

Let there be a few more amalgamations between new banks and then this high pressure system can be set aside, rest reasonably looked for, commercial credit will not be unduly depressed, and bank managers will be relieved of the dirty work of "touting" for business."

I am, Sir,
Your obedient

MERCANTILE BANK OF INDIA, LONDON, AND CHINA.

Chartered Mercantile Bank of India, London, and China, previously to the meeting. The audited balance-sheet, account of the bank, for the year ended 31st December 1864, providing for all bad and doubtful debts, and demerit management at all points, the net profit amounts to £75,831 undivided profit has to be added a sum of £201,913. Out of the preceding year, making a total of £277,744. Out of £136,153 has been paid in two half-yearly dividends, 10 per cent. on the paid-up capital of the bank. The undivided profit of £65,760 is carried forward to the profit and loss account of the next year. The last instalment of £12. 10s. per share, upon the 10,000 new shares issued 1st December, 1864. The Newera Ellia and Tuticorin agencies have been opened, answering expectations, and for a similar reason the bank will be closed at the end of the current year.

Estates of Failed Firms.

THE ESTATE OF MR. DAVID LEOPOLD

THE creditors of Mr. David Leopold Lewis met on the offices of Messrs. Lawrance, Plews, and Boyer, to consider the mode of liquidation, and after a lengthened explanation and considerable deliberation, they unanimously determined under a deed of inspectorship. At the same time it was decided that an application should be made to the Court of Chancery, where possible, for the purpose of arriving at the rights of all in the shares, stocks, and bonds of the Cork and Yougha. These comprise nearly the whole of the assets of the debtor's estate. The liabilities of Mr. Lewis are about £350,000, and it is feared that the creditors will not obtain a favourable dividend.

THE ESTATE OF MESSRS. BUCHANAN, HAMILTON, AND CO.

THE creditors of Messrs. Buchanan, Hamilton, and Co. are Messrs. Jarvie, Thorburn and Co., of Shanghai. Geo. May and Co., of Singapore), held a meeting on the 12th April, at which Geo. May, of the firm of May, Matthewson and Co., was called to the chair. Mr. William Anderson, of Glasgow, accountant, presented a statement of the affairs, from which it appeared that the assets were estimated at £632,068, and the liabilities at £632,068. Mr. Murray, of London, and Mr. J. S. Fleming, of Glasgow, explained the position of the estate, and the following resolution was unanimously adopted:—That the meeting be adjourned to the 3rd July next, and that in the meantime the business be conducted under the inspection of Mr. George May, Mr. Michael Connal, and Mr. Anderson, the accountant; that the banks and other parties in the United Kingdom do not send their bills abroad or take any action during the adjournment of the meeting, and that all payments be made with the approval of the inspectors.

THE ESTATE OF MESSRS. BREMNER

A MEETING of the creditors of Mr. George W. Bremner, of Glasgow, firm of Messrs. Bremner and Co., merchants, and shipowners, was held on the 12th April, when it was agreed to carry out a liquidation. The debts and liabilities were stated to be £48,911, and the assets £52,441; but of course the latter are subject to realization. Messrs. Killingsworth and Son, accountants, prepared the statement. Great sympathy was expressed for the debtor.

MERCANTILE SUSPENSIONS.

in the effects of which he died early on the following morning.

me moment, another assassin made an attempt on the life of Mr.
 t his residence, by stabbing him several times about the neck and

e at the same time felled Mr. Frederick Seward, the son of the
 o, it is reported, died in the course of the following day. The

murderer of Mr. Lincoln is an actor named Wilkes Booth. At
 Mr. Seward's assassin is said to be unknown.

BANKING OBITUARY.

On the 11th April, at Essex Road, Islington, Mr. Thomas Paul, Esquire, aged 79. He had been engaged for a period of his life in banking business, and, as a partner in the London Banking Company from its establishment in the year 1832, he took a very active and efficient part in the management of the same.

On Saturday, the 15th April, at his residence, Langport, Thomas Paul, Esquire, aged 79. He had been engaged for a period of his life in banking business, and, as a partner in the London Banking Company from its establishment in the year 1832, he took a very active and efficient part in the management of the same.

Notes of the Month.

THE BANKERS' GUARANTEE AND TRUST FUND.—It is announced that Mr. George Thomas Brooking is added to the list of members of the Bankers' Guarantee and Trust Fund. This association, which was established in 1853, and is now in active operation, is for the purpose of general co-operation among bank officials, in order to secure the establishment of a system of mutual guarantees. Several of the leading stock banks in London and throughout the kingdom have accepted the guarantee of this fund for their clerks, and it is expected that in short time it will be universally adopted.

POST-OFFICE SAVINGS BANKS.—It seems from a statement issued last month, that the sum standing to the credit of the Post-Office Savings Banks Fund, on the 31st of December last, at the National Debt Office, was £1,993,663. 2s. 3d., and on the same day there was in the Postmaster General's account a balance of £18,546.18s.1d., making in all £2,012,210.1s.4d. to meet a liability of £4,993,123. 11s. 7d. The repayments to the fund during the year were £1,834,849. 2s. 9d., and the cash received from deposits was £3,350,084. 8s. 1d. The charges and expenses incurred during the year amounted to £45,836. 1s.

FIRE AT THE BANK OF OTAGO.—A telegram was received from the Bank of Otago, Limited, on the 7th April from their clerk in Dunedin:—"Great fire on the 24th of January. Twelve shops burned. Books and cash saved; business continued as usual. The secretary adds that the premises of the bank are fully insured."

BANK MOVEMENTS.

At a meeting of the creditors of Messrs. Attwoods, Spooner & Co. of the Birmingham Joint-Stock Bank to pay 11s. 3d. in the pound, a resolution, which was carried by acclamation. The Birmingham Bank opened a branch in New Street (Attwoods' old establishment) on April 1st.

The payment of the first dividend of 8s. in the pound, on the affairs of the Leeds Banking Company, was commenced on April 1st, at 11 o'clock in the forenoon, from which hour to the afternoon, the bank premises were crowded with creditors. Arrangements had been made by Mr. Turquand, the official liquidator, to prevent overcrowding or confusion, each creditor having had a card informing him the time, between certain hours. Those persons who were to attend at the specified time were paid at the usual hours, on April 1st.

Mercantile and Exchange Bank having made satisfactory the Clydesdale Banking Company (who will act as their agent in Scotland) intend to withdraw their branch from Glasgow. The manager of the Mercantile and Exchange Bank in London has taken over the management of the Clydesdale Bank.

A meeting of the London Bank of Scotland will be held at the Bank of England, Tuesday, May 9, at two p.m., to receive a report from the directors on the progress made in the winding-up of the affairs of the bank.

The London Scottish Bank, Limited, will be in a position to meet its engagements, and that negotiations are pending with the bank for the sale of its business.

Mr. J. H. P. de la Cruz, the Columbian consul general in London, has joined the staff of the London and Venezuela Bank.

TENDERS FOR BILLS ON INDIA.

Tenders for 1,00,00,000 rupees in bills on India took place on the 6th of April at London. The proportions allotted were—to Calcutta, 2,20,000 rupees, and to Madras, 2,20,000 rupees. The minimum price was fixed at 1s. 11½d. on Calcutta and Madras, and 1s. 11½d. on Calcutta and Madras at and above the minimum price.

On Bombay no tenders were made above the minimum price. Tenders for 30,00,000 rupees took place on the 20th April. The proportions allotted were—to Calcutta 2,70,000 rupees, and to Madras 2,70,000 rupees. The minimum price was fixed at 1s. 11d. on Calcutta and Madras, and 1s. 11d. on Bombay. Tenders on Calcutta and Madras at and above the minimum price were received in full; on Bombay all the tenders were below the minimum price.

TRADE OF THE UNITED KINGDOM.

The returns for the month, and two months ending March, were issued on the 31st March, but the results were so favourable as for some time past. The decline of a quarter in the value of our exports during the month of March was due to the general dulness in business, but although the decline was in the value of our exports, the chief items of the leading articles of commerce, the chief items of the articles of cotton yarn and cotton manufactures, declared value of exports for the month last past was £12,698,121 in the same month of 1864, and in 1863, being a decline, as compared with 1864, of £1,321,907, with 1863, an increase of £2,077,638. For the two months ending March the total was £21,865,553, against £23,111,707 in 1863, which is a decrease on the former period of £1,246,154, or an increase on the latter of £4,521,822. The chief items of exports have been an increase in linen manufactures and a decline in alkali, beer and ale, coals and culm, cotton manufactures, haberdashery and millinery, hardware and iron, yarn, metals, seed oil, silk manufactures, wool, and woollen yarn, and woollen manufactures. In imports the chief items have been an increase in raw cotton, guano, hemp, raw silk, tallow, wool, coffee

and sugar; and the falling off in flaxseed and linseed manufactures, wool, spirits, tea, timber, tobacco, and wine. There has been an increase in the importation of barley, corn, but a decline in wheat, peas, beans, and whey. In the case of provisions, there has been an improvement in cheese, but eggs, but a falling off in bacon and hams, and fish. The extent of the most important variations in the principal articles.—

BANK AMALGAMATION AT BIRMINGHAM.

J. L. MOILLIET and Sons, private bankers, of Birmingham, have amalgamated their business with that of Lloyd's Banking Company. This fusion was looked for, and the two remaining banks have now become a joint-stock (limited) bank. It is understood that two members of the firm, Messrs. James and Theodore Moilliet, are on the board of the new company. A formal prospectus has been issued of the new bank. It is to be styled Lloyd's Banking Company, and the capital is fixed at £2,000,000, of which £1,250,000 is to be paid up, in 25,000 shares of £50 each. Of these shares 12,500 are allotted to Messrs. Lloyds and Messrs. Moilliet, and 12,500 are to be taken at a premium of £5 each, such premium being applied to pay for the shares, and leaving the whole amount of the share capital available for the purposes of the bank. It is proposed that the remaining 15,000 shares shall be reserved for issue at such premiums, at such times, and to such persons as the board shall consider best for the interests of the company. No dividend above 10 per cent. per annum is to be paid until a dividend of 10 per cent. shall have been formed equal to a fifth of the paid-up capital. A provisional committee comprises sixty-six of the leading persons in Birmingham with the business of Birmingham and its district, and the business of the new company commence on the 1st of May.

TURKISH FINANCE.

(From the *Levant Herald*.)

Since the Easter holidays there has been an almost total stoppage of business, both monetary and commercial, during the week. Yesterday, the Khan was wholly closed, and to-day only a few important operations were transacted, at an average of last week's prices. There is, therefore, substantially no change to report in the local stocks. The shares of the Société Générale have however risen this afternoon at 3 p.m., being an advance of $\frac{1}{4}$ on last notation. Exchanges on London have also risen, to-day's rates being 109 $\frac{1}{4}$; for francs (on Marseilles), the demand has been dull.

The failure of Messrs. Joyce, Thurburn and Co.—reported last week—has been glad to learn, affected Galata less severely than was expected, the local loss from the event being little beyond £50,000. The *Levant Herald* gives publicity to the rumour of the suspension of Messrs. Neill Bros. and Co., of London and Manchester. We are very glad to be able to say that the report thus indiscreetly circulated is only the most shadowy foundation. The very latest advices from the temporary difficulty occasioned to this eminent firm by the recent fall in cotton has been tidied over, the confidence and support of their connexions enabling Messrs. Neill and Co. to meet the crisis in a manner which has left their high credit wholly unimpaired. Otherwise, the fact would be a real misfortune for cotton culture in the Levant, which owes more to the generous enterprise of this one firm than to any other. The Manchester and Liverpool combined Oriental Commercial Company has effected a fusion with the National Bank Company and the Financial Corporation—institutions brought into respectable directions during the speculative activity of last year. The combination takes the name of the Oriental Commercial Bank,

and starts with the nominal capital of £3,000,000 of which £500,000 subscribed, and nearly £500,000 paid up. Of this the National Bank £500,000 nominal, and £100,000 paid up; the Financial Bank £150,000 nominal, and £150,000 paid up; and the Oriental Bank £300,000 subscribed, and £105,000 paid up. With resources, a new enterprise, if cautiously and intelligently conducted, and very profitable business,—independent banking of a kind specially adapted to the habits of the country, yet offering facilities, being one of the chief commercial wants of the Levant. The return of the Imperial Ottoman Bank and its branches ending February 28, shows an increase of 4,070,825p. in the notes in circulation, as compared with the previous account. In the bills discounted there is a diminution of 1,129,174p. and in advances, on public securities and merchandise of the Treasury balance has also fallen to 1,129,174p., as compared with 14,670,014p. at the date of the previous return.

Monetary Intelligence.

MONETARY REVIEW FOR THE MONTH OF FEBRUARY 1900.

THE appearance of financial and commercial affairs during the month has been quiet. The low rates of money have not stimulated trade, and the depreciated prices of produce have caused further depression in mercantile circles. The losses in the principal staple commodities have created depression, the effect of which has been to keep the market for the remainder of the month. The effect of the strain of the autumn is now fully perceived.

any of these disasters did not then occur, or a complete panic
 ve ensued. The intelligence of the assassination of Mr. President
 has produced an immense sensation, American stocks being
 influenced, a large advance having previously followed purchases
 render of General Lee's army. It is, however, hoped that with
 rudence the state of things will settle down; but if anything like
 should be experienced the consequences will prove most
 At the last moment, to exercise a healthy influence, the
 as been developed, and it is certainly one of the most satisfactory
 years. With a balance of nearly £4,000,000 available, the
 r of the Exchequer has prudently reduced the income-tax 2*d.* in
 , the duty on tea has been lowered 6*d.*, and the duty on fire
 has been placed at an uniform rate of 1*s.* 6*d.* The supply of
 s been very good until the last two or three days. In addition
 ital required for the new financial operations of Turkey, there
 some withdrawals for America. The demand at the end of the
 s carried the rate to 4 per cent., the lowest quotations for first-
 r. The favourable feature in the Budget of a reduction of 6*d.* in
 n tea has already caused a rise in the price of the leaf of 2*d.* per lb.
 like those of Messrs. Buchanan, Hamilton and Co., of Glasgow, and
 elson, Tritton and Co., of London, it will prove a great boon, and
 bably prevent some firms from actual failure.

ous fluctuations have taken place in English securities. The
 is now to advance, and it is expected that the government broker
 y resume his official purchases to the extent of nearly £600,000
 of the commissioners of the national debt, and the sinking fund.
 s been a good demand for foreign stocks, but although prices
 d to some extent in the course of the month, they are, with but
 ions, at nearly the same quotations as at the close of March.
 fluctuations have been in the Confederate Loan, which has been
 eclining in consequence of the great progress made by the
 oops, and the ultimate surrender of General Lee. Spanish and
 tocks, have been speculatively dealt in to some extent, but with-
 ing any considerable fluctuations in the values; the changes that
 n place, being due more to the internal position of the respective
 than to any other causes. The Italian loan continues heavy,
 considerable discount.

s shares have been generally in good demand, and prices for most
 ing descriptions have shown a further advancing tendency; the
 ing upheld by the stability of prices in the other departments,
 ntinued favourable nature of the traffic receipts. To some ex-
 ver, prices were for a time unfavourably affected by the news
 rica, but a general recovery subsequently took place.

ock bank shares have been generally flat, but the transactions
 on an average scale. Some of the new undertakings, however,
 n rather more stability, purchases having been made under the
 n that such shares may yet attain a higher premium. Credit
 e shares have exhibited rather more firmness, but the dealings
 ve not been particularly active.

duce markets continue very dull, the recent heavy speculations
 and sugar, with, in some cases, their disastrous results, are still
 epressing influence. The reduction in the Bank rate of discount

having failed to give the buoyancy that might have been expected. Confidence is again restored much activity cannot be expected. Details of the Budget were published, prices became rather firm, and of tea advanced.

THE GRAIN TRADE.

THE grain markets throughout the country have been active during the past month, but, as is usual at this time, prices have in general had an upward tendency. The imports of all descriptions of grain have been considerably under the quantities of home-grown brought forward have been all demands. The last average quotations were:—Wheat, 38s. 4d. per qr.; barley, 30s. 0d. per qr.; and oats, 22s. 7d. per qr., with a fall of about 1s. 3d. per qr. on each description since last month.

The Gazette returns for England and Wales have been as follows:

Week ending, 1865,	Wheat. Qrs. sold.	Weekly Average.	Duty.
		s. d.	£.
March 25	71,992 ...	38 4 ...	1
April 1	73,924 ...	38 11 ...	1
" 8	75,137 ...	39 8 ...	1
" 15	61,605 ...	40 1 ...	1
" 22	62,003 ...	39 7 ...	1

The importations since the harvest of 1864 have been as follows:

	Wheat. Cwts.	Other.
Thirty-five weeks ended 18th March	11,220,766	15,900,000
Five weeks ended 22nd April	577,117	1,700,000
	11,797,883	17,600,000

And the weekly averages have been:—

Thirty-five weeks ended 18th March ...	320,000	4
Five weeks ended 22nd April ...	115,000	3
	Less 205,000	1

STATE OF TRADE.

In the early part of the month business affairs were looking up. That is scarcely the case now. The Americans have induced an increased extent of caution.

NOTICES TO CORRESPONDENTS.

We have arranged in future to issue a double number in February formerly in May and November. This has been rendered necessary by the Meetings of the Banks and Discount Companies, which will be advertised in the pages of the *Bankers' Magazine*. We shall also give the proceedings of the Credit and Finance Companies as they are more or less associated with our subscribers and readers can refer to them without difficulty. We will please forward communications addressed to the Editor, No. 1, Groombridge and Sons, Messrs. Waterlow and Sons, Carpenters' Hall, London Wall.

BANKING AND FINANCIAL ANECDOTES.—It will be perceived from our Editor of the *Bankers' Magazine* is collecting and arranging a series of Anecdotes. Any contributions from subscribers and readers of the *Bankers' Magazine* are thankfully received, particularly if the subject-matter shall not have been printed. Nothing personal or offensive will receive publicity.

We thank our correspondent T. for his two anecdotes, which will appear in course.

Two or three communications still stand over.

£33,416,770	£35,067,615	—	17,599	£306,754

ending April 2nd, 1864, with the month ending April 1st, 1865.

England circulation of £245,512, a decrease in Private Banks of

£195,354; being a total decrease in England of £722,639;

decrease of £59,494; and in Ireland an increase of £160,900. Thus

1st April, as compared with the same period last year, presents a

and a decrease of £511,235 in the *United Kingdom*.

Bank of England, for the month ending March 29th, gives an

amounts of £15,077,125. On a comparison of this with the Return for

it appears to be an increase of £400,355; and an increase of £406,112

last year.

The Banks in Scotland and Ireland during the month ending 1st

increase of £3,331 as compared with the Return of the previous

as compared with the corresponding period last year.

THE BANKERS' MAGAZINE,

AND

Journal of the Money Market.

JUNE, 1865.

THE COURSE OF THE MONEY MARKET.

Course of the money-market has rather varied within the night or three weeks. It is yet not certain which way a reality tend, but at present it seems that the rates will . Both the position of the Bank of England and that of k of France continue gradually to strengthen, and if ly accounts shall exhibit further improvement it will not before we see a fresh reduction in the rate. Although not an end to commercial disturbance here and in and probably it will be some two or three months before of the character like those which have occurred at will be exhausted, still the public are now so thoroughly for them that they occasion little alarm, except in circles where losses are likely to be made. It is quite at some of these disasters are not wholly the consequence all in produce, but it appears they are likewise brought rough heavy speculations in shares. The rage in Bom- other parts of India for gambling in securities like the Reclamation Company, have, it is found, involved number of the merchants, both native and foreign, and en reaction in those and in the value of cotton, &c., has ral of these houses "high and dry." It is generally ed by those well conversant with Indian affairs that, tanding the state of panic lately prevailing at Bombay, cantile community will get through there better than , and that though losses have been made, there yet a balance of profit greatly in favour of the principal Whether the same remark will apply to China, it is to state, because no strong compensating influence has in the situation of the share market there to adjust

the losses on tea and the other staples which great a depreciation. From this point it is a have failures of importance, one or two have announced by telegram.

It was no doubt in consequence of the discount the advices from Bombay, coupled with the first American war, that acted upon our money market part of the month and carried the rate of discount per cent. With the increased pressure for a the introduction of a variety of new companies felt at the Bank of England, and the Lombards being short of capital, they placed their terms as forced the business to the Bank parlour. the official quotation was placed at the improved thought it would not long remain there; bills from circulation in consequence of failure that no alarm need exist from any undue export. At the same time it was evident that little chance of export of gold to America or elsewhere, and an inquiry for gold to India was confirmed by the succeeding telegram. With general mercantile such a state of repose, the temporary stringency given way, and fine and seasonable weather the crops, an additional circumstance has thus confidence in the future.

It was on the 4th of May that the Bank discount rate from 4 to 4½ per cent. and the result was very quickly responded to the action. Notwithstanding believed at the moment to be merely a temporary considered quite warranted by the condition of and necessary to the exigencies of the period. movement was in some quarters condemned, and of a 1 per cent. rise was discussed. But in reference to trade as to the policy of checking of new schemes which are being daily brought in view of absorbing capital. Since then we have first occasioned by the India and China suspension also successfully surmounted the critical inflation of the American war; and at length the hard labour of the weather gives an earnest of what connection with the grass crops and the harvest year.

The natural consequence of the easier conditions and the expectation that the rates will grow

the impression of the probable increase of speculative activity towards the end of the year. This feeling we do not, however, share, because the overweight of securities in the investment department will prevent, for some time at least, any great accession to the Stock Exchange, the condition of the market most unmistakeably denoted that it will be difficult to do much more. A few sound projects, the authors of which are well accredited, may be introduced, and these will in all probability be supported; but there is not the slightest chance of a great quantity of schemes being introduced until much rubbish recently patronised is swept clean away altogether.

From the examples hourly furnished of the most important private undertakings being turned into "limited liability" companies, it is evident that the principle will yet lead to greater development, but it is not so certain that all undertakings will succeed, though they may be brought within the range of the system. No doubt, promoters and others are most anxious to encourage the growth of even the most important where there are fees to extract, or general commissions to be obtained, for the services rendered. But the system thus created may, perhaps, crush those who have actively engaged in the business, when they least expect it, and when they may imagine they are on the eve of a season of prosperity. It will be well, indeed, if the public shall hesitate to encourage any attempted revival of the system, if they in the long run will be the sufferers, either through the onset of a period of adversity, or some fresh panic in the market.

As we should in reality like to see, would be increased activity in the produce markets, and a further development of the manufacturing industry. These things must come sooner or later, and we trust the period has arrived when the change will come in this direction. The merchants and others cannot be expected to make even greater sacrifices than they have at present suffered without a rally of this description takes place, and unless in the course of time the alteration must be experienced, because the demand for shipments to this side are stopped, and the process of consumption will speedily affect existing stocks. The present easy situation of the money market, nevertheless, has lessened the blow which must otherwise have been very severe, and which would, had it occurred in days of dear money, have once more shaken credit to its very centre. From the advice the authorities have represented a few commercial difficulties, but these will not, it is presumed, be viewed as alarming.

When all these sources of anxiety shall have then we shall, in a mercantile sense, begin to and find that permanent recovery which will be of another epoch of prosperity.

It is wonderful to notice the great strides in the bullion reserves of the Bank of France. They have absorbed capital by the forcing of ephemeral though loans have been negotiated in Paris, they have taken up large sums of money. This discretion on the part of the French public will be found beneficial to them in the long *temps* they should be hurried into a war with the vaults of the Bank of France have not for long been held, as at present, a total of between £120,000,000, and it may be safely asserted that the present cumstance alone places that establishment in a strong position. The total of bullion in the Bank of France is extremely satisfactory considering the drains it has now and then spasmodically suffered; and since there is no reason to imagine that the *furor* for comparison will wholly at least temporarily subside, the large available resources will be applied to the benefit of home and foreign commerce.

At the last moment at which we write, it is seen from the telegrams in from Bombay bringing intelligence of the 30th. Certain it is that these advise a continuation of credit, and a thorough confusion of money. Unfortunately at the same time it is rumoured that the late difficulties among banking establishments should prove correct, may further unhinge the government of the Presidency. It is to be hoped that the rumours are exaggerated, and that they will turn out to be some of the local institutions started during the late supposed prosperity. From the tenor of the accounts, we must be prepared to receive into the further development of the crisis, and it will be watched with vigilance in case any disasters of the kind. Little is to be feared from the English element in the money and finance market at Bombay. Where a serious mischief may ensue is among the native merchants, who, their engagements being large, may find themselves in a difficult position and attempt to repudiate them. If the crisis in Bombay shall blow over without any very serious embarrassment, affairs there will not be long before they are settled themselves.

HISTORIC OUTLINES OF AMERICAN FINANCE.

No. 16.

BUREN sought to defend the policy of General Jackson. He maintained that when the States banks, after the year 1833, depositories of public money, personal security was its safe keeping and prompt payment when demanded, all returns were to be made from time to time by the banks. The plan was at first successful; but when it became known, under the Act of June, 1836, to withdraw the money from the selected banks for the purpose of transferring it generally to the States banks in defined proportions, it was found impracticable in many cases to comply with the demands of the public, and numerous and pressing applications were made for assistance. As the instalments became due under the law, the depositories could not pay. Grasping at high prices, they had loaned what did not belong to them, and were compelled to press their debtors and withhold discounts. According to Mr. Van Buren, arose the monetary crisis; he might also to have said that the depositories were the victims of a vacillating legislation. They were first made use of as branches of the condemned national bank. While serving those purposes they were declared trustworthy and efficient, and were encouraged to make those prodigal loans and discounts which gave activity to trade and stimulated the excessive speculation. This laxity of providential restraint was not improved in the messages of General Jackson, but highly improved in the results enabled him to convince the people of his wisdom in not renewing the Bank Charter. When he had won the election, the Distribution Act was passed, which compelled the banks that had been favoured with the deposits to restore them to the Secretary of the Treasury, that he might divide them among the several States in the ratio of their population. He took the depositories by surprise, and as they could not immediately recover the loans they had been induced to make, they could not refund what they held in trust for the government. In fact, they had been entrapped into a false position for those chosen by Mr. Taney as receivers of the money believed, and reasonably believed, that it would be used with them till required for Government expenditure. He regarded the deposits as a fund or working capital on which they could safely make advances to their customers; but when Woodbury, the new Secretary to the Treasury, acting under the Distribution Act of 1836, directed the public money to

be removed from their custody and dispersed at the States in the manner directed by Congress. It was the intent of that law, and the Specie Circular that gave the blows to American industry.

Mr. Van Buren introduced another change in the finance, known as the Sub-Treasury plan, which was viewed as an attack on the whole banking system. It was rejected in two successive sessions of Congress, but was ultimately carried, and signed by the President in 1840. In proposing the Sub-Treasury plan, Mr. Van Buren proceeded on the principle that the fiscal operations of the government ought to be entirely severed from those of the States and Territories. He advised the discontinuance of the depositories of public money, recommending its custody by government officials, constitutionally controlled by law. He had not the same faith in the States as General Jackson. "When I entered on the discharge of my official duty," said Mr. Van Buren, at a turning point of his career, or in 1840, "the Act for the distribution of the surplus revenue was in the course of rapid execution. Twenty-eight millions of dollars of the public money, in pursuance of its provisions, deposited with the States in January, April, and July of that year (1837). It had incurred a general suspension of specie payments, including, with very few exceptions, those in which the money was deposited, and upon whose fidelity the government unfortunately made itself dependent for the revenue that had been collected from the people, and were indispensable to the public service." He then enlarged on the security and advantages of the Sub-Treasury plan, insisting that it could never prosper with a national bank or a national currency.

When this new financial scheme was first introduced, it passed the Senate by 26 to 20 votes. It was opposed by Mr. Clay, who declared that nothing but a national bank, one common currency, and acting as a regulator of the banks, could restore and maintain commercial prosperity. His arguments failed to convince the Senate, but the bill was not passed. The Bill met a different fate in the House of Representatives, where it was ordered to be laid on the table without a vote.

On the 4th December, 1837, Congress was again convened, when the President again pressed the Sub-Treasury plan. It passed the Senate a second time, though not without opposition from Mr. Clay, Mr. Webster, and others.

On this occasion Mr. Clay said that General Jackson's real object had been to establish a Government Bank, a Treasury to be administered and controlled by the executive government, and that the proposed Sub-Treasury scheme was to be such an institution under another name, now that the States Bank had been destroyed. The bill was once rejected in the House of Representatives by 125 to 111.

The next session of Congress opened on the 3rd December, but nothing was done in reference to banking. In the following session, which commenced on the 2nd December, 1839, the Sub-Treasury Bill was again brought forward and carried. The measure terminated Mr. Van Buren's presidential administration, and, from the Sub-Treasury Bill, its leading event, it derived the name "The Divorce of Bank and State."

For the sake of connecting under one continuous view the whole of the proceedings on the Sub-Treasury Bill, we have added some remarks on Mr. Van Buren's earlier messages, in which we now propose to advert. Having already quoted his message on the condition of the banks during the first six months of 1837, our next task is to direct attention to his message on the state of the Treasury, contained in his special message of the 4th September, 1837.

"The sum necessary for the service of the year," he said, "is estimated at \$10,000,000. The probable receipts, and the amount which it was estimated should be reserved in the Treasury, will be about six millions of dollars. If the whole of the reserved balance be not sufficient to meet the current expenditure, but four millions be still required, the Treasury, as sums most expedient for the uses of the government, and to meet contingencies, the sum needed will be ten millions. In making this estimate the receipts are calculated on the supposition of some further extension of the indulgence granted to the payment of bonds for duties which will affect the revenue of the present year to the extent of \$2,000,000. It is not proposed to procure the required amount by a new tax or increased taxation. There are now in the Treasury \$4,000,000, directed by the Act of the 3rd June, 1836, to be paid out with the States in October next."

"The exigencies of the government were immediate, Mr. Van Buren proposed to withhold the transfer of that sum to the States banks, which amounted to setting aside the law. He admitted that this would prove inconvenient to many States which had counted on receiving the instalment on the 1st of the Act of Congress; but, as he declared, the money

was indispensable to the Treasury. To raise new loans have been to commence another national debt—a burden on the ultra-democratic party, of which Mr. Van Buren was one of the most accredited chiefs.

In the annual message of 4th December, 1837, Van Buren directed the attention of Congress to the Federal Reserve Bank of the United States, for the charter of the old bank with the United States, for the charter had expired, still the time was not yet over when it was obliged to close its accounts. Moreover, as already stated, it had become a Pennsylvania bank, which rendered the liquidation complicated. When its assets and effects were transferred to that States bank in trust, pending the final settlement of its affairs, an adjustment was made by authority of Congress of the large interests which the government held in the institution. The two years allowed for winding-up the bank were nearly at an end, but the trustee (the Pennsylvania State Bank occupying that position) had not redeemed or cancelled the outstanding notes of the old bank, but re-issued and re-issued them since the 3rd of March, 1836, on which the charter expired. According to the official statement of the bank, so late as the 1st October, 1837, nineteen months after the privileges given to the Federal charter were at an end, had under its own control cancelled notes of the late Federal Bank of the United States to the amount of 27,561,866 dollars, 6,175,861 dollars were in actual circulation, 1,568,622 in bank agencies, and 3,200,390 in *transitu*, thus showing upwards of ten millions and a half of the notes of the old bank were still outstanding. Then the question arose, if the trustee had such a right when would it end? And what became of the 21st clause of the charter which prescribed the winding-up the institution, which could not be carried out with continued circulation? It is also to be observed that for those notes the trustee putting them out as a public officer for value was not liable, for they bore on the personal responsibility of his own; and as the United States was settling with the trustee for their share of the stock, their former direct liability to the creditors of the old bank, the notes were positively unguaranteed. This was unfortunate. The power of issue clearly ceased in 1836; the extension of time to 1838 was a concession made solely and specially for closing old transactions.

In his annual message, 4th December, 1838, Mr. Van Buren estimated the available balance in the treasury on the 1st January, 1839, at 2,765,342 dollars, and the receipts

and land sales at 20,615,598. But these several sources were increased by an issue of Treasury notes, of which President calculated there would be outstanding 8,000,000 end of the year. Government, to recruit its decayed , had also sold a bond of the United States Bank for 71 dollars. This exhibition of the Federal ways and contrasted with what they were at the close of General's administration, was a complete condemnation of his both in destroying the bank and issuing the specie . Mr. Van Buren had a high reputation for sagacity, difficulty would have embarrassed even an abler man ; he was obstinate and doggedly persevered in the which had brought disaster on the country; while edients he adopted to moderate the evil effects of the principles he had embraced amounted to positive infrac- the law and violations of Congressional faith. We en that he held back from the States banks the of public money on the fourth instalment in defiance Act of Congress. He also left several millions at long with the bank and postponed the payment of bonds es to between four and five millions of dollars. This ce was not an optional act of generosity on his part ; necessity which he could not avoid, for to have d the fiscal rights of the Treasury in full strictness would erified nearly the whole property of the Union. He ven to issue Treasury notes, thus claiming a privilege government which government refused to the merchants ne specie circular. Government, as a debtor, tendered a payment; government, as creditor, exacted coin. In just and inconsistent manner Mr. Van Buren sought to he evils of the suspension of 1837.

public money was now kept by the treasurer under his legal powers, subject to the superintendence of the y of the Treasury, but as one of the revenue collectors ed, Mr. Van Buren, apprehensive that others might become rs, proposed the exercise of additional vigilance over ection and custody of the Federal assets. When the k of the United States was incorporated and made the ry of the public moneys, a right was reserved by Con- inspect at its pleasure, through a committee of that he books and general proceedings of that institution. esident now observed that in the State of New York, banks were considered to rank among the first in point ility, the power of constant examination by commis-

sioners, appointed for the purpose, existed, "Whether a committee of Congress might be deemed proper, the accounts of officials in custody of the public moneys?" He urged them to be honest. Thus he had his doubts of the Sub-Treasury scheme which he had struggled to establish, or, at least, of its secure guardianship.

We have seen that the suspension of cash was universal within a few weeks after Mr. Van Buren took the presidential chair. It stayed the downfall of the currency, rescued the country from a state of barter. Trade in foreign goods was discouraged, and a stimulus given to domestic manufactures. Panic locks up capital. What they held at the time of suspension they could not get out in their coffers. In the west and south-west insolvency was the rule. The Atlantic cities generally were so. Banks were cautious, neither granting loans nor discounts. During the year of suspension agriculture was chiefly employed in realising, in circumstances admitted, their outstanding securities. That period of indulgence was drawing to a close. New York banks convened another meeting of the several States banks to fix a day for the resumption of specie payments. It has been said that New York banks had received legislative sanction for suspension during one year, which terminated on the 1st of January, 1838, and they were desirous not to exceed that term. The delegates proposed to extend the time to the 1st of July, while a third party advised that it should be continued till the 1st of January, 1839. In the division of opinion the delegates separated. The banks resumed on the 13th of May, 1838. In the summer and autumn all the Northern and most of the Southern banks followed the example. On the 1st of January, 1839, New Orleans banks and those of the south-west resumed specie payments. The State Bank of Alabama, also resumed.

The chief opposition to the early resumption of specie payments recommended by the New York banks proceeded from the directors of the old United States Bank, which, after the war, had become a state bank with a Pennsylvania charter. Its property, and its debts and credits had been transferred to the State bank which had assumed all the liabilities of the old United States Bank, its branches having been wound up.

New Bank was not conducted with the prudence of the Bank of England. It speculated largely in cotton, and to the monopoly of the article so as to raise prices to English levels. It made heavy advances to the planters. To effect this on a grand scale it put out its own bonds or post notes, and it raised money in Europe. As an illustration of this procedure, we may cite its transactions with the State of Mississippi. That State issued its own bonds for five hundred thousand dollars, to enable it to establish its Union Bank. The bonds were sold in June, 1838, in the following August were taken up by the Bank of Pennsylvania, and the purchase-money was paid in stipulated instalments to the Union Bank of Mississippi. Biddle, the manager of the Bank of Pennsylvania, advanced all the cotton grown in Mississippi; but prices fell, and the speculation, and within two years the Mississippi was hopelessly insolvent, and the State repudiated its debt. At a low state honour and good faith had fallen. See some passages from the executive message of Governor of Mississippi, in which he sought not only to excuse but to justify this shameless violation of contract with the State and creditor. The Bank of Pennsylvania had been secured by Baron Rothschild on the deposit of the Mississippi, and the circumstance Governor MacNutt refers to in the following terms:—

"I have been informed, has hypothecated these borrowed money upon them of the Baron Rothschild; and as Shylock flows in his veins, and he unites with both his countrymen. He has mortgages on the mines of Mexico and the quicksilver mines of Spain. He has borrowed money to the Sublime Porte, and taken as a mortgage upon the Holy City of Jerusalem and the life of our Saviour. It is for the people to say whether they will mortgage upon our cotton fields and make serfs of our people."

Mississippi was the first repudiating state; Mr. Mac Nutt, the first repudiating governor; and Mr. Jefferson Davis, afterwards President of the Confederate States, the first repudiating senator. The precedent thus established was widely followed in the South at that date.

It was too late for the safety of his bank, became aware of his enormous liabilities he had contracted, and of the rashness of which he had engaged, had opposed the wish of the State banks for early resumption, conscious that he could not command the requisite specie. His issue of post notes

was a palpable sign of weakness, and only portended ruin. Another general suspension, not, however, of New York banks, took place in 1839; and finally the State Bank, under its new style of State Bank of New York, disappeared.

As the New York Free Bank Act passed that year, that State on the 18th April, it is not inappropriate to mention its chief provisions in this sketch of Mr. Van Buren's administration. The principle of the measure was that of a public bank. Any individual or association desirous of establishing a bank was empowered to do so under the supervision of the comptroller of the State. "any portion of the public debt now created, or hereafter to be created by the United States, or by any State, or such other of the United States as shall be designated by the comptroller." The debt so transferred became the property of the comptroller, the notes being made, registered, and issued by the comptroller, who handed them over to the bank. In case of assignment of the stock of which he had an interest, the bank was to sell within ten days, if the bank failed to redeem, the lawful money of the United States. The bank bore these words stamped on their face: "secured by the pledge of public stocks." The security, however, consisted one-half of public stock and one-half of mortgages, in which the words stamped on the face of the notes were, "secured by pledge of public stocks and mortgages." The eighth section of the Act provided that "such securities shall be only on improved, productive, unencumbered lands in this State, worth, independently of any building thereon, at least double the amount for which they shall be pledged, and the comptroller shall prescribe such regulations as to retaining the title and the value of such lands and mortgages as may be necessary, and such mortgages shall be payable to the order of the comptroller as the comptroller may direct." The annual interest on the stocks, bonds, and mortgages assigned was to be paid by the parties who had pledged the securities, so long as they were not made in paying the notes. The plates, dies, and machinery for printing the notes remained in the custody of the comptroller. If the comptroller, or any other officer of the State, was convicted of putting out notes in excess of the securities deposited, the punishment was a fine of not more than five thousand dollars, or imprisonment for not more than five years, or both such fine and imprisonment. The stock of any banking association was not to

thousand dollars, and it might be increased from time to time at the option of the shareholders. On the first Monday of January and July a full statement of the affairs of every bank incorporated under the Bank Act was to be transmitted to the Comptroller in a form prescribed by him, and certified by the president or cashier; and if, at any time, any bank or shareholder holding debts or shares to the amount of one thousand dollars "should state facts, verified by affidavit, which would require the Comptroller to order a strict examination by one of the masters of his Court of all the affairs of the bank," for the purpose of ascertaining the safety of its investments, and the prudence of its management. The result of the examination was to be published. It was further provided that no bank, for the space of twenty days, should be closed at its place of business less than twelve and a half hours. No bank was to issue bills or notes in circulation in specie on the amount of its bills or notes in circulation for more than one hundred dollars: nor could any bank make any of its bills or notes of a denomination less than one thousand dollars to be put in circulation as money, payable at any other place than at the place where the bank was conducted. Such were the leading provisions of this legislative Act, and the minor clauses were generally constructed as to guard the note-holders against all possible contingencies.

The administration of Mr. Van Buren was not a successful one. The people had given him credit for great astuteness, but his administration disappointed their hopes and belied their praise. He was himself the President of a new generation, of which title he was proud, for he seemed to think that the inheritors of the American constitution were to eclipse the fame of its founders. Early in the date of his presidency is the date of American history, though the first fatal blow was struck by General Jackson, but Van Buren completed the work of his predecessor. He was put in nomination for a second term of office, but only received sixty electoral votes, while his opponent, General Harrison, received nearly four times as many. There could be no more decided proof that his popularity had departed.

(To be continued.)

G. J. GOSCHEN, ESQ., M.P., ON "THE THEORY OF THE FOREIGN EXCHANGES" AND "SEVEN POUNDS"

To the Editor of the Bankers' Magazine

SIR,—In March, 1864, I addressed a letter to you on a subject of work which had been published by Mr. Goschen under the title "Theory of the Foreign Exchanges," of which I send you a copy. I am a gentleman, and have a letter from him thanking me for drawing his attention to the subject, and regretting that during the work referred to, Mr. Goschen says, "But as the subject is of even of the leading bankers and merchants, are as to the subject as its immense importance deserves;" and that it questions the ability of persons (such as described in the affairs in which they are daily concerned. I thought the question in the letter I addressed to you, "If Mr. Goschen pretends to a knowledge of the subject on which he is writing, and, as the subject of exchanges has reference to money, florins, &c., I required his definition of a "pound." The above-mentioned has gone through four editions without answering the question last asked, a solution of which lays at the basis of the theory advanced, and which it must be said he demanded his attention, and as he has on several occasions taken his seat in Parliament on currency matters, and has written an article in the "Edinburgh Review," entitled "Seven Pounds," dealing on the subject of money, without venturing to say meaning he attaches to a "pound," I trust you will be able to briefly recapitulating a part of what I have been told in your introduction to other matters of equal, if not greater importance. Socrates said, "Before we can reason accurately concerning a subject, we must first know what it is." As I presume the soundness of the argument will not be disputed, it is important that Mr. Goschen at the outset of his public life should make himself acquainted with the meaning he attaches to the terms he is using in any speech he may make, or work he may write. I do not enter into any discussion with Mr. Goschen on currency matters, but only require from him a direct answer to a very simple question: his definition of the term "pound."

The late Sir Robert Peel (the last person who, I believe, attempted to explain the meaning) asked the question, "What is the meaning of a 'pound'?" and he answered by saying, "the meaning of a 'pound' is neither more nor less than a definite quantity of gold;" and he added, "there is no reason why you should not change a pound than to say that it is a foot and a half." This definite quantity of gold as fixed by the Act of 1819) is $123 \frac{3}{4}$ grains. If, then, a pound can be defined in shillings and pence, how can it alter in francs and florins? if it be $123 \frac{3}{4}$ grains English, it cannot vary in grammes.

English can alter in French metres? What, then, is the standard of value, which alters in foreign measurement? A philosopher (a great authority on currency matters, and by the late Sir Robert Peel), in a letter dated in 1717, in a statement that silver (then the standard of value) was more valuable than after it was coined, says, "I take it as so far from being true that I affirm it is impossible, notwithstanding Sir Isaac Newton (when Master of the Mint) and a letter, dated the 21st September, 1717, to the Treasury's revenue, saying, "but silver in bullion exported with 2*d.* or 3*d.* per ounce more than in coin. * * * Allowing for the East Indies the demand of silver for the price to 5*s.* 6*d.* or 5*s.* 8*d.* per ounce, or above." According to the opinion he had given that the price of silver might possibly alter, although those persons who paid an ounce of silver must have known that they had done so, and now pay a difference in the rate of exchange, for (after Sir Isaac Newton's letter), John Locke says, "The value of silver, which makes the intrinsic value of money itself, under any stamp or denomination of the same, cannot be raised. For an ounce of silver, whether coined into groats, or crown pieces, stivers, or ducatoons, or in any other way, always eternally will be, of equal value to any other stamp or denomination soever." But if the value of silver can alter in stivers or ducatoons, how can it alter in gold? What, again, is that sum which describes the value of gold at one time worth 5*s.* 4*d.*, and at another time 5*s.* 8*d.*
